Thursday, Aug. 18.—At high water our creek was only separated from the sea to the westward by a narrow belt of shingle, and advantage was taken of this to have an invigorating tub in the surf. Breakfast and the morning pipe over we got underway for Brightlinsea, but Brightlinsea saw us not. How often in sailing small craft may an old moral be altered to the following tune: "The skipper proposes, but the wind disposes." The cause of our change of plans, or rather of the changing of our plans (a distinction with a difference, good reader, which your logical mind will readily grasp) came about in this prosaic fashion. Imprimis, as our ancestors would say, the wind, W. by N., made it a dead beat up to Brightlinsea, and then, while leaving the creek, we were struck by a heavy rain squall, and to complete our discomfiture, for verily it never rains but it pours, you know, the ebb was strong against us. Not being anxious to (falsely) prove our strength of will, a term not unfrequently confounded with pigheaded stubbornness, which is really a sign of weak will, we philosophically bore away for Harwich instead. When Sales Point was abeam, the sky to windward banked up black and ominous and there was every appearance of dirty weather, in seaman's parlance "it looked very saucy." At last crash came the thunder, and we had the full benefit of a squall. "There is beauty in the bellow of the blast," sang the lovely Katisha, and to a certain extent we agree with this elderly virgin; but one may

have too much even of a good thing, and this was soon our lot. By the way, it is not difficult to understand and even to enter into and sympathize with the feelings of the poet Young (we are in a different mood now and not thinking of Gilbert), of whom it is recorded that he loved to go out when the thunder was abroad and the storm a-raging. To some men a real good thunder clap, or better still a series of thunder claps preceded by the sudden rushing of the wind and followed by the no less sudden down-pour of the rain, is a message from nature full of attractiveness (a good deal depends upon the state of your oilskins!). But moralizing aside it was a comfort to find that the boats behaved themselves right bravely, while we ran dead before the gale under storm canvas for the Ray Sand, some seven or eight miles ahead, our nearest point of shelter, and under its lee we shortly found ourselves, thanked our stars at having such staunch craft, for they made good weather of what in the old class of boat we should have had—to speak the least of it—considerable trouble with.

In these sheltered waters we made more sail and entered the Crouch River, probably so called from its crooked course. The squall having blown itself out, we drifted up the river with a faint zephyr to that quaintest of all quaint places, Burnham, where we landed for stores and to look about us, being much taken with the Old-World appearance of the town.

Canewdon Creek, to which the Burnham fishermen directed us, being unsuited to our purpose, we dropped our mud hooks on the opposite shore, thereby bringing troubles thick upon us, for it turned out that we were on an oyster bed, and down came the watchers upon us like Mark Twain's frog upon a fly. The only way to pacify these irate individuals was to haul inshore clear of the bed when the tide made, which we did, realizing at the time that our start next morning, on which much depended, would be consequently delayed. It was too late to think of finding another berth.

Friday, Aug. 19.—To-day we ran back to Burnham with a light air and turned down the Roach over a strong ebb—bother those watchers!—fondly flattering ourselves that the tide would be in our favor further down; but, as we found these creeks to dry out at the southward entrances first, "Hope told a flattering tale" to our cost. What little wind there had been died away, and, the sun coming out with scorching power, rowing was anything but a pleasant occupation. When half-way cooked, overboard we popped for a plunge in the briny, and the fillip thus imparted enabled us to drive our boats as far as the Coast Guard station in Havengore Creek, a name, by the way, with an affix much rarer in England than the Emerald Isle, and generally having allusion to its shape as a triangular plot of ground either running into other land or into the seaboard. Here we were left high and dry on the mud, instead of taking up a cosy berth on the long-looked-for London River. Bother those watchers, we say again.

The coast guard at once came to see us—not the one who interviewed the crew of the Viper—and thinking of the Viper, we cannot help wishing there were more of such books to read, for it appears visitors are as great a rarity to this sojourner in the wilderness as, according to our Latin grammar, a black swan used to be to the inhabitants of the civilized globe centuries ago. This old salt, intuitively knowing what would please, enthusiastically described a new rig he had invented; and, his yarn over, advised us when we had water enough to haul close into the west bank for fear of receiving "a knock" from a hay barge drifting through with the night's tide. Not wishing to "take the knock" in this fashion, we floated our boats to the shore as the tide made up the creek, but we were not free from an adventure after all, and it came about in this way.

When the tide made over the Maplin, which it did at the sleepy hour of eleven P. M., and met the other tide, a bubble was caused, and each boat naturally sheered about and circled round after the manner of a float in an eddy. What could we do? Well, nothing but watch one another's riding lights careering about. What was bound to happen did happen, in one mad rush the cable of one fouled the rudder of another. The phosphorescent water boiled past at no end of a rate, making it troublesome work for the crews to put matters shipshape, but patience and perseverance conquers difficulties, and some time or other we were comfortable. All this exertion entitled us to one more pipe, and that over we snored in concert.

Creeping out into the channel next morning as early as possible we found an east wind, and it was a case of "rig-a-jig-jig, away we go," till the tide turned some four miles above Southend pier. The wind still held fair, and steering in shore we ripped through the slop to Thames Haven. Shortly after leaving this place we were caught in a succession of heavy squalls of wind and rain, and having failed to get into the Mucking for want of water, were in a difficulty where to find a quiet berth for the night, finally choosing the Lower Hope reach. Talk about mud, it was something too awful, and when we took the ground a prisoner each man found himself in his canoe. How to get out we knew not. Lower was our hope of a supper than if we had been three Crusoes stranded on the most deserted of islands. Nay, in that plight we could have reconnoitered, but in this, our island of mud, to have attempted to move seemed to threaten us with lower depths still. However, Sabrina fortunately was the owner of a pair of wading boots with which he made the attempt, and "squirked" through the "putty" to serve out the rations like a good Samaritan.

In the early morning we were awakened by some river side loafers shooting at gulls (we use the preposition advisedly and thankful too for the poor birds' sake), and little as we were led to appraise these sportsmen (save the mark!) at a high value we were more than astonished at seeing one of their number trying to poach—to filch—to appropriate to himself—well, what's in a name—to steal a pair of boating shoes from Gipsy's mizen mast. Gipsy, soundly asleep as becomes the innocent, was awakened by the shouts of his friends' and putting his head out frightened the would-be mis-appropriator, thus both saving his property and bearing evidence to the fact that in some circumstances ignorance is not bliss, and then it is not folly to be (other) wise.

We had a strong flood tide with us on starting after this early adventure but a head wind, and did not make Erith until the afternoon. We had proposed to reach Kingston, but as time pressed this plan was given up and a landing forthwith effected. Sabrina and Gipsy had a mighty washing of boats and packing of luggage, but Muriel—homo fortunatus—having more time at his disposal, only awaited their departure to hold on for the upper Thames.

Thus ended the last cruise of the three skippers, a cruise wanting, it is true, in the grand scenery they had been accustomed to in previous trips on the west coast of Scotland, but for all that a most enjoyable one, the memory of which will shorten many a long winter's evening, it is hoped, certainly it will give a zest to the photographic album, which through the help of Sol—artist imperial—boasts many a picture of moving scenes by flood and field, from a quiet berth on a canal to an exhilarating sail on breezy waters, with a study of the Atlantic rollers breaking on the rugged Scotch coast put in as mustard is into a sandwich to make the morsel toothsome.

A feeling of sadness comes over the true boating man when cruising things are put away for the winter, and his craft which has been so enjoyable a home, is carefully laid on the rack, but as the end of the 1887 season saw the inauguration of the British Canoe Association our feelings, were changed to bright anticipations for the future.

To our English readers we say in Dot's words: "Will you join the clan? You will find such friends as you never dreamed of before, and delights kings and the rich are strangers to."

Our fervent wish is that the association will bring together many "a good man and true," and that its cruises on salt water and on fresh may be as jolly as have been those of its sincere friends.

THE NORTHERN DIVISION MEET.

ACTIVE preparations are being made for the Northern Division camp, to be held at Lake Couchiching, July 23 to Aug. 4. Horse Island is now being thoroughly underbrushed and the camp store, wharf, etc., will be built at once. During the winter the sailing courses were laid out to north and south of the island. The Grand Trunk Railway will carry members to and from Orillia at one fare (canoe and kit free). The steamer Norseman, Charlotte (port of Rochester) to Port Hope, will issue return tickets at $2, canoes free.

Already the greatest interest is being taken by canoeists and their friends in the coming meet, which promises to be a large one. The long, clear stretches of Lake Couchiching are especially adapted for sailing, while its propinquity to the River Severn and numberless small lakes make it a perfect paradise for cruisers. The programme of races is as follows:

PADDLING RACES.

No. 1. Classes II. and III. Open or decked, any blade, 1 mile. No. 2. Classes IV. and V. Open or decked, fitted with centerboards, any blade, 1 mile. No. 3. Classes IV. and V. Open, single blade, 1 mile. No. 4. Classes IV. and V. Tandem, open canoes, single blades, decked canoes, double blades, 1 mile. No. 5. Any Class (except Class I.). Tandem, lady and gentleman, any blade, ½ mile. No. 6. Classes IV. and V. Club fours, four paddles from any organized club, single blades, 1½ miles.

COMBINED RACES.

No. 7. Classes A, B and C. Open or decked, 3 miles: the half miles to be alternately paddled and sailed, commencing with paddle. No. 8. Classes A, B and C. Open or decked, paddle 1 mile to windward, round buoy, step mast, hoist sail and run 1 mile to leeward.

SAILING RACES.

No. 9. Classes A. B and C, novices who have not sailed a canoe prior to 1888, 3 miles. No. 10. Classes A, B and C, decked canoes, 3 miles. No. 11. Classes A. B and C, open canoes, 3 miles. No. 12. Classes A, B and C, open or decked, passenger race, male passenger weighing not less than 100lbs, 3 miles. No. 13. The six leading canoes from each of Nos. 10 and 11, 4½ miles (absence of any not to prevent the race).

MISCELLANEOUS RACES.

No. 14. Portage race, any canoe (Class 1 excluded), weight of canoe not less than 50lbs., paddle ¼ mile, portage ¼ miile, paddle ¾ mile. No. 15. Hurry-skurry, run, swim and paddle. No. 16. Tournament.

Note A. The record prizes will be awarded from the results of Nos. 1 and 2, 7 and 8, 10 and 11. B. The "one-man-one-canoe" rule is to apply as heretofore, and in addition each canoe will be limited to one rig in the sailing and combined races; that is, the sails used in the first of such races are to be used in the other sailing and combined races, but these may be reefed or lowered, and mizens may be omitted in combined races without affecting subsequent events. C. The races for tandems and fours are excepted from the "one-man-one-canoe" rule. D. Special races will be added at the discretion of the Regatta Committee, if a sufficient number of contestants signify their desire and willingness to enter. Such as "a paddling upset race," "a man-overboard sailing race," "a passenger-overboard sailing race," etc.

} Regatta Committee.

A. C. A. MEMBERSHIP.—Northern Division: J Godfrey, F. Kilmer, A. Bottum, of Bobcaygeon, Ont. Central Division: Matthew Bender, Jr., Albany, N. Y.; Charles G. Ransom, Cleveland, O. Eastern Division: John F. Seven, Jr., Thornton H. Smith.

Yachting.

SEAWANHAKA CORINTHIAN Y. C.

LAST week the Seawanhaka C.Y.C. closed the interesting and successful winter work which has done so much to aid and instruct its members, and to shorten a winter that has been colder and more tedious than is usual in this climate. The general use of the handsome club house has proved a very important factor in uniting the members and promoting social intercourse among them, but besides the social features it has been the school room for much valuable instruction in special classes and lectures. On Tuesday night were held the graduating exercises of the navigation class, which has been held twice a week under the direction of Capt. Patterson, and on Saturday night the final lecture of the series, on Harbors, was delivered by Capt. H. C. Taylor, U. S.N., through whose kindness we are enabled to give the following extracts, which are of special interest to all yachtsmen about New York. During the summer the house will be open as usual, but the lectures and classes will not be resumed until the end of the yachting season, when it is proposed to carry out on a still more complete scale the experiment so successfully inaugurated.

"Some great harbors, lacking convenient land access, have not been utilized as ports, and are not generally known. Among harbors of the first class may be mentioned Rio de Janeiro, which is well known, Acapulco less known and used, Chiriqui Lagoon in Costa Rica, scarcely known, Carthagena harbor on the Spanish main, Magdalena Bay in Lower California, and Gardiner's Bay in Long Island are, I believe, the most complete harbors I have ever visited in my cruising. The most eminent of authorities on harbors say Gardiner's Bay, with its perfectly sheltered tributary basins, is perhaps the best anchorage in the world.

"Considering our coasts, we should place Halifax, Portland and Boston high among harbors of the second class. Halifax having fogs and reefs outside the entrance; Portland lacking capacity, while Boston's defects are so slight that we probably do her injustice when we do not place her in the first class. New Bedford, Newport and New London are in the third class. New Bedford, difficulty of access and lack of space. Newport, lack of space and bad holding ground. New London, too much withdrawn from outer coast line, and lack of anchorage space. A portion of Narragansett Bay north of Gould Island should, perhaps, be placed in the first class, having almost every advantage demanded by a great anchorage. I have always classed Gardiner's Bay among the few harbors of the first class, and it is, without doubt, first in the front rank upon our Atlantic coast. Some figures will be significant in this connection. Boston can give a good anchorage to 1,827 merchant vessels of various sizes. New York has a capacity for 10,965, with its two harbors; while Gardiner's Bay can accommodate as many as 15,098. New York comes near to being in the first class, but its bar relegates it to the second. Delaware Bay can scarcely be rated higher than third, the low water bay being a poor shelter, even with the aid of a breakwater, and the whole bay and its entrance being obstructed by shoals. Hampton Roads, though the seat probably of a great commercial port in the future, fails of a high place among the harbors of the first class because of a bar, and of the openness of the anchorage grounds, permitting a long fetch of the sea from the eastward; but these defects are not sufficiently serious to place it in the second class. South of this we may note Key West as a second class. On our Pacific coast we have San Francisco, whose bar alone prevents its ranking first class; and the Columbia River mouth, whose very bad bar puts it in the third class. Puget Sound ports have the rare trouble of too deep water for convenient anchorage, and Bellingham Bay, near the line of British Columbia, which is easily in the second class, may, when more is known of it, prove to be in the first rank.

"You will have observed, doubtless, that commerce in establishing a great port does not make a good harbor the first requisite, but has always selected a point of greatest convenience for land access; that being secured, a good harbor in the vicinity is considered desirable, but is secondary in importance; and thus we see Montreal, difficult of water approach, and ice bound for part of the year, outstrip Halifax. New York grows to greatness while Gardiner's Bay is a wilderness. Norfolk languishes, and Newport News is unheard of, while Baltimore enjoys centuries of prosperity as a great port.

"The commercial instincts of European nations are keen, and recognize quickly the need of good harbors, and they call upon their rulers to supply that need. Not so with us in the United States. Our demands upon Congress are feeble and intermittent, and in consequence but little regarded. New York is to-day, all things considered, the greatest trade center in the world. Its harbor is nearly perfect, but its entrance is difficult, at times dangerous for large vessels, upon which so much of its prosperity depends, and its inner waters, which are of noble capacity and proportions, are sadly mismanaged, or more exactly, not managed at all.

"A brief description of the Board of Conservancy of the Port of London and the River Thames will suffice to indicate the general system of government for other great ports of England, difference of detail being caused by the varying circumstances of localities. The Thames at London, compared to New York harbor, is but little more than a muddy ditch; yet a vast commerce is there accommodated. Such methods as are employed at London, if brought to bear upon our port, already so generously treated by nature, would produce results of order and efficiency undreamed of in our present chaotic state. The directing authority at the port of London is a commission known as the Thames Conservancy Board. All important interests of the harbor have representatives upon this Board. The conservators, on the part of the Corporation of London, at the present time, are the lord mayor and six of the aldermen; on the part of the Admiralty, two admirals of the Royal Navy; of the Board of Trade, two gentlemen, one of whom was formerly a captain of a White Star steamship; and of the Trinity House, which has charge of the lighthouses and other navigation interests, two captains, one of them formerly in the East India service. In addition to these, the ship-owners of London are represented by two ship captains; the owners of passenger steamers by one member; the owners of lighters and tugs by two; the wharfinger by one. The deputy chairman of this board is an admiral; the secretary, a navy captain. The engineer of the board is a civil engineer of distinction; and there is, finally, an assistant secretary. This board, clothed in the beginning with considerable power, has given such satisfaction during the past thirty years, that various additional interests have fallen to its care from time to time, until now it is intrusted with a practically complete authority over the affairs of the port of London and its approaches. The value of its services may not be questioned. The natural imperfections of the harbor on the one hand, and on the other the immense traffic which uses it with safety and comfort, are sufficient answers to any doubt. It would seem, therefore, that we could not do better than to imitate our English friends and to put in practice the methods they have found successful. Although there is an entrance much used from Long Island Sound, it is not an entrance consistent with a great port. We must regard Sandy Hook as our principal entrance and the one on which our greatness in the world depends. The long passage through the Sound, with its fogs, reefs and crowded waters, is an objection. Deep sea ships demand a cessation of their labors when they reach land. The difficulties about Hell Gate, with all possible improvements made, will prove insurmountable for large seagoing ships. Doubtless New York is now too great to lose its commerce, even were the Sandy Hook entrance to fail entirely; but in such an event I believe the difficulties of Hell Gate would prove so serious that the shipping and receiving point for our foreign commerce would be chosen east of Hell Gate, perhaps between there and Throgg's Neck, and there would arise a vast suburb, whose prosperity might soon become independent of the parent city. I am led to touch upon this possibility because I have been so often, when urging the importance of Sandy Hook, confronted with the question 'Why should we worry about Sandy Hook, when we have always the Hell Gate to fall back upon?' And this from merchants and practical men of intelligence. Hell Gate is very valuable for the coastwise traffic to and through New York, and that traffic is much larger that New York's foreign trade, and concentrates at the great centers of foreign shipping business, and, as I have said, the bulk of that business is not going to pass through Hell Gate.

"The undoubted evil of depositing the city refuse outside of the bar is not of great magnitude, but the tendency is in the wrong direction, and should be changed. The present system involves a great waste. Much of the refuse can be used by farmers for fertilizing, use can be found for more of it in filling and grading in the neighboring country, and the garbage portions may be disposed of by burning, a method which has given good results in other cities.

"The port must have its harbor affairs directed by competent authority, in whose hands full power is placed. This authority must not be satisfied with making good rules, but must have a force to see them carried out. It is not sufficient on Broadway that there should be regulations for vehicles, but policemen are needed to enforce these regulations. A sufficient number of steam launches must be provided to keep the crowded waterways constantly patrolled. Once assured of having its orders obeyed, the directing authority can proceed rapidly toward evolving order and method out of the present confusion.

"What should be this competent authority which is to supervise and direct our harbor affairs? How shall it be composed, that it may bring order out of present confusion, that it may in fact be competent? A nucleus for a board similar to the Thames Conservancy has been proposed for some years past, and a measure has been before Congress which provides for a harbor commission for New York. This is composed of an officer of the Army Engineer Corps, an officer of the Navy, and one of the Coast Survey; also one citizen of New York, representing the Chamber of Commerce and the other commercial bodies, and one citizen of New Jersey, representing the interests of that State in the harbor. This measure has met with some opposition and will probably meet with more, for there is no suggestion of a change possible, no matter how much it promises to extricate us from our present sad dilemma, which will not be obnoxious to some of the interests involved in the management of the port. There is, indeed, much that is desirable which even this commission would fail to accomplish when confronted by nature's forces and by long-established customs of trade. It cannot be doubted, however, that when the business men of New York awaken at last to the true state of the harbor, some such commission as the one described will be established as the competent authority which, intrusted with proper and sufficient power, shall remove obstacles, remedy defects, and assist our great port in its now halting steps toward that supremacy in the world's commerce for which nature has designed it."

RESOLUTE—DAUNTLESS.—Negotiations are under way to arrange a match between these two well-known schooners, the former now owned by Mr. C. A. Postley and the latter by Vice-Com. Colt, N. Y. Y. C. Resolute, or Ramona, as she will in the future be called, has been greatly altered this spring under Mr. A. Cary's Smith's supervision, a very handsome new stern being added, the plumb sternpost being replaced by a new one, with a rake of 60 degrees; 15 tons of lead have been cast in the keel, which has been deepened 25in.; a pole bowsprit with jib and staysail has taken the place of the old-fashioned rig; all of which alterations will improve her speed and appearance. Her cabin trunk has been extended further aft, and the old pine coamings have been replaced by mahogany, while the cabin, already very handsomely fitted with rich carved oak, will be decorated anew, so that with her new name she will be in most respects a new craft. Dauntless, too, has been thoroughly overhauled this winter, with new topsides, new garboards and extra fastenings, while her topmasts have been replaced by new ones 10ft. longer, with a new outfit of racing canvas. She has returned to her old color, black, after one season in a white coat. Vice-Com. Colt's reputation as a racing man is such as to insure her entry in all regattas, as well as the arrangement of special matches, like the one now under consideration. Both are keel yachts and sufficiently near the same size, Resolute being 110ft. l.w.l. and Dauntless 112ft., to make a contest very exciting. Schooner racing is evidently to be the feature of the coming season, and no better introduction could be had to the revival of the grandest of all varieties of yacht racing than a match between two of the most famous of the old schooner fleet.

THE DEATH BLOW TO INTERNATIONAL YACHTING.—The May number of *Outing* contains an article under the above heading by Captain Roland F. Coffin, in which the present deed of gift and its effect on international yachting is criticised in detail. We cannot agree with Captain Coffin in all his conclusions, but his main points are well taken, and will be freely conceded by the great body of American yachtsmen who still believe in fair play. He says: "It is much to be regretted that the deed of gift of the America's Cup was meddled with. There was not the least necessity for it. Three races had been sailed under it with entirely satisfactory results to the public, to the New York Y. C., and, so far as the deed was concerned, to the challengers, and there did not exist a single valid reason for changing it. * * * In the glamor of these successive international victories men have been inclined to accept the work of their committee without question. The average Down East commodore says, 'Paine and Burgess wouldn't have agreed to that if it hadn't been all right, and therefore it is all right.' The enthusiast of the club says, '— 'em! if they don't like to come and race on those terms let 'em stay away.' The committee does not like to admit that it has made a mistake. It is of no use for the committee and its friends to say, 'The deed is all right,' when those from whom a challenge must come say, 'It is all wrong,' and unless the club desires to retain the trophy on storage at Tiffany's forever without contest, it must attach to it terms which the whole sporting world shall pronounce fair. It is not too much to say that the terms of the present deed have been condemned by the most competent and impartial judges on both sides of the Atlantic."

MONTGOMERY SAILING CLUB.—Third weekly cruise, May 6, 1888, Norristown to Indian Creek and return, distance 5 miles, weather clear and warm, wind brisk westerly:

	Length.	Start.	Finish	Corrected.
Igidious, W. Rochell	15.00	1 40 00	3 05 15	1 25 15
Playford, J. Geisdale	15.00	1 40 00	3 10 00	1 30 00
Priscilla, E. Stanley	15.00	1 46 20	3 10 22	1 30 22
Flying Eagle, J. Berndt	15.00	1 40 00	3 11 09	1 31 00
S. H. Querner, J. Lever	15.00	1 40 00	3 18 38	1 38 38
Elsie, E. McAllister	15.00	1 30 00	3 21 48	1 41 48
Iola, Geo. Walker	15.00	1 30 00	3 30 35	1 50 35
Gracie, E. A. Leopold	12.00	1 30 40	3 31 37	1 51 37
Warren, John Wolf	14.00	1 30 00	3 37 20	1 57 20
Sadie, Geo. Ritter	16.00	1 34 40	Capsized.	
Bowers, C. De Haven	15.00	1 40 40	Capsized.	

The Igidious has won first place in every race this season. She is fitted with a steel centerboard weighing 50lbs. The Priscilla also has a steel board and made the fastest time for the course today that did not win, as she was set back 6m. 20s. at the start for excess of sail area. The Gracie was reefed down to 59ft. The canoe Sadie was reefed to 91ft. and the other boats carried full sail. Judge, William Alcorn.

NEW ENGLAND Y. R. A.—At the annual meeting on April 25 the following officers were elected: Pres., J. B. Rhodes; Vice-Pres., W. L. Jeffries; Ex. Com., L. M. Clark, E. C. Neal and E. D. Dixon. A length and sail area rule was proposed, which will be acted upon at a meeting this week. The following classification, by l.w.l. length, was also adopted: 35 to 40ft., 30 to 35ft., 21 to 25ft., 25 to 30ft., 18 to 21ft., and under 18ft.

LAUNCH OF MR. WYETH'S SCHOONER.—The schooner building from Mr. Burgess's designs by Wm. Eddy, at Marblehead, was launched on April 28. She is 72ft. over all, 62ft. l.w.l., 16ft. beam, and 10ft. draft, with 33 tons of lead in her keel and centerboard

GRACIE AND "TWINESHARP."—Norristown, Pa., May 7.—A race was sailed on May 5 between Thos. W. Bluett, of Philadelphia, and E. A. Leopold, owner of the skiff Gracie. The race grew out of a controversy recently published in the FOREST AND STREAM regarding the comparative speed of a small ducker and the Gracie. Mr. Bluett ("Twinesharp") sold his ducker, 14×44, with 72ft. sail, shortly after the challenge was issued, but expressed his willingness to sail the Norristown ducker Warren, 14×45½, against the Gracie, requesting, however, that the latter should not attempt to sail around him six times during the race, as was proposed by Mr. Leopold. It was agreed that the race should be on even terms. The start was made at 9:05 A. M., with a very light wind;

	Length.	Start.	Finish.
Gracie, E. A. Leopold	12.00	9 05 00	11 13 40
Warren, "Twinesharp"	14.00	9 05 00	withdrew

The judges waited half an hour after the Gracie finished, and as the Warren was not in sight, they went home for dinner. The course is 5 miles, and the Warren was supposed to be about two miles behind when the Gracie finished. The tie between the tuckups Igidious and G. W. Bowers from the cruise of April 22 was sailed off at the same time:

	Start.	Finish.
Igidious	9 00 00	11 14 10
Bowers	9 00 00	11 14 11

The Igidious won by 1s. The Gracie started 5m. behind the tuckups and beat them 30s. at the finish. Judge, Wm. Alcorn.

ROYAL CANADIAN AND TORONTO YACHT CLUBS.—These two clubs of Toronto, Canada, are now making an effort to amalgamate under the name of the former, the older club. The following statement has been made up of the strength of the two clubs:

	Assets.	Liabilities.
R. C. Y. C.	$21,500	$14,500
T. Y. C.	6,500	3,000
Total	$28,000	$17,500

	Membership.
R. C. Y. C.	367
T. Y. C.	275
Total	642

Estimated joint annual revenue	$9,000
" " " expenditure	7,500
" " " surplus	$1,000

Should the union be consummated it will make the new club the second in America in point of membership.

MADGE—MERLE.—A match is talked of between the 10-ton cutter Madge; now owned in Rochester, and the Merle, of Oswego. Madge is the Watson cutter that raced so successfully with the sloops in 1881, while Merle is a Burgess boat, new last year. She is about 1ft. shorter than Madge and over 6ft. wider; a deep centerboard with a heavy lead keel.

BANTAM.—The 26ft. cutter, designed by Mr. Burgess, in 1886, for Mr. Archibald Rogers and built by Lawley, has been purchased by Mr. Woodbury Kane, who will cruise in her this season about the Sound. Her name, Medora, will be changed to Bantam. She is now hauled up at Bay Ridge for a suit of copper.

BOSTON FISHERMEN.—The new schooner designed by D. J. Lawlor will be built for Capt. John Cannon by A. D. Story. She will be similar to the Sylvester Whalen, but of less displacement and deeper. Mr. Story has another order in prospect.

DORCHESTER Y. C.—In addition to its quarters on the water, this club will establish a town house before next winter, after the plan of Seawanhaka C. Y. C.

SEAWANHAKA, C. Y. C.—The third regular meeting will be held on May 12, at the club house, at which among other important business Mr. John Hyslop will move striking out the whole of Rule XIII. of the Racing Rules entitled "Sails," and substituting the following: "There shall be no restrictions as to sails excepting that Classes V., VI., VII. and VIII. sloops, cutters and yawls, shall be restricted to topsails which do not extend above the truck nor beyond the gaff end. No club or head yard on spinakers shall exceed in length one-thirtieth of the L.w.l. length of the yacht, and no foot yard or club shall be permitted." Mr. Hyslop will also present a modification of the present Table of Time Allowances and will move the adoption of his amended Table. A bill has been presented before Congress authorizing the loan by the secretary of the Navy of an old war vessel to Captain Howaad Patterson, for the summer cruise of a navigation class of yachtsmen.

LARCHMONT Y. C.—A meeting was held on May 5, at which the classification lately adopted was changed to read as follows: Schooners—Class A, over 91ft.; B, 91ft. and over 79ft.; C, 79ft. and over 68ft.; D, 68ft. and over 59ft.; E, 59ft. and under. Sloops, Cutters and Yawls—Class 1, over 81ft.; 2, 81ft. and over 71ft.; 3, 71ft. and over 62ft.; 4, 62ft. and over 54ft.; 5, 54ft. and over 47ft.; 6, 47ft. and over 41ft.; 7, 41ft. and over 35ft.; 8, 35ft. and over 30ft.; 9, 30ft. and over 25ft.; 10, 25ft. and under; 11, catboats, under 32ft. The numbering of the lower classes was also changed to correspond. Some other minor changes were made and the courses were slightly altered. Thirteen new members elected. The club will celebrate the completion of the new club house on May 12. The sum of $3,000 has been appropriated for prizes for the annual regattas.

SHACKAMAXON Y. C.—*Editor Forest and Stream:* A meeting of the Shackamaxon Y. C. was held at the club house foot of Shackamaxon street on April 30, at which the invitation of the Montgomery Sailing Club of Norristown to go up there with the fleet to race them was accepted, and a committee apointed to arrange for dates and transportation. A large party will go up to attend the race, which is virtually a test between two different types of boats. The prizes for the spring regatta, June 11, consisting of handsome marine glasses and compasses, were on view and attracted considerable attention.—J. M. ARCHER.

CEDAR POINT Y. C.—This active young club has just passed its first birthday with a membership of 41 and a fleet of 24 yachts. The officers for 1888 are: Com., Francis Burritt; Vice-Com., J. H. Jennings; Sec'y, Edwin Thorne; Treas., P. G. Sanford; Meas., S. S. Dayton; Regatta Com., A. S. Cram, F. W. Hurlbutt; Membership Com., L. K. Youngs, J. H. Jennings and E. S. Wheeler. The yachts are classed and rated by the waterline length. The club is located at Saugatuck, Conn.

SAVIN HILL Y. C.—At the annual meeting on May 2, the following officers were elected: Com., James H. Stark; Vice-Com., I. H. Odell; Fleet Captain, Henry G. Patten; Sec., J. Herbert Shaw; Treas., H. G. Patten; Meas., A. Lawrence Kidd; Delegates to N. E. Y. R. Association, F. J. Stark, W. H. Besarick, J. L. Corr. The present club house has been repaired, but a movement is now on foot to replace it by a new one.

NOOYA, s.y., has been sold by J.W. Andrews to J. Montgomery Sears, of Boston.

SALE OF SALMON RIVERS IN ANTICOSTI.—In another column will be found an advertisement of the sale of the season's fishing on the famous salmon and trout rivers of Anticosti Island. The privileges will be sold at auction by A. J. Maxham & Co., Quebec, on the 22d instant, who will furnish all required information. These rivers have been fished a little in years past, and have excellent reputations.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

O. M., Ottawa.—Choose the double barrel gun.

J. L., Liberty, Tex.—There is no national championship medal for skill in rifle shooting at moving objects.

A. J. T., Philadelphia, Pa.—We know of no steamer of 70ft. that has beaten the Mary Powell. Stiletto, 94ft., is probably the smallest that has done so.

S. R. K., Jr., Philadelphia.—The New Jersey woodcock season will open in Monmouth county Nov. 14 and extend to Dec. 25. We cannot name a locality near the town.

BEAGLE, Cleveland, O.—1. We print elsewhere an article from "Iron Ramrod," which may answer your request. 2. Send us the beagle paper, and open the discussion yourself.

NATURA, Orillia, Ont.—Could two young men that hate civilization make money enough out of bird stuffing to keep them if they would go out camping and working at it all summer, and learn themselves. Ans. We think not.

IF G. F. M. of BOSTON will send me his address I will put him on the track of some good black bass fishing within an hour's ride by rail of Boston, and after July 8 will at any time show him the place and cast a fly with him.—W. B. Arnold, Rockland, Mass.

A. M., Plantsville, Conn.—The standard for the Irish setter says "The color should be a rich golden chestnut or mahogany red, with no trace whatever of black; white on chest, throat or toes, or a small star on the forehead, or a narrow streak or blaze on the nose or face not to disqualify."

GEORGE, Quincy, Ill.—The thwarts are placed about 7in. below gunwale, the forward one so that the boat will trim with one man on and one in the stern, the after one far enough aft to leave room for the legs of man on forward thwart, then the boat will usually trim with but one man in her, on the after thwart. The rowlocks are placed from 9 to 10in. abaft the after edge of thwart. You can use oars 8ft. 6in. long.

LIBERTY.—Where can I find a place within 250 miles of New York city where either weakfish or blackfish are plenty and run large size; where fine fishing can be counted on with certainty? Ans. You may find such a place at almost any fishing place between Cape May and Montauk Point. During some seasons the fishing for weakfish may be best about Barnegat Bay or in the Kills at Staten Island; this is impossible to predict. Blackfishing is better further east, and you will find good fishing for them east of New London, from Groton to Wood's Holl, where you will also find plenty of sea bass. The season is from June to October.

J. QUAY.—In planting young trout in streams, where should they be placed and how guarded, if at all, and is any subsequent attention necessary? Ans. Always place them near the headwaters, if possible, and in small streams select such as have good hiding places, as rocks, weeds and obstructions, near which they will lie. Instinct teaches a young trout to keep out of the way as much as possible, and they will scatter to find food and shelter. If placed in deep pools many will be devoured by the larger ones, and the small fish seem to avoid these places. You cannot well guard them, and if you confine them closely they will starve unless you give your whole time to them. The only attention you can give is to watch for their many enemies and kill them.

CORMACK & CO.,
81 New st., or Box 3,700, New York City.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

WOODCRAFT.
By "NESSMUK."
A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

The Audubon Magazine

BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

ANSWERS TO CORRESPONDENTS.

DOG SHOWS.

THE success of dog shows has been considered so problematical in the past that few individuals have been plucky enough to risk these ventures on their own responsibility. The rule has been for club members to pledge themselves to stand whatever losses might be incurred by the exhibitors, or to divide the profits which might accrue. This year has been unusually favorable for dog show projectors, the shows of all the clubs have been remunerative; and individual enterprise has been tempted to speculations in the same field. The show recently given at Baltimore was the individual undertaking of Mr. Frank Hall, of Philadelphia, who is reported to have cleared $1,500 profits on the venture. This has encouraged Mr. Hall to give other shows, and he announces that the next one will be held in Washington.

Mr. Hall has thought it necessary to adopt the expedient of organizing himself and his employes into so-called kennel clubs. His Baltimore show was announced to be under the auspices of the "Baltimore Kennel Club," although it appears that exhibitors, judges and other persons concerned understood perfectly well that it was "Hall's show," and it was commonly spoken of as such. At Washington a similar plan is to be followed; the show there is to be given by a supposititious "Washington Kennel Club."

To this mode of doing things it is rather late in the day to object, for the same thing has been done before. There can be no harm in it so long as the public understands the true state of affairs. If Mr. Hall, or any other man wishes to conduct bench shows for profit, he has a perfect right to do so; and if he pays his prizes and discharges his obligations to the satisfaction of those concerned, his enterprise is legitimate and should have its reward.

The more dog shows, the better. American shows are destined to be developed until the annual exhibitions shall be numbered by the score. They will not be confined to the cities and larger towns, but they will be as common as cattle fairs. They will not always be given by "kennel clubs" nor "bench show associations." Individual management will be recognized as quite proper, and a given show will be patronized and supported in a measure commensurate with the confidence commanded for it by its management, be it of club or individual.

HANGING IN COMMITTEE.

THE bill for the protection of the National Park is still in the hands of the Committee on Public Lands. There seems little prospect of its being brought before the House for several weeks, for the debate on the tariff is at present occupying all the attention of Congress. Spring is opening in the mountains, and before long the tide of summer travel will reach the borders of the reservation. From the Northern Pacific Railroad, on the north, and the Union Pacific, on the south, sight-seers in greater numbers than ever before will flock to the wonderland of America.

They will find it, as it has always been, unprotected by law, but with a guardian who will do for its protection everything that is possible under the circumstances. His force, however, is not nearly so large as it should be to adequately patrol the Park, and especially does he need half a dozen more competent mountain men, to act as scouts and locate evil doers.

If it happens this year, as it did last, that people who offend against the rules and regulations established for the Government of the Park by the Secretary of the Interior, find themselves summarily ejected from the reservation, without process of law, they will have to thank only their representatives in Congress, through whose neglect the Park remains without courts or any machinery of justice.

It is possible that the bill may come before Congress for action before travel in the Park opens, but this is not at all probable, and it may be midsummer before any action is taken on it.

FAIR PLAY IN THE CUP RACES.

IN alluding to Thistle and her races, *Land and Water* of May 5 indulges in the following splenetic attack on Americans, as well as on some British yachtsmen:

There is no doubt that, by side issues and unsportsmanlike conduct, the Yankees (so far as the yacht racing section are concerned) organize victory by any shabby means, and unquestionably, as was the case with Cambria and Livonia, the Thistle was another victim. We advisedly leave the Genesta out of the list, as Mr. Beavor-Webb was a whitewashed Yankee before that boat went over, and "British Yachtsman" (save the mark!) of the *Field* went out of his road to explain away the defeat of the Genesta. Mr. Henn, R. N., undertook to uphold the merit of the tank Mr. Webb designed for him, but it was a sorry business; and in our opinion the only boat which may be called "representative" (other than the Cambria) that has sailed for the America's Cup, was the Thistle. We can only reiterate our expressed opinion that the Thistle is a marvel of speed, and wish that some of the Yankee bastard cutters would come over and give her a chance round some of our regatta courses.

After the conclusive beating that Thistle received in the final race, there was but one thing for fair-minded sportsmen to do—to concede freely their defeat; and as all connected with Thistle have done so, such comments as the above by one who witnessed none of the races of 1885-86-87, are of little account. As far as the races of Thistle, Galatea and Genesta are concerned, the *Land and Water* can produce no instance in which perfectly fair play was not accorded, if we except the retention of the inside course. It is only too true that there are illiberal and unsportsmanlike men on this side of the Atlantic as well as the other, and they have been heard often enough in connection with international yachting, from the days of Ashbury down; but in spite of their efforts, there are no instances in the late series of races where the challengers have not had perfectly fair play and the most courteous treatment. To this all have borne ample testimony—Sir Richard Sutton, Mr. Beavor-Webb, Lieut. Henn, Mr. Bell, Mr. Watson, and the many visitors who accompanied them last year; and in the face of all this such insinuations as those quoted above can carry no weight whatever. Lieut. Henn has promptly answered them as follows in a letter to the *Land and Water:*

Having witnessed the races between the Thistle and the Volunteer I can testify that they were conducted throughout by the New York Yacht Club in the fairest and most sportsmanlike manner, and the universal wish that I heard expressed by American yachtsmen, and in fact by every one, was, "May the best boat win." The reason the Thistle failed to win the America's Cup was simply this: She was unable to sail as fast to windward as the so-called bastard cutter. I have sailed many races in American waters and on every hand have met the most sportsmanlike and honorable treatment.

The attack on Genesta and Galatea and those connected with them is no less disgraceful than that on Americans. When Genesta challenged she had beaten Irex and was the representative yacht of the year, in type and in record; and Galatea, whatever her faults of model, was the legitimate product of the rule so strongly upheld by all British yachtsmen for many years. Both yachts were owned by gentlemen who came here as strangers but left friends behind in every port they called at; in spite of their defeats they carried the national flag with honor, and it little becomes a British journal to throw discredit on ventures that, though unsuccessful, were bold, manly and sportsmanlike throughout. The sort of fair play that the *Land and Water* would accord to a visiting yacht may be easily inferred from the last sentence; it would choose a course where the centerboard could not be used on account of draft, where tides, currents and shoals make the race a mere question of local knowledge, and consequently in favor of the home boat. This was what Mr. Chamberlayne proposed for the Arrow-Mayflower match. It is very much to be regretted that the action of the committee of revision of the deed of gift gives ground for such attacks as the above; but fortunately the new deed does not represent the sentiments of American yachtsmen any more than the *Land and Water* does the British sportsmen.

SNAP SHOTS.

THE fly-casting tournament will be held at Harlem Mere, in the Central Park, this city, Wednesday and Thursday of next week. The Mere is at the upper end of the Park, and may be reached by either of the elevated railroads. The prize committee have made a change this year in the manner of awarding prizes. The prizes are assigned in order, and winners are not left to choose from the entire list, as has been the practice in the past. The intent of this, we presume, is to discourage any tendency to "mug-hunting." Every angler who is sincerely interested in the success of these tournaments must deprecate the creeping into them of anything like a mercenary spirit. Here, if anywhere on the broad earth, emulation should be generous, and each should rejoice in the cast of his competitor even more than in his own.

One of the shooting matches at the coming tournament of the New York Association for the Protection of Fish and Game, at Auburn, will be what is called a walking match. The contestants starting from a given point walk toward the traps, and the birds are sprung at the option of the trap puller, when the shooter is at different distances from them. By the use of more than one trap, birds may be made to rise from different quarters of the field. This is the nearest approach in artificial shooting to the actual work of the field; and it is as near to actual work as many trap-shooters ever come. The walking match was devised by Mr. J. E. Bloom, formerly connected with the clay pigeon manufacturers.

It is a curious condition of affairs that the largest city on the western continent should have no shooting ground convenient of access where business men may repair for recreation with trap and gun, yet such is the case with New York to-day. These conditions are, however, in a fair way of change. At the meeting last Friday of gentlemen interested in providing a trap-shooting ground, the initial steps were taken, and it will not be long before it will be practicable for a business man to leave his office and within half an hour find himself gun in hand at the traps. Notice of the proposed organization of the New York Suburban Shooting Ground Association will be found in our trap columns.

A dispatch from our Yellowstone National Park correspondent announces that the Excelsior Geyser, sometimes called Sheridan Geyser, has resumed action, after a rest of six years. This geyser is in the Midway Geyser Basin; its spoutings occur at intervals of from forty-five to fifty minutes. It is attracting many visitors. The roads in the Park are now so free from snow that wagon traveling is practicable over them.

SAM LOVEL'S CAMPS.—IX.

PELATIAH had not been brought up in the woods to be scared by owls, as he had more than once assured himself as he stumbled along the darkening wood road, half carrying, half trailing his big pickerel and bass, but he fancied that their hollow hoots had never sounded so like derisive laughter, "Ho! ho! ho! Ho! ho!—ho! ho!" repeated by one another till the echoes joined in the dolorous mirth. A whippoorwill, far away on the border of the forest, was not insisting on the summary chastisement of poor Will, but repeating this new culprit's name with sharp reproachful reiteration, "Pel-a-tier, Pel-a-tier, Pel-a-tier!" The trill of a toad rang in his ears like a long-drawn jeer and the bellowing of the bullfrogs along the Slang was shaped by his fancy into solemn words of rebuke, advice and warning, "Didn't go hum! No, no! Go hum! Go hum! Don't du it agin, agin, never agin!" Not a word of comfort for the poor fellow among all these voices of the night, that followed him out of the gloom of the woods, and looking up to the sky, he saw the stars blinking at him with unpitying eyes.

Shellhouse Mountain, which but yesterday he had despised as a hillock that would be but a pimple on the face of old Tater Hill, now uplifted on a vague foundation of shadows and asserting itself as a bound of the visible world, stood before him and frowned upon him like a dark, scowling brow. The lights that dotted the highway went out one by one, as the farm folks went to bed but a little later than their poultry. The living world was forgetting him or cared nothing for him, the good-for-nothing fellow who had broken his word, and Bose was barking as if he scented a stranger. Yet it heartened him a little when, prompted by his faint shadow, he looked over his right shoulder and saw the thin crescent of the new moon. In confirmation of this lucky sign, he presently discovered a light shining from an upper window of the big white house, Lowizy's window, he was sure, and perhaps, too anxious to sleep, she was waiting for him. Yes, now he saw her form, a lovely silhouette set in the frame of the casement. She was looking for him, and he was only restrained from calling to her for fear of arousing the household. He would have ventured to whistle just once if his tremulous lips had not refused to pucker. Then the silhouette faded to a shadow and the light was put out. As he entered the door-yard Bose ceased barking and came whining and panting to welcome him, and assure him that he had at least one friend there, and who, following close at his heels, superintended the hanging of the precious fish in the cool, safe corner of the woodshed. In those happy times when tramps were unknown, farmhouse doors were never fastened at night, and in summer were often left open, as Friend Bartlett's kitchen door was now. So pulling off his boots at the threshold, Pelatiah silently went in and made his way to his bed in the kitchen chamber.

The blithe chorus of the robins had not long been ringing in the dewy freshness of the early morning, when Pelatiah was astir, an hour before any other member of the family. First he cleaned the fish, so nicely that Antoine could have found no fault, and then he drove up the cows from the night pasture. He was milking his second cow when Friend Bartlett appeared with his pail and stool, and he was glad to see no shadow of displeasure on his employer's kindly face, to detect no tone of reproof in his cheery voice when he addressed him.

"Well, Peltier, thee didn't get back quite so airly as thee expected, did thee? I didn't hardly think thee would, for when I was a boy an' uster go a fishin', if they bit, I hated ter go off an' leave 'em, an' if they didn't bite, I wanted ter wait till they did."

"Oh, I'm awf'l sorry, Mr. Bartlett, an' shameder 'n I c'n live, but I couldn't help it!" and he went on explaining his mischance, forgetting to milk old Spot till she thought he had done with her and moved on. When he went to the cheese-room with two filled pails, by some lucky chance, Lowizy was there, blushing like a June rose and never handsomer than now.

"O, Peltier!" she cried, coming toward him, radiant with a pleasure that surely could not be feigned, and so shone upon him that the last icy corner of his heart melted at once. "O, Peltier! I'm dreffle glad ter see ye! I was afeared 'at you was drownded an' I never slep' one wink all night a thinkin' on 't!"

"Would you ha' cared 'f I was drownded, Lowizy?" he asked, trembling so that his unsteady hands poured half the milk outside the strainer and a little on the floor.

"Don't ye slop!" she said sharply, and then in a tenderer tone, "Don't ye think I would? But you never thought o' me onct a-worryin' while you was hevin' high jinks wi' your frien's!"

"I swan tu man!" swore Pelatiah, as he set down his last-emptied pail, "the' wa'n't a minute 'at I wa'n't a-thinkin' 'baout you while I was a-fishin' an' when we was hove away on a deserlate islan', an' a-wishin' 'at I hedn't ben cross an' 'at I'd filled the wash biler for ye. O, Lowizy, I was mean an' I'm sorry, an' I won't never du so agin, an' I wish't you c'ld forgive me, but I don't s'pose you ever can."

She could not withhold forgiveness so humbly asked. She rushed to him with upturned face and put her arms astride his neck, one cream-bedaubed hand holding the dripping skimmer, the other the half-filled basin, and as the tins clashed behind his head he held her in his arms and kissed her.

"Peltier! Hey, Peltier! Bring back them pails!" Friend Bartlett shouted from the cowyard gate.

As the heavenward-soaring lark, pierced by the cruel shot of the gunner, falls fluttering down to earth, so at Friend Bartlett's impatient call Pelatiah dropped from the rose-tinted clouds whereunto in delicious affright he had been upborne, and went stumbling through the door-yard knot-grass, while a still, small voice repeated Sam's words, "They'll fool a feller agin an' agin." But his heart whispered that this could not be fooling, and then, as he sat down to his cow, sang inwardly to him this sweet assurance, while the dancing streams of milk kept rhythmic time to the song that no one else in all the wide world could hear.

At breakfast, Rebecca Bartlett's placid face beamed kindly upon him as she said: "Thank thee, for the nice mess o' fish thee brought, Peltier, but I'm sorry thee had such a tryin' time. We see it stormin' on the lake and felt a good deal concerned about thee, thinkin' thee might be out in a boat, and more so when thee didn't come back, for we knew thee would if thee could."

The gloom of night was gone, its dolorous voices hushed. Sunlight flooded the earth and the soft air was full of the joyous songs of birds. Could this world, now so full of light and joy, and warm with love and kindness, be the same that so lately frowned upon him? He would never doubt the signs of the moon again, and never Lowizy.

When the next Sunday came, Pelatiah again declined to follow Rebecca Bartlett's suggestion that he should attend Friend's meeting. Yet he heard something of the simple service, for he was wandering with Lowizy along the western rocky slopes of Shellhouse, where, hidden by the leafy screen of the woodside, they could look forth across the pasture to the gray and brown shingled sides of the old meeting house, through whose open doors and windows came the voice of the preacher, whose spirit was moved most audibly. To-day, certainly, the green and flowery aisles of the woods were pleasanter than that barren interior, and distance softened to tunefulness the doleful cadence of the sermon.

The "young come-ups," though a week older, had lost nothing of their pungent sweetness. In fact he, who a week ago had thought he never could touch one again, now was sure they never tasted so good. If at times the low song of the pines seemed to voice solemnly the words, "They'll fool a feller agin an' agin," he shut his ears to it, it was not sung for him.

ROWLAND E. ROBINSON.

THROUGH MIRAMICHI WITH ROD AND RIFLE—I.

ON the morning of August 20, 188–, a morning that broke glorious over the Nepissiquit Bay after two days of mist and rain, I found myself bidding good-bye to our well-fed host at the Wilbur Hotel, Bathurst, New Brunswick. Seated on an express wagon piled up with boxes and bags, and bristling with guns and rods, with two Indians perched on precarious eminences of the motley pile, we waved our farewells. A pair of weedy colts, better up to their work than their appearance promised, bowled us swiftly over the rough road, past farms and lots of uncleared forest, a distance of some nine miles, to the Papineau Falls on the Nepissiquit River, above which our canoe White Heather awaits us.

The Falls presented a very fine spectacle, the river pouring itself over a ledge of granite, and where it has receded leaving curious traces of water sculpture, such as circular basins in the solid rock, with the round stones still remaining, the gyrations of which had scooped the "pot-holes," so called. Here we left our wagon, which was to proceed along the rough lumber track on the river's eastern bank to join us some sixteen miles above at the Grand Falls, and this, therefore, will virtually be the starting point of the expedition.

The muscular arms of my two Indians, Joe and Peter, swiftly forced the light canoe against the rapid current, and having a permit to fish as I moved along, I willingly rested them at the principal salmon pools.

The first notable pool is Gordon Meadow Brook, named in honor of a former Governor of New Brunswick, famed for his sporting proclivities. Here the river is wide and shallow, but the mouth of a tributary stream invariably has a great fascination for the Salmonidæ, and this proves no exception.

Fishing down some unpromising looking water, a cautionary word from Joe as we approach the peculiar swirl that marks a sunken rock, puts me on my guard, and not in vain. As the black-doe fly swings slowly round about a yard from the hidden rock, there is an upheaval of water, dear to the angler's eye, and the back fin and pink side of a large salmon have been revealed and quickly curtained by the closing flood. A few moments to rest him, and I send the fly inch by inch nearer to where he broke, on the tip-toe of expectation. But no response. Surely he did not get a taste of its quality. What can be wrong? "Perhaps he has moved, sir," said Joe; and acting on the suggestion, I lengthen my line and send a cast several yards away to the other side of the ripple from the rock. The response was immediate; with a sidelong rush that showed his black back and gleaming sides, he seized the fly, and instantly the line began to hiss from the reel, while the rod was strained almost double. He proved a very gamy fish of nearly sixteen pounds; and evidently set a high estimate on the value of his life, for he fought long and valiantly, and left no tactics untried to rid himself of the toils. A series of high springs, a straightaway rush at the pace of ninety miles an hour, twisting over and over under water and jerking heavily, striking savagely at the leader with his tail—all proved of no avail. Admiration of his pluck almost made me regret his fate; but Joe's relentless gaff quivered for a moment only above the victim, then instantly, with unerring aim, the bright steel was buried in the shining side, and the metallic body was laid, bright and beautiful, on the bottom of the canoe. Before leaving this pool I also killed a fine grilse of four pounds weight, which died game, and two large sea trout of a combined weight of five pounds.

A beautiful pool just beyond, where some immense masses of rocks overlook a lake-like expanse of the river, is noted as the place where a gentleman of St. John encamped with his whole family after being burned out of house and home by the great fire. As we passed a brood of young shield ducks were diving and disporting in a very lively fashion.

Among the most noted camping grounds that we passed, I must particularize the Middle Landing, where the river contracts itself into a deep, narrow gorge, and then pours itself into a placid pool, where grilse and salmon delight to linger; the Big Chain, one of the most picturesque parts of the lower river, where Lady McDonald spent a few weeks of the previous summer; the portage path here is like a bit of fairyland, so wondrously lovely is it with sweet, flowering shrubs and hazel copses, with a bubbling ice-cold spring and deliciously cool banks of ferns and mosses.

Little Chain is another beautiful pool, doubtless endeared to my memory because it proved a lucky one. Here I killed another salmon and raised a grilse, but could not charm him to make a second attempt at black-doe or fairy. A bear had been reported as seen at this spot a few days previously in the act of taking a bath and fishing.

Toward evening we find ourselves no longer struggling with a rushing current, but paddling apparently on the bosom of a broad lake. Quickly traversing its expanse we enter a gorge, where the water at first is still and dark, and the precipitous rocks rise on either side to the height of from one to two hundreed feet. The shades of evening were already closing over the landscape, and curtained as we were by the steep sheer sides of the cliffs, the gloom grew intense. We knew that in these rent rocks we witnessed the work of myriads of slow years, during which the waters had been chiseling out this passage. There was an awfulness about it difficult to describe. Pushing through the gorge for nearly half a mile, at a sudden turn I looked up and beheld confronting us:

> The giant element
> From rock to rock leap with delirious bound,
> Crushing the cliffs beneath.

I felt that seldom in my life had I witnessed anything more impressive. We had passed through the galleries of the sculptor, and here we stood, face to face, with the power that, unwearied with untold centuries of labor, was still at work carving the solid rock in the old fashion.

A steep pathway led up from the ravine of the river bed to a level plateau that formed a lovely camping ground, and had evidently been very frequently used for that purpose. Here we found our baggage awaiting us, and in the fast waning light we cut our tent poles and fire wood, and soon the air was fragrant with the steaming tea and the juicy salmon steak broiling over the glowing coals. The cataract was hidden from view by a growth of birch, but its roar filled the air not unpleasantly.

Still later in the evening shouts were heard from some French half-breeds, who always make a noise as they travel and are therefore poor guides, if any hunting is aimed at.

Two Boston gentlemen—one of whom, an old college chum, I had last met quite as unexpectedly on Fleet street, London, an antithesis as direct as conceivable to this quiet scene of sylvan beauty—were making a canoe voyage up the Nepissiquit, intending to portage to the Tobique River, and descend by that stream to the St. John. After a pleasant exchange of hospitalities they pushed on to the pools of the Upper River, haunted by the giant trout; while I concluded to remain here to do another day's salmon fishing below the falls, and to enjoy the quiet repose of the succeeding Sunday in this romantic spot, from the allurements of which I found it difficult to tear myself away.

It is difficult to decide which view of the falls is most impressive, that from the canoe below, looking upward at the seething torrent in the act of taking the delirious bound, or that from the cliff above, where one looks down upon the white and tortured waters, writhing between the rocky barriers after they have made the fearful leap. On the cliff above are carved the names of many, who like us have with awe bent over the giddy summit, and looked down upon the raging abyss immediately beneath. Among them we recognize the names of officers in Her Majesty's service, now perhaps in sun-scorched India or Egypt, who, doubtless, when oppressed with the glare of eastern skies, sometimes think tenderly and affectionately of such spots as these in our happier climes.

Immediately below the falls is one of the most curious salmon pools in the world. It is called the Falls' Pool. The water is not very deep, and where the salmon lie it is calm and quiet. The difficulties of playing the fly in still-water are so well known to sportsmen that it would seem impossible to take any fish here. But fortunately a great fragment of rock, detached from the cliff, slopes upward from the river's edge, and resting on a narrow ledge overhangs the pool. Crawling upon this rock on all-fours and entirely concealed from view, the fisherman can throw his fly lightly on the pool, and allowing it to rest for one moment only on the calm surface, immediately withdraws it, if not taken. One clumsy action will entirely spoil the fisherman's chances, until a fresh fish slips into the pool, which is continually happening. The "old soldiers" seem to know the deception, and occasionally turn on the side, and eye the feathery cheat in a side-long mocking way that is very provoking. The only fish hooked are those that have newly arrived in the pool. If the throw proves successful, the moment that the fly touches, like an arrow shot from the bow, a torpedo-like shape darts diagonally toward it, and floundering for one moment on the surface disappears below. The other fish appear to eye the hooked one with amazement, but hardly with alarm. They evidently fail to take in the situation, and draw aside lazily when he comes among them, as if to implore sympathy and aid. Seeing that there is no relief here for him, the fish usually darts down stream, and the Indians bringing up the canoe, the fisherman steps in and gaffs his fish a few hundred yards down the river. To fish this pool successfully a man must be endowed with the qualities of patience, skill, tact and observation, in fact a being as far removed as possible from the idiot defined by Dr. Johnson as an angler. Such fish as are here found are not to be caught by fools, they can only be taken by men of acomplishments.

Leaning over the edge of the protruding rock I counted sixty salmon fanning the sands of the pool below, but I was told that many years back it was a common thing to count upward of two hundred in this pool. After vainly essaying to scale the falls they slink back here to show their disappointment by indulging in a lazy sulk. In vain for them exist in the upper river above the falls most lovely pools and boiling rapids which their restless intrepid spirits would have delighted to achieve. They have come only some twenty miles from the river's mouth. Could not a small grant of government money be made to build a fish ladder that would enable the fish to surmount this great natural obstacle and open to them the remaining sixty-five miles of river and the three lakes, and furnish a journey from the sea worthy the ambition of the most aspiring salmon?

We can well believe the tales of canoe loads of salmon speared here in old times when game wardens were a thing unknown. The fish would be absolutely helpless and the birch-bark flambeau would inevitably betray almost every one to the relentless spear. Of course so famous a pool is not without its salmon myths and traditions. The writer has been told on excellent authority how one forty-five pounder committed suicide by leaping

into the canoe, how another rushed down stream with a line of one hundred yards and was again made fast. Gentle reader, the writer also heard other stories far more wonderful, but he will not rehearse them as he wishes to gain confidence and esteem, and fears to provoke such criticism as he once overheard of a brother angler: "How strange that men who in other relations of life are truthful in speech and trustworthy in character, will lie with audacious hardihood about fish."

With a sigh of regret the salmon tackle was put away and the beautiful trout rod is got ready. What a toy-like thing it seemed after the ponderous sixteen-foot salmon rod. We took a long lingering look behind at the brown backs in Falls' Pool, and regretting for their sake and our own that the power is denied them of accompanying us in our progress through the upper river, we bade them a sad adieu. Our various packages have been skillfully stowed in the canoe, that surprised us by its capaciousness; the canvas tent is spread as a covering over the cargo; the senior Indian Joe takes his station at the stern; gun in hand I recline as comfortable as circumstances admit on the baggage; two pairs of muscular arms are impelling us up the swift current. Onward! Each turn of the river is to open up to us a new wonderland! With enthusiasm thought flies ahead to the upper reaches before us to the fabulous trout that haunt the upper pools; to the bears and moose and caribou. Heaven help them that may wander within reach of our rifle.

Without one sigh of regret we reflect that we are rapidly leaving civilization and its cares behind us. In exchange, nature is steeping our whole being in her gladness and freshness. The west wind is wafting to us from the woods the resinous scents and odors of wild flowers. The glorious sun is touching all things with heavenly alchemy.

> Can we dream of wars and carnage,
> Craft and madness, lust and spite;
> Roaring London, raving Paris,
> In this point of peaceful light?

Good-bye to cities! My only society for the next few weeks is to be found in two or three favorite volumes, the companionship of my two men, and most of all in the open book of Nature that I have turned at such an inviting page.

Let me take this opportunity of pausing to sketch my henchman Joe. The other man is nothing more than a muscular piece of mechanism without any traits worth mention. But Joe is interesting. After the day's toils and excitements are over, and as he is enjoying his pipe before the glowing coals of a hardwood fire, how fittingly his stories of Indian superstitions, of the habits of the denizens of our forests, of hardships endured in the chase, chime in with the surroundings. Give me an Indian for a guide on such an expedition as this; with all his faults there is a lovable simplicity about him and a sympathy with the wild creatures that I heartily admire.

Do not judge him as you see him in the town street. He is a creature out of his element there. But see him on the trail of a wounded caribou; go with him up the rugged hills to surprise an unwary bear; mark his dilating nostril and flashing eye, when with his birch bark horn he has called up within reach of your rifle the monarch of the forest, the stag moose; watch the energy, patience and skill he displays in the construction of his traps and deadfalls; see the masterful manner in which he proudly guides his frail vessel among the seething waters—and it must be confessed that he is the right man in the right place on a trip through the Miramichi forest.

While sitting round the camp-fire one evening I noted that Joe had lost a large part of his right great toe. On questioning him I got the explanation: "You remember that cold Friday, sir, about twenty-eight years ago? Plenty people froze to death; plenty more lose toes, fingers, nose, on that day, I tell you. Me and my brother Peter were in the woods that day, far from home. Six miles from our camp we had killed two moose the evening before. By the time we dressed them it came on dark, very dark, sir, and snow began to fall. We could not find our way about, so we dug down through the snow." "How deep, Joe?" "About four feet, sir, to the ground; then we laid down for the night." "Had you any fire?" "Oh, yes, sir! but it got so cold before morning; we sat there quiet, waiting for daylight, and neither spoke. At last we saw the sky grow brighter; so slow, though, it seemed like a year getting daylight; our teeth chattered: we looked at each other, but neither said anything. We rose to try and make our tent, where we had blankets, flour and pork. But now there was a fearful driving snowstorm; we could not see five yards ahead; we missed our tent, and then tried to get to a lumber camp we knew was five miles away. We wandered about, and at last struck a lumber road that we knew led to the camp. Taking off our snowshoes, because the lumbermen do not like snowshoe tracks on their roads—it packs the snow and makes it difficult for the horses—we made for the camp, some eight miles off. We got about four miles; then I felt like dropping. My brother reeled like a drunken man, and staggered and sometimes fell, but at once jumped on his feet again. When I began to freeze I felt very warm, as if going to sweat, and took off my mits and opened my coat.

At last I got to camp, but could not speak for a long time. When I could speak I told them about Peter and they went and got him. They put my feet for two hours in salt water and snow; then put me to bed. There was a big fire in the middle of the camp on the ground that was the floor. It seemed to me like coming from hell to heaven. But when I woke my feet were burning in a slow fire. I made them strip off the skin that rose in blisters, so that it would heal quicker. They kept me three days. I tell you, sir, a lumber camp in winter is comfort. It looks rough outside, but once get in—plenty good grub, plenty warm, plenty good yarns. I got a free ride into Bathurst, but could not walk till planting time, and feet tender ever since; part of big toe clean gone, as you see, sir."

Such was Joe's terrible experience of that cold wave which swept over eastern Canada in February of 1858, when the thermometer touched 60° below zero. Well does this painful narrative illustrate the dangers and hardships faced by the hardy hunter in the winter months; vividly did it remind us of the severely stern aspect which this smiling scenery, now bathed in the midsummer sun, can assume in midwinter.

ARTHUR P. SILVER.

HALIFAX, N. S.

Natural History.

SNAKE BITE AND ITS ANTIDOTE.—II.

Experiments With Crotalus Venom and Reputed Antidotes, with Notes on the Saliva of Heloderma ("Gila Monster").

BY H. C. YARROW, M.D.
Curator Department Reptiles, U. S. National Museum.

AFTER reading de Lacerda's views regarding the antidotal effect of the permanganate of potassa in cases of serpent bite, the writer was so firmly convinced of its merits that, during his travels in the Western States and Territories, he invariably carried with him, with a blind and unquestioning faith, a hypodermic syringe and some permanganate of potassa, prepared in case of serpent bite to promptly administer according to de Lacerda's directions, but his confidence was weakened to a certain extent by the results of the experiments of Vincent Richards, Fayrer and others, and, to verify if possible the different statements, he determined to experiment himself with the permanganate, and as will be seen from the recorded notes below, was forced to the conclusion that this salt was of little or no value, at least in poisoning from *Crotalus* venom, if de Lacerda's suggestions only are followed. It was not intended at first to take up the subject of other so-called antidotes, but a good supply of serpents having been obtained by the National Museum, by whose co-operation the experiments were performed, it was thought advisable to continue the investigation still further. In addition to this reason, quite a number of persons, hearing of the experiments, have from time to time sent various reputed antidotes or have suggested certain methods of cure.

The venom used was obtained from several healthy specimens of the northern rattlesnake (*Crotalus horridus*) in the manner recommended by Weir Mitchell.

The snake is seized a short distance behind the head by means of a staff, having at its end a thong of leather passing over the end and through a staple, and this is tightened or loosened, as occasion may require, by means of a string extending up the handle. The cut copied from nature clearly shows this simple instrument. It has been found necessary not to confine the snake's head too tightly, as otherwise it cannot be induced to strike. The head being secured, a stick having its end covered with absorbent cotton is pressed against the snake's mouth, and it is teased until sufficiently irritated to strike its fangs into the cotton, which receives the venom and obviates any danger to the fangs, as it has been found in allowing snakes to strike against a saucer the fangs are frequently broken off. Generally a snake will strike three or four times very viciously, and then relapse into sullen apathy. We have in vain endeavored to procure venom from our snakes by pressing over the poison glands, but this has been unsuccessful except in one instance unless the snake was chloroformed, and if this is done the reptile generally succumbs within a few days. This fact is mentioned as it has been learned through the public prints that some experimenters in a neighboring city have succeeded in squeezing out the venom while the snake was active.

The quantity of venom obtained from different individuals varies greatly. From a large rattler weighing perhaps three or four pounds, our first attempt resulted in securing about fifteen drops of venom after the reptile had struck three times; but if the process is repeated every day or two but a very small quantity is obtained. The smaller snakes gave a much smaller quantity. The cotton after having received its charge of venom was removed from the stick and washed out carefully in glycerine, and by measuring the quantity of this substance first, and then after the venom had been added, we were able to tell accurately the strength of the solution, which consisted of eight drams of chemically pure glycerine and one dram of the venom. This is the preparation which was used in all the experiments, and is called glycerine-venom. One fact should be stated as bearing upon the popular belief that snakes, if kept from water, are not poisonous. It was found that by keeping the rattlers without water for a week or two the quantity of venom was materially smaller than when we allowed them free access to water, and that the color of the venom, which was yellowish-green when no fluid was supplied, became much lighter in color when they had freely drunken. We have never been able to induce our rattlesnakes to eat, although they have been tempted with a variety of food, but water they consume largely.

When the present supply of rattlers was first received, it was a very easy matter to grasp any one of them behind the neck with the snake staff; but experience has taught them that they must do something against their will, and now it is quite difficult to secure them, and even when secured it is difficult to make them strike; in fact, one specimen is now so tame that it may be handled with impunity, and it is the writer's belief that a rattler, if carefully and tenderly handled, will not bite the hand that grasps it. It is believed the Moqui Indians are aware of this, and it enables them to handle with impunity the venomous snakes used in their fearful dance, so well described by Capt. John G. Bourke, U. S. A. Many persons suppose that the fangs of a rattler once removed, the reptile is harmless for all time, or that at least a year is required to replace the fangs. This is an error, for the writer has in his possession a rattler in which the fangs were twice replaced after an interval of three weeks only. As the rattler doubtless knows when the contents of the poison gland is exhausted, as is evidenced by his refusal to bite after two or three efforts, he probably also knows that it is useless to show fight when the fangs have been removed, and this has been practically tried on one of our snakes. She continued to coil and rattle, but no matter how much teased and irritated, makes no attempt to bite.

An interesting fact has been noticed during the course of our experiments, and one which it seems important to record. It is, that the rattler does not invariably use both fangs in striking, the muscular movements of either side of the jaw being quite independent of the other, and quite at the will of the reptile. The practical bearing of this point is that, occasionally in snake bite, but one puncture will be found, and some doubt might exist if this was really due to the serpent's fangs or not. Another point of interest lies in the fact that if only one fang is plunged into the tissues, the patient will not have received so large a dose of the venom as if both teeth had been used, and a more favorable prognosis can be made.

EXPERIMENTS WITH PERMANGANATE OF POTASSA.

This was the first substance used in the experiments, and de Lacerda's directions were carefully followed with the exception that chemically pure glycerine was used as a menstruum to preserve the venom, instead of distilled water. The writer is aware that de Lacerda claims that if glycerine is used to hold the venom in solution, the permanganate is rendered inert, but this is not the case, as in our experiments it has been found that a 5 per cent. solution of the salt if added to the glycerine and venom solution neutralizes its poisonous effects; moreover, if a ligature is placed around the leg of an animal and a certain quantity of glycerine-venom is injected below the ligature, followed by a solution of the permanganate, no poisonous effect is produced by the venom. This effectually disproves de Lacerda's statement. It should be mentioned that in all the experiments tried with the various reputed antidotes, different quantities of these were always first injected into the animals on the day preceding the test with the poison, in order to ascertain if the remedy itself was capable of producing mischief or death.

In order to ascertain the amount of glycerine venom required to destroy a pigeon, the following experiment was made Oct. 21, 1887.

Oct. 21, 1887—11:45 A. M.—Injected pigeon in the lower part of left breast with 3 minims of glycerine-venom solution.

11:48 A. M.—Pigeon commenced to tremble and had difficulty in opening the eyelids.

11:55 A. M.—All voluntary motion ceased.

12 M.—A good deal of tumefaction was noticed around the part injected.

12:05 P. M.—The pigeon has recovered partial muscular movement and the eyes appear brighter.

12:15 P. M.—The pigeon has again lost muscular power.

12:35 P. M.—The pigeon gave two slight flutters, a few gasps and was dead. A post mortem was made before rigor mortis set in, and it was found that the whole of the left breast was ecchymosed and congested with dark blood, and the heart was filled with venous blood.

It was thus discovered that three minims of the venom solution was sufficient to destroy a large healthy blue rock pigeon in less than one hour, the strength of the solution being eight drams of glycerine to one dram of the *Crotalus* poison.

Oct. 22—11:43 A. M.—Injected pigeon with 5 minims of venom solution in the left breast.

11:45 A. M.—Injected 17 minims of 1 per cent. solution of potassa permanganate in left breast.

11:54 A. M.—Convulsive movements of the pigeon's head was noticed.

11:55 A. M.—Injected 17 minims more of the permanganate solution, as the bird was getting very feeble. Opisthotonotic spasms took place.

12:15 P. M.—The pigeon died without a struggle.

In this experiment the permanganate solution was injected twice in the immediate vicinity of the venom injection. It should not be forgotten that the 1 per cent. solution of the permanganate is the one recommended by de Lacerda.

Oct. 25—12:45 P. M.—Injected a large healthy English rabbit in the left thigh with 5 minims of the venom-solution, followed at once, without removing the hypodermic needle, with an injection of 25 minims of the 1 per cent. permanganate solution.

12:50. P. M.—Rabbit began to show the effects of the venom; respiration very much quickened; heart beats fast and is weak; animal indisposed to movement.

1 P. M.—Rabbit drank a little water, but was breathing short and fast.

1:10 P. M.—Part injected quite swollen and ecchymosed, but otherwise the animal seemed to be better.

1:40 P. M.—Rabbit was eating, and appeared to be doing very well.

3 P. M.—Rabbit seems perfectly well with the exception of a stiffness of the leg injected.

Oct. 26—12 M. — Rabbit appears perfectly well with the exception of a slight lameness and some swelling of the injected limb.

Oct. 27—Rabbit found dead in the cage. Post mortem: Heart contracted, lungs, liver and kidneys congested, bladder full of urine, intestines full of fæces. In the vicinity of the point of injection was found a large abscess, and the surrounding tissue and whole limb was ecchymosed, and had sloughed deeply. The liver, lungs and mesentery were studded with parasitic cyst worms still living. Decomposition was well advanced in the affected leg.

In the next experiment it was decided to use a smaller dose of the glycerine-venom, the subject being a large healthy English rabbit.

Oct. 27—11:45 A. M.—Injected rabbit in left thigh with 3 minims of venom solution, to which was added 10 minims of water without withdrawing the hypodermic needle; this was followed at once with an injection of 25 minims of 1 per cent. permanganate solution.

11:50 A. M.—Respiration and heart's action much increased, with a curious backward movement of the animal.

11:55 A. M.—Complete loss of motion in leg, with considerable tumefaction of part injected. Animal averse to motion even when irritated.

12:30 P. M.—Animal moves more freely, and seems better, although there is much more swelling and discoloration in the vicinity of the point of injection.

3 P. M.—Animal appears to be doing very well.

Oct. 28—12 M.—Great tumefaction of leg and thigh, œdema of rectum. Punctured and let out large amount of bloody serum. Animal has eaten, but is averse to movement.

3 P. M.—Animal very sick, unable to stand; all motion of hindlegs lost; is very weak.

Oct. 29—10 A. M.—Rabbit was found dead in its box, excessive hemorrhage having taken place from the wound. Post mortem: Great infiltration of blood in the leg and surrounding tissue. Much decomposition and sloughing.

It was now determined to try the effect of placing a ligature around the leg of a fowl before injecting the venom, with the following result:

Nov. 2—Hen injected in left thigh with 3 minims of venom solution with 10 minims of water added.

12:40 P. M.—After a ligature had been placed two inches above the place of injection, without withdrawing the needle, 25 minims of 1 per cent. permanganate solution was injected.

12:50 P. M.—The ligature was removed.

1:15 P. M.—No effect.

1:25 P. M.—Hen draws up the leg injected and stands on the other.

Nov. 3—Fowl apparently in fair condition, but there is much greenish discoloration of the leg and softening of the tissues contiguous to the joint where the venom was injected, abscess forming. Is quiet and stands upon both legs, but does not use the left leg.

Nov. 4—Fowl in about the same condition as yesterday; greenish discoloration more marked, but not extending so far into the surrounding tissue. Part quite soft and feverish.

Nov. 5—Fowl suffering no inconvenience from the injection; discoloration of the part subsiding; very little swelling.

Nov. 6—No result.

Nov. 7—Discolora'ion and swelling of part injected have entirely disappeared and the fowl has entirely recovered from the effects of the venom.

It will be seen from this experiment that the permanganate had a decided antagonistic effect to the venom, doubtless because the ligature confined the latter to a limited area, and prevented it being carried into the general circulation. In the next experiment the venom solution and permanganate were mixed together and used with the result as noted below.

Nov. 3—12:10 P. M.—Injected into the right leg of a fowl 3 minims of glycerine-venom, 5 minims of water and 30 minims of 1 per cent. solution of permanganate, mixed in vessel and allowed to remain together two minutes. Solution of permanganate changed at once to a color resembling solution of dragon's blood.

Nov. 4—Fowl appears to suffer no inconvenience from the effects of yesterday's injection. Slight swelling and discoloration, and only a slight increase of temperature.

Nov. 5—Fowl as well as ever.

Nov. 7.—Discoloration of and swelling of the part injected has disappeared, and the fowl is in a perfectly healthy condition.

With a view to still further determining the beneficial effect of the ligature, the following experiment was tried with a large dose of the venom and of the permanganate:

Nov. 10—12:45 P. M.—Injected 10 minims of venom solution into right leg of hen below ligature, followed at once by 25 minims of 2 per cent. sol. of potassa permang. Ligature allowed to remain on three minutes. The tissues near puncture were well kneaded. (This chicken was injected before with 3 minims of venom and 1 per cent. sol. permanganate.)

2:30 P. M.—Fowl inclined to stand still, otherwise no other symptoms noticed.

Nov. 11—11 A. M.—Fowl not inclined to move around, but sits down; not much swelling or inflammation of the part injected, but a little darkened in color; eats well.

2:30 P M.—Fowl appears to be much better than she was this morning; eats and drinks as usual.

Nov. 12—11 A. M.—Fowl slightly lame in the leg injected; part swollen, with greenish discoloration; eats and drinks well.

2:30 P. M.—Fowl in same condition.

Nov. 13—No result.

Nov. 14—Fowl entirely recovered.

It was thought advisable to try the antidotal effect of a much stronger solution of the permanganate, giving a small dose of venom, the result being as follows:

Nov. 21—12:18 P. M.—Injected 3 minims of venom solution into left leg of hen, followed at once by 25 minims of 5 per cent. permanganate solution through same puncture without removing the canula.

12:22 P. M.—Leg drawn up and trembling; respiration quickened, and chicken lying down—can hardly be made to stand up and oscillates backward and forward, feathers ruffled.

3 P. M.—Chicken will not stand, loss of motion of leg injected.

Nov. 22—11 A. M.—Chicken somewhat better, can use the leg injected a little, but still inclined to lie down. Much swelling and greenish discoloration of the leg.

Nov. 23—Hen in about the same condition as yesterday. Will not stand up.

Nov. 25—10 A. M.—Hen found dead; much swelling and sloughing of the leg injected.

This same experiment was repeated upon other fowls and upon rabbits, the result being death.

It should be remembered in this connection that de Lacerda claims that in nearly every case in which he used a one per cent. solution of the permanganate the animal recovered, and moreover he claims that the antidotal effect is produced even if a considerable period of time has elapsed after the injection of the venom. In our experiments we have shown that even a five per cent. solution is of no value, and the reputed antidote was used immediately after the injection, in fact so soon as the venom was injected the barrel of the hypodermic syringe was immediately unscrewed from the needle which was allowed to remain imbedded in the tissues, the syringe was rapidly filled with the permanganate and the injection was then made. Sometimes less than half a minute was consumed in the whole operation.

RANGE OF THE WHITE GOAT.

Editor Forest and Stream:

I am collecting material on the range of the *Mazama montana*, and desire to appeal for assistance to such of your readers as may be familiar with this interesting animal. I should be greatly indebted to any one who can give me records of its most southern, eastern and northern range. I have notes of its occurrence in Colorado and central Montana—eastern foothills of the Rocky Mountains—but no positive record for Wyoming Territory, though there is little doubt that it occurs somewhere in the western portion of that Territory. It is no doubt found in southern Alaska, but how far north and how far east from the coast? No doubt there are among your readers in the far West many who could supply interesting notes on this species, and I should feel greatly obliged to any one who would communicate with me on this subject. Any letters sent to me care FOREST AND STREAM will reach me.

GEO. BIRD GRINNELL.

NEW YORK.

EDIBLE FRESH-WATER MUSSELS.—Cold Spring Harbor, N. Y., May 12.—*Editor Forest and Stream:* In your last issue "N. A. T." makes inquiry concerning the edibility of the *Unios*, or fresh-water mussels, and appeals to me to tell him about them. Certainly they are edible, muskrats, Indians, and the Ichthyophagous Club eat them. Once upon a time "N. A. T." dined with the club at Manhattan Beach, but no *Unios* were served on that occasion, although he had other strange, horrible, and fantastic dishes in abundance, yet the Colonel hesitates at the hydraulic clam of fresh streams, and his courage fails when he thinks of experimenting with it as an article of diet. My experience with the fresh-water mussel is limited: A trial of them raw was never repeated, although salt, pepper and vinegar were liberally applied. They were very tough, and had a flavor that one might like, after years of practice, but I lacked that experience then and have never acquired it. As one of the Ichthyophagi I have eaten the *Unio*, and particularly remember them at the third annual dinner in June, 1882, at the Palisade Mountain House, where they appeared as "Soufflé of fresh-water clams en coquille." The flavor, under the manipulation of the *chef*, was not bad, but the toughness had not departed. No one imitated Oliver Twist, and the next dish was looked for. Perhaps as the basis of a soup they may be, if not to the Queen's taste, at least "fillin'," and here is an opening for Col. "N. A. T." to do the original discovery act. Certainly they are not poisonous, and their edibility is merely a question of taste and—good teeth.—FRED MATHER.

THE BIRDS NEAR NEW YORK.—*Editor Forest and Stream:* As you are well aware, my profession keeps me constantly in the field of topographical survey. I feel positively happy to say that my observations distinctly unfold the fact that this year's migration has left among us, in vast numbers, the sweet, nimble, ever-busy house wrens, Baltimore oriole and other insectivorous songsters, long strangers to our city parks and suburban woods and fields. Thanks are due to the blizzard, which killed off thousands of the pugnacious English sparrows. Hence the return of our long missed friends. The Audubon estate and mansion will remain as it is, having been purchased as the future private residence of one of our wealthy German citizens.—CANONICUS (North New York, May 15).

IOWA WOLF BOUNTIES.—Vinton, Iowa, May 5.—As M. T. Mutchler was going through the woods to-day, near Vinton, his dog struck a trail and followed it to a den in the ground. After digging about 5ft. he found a nest containing eleven young wolves about one week old. He brought them to town in a basket and received from the auditor an order on the county treasurer for $33 for them. Does any one know of a larger litter of wolf pups than that?—L. S. K.

The Peters Cartridge Co., Cincinnati, O.: GENTLEMEN—The shells were simply immense. They are shells that will please everybody, and I do not think that they will require much booming. I used 48 of them on Peoria blackbirds and had the satisfaction of smashing 47 of them. I found them quick, clean and with very little recoil, and I must say that the pattern and penetration was splendid. I think that your load No. 5¼, 4¼-1¼-8 with No. 1 powder will meet with the approval of every one wishing to do good shooting at the trap.—R. E. SHELDON (Mayfield, O., April 30, 1885).—*Adv.*

Game Bag and Gun.

PETE, THE DOG WITHOUT A PEDIGREE.

II.

HOW HE HANDLED (OR FAILED TO HANDLE) THE MOUNTAIN CAT.

THREE miles due north of the Chestnut Shanty and near the summit of the mountain may be found a curious little savannah, grass-grown and encircled by a dense laurel brake; and in this little oasis is the head spring of Bear Run. Approaching it from the south and following the backbone of the ridge for some 3 miles, you suddenly find yourself on the edge of a rocky precipice some 50 feet in height. The little prairie-like savannah lies below with its heavy border of dark green laurel, and a few dwarf pines are scattered about the center.

The two dark, muddy looking spots that you see among the grass are bear wallows that were there when the first settlers came in, and have been used by the bears every heated term for more seasons than any man knows of. I do not know a more lonely spot; and, with the exception of one old surveyor, I know of no one but myself who has ever left his footprint on the dank sod of that grassy little sevannah, the reason being that it is so very difficult getting over the tangled border of low laurel which surrounds it on every side. I have tackled some exasperating laurel brakes in my time, but this is the worst one I ever floundered through. It is like traveling on a roadbed of hoopskirts and barbed fence-wire, and it remains to-day almost the same as when I first saw it, some forty years ago. Thank Heaven, there are a few green spots on this green earth that it does not pay to "improve," but they are remote.

It was on the morning of our third day's hunt in company that Pete and I found ourselves on the brink of the rocky ledge overhanging the broad laurel brake with its setting of miniature prairie. We were there, man and dog—because the party of the first part thought it a promising range for bear and was somewhat anxious to test his companion as a bear dog. And the other was there because he was tied to his new master with a hemp-rope and couldn't help himself. Several times during the morning he had winded deer and had signaled the same by sundry nudges and nips, but the party at the other end of the rope was obtuse and would not understand, being intent on looking for bear sign; but no sign was given him, and the slow-paced stalk of two hours ended at the brink of the cliff without event. Glancing over the basin below, the quick eye of the man caught on a cluster of leaf-heaps that seemed freshly made, and seeking a place of easy descent he proceeded to investigate.

The heaps were five in number and larger than usually made by a mountain cat, also, the largest heap showed unmistakable signs of being newly worked. So the eager dog was given his liberty, which he used by roading rapidly into the laurel, while the man's heart beat faster as he reflected that it might be a panther; and, taking a position that commanded laurel brake and savannah he waited a little nervously with rifle at the ready. For two or three minutes the silence was only broken by the rustling and hustling of the dog as he worked his way through the dense tangle, and then there was a bounce, a crash, and a huge cat flying across the clear space with a frantic dog at its tail.

On reaching the laurel at the opposite side the cat made a stumble that lost him a jump or two, and the dog closed at once. It was a very brief round, but creditable to the parties most nearly concerned as regards gameness and the infliction of telling punishment. I think it took that feline terror less than ten seconds to fight himself clear and get away, leaving poor Pete a handsome addition to his scars. He beat the dog across the laurel, and went bounding up a large yellow birch with the ease and grace of a squirrel, where he sat glaring fiercely and fearlessly at the dog while I walked leisurely around the thicket instead of crossing it, that I might arrive on the ground in cool shooting condition. And the shot was not a good one after all. The bullet should have gone fairly through the head, instead of which it went through the neck just under the bone, cutting arteries and knocking the beast out of the tree, but leaving enough bite and kick in him to half kill poor Pete before I could safely end the fight by a shot. When stretched and cased properly the skin measured 4 feet from tip of nose to roots of the tail, and it was as large as I have ever handled myself, though I have seen larger ones. On the return to camp, Pete did not show his usual interest in hunting matters. He was badly cut and clawed about the breast and abdomen, and walked slowly along with hanging head while the blood oozed from his wounded muzzle. Evidently he thought one such cat-hunt a pretty fair day's work.

It was time to break camp. Breadstuffs were reduced to a few dry crumbs, pork, butter and sugar were things of the past; there only remained a little tea and salt, with plenty of venison, the latter beginning to grow suspiciously slippery. A deer or two might easily have been added to the score, but to no purpose save useless slaughter and a wanton waste of good venison, for no one could afford to double-trip it to that lone region. And on the morrow by 1 P. M. Farmer B. was to report at the end of the road just where he had landed me the week before.

So the afternoon was spent in jerking the best part of the doe and getting duffle in shape for a hard forenoon's tramp. Then followed a long, luxurious lounge on the fragrant browse, smoking, musing and mapping out plans for an autumn hunt, to last until cold weather drove me out of the woods. As for the dull, hard routine of daily work by which most of us must win our daily bread, I decided to strike against that—at least for the season. One may work always, if he will; the lame and lazy will see to it that he has the chance. But successful hunting—deer hunting—can only be done for a few weeks at the proper time and season; and the acquisition of such a hunting dog as Pete is the event of a lifetime. It was the dog that decided me to make the fall hunt in the wilderness to the westward of Pine Creek, where, though deer were not as numerous, they were much more accessible than in the Blockhouse Range; and besides, I had a very neat little camp there within two miles of the stage road, which made it easy to utilize every pound of venison not needed in camp. At sunrise the next morn-

ing Pete and I had turned our faces toward the clearing; at noon we were resting at the big pine stump which marks the terminus of the road, and at 4 P. M. were at home. That evening and the morning of the next day were devoted to getting a change of flannels, laying in supplies, and organizing generally for a long hunt.

At 2 P. M. we were jolting over the Pine Creek road en route for fresh fields and pastures new; and Pete was so sore from his recent cat work that I tipped the driver to let him ride. He curled down in the stern sheets of the lumbering old conveyance in a way that showed it was no new chromo to him; and at 4 P. M., just 24 hours from the time of reaching home, we were left standing on the east bank of Pine Creek, with all our groceries round us. At this point, the valley had rather a civilized and business-like appearance. "The Company" (Phelps & Dodge) had built a large house and larger barn, with a store-house, in which there was always a good stock of supplies—and the post-office. There was also a neat little church, wherein services were held semi-occasionally, and "The Meadows," as the place was called, included a farm containing 100 acres of rich alluvial bottom land, and there were two powerful old-fashioned saw-mills, known all over the country as the "Strap Mills."

The contrast between the east and west banks of the stream was almost startling. On the east bank the constant clang and crash of the saws, the loud spank of the boards as they dropped into place, the rough voices of the teamsters, and all the various noises incident to a busy lumbering establishment. On the opposite side, a dense, unbroken wilderness, extending from the water's edge nearly forty miles to the west and south without a clearing. True, there were old, weed-grown lumber roads and mouldering wrecks of lumber camps; but these only added to the desolation, and did not in the least decrease the chances for deer, nor did the noisy works at the Meadows disturb them. On the contrary, they were very apt to be found lying on the face of the mountain overlooking the valley, where they could hear and see just what was going on below. This state of things was largely attributable to the fact that owners, bosses and mill hands were bitterly opposed to hounding. Not a man among them was fool enough to believe that a pack of dogs or wolves could go baying and howling among the deer without frightening them away—far away—to another range. And it was a cold day for the hound that got caught after a deer in sight or hearing of the Strap Mill hands.

When a hound was heard running on the hill it was usual for a hand to pick up his rifle with the remark, "I guess I'll go an' see if I can get a shot;" which simply meant beating a hunting party out of the deer, and sinking every possible hound in the creek, by fair means or foul. If a lawsuit resulted, as it sometimes did—the money and influence of the Company was quickly at the defendant's back, with public opinion also on his side; and though scores of deer dogs were thus "treated," I never knew a prosecutor to get a dollar or a verdict for his dog.

The little camp before mentioned was a short two miles from the Mills, and reached by an easy trail that crept gradually up the face of the mountain to within a hundred feet of the summit, where, in a small circular basin, beside a cool, clear spring, stood the rough cabin.

It was necessary to ford the stream, and, as there was too much duffle for a single trip, a box of supplies was left at the Mill. With the exception of a loose bear skin, a square box is about the worst load a man ever toted through the woods. The most comfortable way to manage it is to empty the contents into a grain bag, kick the box into the shin-hopples and walk off with the bag on your shoulder. The creek was forded, the man wading, the dog swimming—and the ascent was made easily in less than an hour. It ended at a little three-sided inclosure which looked like an unfinished pig-pen. The dimensions were 8x5 feet on inside; height, 5½ feet in front, 3 feet at back; front, open. There was no roof; but a few light poles running fore and aft seemed intended to support one, and in fact the roof was in the knapsack; it was a simple sheet of oiled drilling 9x7 feet, and was made to go over all by stretching and tacking in place. Such a roof is better than bark, as it cannot warp, is impervious to any storm, and cannot be used as firewood by the swamp-loafers who delight in destroying the camps of outsiders—an "outsider" being any man outside of their immediate neighborhood and acquaintance. Now, I had noticed that these woods vagrants never stopped to bother with an old roofless camp; because, in the first place, the dry hemlock leaves from the bedding sifts down to the earth and forms a black, slimy mulch in a few weeks, which requires considerable work and a strong blaze to render dry and sweet. And secondly, in the autumn when bark will not peel, or in the summer when there is no axe to peel it with, the fixing a roof in shape to shed rain requires too much labor, of which they are notably economical. So I had come to adopt the light, portable roof; and it proved so satisfactory that it has been a permanency with me me for the past thirty years. With this and the pocket hatchet I can in a few minutes make a camp that will keep a party of three dry in the hardest rainstorm, and it weighs less than 3lbs.

An hour's work sufficed to clean up the camp, fix the roof, clear out the spring, and get a good supply of hemlock bedding, and night wood. Then came the evening smoke and lounge, so dear to the heart of every hunter. The night was still and fine, there was a young moon, and the litte rill from the spring broke over the brink of the narrow basin with a silvery murmur that was very suggestive of sleep, while at intervals the metallic clank of the saws at the Mills below was borne upward by the night zephyrs, only to sink into silence again as the gentle breeze shifted or fell off. The owls, always numerous along the valley of Pine Creek, were holding a noisy caucus in the hemlocks near the camp, and occasionally one more venturesome than his fellows would come flapping silently into the firelight, take a brief survey of the surroundings, and vanish into darkness again. There was at least one pleasant, cosy spot in the wilderness on that November night.

And on the morrow the hunt commenced with a break of good luck. Before we were a mile from camp Pete winded a deer, which he roaded up to and pointed in his best form, and I succeeded in getting very close before it jumped from its bed. The deer fell dead at the crack of the first barrel, and it was one of the "remarkable shots" wherein luck is the leading factor. The bead had been drawn on the white hair behind; but the bullet flew high, ranged along the back, and crashed through the head, breaking the horns apart and scattering the brains. I am always thankful for such luck, though I do not put in a claim to marksmanship when the bullet strikes a foot higher than I intended. It was a fine yearling buck in the "long blue," sleek, round and fat. Before noon it was in camp, and I hardly need say that the dinner consisted largely of broiled venison that day. In the afternoon the saddle and skin, nicely packed, went down to the Meadows to be sent home by the mail wagon, and a lot of supplies were brought to camp in return.

The second day's hunt resulted in getting another deer, after which my recollection of events is not so clear. I know there were heavy autumn gales with rain, when the roaring of the storm in the forest sounded precisely like a storm at sea, and the weather rendered hunting useless. There were times also, when the leaves were so frozen and noisy that a deer could hear a man walk forty rods away, and on the whole I think there were not more than a dozen days of really good still-hunting during the four or five weeks I hunted from that camp. I have forgotten, too, just how many deer I killed, but less than a dozen anyhow, and for nearly all of them I was under obligations to Pete, whose knowledge and sagacity on a deer hunt were something wonderful. It was amusing to see the look of silent reproach he would give me if, in creeping up to a deer I happened to break a stick or make a noisy step; he knew the value of silence, and in following a wounded deer he never gave tongue, but made his race swiftly and without noise. When, however, he had caught and killed his deer he would stay by it for hours, barking loudly at intervals, and occasionally giving a long, loud howl. If no one came to his assistance he would work his way back to his master and try to explain in simple dog language that there was a dead deer in the distance and help was needed to bring it into camp. When he had succeeded in making himself understood and was leading the way to his quarry, he was a proud dog, and he never lied; though his deer was sometimes so far from camp that it scarcely paid to pack it in. Like most still-hunt dogs, he would not follow a well deer a mile; but a few drops of blood on the track would set him off for an all-day race, and the deer was pretty certain to be run down, though the wound might be trifling.

Before the hunt was over I had a chance to try him on bear, and he was the best bear dog of his size I have ever been out with. His hunting weight was about 40lbs.; but at times he weighed 5lbs. less. When an able-bodied bear has been thoroughly frightened and has made up his mind to leave the country rather than climb a tree, it takes a pretty smart dog to stop him until the hunter can catch up for a shot; but Pete would often do it. Not always, though. For the bear has a shrewd way of dragging his enemy through the worst possible tangles of brier and laurel brake or knocking him loose against fallen timber, rocks, etc. But his most effective ruse is to drag the dog into a tangle of undergrowth, and then throw himself over with a sudden back-flop, reaching out and striking savagely with his fore paws; or, to reverse the operation, he will suddenly drop his nose between his forelegs and change ends, which draws the dog over and in reach of his claws; and it is a wise and wary dog that escapes all these tricks. Whence it sometimes happened that Pete was left on the trail so utterly beaten and exhausted that he had to be helped into camp. This, however, was rarely the case.

The bear, when suddenly attacked and sharply bitten, would usually take the nearest large tree he came to, where, with coolness and skill, he could be easily approached and shot. If only a slight wound were inflicted he was apt to come down with a heavy thump, gather himself up and commence to emigrate in dead earnest; in which it took a good "bear team" to stop him; and Pete was a team by himself. I have known him to seize a bear by the ham and hang his hold, with legs stiffly braced, until he was dragged more than a hundred yards at a stretch. He had a very creditable score on bear scalps, as I subsequently learned, though we only got after three bear while he was with me, two of which got away. These two were wary old pig-thieves who knew all about dogs and would sooner die than be treed. In each case they wore the dog out and left him on the trail in a half day's run, while the hunter, with his best efforts, could not get near enough for a shot.

The foregoing will give a pretty fair idea as to the hunting traits of Pete; and his accomplishments were by no means exceptional at that day, only that they were condensed under one dog skin. In other cases they were spread out and divided among different dogs, as it were.

But we were fated to part. When the off season came for man, dog or game, and the frozen hand of bitter winter was pressing the frost into forest and clearing, earth and water—there came to our shop a hook-nosed, long-legged, shambling Dutchman, who introduced himself as "Yohn Shultz, from vay out py ter Plockhouse," and he wanted to know you know, if "somepotty here haf cot a leedle tawg, mit one ear straight up, unt de odder lop town py his het, like dis;" and he illustrated by a bent leather chip.

There was no need to answer. Pete heard the voice, and the way he went into ecstacies over and around that Dutchman settled the question of ownership to my mind. I never saw a steady business dog exhibit such extravagant joy.

All the same I had determined not to lose Pete. The man looked poor, and his clothes were patched to a wonderful extent. The Blockhouse was a rough, poverty-stricken region. Probably ten or fifteen dollars would be worth more to the man and his family than any dog; so I commenced to negotiate, and, as often happens, was mistaken in my man. He said, "No; I coodn't solt him. You see, he vas grow up mit our leedle poy, Peter, unt ven der poy vas took sick unt go det, my olt voman she say, 'now ve call ter tawg Peter, unt keep him so long as he lif.' He is wort more to me as a goot hoss."

And old Shultz, like his dog, was better than he looked. It turned out that he was a well-to-do farmer, with a bank account and a strong penchant for hunting, though he did not allow his love of the woods to lessen his savings. Hunting that did not pay was no sport for him. He had hunted and trapped for more than thirty years in the Blockhouse Range and the Armenia Mountains, and it transpired that he was the man who had built the Chestnut Shanty, an enterprise that did not pay from a money standpoint. He offered to pay for Peto's keeping, and thought $2 would be about right. In return I offered to keep the dog a year for nothing and himself until the next day on the same terms. The latter part of the offer he accepted, and we spent the evening together, he doing most of the talking, as was meet, for he knew all about the romantic history of that quaint, out of the way settlement called Blockhouse, and had paid for his land with wolf scalps—a fact that proved him the skilfull trapper and woodsman.

When we finally turned in it was understood that we would meet at the Chestnut Shanty on or about the middle of the ensuing October; and at early daylight the next morning old Shultz was making for home at a telling pace, with Pete at his heels, leaving me to regret the loss of the best still-hunt dog I had ever known; nor have I yet seen his equal for bear or deer. And, alas! he had no pedigree.

NESSMUK.

EARLY FIELD LITERATURE.

Editor Forest and Stream:

I have the first volume of the *Cabinet**, one of the earliest publications of its kind in the United States—which I think must be rare, as it was not very liberally supported, and only reached the second volume, as I believe. This volume was rescued from the great Chicago fire of 1871, where Vol. II. was consumed.

Thomas Doughty, one of the publishers, was a well-known landscape painter of that day, and most of the illustrations of the work were from his pencil on stone, and are very good; they are in colors, and are, I think, equal to those of Audubon and Bachman. The Virginia deer, the ruffed grouse, the quail and the woodcock were drawn from nature by Doughty, and are very lifelike and spirited. So is the drawing of the bighorn or mountain sheep, which he calls the American argali; at that time little known, and supposed to be the same as the argali of Central Asia.

To show how far away from the modern sportsman the year 1830 was, I find in this work an elaborate defense of the percussion lock, as against the older flint and steel, which some conservative men of the period argued to be superior to the new invention both in range and penetration. I myself well remember the discussion which ran through the sporting papers of the day; and now the percussion lock is itself superseded by the breechloader, and that is contending against the hammerless.

A writer in the *Cabinet* gives an account of grouse shooting in Pennsylvania, in which two sportsmen killed fourteen brace of pinnated grouse in two days. Even then these birds were scarce, and the writer wisely declines giving the scene of the exploit.

On June 22, 1831, a pigeon match for $500 a side was shot between two men of Philadelphia and two from New Jersey. Philadelphia, 15, 19—34. New Jersey, 17, 15—32. It is not stated whether flint or percussion guns were used.

Even as early as 1831 there was a scarcity of quail about New York, and the sportsmen of that city were arranging to buy and protect through the winter 3,000 of those birds.

An angling club was formed in Cincinnati in 1830, the proceedings of which are described. The meeting took place at Whitewater, twenty miles northwest of the city. About fifteen members angled there for one and a half days with rod and reel and took 353 black bass and salmon (pike-perch). The largest bass was taken by the president of the club, and it weighed 5lbs. 2oz., and was the largest bass ever taken by any angler from the waters of the Miami. This seems to show that the size of black bass has not diminished in fifty-eight years. The writer goes on to describe the black bass and the sport of taking it. His account reads like a chapter of Dr. Henshall's book, except that in 1831 the minnow was used exclusively. The present writer was one of the first to take black bass with the fly; this was in Wisconsin, about 1841.

Fly-fishing for trout is treated in the *Cabinet* and the article is illustrated by two colored drawings of red-spotted and silver trout, done by a lady. At that time the big trout of Maine and the Lake Superior country were little known, and a pound trout was considered a prize. I have heard anglers disputing whether such a fish as a three-pound trout existed. This, however, was in New England, where brook trout were plenty, but small.

I find nothing about trotting in the *Cabinet*, but a running race for a purse of $10,000 was run at Norfolk, Va., on Nov. 2, 1831. Two-mile heats, won by W. R. Johnson's Annette, in two heats, 3:47½ and 3:50. The next day a race for $4,000, on the same course, won by Doswell's Sally Hornet, four miles in 7:55 and 8:13. W. R. Johnson was the leading turfman of that day, usually called the "Emperor of the Turf." I saw this same mare Annette in 1832 win a three-mile race in Charleston, S. C., and Johnson's famous gray mare, Bonnets of Blue, win a great four-mile race at the same meeting, against Col. Singleton's Clara Fisher, for $5,000, in 7:45. In those days a horse which could trot a mile in 2:30 was considered a wonder. So that within fifty years the trotting record has been cut down twenty seconds to the mile, and the running record of four miles from 7:45 to 7:20, twenty-five seconds, this time having been made by both Fellowcraft and Lexington.

S. C. C.

*"The Cabinet of Natural History and American Field Sports," Vol. I., Philadelphia, J. & T. Doughty, 1830.

WOODCHUCK IN TREE.—Auburn, Pa., May 5.—I met with a new experience to-day. While drinking at a spring near a piece of woodland, my attention was attracted by the excited barking of my dog. Going to him to ascertain the cause I found him at the foot of a thrifty young hemlock, some 10in. in diameter, and among the branches, at least 35ft. from the ground, rested a large woodchuck, the forefeet over a branch, the others clinging to the bark of the trunk. A few stones thrown at it caused it to shift its position and go 10ft. higher up as readily as a coon might have done. A brisk walk of fifteen minutes and I was back with my rifle, at the crack of which it loosened its hold and came to the ground with a big thump. The tree stood perpendicular without knots or limbs for the first 25ft. Is it not uncommon for them to take to a tree?—BON AMI. [A few years ago a number of incidents of this character were related in our columns.]

BRANT SHOOTING AT CHATHAM.

THE branting season for 1888 at Monomoy, Cape Cod, had about the usual variety of incidents, of waxing and waning fortune, with a little more pressure upon the waning side, as compared with previous years. Each season is counted as about five weeks, or from March 22 to April 26, but in a forward season, some brant may be shot as early as March 18, and in a backward one, like the present, especially if many of them are young birds, as late as May 1. Last year the Monomoy Branting Club broke camp on May 4, and on the 2d of that month bagged six brant. No brant of any account are shot here in autumn. They do not come on to our coast at that season unless driven by an easterly storm, and then will depart as soon as the wind changes. Nor are they of any value for food if so taken, being poor and unsavory.

The year 1887 was particularly rich in young birds, while the present surpasses any season on record in poverty of young, so far as we have seen in our thirty years' experience, yielding but a single pair out of a grand total of 135 brant killed. In this connection we may cite another instance in corroboration of our statement in regard to the poverty of young birds. A party of five gentlemen, gunning near Nantucket early in April, in a week, killed sixty-one brant, every one of which was an adult bird. Last year about three-quarters of all the birds killed were young. It will be readily understood by any person of experience that there will be relatively more young birds killed than old ones. The old birds are more wary and suspicious and do not decoy so well as young, and hence more of them fall victims to misplaced confidence as do many of our inexperienced youth. We have no means of determining the age or sex of these little geese except by the dissecting knife, but our test with some of them as they came from the hand of a professed cook is that they are fully up to "three score and ten," and well sustain the character of the family for great longevity.

"Why are the young birds this season so scarce?" is a question frequently asked. Various theories have been advanced to account for the almost entire absence of young birds this season, but none are quite satisfactory. Our own opinion is this: The season of '87 must have been very backward, so that the birds did not reach their breeding ground till late, and the cold weather of autumn set in so early as to compel the parent bird to abandon her callow young to perish in the ice. No other theory is at all plausible. It is well known that these birds do not leave Prince Edwards Island till the 10th of June when the eggs are in a rudimentary state. Allow them three days to reach their breeding ground, six more to build their nests and mature their eggs for extrusion. If then they lay fourteen eggs, fourteen days more will be required. Four weeks (28 days) is the ordinary time necessary for incubation by the goose family. Fifty-one days are already consumed and our little chick has just burst his prison wall and sniffed the chilling Arctic breeze of August 1. Now, we are informed by our most reliable Arctic explorers that by the third of September in ordinary seasons the ice begins to make.

It was on the 4th of September when the Polaris, unable to proceed further, dropped her anchors for the winter, and much snow began to fall. This would leave but thirty-four days for the young birds to mature and become strong and well fledged enough to wing their way out over the long, weary road to more genial climes. It is presumed six weeks or forty-two days at least would be required to accomplish this, and when winter sets in so early as Sept. 5, all the young birds, except those of a few old ones that arrived upon the ground earlier, must perish. Such a season must have overtaken them in '87. If it is assumed that some malaria—some frightful epidemic swept away the young birds, why, then, did it not also take the loving mothers who so faithfully and tenderly nursed and protected them? We deem both the non-productive and epidemic theories untenable.

We have at times thought there were less birds going north this spring than last. This, however, is mere conjecture, as there are no data from which to deduce conclusions. The best judges differ about it, but there was no difference of opinion as to the numbers last year being equal to or even greater than on any previous year during the past half century. They are birds singularly exempt from destruction by man's ingenuity. They have entire immunity from danger on their breeding grounds, but within a few years have been pursued and destroyed in their southern or winter resorts. To what extent this slaughter has been carried on we have no means of judging other than by the numbers offered in our markets. We should hardly think it would foot up five thousand. If, then, the number of brant as estimated by our best judges last year was four millions, the small number killed by man and other casualties would make no perceptible diminution, and if any apparent decrease had taken place it must be accounted for upon some other ground than human agency. In surveying all the pros and cons we must still adhere to the theory of the sole agency of frost.

That we have killed so few birds this season rests simply upon two causes: First, that the birds, being all old ones, would not decoy well or offer any number of good shots; our members and invited guests are most of them old, experienced hunters, and the small bag could not be attributed to a want of skill on their part. Second, the transformation of some of our best feeding ground into a grand sand flat. This place has from time immemorial been peculiarly situated to attract brant hither, as well as to afford most excellent opportunities for shooting them. The Chatham Flats, which are overflown every high tide, are more than a mile in length by less than half a mile in width. On the west side of these immense sand flats is the open bay, much of which is shoal water, containing large patches of eel grass (*Zostera marina*), upon which the brant feed. On the easterly side of these flats was a strip of water running up to the town, some two miles distant. This channel, through which vessels and the tide water passed, subsequently closed at its southerly end, forming a sort of bay, which was protected from the ocean waves by a broad, high beach, called Nanset. In course of time this inner bay produced unknown quantities of eel grass, fresh, green and delicious. This natural food for the brant attracted them over and across the flats.

Along the margin of these flats our boxes are placed so that the birds can swim up on to the bars of sand that surround them, or as they fly over to the feeding ground might be coaxed to pay a visit to our decoys for social or other reasons. Then they all had to come out over the flats as they did not apparently like to spend the night in so narrow a channel or so near the town. The fact that the birds had to cross and re-cross these narrow flats to reach those precious feeding places, rendered this location one of the best if not the best brant shooting ground to be found anywhere upon our whole Atlantic seaboard. Some few years ago, during an easterly gale and high tide, Nanset bar was broken through or breached nearly opposite the town of Chatham. On every high tide the current through this breach westward was so strong as to move immense fields of sand, of which the beach was formed, into the channel, thereby ruining the northerly part of this feeding ground. Still there was left some mile or two of this alluring food which the birds continued to visit.

Last winter during another gale and high tide the dashing waves made a clean breach through Nanset abreast of our club house, and finally so reduced this great warder of the waves, Nanset beach, that every high course of tides sweept over it until it, is now almost level with the common flats. The material thus removed has been utilized to fill the remaining part of the channel. The gap abreast the Monomy club house has not for the past month widened, but rather diminished. What the final result will be no one can predict. The nature of all this immense pile of sand of which Cape Cod is composed, has, it is thought, a tendency southward. We are not certain but there is such tendency in all particles of matter north of the equator, since it is ascertained that the equatorial is greater than the polar diameter.

Then there is another observed feature in all widely extended sandy beaches, *i. e.*, in course of time for a second or outer bar to form. But even though this were to occur, the glory of our channel feeding ground has departed forever! The harbor feeding ground is still left to us on the west side of the flats, but even this is imperiled by the dashing wavelets against our little island, which is now the only barrier against the broad Atlantic, that at no distant day may sweep our islet across the flats and fill the harbor with moving grains of sand. For ages have the brant crossed and re-crossed the great flats to feed in the channel, which but so recently bore upon its bosom the thrifty commerce of Chatham, now an unsightly barren waste.

But we have as yet conveyed to the reader no very clear idea of the shooting done this seeson. The first party of seven that visited the club house, killed no brant. The season was backward and cold, the flats much of the time covered by ice, and then the wail that usually goes up from the flats at this early period about high winds and tides carrying away the bars; some stray shot from an outsider scaring the brant and spoiling such a big shot; the east wind keeping the birds off the flats; a boat coming along just at that critical period when great numbers were about to fall; or some of the other thousand and one complaints that gunners put forth when unsuccessful. The second weekly party of eight fared better, killing twenty-three brant. The third party of seven got twenty-nine; fourth party of seven bagged thirty-one; the fifth party of eight got forty-four, and the sixth and last group of seven persons took in only seven brant. There were several hundred of the birds in the bay when we departed on the 2d inst. looking so innocently as much as to say, the next southerly wind will carry us beyond the reach of any breech loader. They never decoy well on these last days of the flight. They seem to be awfully impressed with the idea that they are late and must hurry along to catch up. W. HAPGOOD.

BOSTON, May 4.

OUR MOOSE.

Editor Forest and Stream:

In your issue of March 8 I gave an account of part of my experience while in Maine last fall on a hunting expedition. Among other things I forgot to mention that we found signs of three moose, a cow and two calves, near Pierce Pond; and I was much interested in seeing where they had browsed the bushes and twigs and pealed the bark off the small trees, also their tracks and large beds in the snow, and the place and surrounding where they had no doubt expected to yard for the winter; and I studied their habits so extensively that I quite naturally called them "our moose;" and as might be expected was quite anxious as to their future, and hopeful that they would be fortunate enough to pull through the long hard winter, and that by next fall I might have a chance to look after them again and see if any of them had horns or not.

But alas for my hopes. In March I received a letter from my old guide and friend stating that the snow was very deep, and that there had been a great deal of game killed in the winter, and parties were still killing all the moose, caribou and deer they could. He wrote, "The worst of all is, I fear, they have killed 'our moose;'" and he tells a pitiful story of how the creatures were discovered and mercilessly killed. They were yarded south of Pierce Pond stream, three-quarters of a mile from the Kennebec River; some boys had been on the hill hunting gum and found their tracks. On returning in the evening they told a man what they had seen. The next morning the man took an axe and went for them, and soon came in sight of the three moose. They stood and faced him as if paralyzed in the deep snow, because they could not run; but to make sure of all of them he went back and got two other men, and took a fresh start the next morning. On coming to the yard they found that after he left them the day before the moose had started and traveled about seven or eight miles through the deep snow, in a desperate effort to save their lives. But the bloodhounds on snowshoes overtook and killed them all. They sold out the two calves and went home in high glee and full of renown, expecting to return for the cow the next day. On their return they found that three other fellows of like depravity had been there and stolen every pound of meat and also the hide. So there does not even seem to be honor among thieves in that country.

BLACK FOX.

STRONGER PRIMERS.—Savannah, Ga., May 10.—Cannot the Winchester people be induced to follow suit and bring out strong primers, as the U. M. C. Co. have done so successfully? Surely it only needs the mention in your valuable paper to induce this great and rich company to try and give the shooters what they need.—CAPTAIN JACK.

MONTREAL FISH AND GAME CLUB.—*Editor Forest and Stream:* The meeting held in Montreal May 2, reported in your issue of the 10th inst. as that of the Fish and Game Protection Club, was not a meeting of the Protection Club, but of the Montreal Fish and Game Club. The latter is a social club in connection with the club for the protection of fish and game; each club has distinct organization and functions.—W. H. R.

MANORVILLE, N. Y., May 12. I was at Eastport yesterday, and heard firing opposite there, and upon inquiry, was informed they were shooting snipe, one party the day before killing 75. It is well known that fire-lighting geese and ducks was carried on there all through this spring. Is there any way by which we can have an officer appointed, who will make an effort to stop this detestable work?—C.

YELLOWSTONE PARK PETITION.

THE lists of signers of the Yellowstone National Park petition are continued from the last issue, as below:

IDAHO TERRITORY.

W. M. Stockton, H. B. Dexter, E. S. Craster, James H. Cameron, John O'Malia, J. M. Akin, C. S. Anderson, B. F. Clark, L. M. Griffin, G. B. Rufner, A. M. Smith, William Lawler, H. H. Kinny, L. A. Cameron, H. Canfield, M. Canfield, M. E. Canfield, P. B. Mahan, S. E. Corker, L. Z. Butler, F. W. Garrison, J. F. Slinkard, C. E. Corker, W. G. Corker, N. A. Morrow, J. H. Morrow.

ILLINOIS.

Cyrus W. Thompson, Lee Harrison, J. B. Hay, Gust. A. Eberhardt, A. W. Herr, A. G. Fleischbein, J. S. Tindale, J. M. Hamill, A. S. Wilderman, Wm. Winkelman, F. H. Pieper, Amos Thompson, Michael Reis, C. C. Johnson, M. A. Stout, H. C. Doerr, George Reis, Henry Kircher, H. D. Updyke, D. S. Elliott, S. A. Friess, B. M. Hunt.

IOWA.

MEGANTIC FISH AND GAME CLUB.

BOSTON, May 14.—The annual meeting of the stockholders of the Megantic Fish and Game Club was held in Portland, Me., on Tuesday last, May 8. Quite a number of the members went down on the boat from Boston on Monday evening, arriving in Portland early in the morning after having a very enjoyable night on the water. The meeting not being called till 2:30 P. M., the members were entertained during the forenoon by Mr. Francis Cushing, of Montreal, who chartered a steamer and took the party for a sail down the harbor among the islands in Casco Bay, landing them in time for lunch on Cushing's Island, one of the finest summer resorts in the bay. The party returned to the Preble House in Portland, where dinner was served and the meeting called to order.

The following directors were elected for the ensuing year: Dr. William Appleton, Boston; Hon. Henry Aylmer, Richmond, P. Q.; Hon. Orville D. Baker, Augusta, Me.; Geo. C. Ainsworth, Boston; A. A. Boyer, M. P. P., Montreal; Dr. Heber Bishop, Boston; L. F. Small, Boston; Fred. A. Foster, Boston; C. P. Hazeltine, Belfast, Me.; Col. S. Harrington, Boston; Wm. S. Hills, Boston; Major Chas. W. Hinman, Roslindale, Mass.; B. Varnum Howe, Cambridge; Chas. A. Kilham, Beverly, Mass.; Frederic L. Brown, Boston; Major W. A. Morehouse, Sherbrooke, P. Q.; Dr. M. A. Morris, Charlestown; Henry W. Nason, Montclair, N. J.; Arthur W. Robinson, Charlestown; E. A. Shaw, Lexington, Mass.; J. F. Smith, Q. C., Toronto, Ont.; F. H. Southwick, New York; Alex. Taylor, Jr., Mamaroneck, N. Y.; Jas. S. C. Wells, Hackensack, N. J.; Jas. Wemyss, Jr., Boston; L. O. Woodruff, New York.

Among some of the recommendations made to the board of directors were the appointment of an executive committee of five from among the directors who should have the management of the affairs of the corporation, under the control of the board; adoption of a new set of by-laws, and a reduction of the board from twenty-six to at least thirteen. The party returned to Boston on the evening boat. The first meeting of the new board of management was held at Young's Hotel in Boston, on Saturday evening last, and the following officers elected for the ensuing year: President, James Wemyss, Jr., of Boston; Vice-Presidents, I. O. Woodruff, of New York, and Hon. Henry Aylmer, of Richmond, P. Q.; Secretary, Dr. Heber Bishop, of Boston; Treasurer, Frederic L. Brown, of Boston; Attorney, James Russel Reed, of Lexington, Mass. Executive Committee—The president, secretary, Dr. M. A. Morris, Arthur W. Robinson and L. F. Small. Finance Committee—E. A. Shaw, Chas. A. Kilham and B. Varnum Howe. Committee on New Members—Col. S. Harrington and Dr. Wm. Appleton, for Boston; Major W. A. Morehouse and A. A. Boyer, M.P., for Canada; Henry W. Nason and James S. C. Wells, for New York.

The financial report of the corporation was read, showing that during the past year $4,899.79 had been received from admission fees, annual dues, interest on deposits, etc., and $4,223.33 expended in erecting camps, cutting trails, furnishing camps with stoves, cooking utensils, dishes, blankets, etc., putting in boats and canoes in the different lakes; for salaries of fish and game wardens, prosecuting infringements of the laws, continuing the leases, etc., etc., leaving a balance in the treasury of $676.46.

The club is composed of about 200 members scattered all over the country, from Philadelphia to Montreal and Toronto, and from Maine to Chicago. The preserve comprises 74,000 acres or about 120 square miles of leased lands and waters situated partly in Maine and partly in the Province of Quebec. It contains twenty-four lakes, four rivers, all well stocked with speckled trout, and immense stretches of forest, which is a natural breeding park for deer, caribou and moose. The reservation is reached by rail and steamer, being only about 18 hours' travel from Boston (400 miles). The admission fee is $50, and the annual dues $10, the limit for the present will be 300. It was decided at the meeting to take immediate steps toward the erection of the club house at Spider Lake, and it is expected that from the admission fees from new members for the coming season and the annual dues a sufficient sum will be accumulated for the purpose. The fishing season opens about June 1, and the hunting in September. The preserve contains some of the Seven Ponds in Maine which are celebrated for their sure fishing all through the season.

H.

OHIO FISH AND GAME LAWS.

JUST prior to adjournment the Ohio Legislature enacted a new law for the protection of fish and game. The following summary will give a comprehensive idea of its more important provisions:

The law forbids in Lake Erie the use of fyke nets, the use of gill nets in water less than 30ft. deep, and the use of any nets from June 15 to Sept. 10. In Mercer county reservoir net fishing is forbidden from July 1 to Sept. 15, in Licking and Lewistown, June 1 to Oct. 1, the fyke or set nets only are permitted, and of not more than 6ft. openings, and wings or leads are prohibited. In all waters the use of trammel net, shooting, killing or spearing a fish with dynamite or other explosive is forbidden. And in all waters except those named above, all fishing except with hook and line, with bait or lure, is forbidden. In all the streams it is forbidden to take black bass with any device from May 1 to June 15, and black bass less than 8in. in length are not to be taken at any time. Any nets set or placed as forbidden are to be confiscated, and the person so placing a net is guilty. The purchase, sale or having in possession of fish caught out of season is forbidden.

The law forbids the killing of quail between Dec. 15 and Nov. 10; squirrels, between Dec. 15 and June 1; woodcock, between Nov. 1 and July 15; ruffed grouse or pheasant and wild duck, between Dec. 1 and Sept. 1. All hunting and trapping, or having implements for these purposes, on Sunday, in the open air, is forbidden. Buying, selling, having in possession and shipping of game out of season is forbidden.

Magistrates are given final jurisdiction in all cases of violation of fish and game enactments. Penalties for dynamite—Fine not less than $100 nor more than $500, and imprisonment not more than six months. For all other violation: For the first offense, fine of not less than $25 nor more than $100, and in case of nonpayment, imprisonment not less than 30 days. Second or other consequent violations, fine of not less than $50 nor more than $500, or in default of payment imprisonment not less than 60 days.

Sea and River Fishing.

TROUT FISHING ON THE NAMELESS.

THE rain fell in torrents and the wind howled enough for a March "blinder," when sitting in front of a bright log fire in this great city of New York, my companion suggested a day's outing on the Nameless River. This awakened such memories of the past that for the moment I was unable to reply, my imagination carrying me at once to the glorious incidents of a year ago. As soon as I recovered and found that after all I was only in the dirty city it did not take us long to talk the matter over and decide that as soon as we could complete the necessary arrangements and get our tackle in proper shape we would go.

The week following found us ready and anxious for the start as we meet at the station and have our traps checked through to the point nearest our destination. And what a contrast between that abominable day of the week previous and the glorious sunshine and balmy air of this May morning. It made one forget that it was possible for old Boreas to whistle as he did but a few days before and courted the feeling that we were pleased with all the world, ourselves included.

At last we are off and the ride of nearly eight hours seemed to pass without our noticing that we were at our journey's end, so engrossed were we with the thought of what we were in search of.

Uncle Jarvis, as every one calls him, was on the platform waiting for us, and after plenty of good honest handshaking and the customary inquiries about the folks, we strap our belongings on the back of the buckboard and jump on ourselves. We inquire first, of course, as to the outlook for fishing, and are delighted to hear that the water is just right and that on his way down he had seen plenty of fish breaking at the bend above the forks. This looks auspicious. And did they appear to run as large as last year? "Well, boys, they ought to be, and plenty of them, too," said Uncle, "for I don't believe there have been more than a couple on the stream since you were here last spring." That was indeed good news, and the prospect for the next day could not have been better.

Now Uncle Jarvis is a whole-souled fellow and a genuine angler, and as he fortunately owns most of the country around, he never permits any one on his waters unless they will agree to fish with the fly only, the consequence is that the sport to be had there is as good or even better to-day than it was five years ago when we for the first time tried our luck on this beautiful stream. If we only had more of such protectors there would be less disappointment and more fish in many a mountain brook.

Just as the sun is going behind the mountains we see in the valley ahead of us the substantial farmhouse of our host. Fifteen minutes more and we are answering questions from all sides; you know what a liking the women folks have for this sort of thing if they have not seen you for some time. We are next shown to our room, and such a comfortable one too, with the good wood fire provided by Mother J., and as the evenings out here are still quite chilly we fully appreciate the warmth it gives out. Being very hungry—and this air would make Dr. Tanner want to eat—we hurriedly prepared ourselves for the good things that were in waiting for us downstairs.

Brother angler, were you ever fortunate enough to come across one of the old style of farmers and his family where each seemed to strive to outdo the other in kindness and where before you had been in the house an hour, you were made to feel as one of the family? If you have, then truly are your "lines fallen in pleasant places." I fear, however, that most of us get acquainted with the farm as a species of boarding house of the poorest kind, where the proprietor sends all his fresh eggs and butter to town and gives you "oleo," watered milk and western limed eggs.

We had chicken, fresh pork, potatoes, preserved fruit and cheese, and oh, what cream, it makes one's mouth water to think of it, and all raised or made on the place. Russet cider for those that preferred it, and tea, of course, which the family partook of, but we were not going to have a foreigner mix with such natives.

The next morning found us up bright and early and ready to do justice to the fishing. Breakfast over, we start for the stream, and at a spot beautiful enough for fairyland, although not as grand perhaps as the amphitheater at the Falls of the Buckkill, we joint our rods, and, with a red-hackle for stretcher and a gray for a dropper, we wade in as quickly as possible. At the foot of an almost perpendicular fall of perhaps twenty feet—

> Where the waters leap and rush
> O'er channeled rock and broken bush—

we made our first cast. Did you see that swirl? Why he was a regular old-timer; too bad not to have hooked him, wasn't it?

In another minute we were both fast to good fish, and after a lively tussle netted our first for the season. Not so very large, perhaps (about ¾lb.), but strong enough for a fish of double the size to be found in most places, and game to the last. A couple more, and we move down stream, leaving that big fellow to get over his disappointment, not to mention ours, and reserving the right to try him again some other time. In an hour or two we have sufficient for the table, so hasten along to that bend beyond the forks, of which Uncle Jarvis told us yesterday.

If you are a true disciple and love nature as you should, the first glimpse of that bend would transfix you and for a time you would forget the errand that brought you there. Under the trees, which here meet overhead, and apparently at your feet, is a view of the valley for miles; here a mountain with its scarred rocky face, there a patch of woods in all its primitive beauty, beyond a small house in its setting of emerald, and far in the distance that indescribable blue haze which lends such enchantment to one's imagination. You feast your eyes longer than you think on this magnificent view, and the involuntary quietness which you have kept in wondering at what is before you, has caused nature to look upon you as one of her own for the time being, and the squirrel comes chattering and jumping to the water's edge to satisfy his curiosity and find out to what family you belong. The birds have become as familiar and the little snipe as he runs from stone to stone seeking his hard earned meal, takes no heed of your presence. A splash and the spell is broken; and you wonder how long the trout have been breaking before that big fellow caused you to awaken from your reverie.

Here we get several good ones, but as the creels are sufficiently filled for our wants, we resolve to return all future catches to the water. But now my friend has enticed one that is a veritable "mossbacker," and for some minutes it is a very doubtful question who will get the best of the struggle. Skilfull play and the yielding rod have done their work quietly and effectually, however, and now on the bank before us is such a one as made us break our previous good resolution. A prize of 1lb. 7oz. is not an every-day affair on a mountain stream; and also knowing so well the excellencies of cream, we concluded that it would be a sin not to take advantage of the opportunity of having him prepared in the way Mother J. only can.

After catching a large number more and returning them to the water, the approaching twilight warns us that it is time to retrace our steps, and with sad hearts we leave the charming stream for another year. On counting up, we find our catch to have been 178 fine trout, and although we kept but forty, the pleasure of playing those that we threw back fully repaid us for our day's pleasure.

Some may ask why I do not give the name and location of this stream. I would gladly do so, were it not for the trout hog, who, like the menhaden pirate, is ever ready and on the alert to take everything that comes in his way to the detriment of all others. For such I have no kind feelings, and therefore in this instance the innocent must suffer with the guilty.

BIG REEL.

MAINE TROUT RESORTS.

WE have recently had a call from Mr. Kennedy Smith, well known to Tim Pond visitors, and who has now gone off and opened a new resort at Round Mountain Lake. This is a new field, Mr. Smith and others tell us that it is one of the best points in Maine for trout and game, large and small. Round Mountain Lake is what was once known as Alder Stream Pond; they have a ridiculous fashion in Maine of dubbing a lake a pond. Mr. Smith's camp will be ready by June 1, and he will no doubt see all of his old friends there. The route is via Eustis. The game is said to include deer, moose, caribou, with ducks and grouse.

Spencer Stream and King and Bartlett Ponds, also reached by way of Eustis, and under the management of Douglass & St. Obier, afford capital trout fishing. The trout in Spencer Stream run about like those in Tim Pond, and are always to be taken. The King and Bartlett Ponds fish are large, averaging, perhaps, a pound, and the waters can be fished with satisfaction in June, July and September. We are told by gentlemen who have been there that this is a great place for moose and deer.

MOUNTAIN TRAILS AND PARKS IN COLORADO.

AH! "Bourgeois," I conned the "sketches,"
Garnered thoughts and mirthful tales,
Saw the upper mountains' glories,
Heard the music of the dales;
Roamed the "Parks of Colorado,"
Threaded all the "Mountain Trails."

Heard the leaping waters thunder,
Caught the lakelet's flashing waves;
And the noontide light, empurpled
In the grand cathedral's naves—
Heard the timbrels of its chancels—
Organs of its chapel caves.

Symph'nies of its bosky galleries,
Echos of its crypts profound;
And the awful "voice of stillness,"
Speaking not in word or sound—
Which the seer discerned in Horeb,
That which hallowed Beth El's ground.

Saw the mystic pearl-wrought "shallop,"
Gleaming through its minster gloom;
By the ever surging torrent,
Borne through sunlight, shade and spume,
Signal back the "Light in Darkness,"
Past the vortex and the gloom.

Roamed with all the hours and breezes,
Where the mists in shadows swim,
Where they spread their rainbow tintings,
By the cat'ract's jeweled brim;
Watched the camp-fire with thy triad,
In the starlight weird and dim;

Till the light of olden summers
Mingled all its dreamy haze
With the torchlight's fitful glimmer,
With the noonday's torrid blaze—
With the splendors of the dawning,
And the sunset's amber rays.

Till the gauzy veils were thickened
O'er the ports of sense to me,
And the gate of dreams stood open,
Loosened by some marvelous key,
Till I passed its charmed threshold
To the realms of mystery.

And the mountain world stood present;
And behold, a wond'rous corps—
Well I knew them each, though never
Had we met in life before—
Knew them by that dream-world knowledge
All unknown to earthly lore.

And our voices rose in concert,
As our noiseless chariots flew
From the valley by the cañon,
Gorge and glen and grotto through,
To the bastioned parks and highlands,
To the craggy ridges blue;

To the ever-reaching ranges,
To the jagged ledges higher,
Whence the glacial fount emerges,
Whence the awful peaks aspire,
Birthplace of the cloud-born missiles
Scattered in the hailstorm's ire.

Up and o'er and 'round and downward,
On our devious course we go,
Where the Holy Cross of crystal
Glows athwart the clouds below,
Where those monk-like mountain hierarchs
Crown their scarlet cowls with snow.

And the music of the singers
Rose in ever rapturous strain;
Dulcet flow and whelming chorus,
Every close a low refrain—
Every voice upbore the concord—
Mine alone the sad refrain.

Rose the song—
"Awake all things of beauty!
Unto you doth gladness bring her train;
Waters pour libation, blossoms wave your censers;
Breathe your anthem, mountain, vale and plain,
Spring is in the fields and dells and valleys."

Then the sad refrain—
"Spring is in the fields, the dells, the valleys;
Dreary winter only doth to me remain."

Swift we passed—with flute-note echoes
Mountain shelves and grottoes rung—
Trees attuned Æolian rebecs,
Far aloft the forests sung,
E'en the willows of the gorges
Seemed to touch the harps of ancient Salem—
Those they bore of old unstrung.

Rose the song—
"Oh, hail all living creatures;
Life and light walk hand in hand again—
Field and wilderness lead forth your myriad voices,
Nature's choirs your minstrelsy regain,
Not alone to earth and air and ocean—
Unto all of life the springtide comes again."

Then my heart's refrain—
"Spring is on the rocks, the cliffs, the highlands,
Dreary cheerless winter only doth to me remain."

All about the mountain splendors,
With the glow of sky and cloud made one—
Gentle wind, the incense bearers,
Hastened with all psalmody and odors
To the jubilee of the sun—
Every voice and force and form of nature
Poured its tribute to the regal sun.

Rose the strain—
"O, wretched, worn and fearful,
Winter's loss and death are spring's own life and gain—
Not alone to lower life terrestrial,
But to human hearts redeemed from thrall and pain;
Comes the springtide of the life transcendent;
Unto all who dwell in Love's sublime domain."

Yet that dark refrain—
"Spring is even on the cold and lonely mountains—
Dreary, cheerless, dismal winter only doth to me remain."

Ah, "Bourgeois," the music lingers—
Through mine ear it swells and trills.
As it swept along the mesas,
O'er the rock-embattled hills.

On by Blanca and the Sultan,
Through each cragged pass and dale,
By the Crested Buttes and Yampa,
Ethel, Orno and Miguel,
Waha Toya and the Chieftain—
Every mountain park and trail.

Still it lingers, ever thrilling—
Even sweeter to console;
And the doleful winter passes
And the spring-tide fills my soul. BREVIER.

To Bro. L. B. France, with the compliments of an admirer of his delightful book.—H. P. H. BROMWELL.

THE FLY-CASTING TOURNAMENT.

ALL prizes for the tournament of the N. R. R. A., to be held May 23 and 24, will be placed on exhibition as soon as received at the store of Mr. A. D. Fisk, No. 18 Dey street, first floor.

The programme of the fly-casting tournament, to be held at Harlem Mere, in the Central Park, this city, May 23-24, is as follows: The first day, May 23, will open at 10 A. M. with

Single-handed Fly-Casting.—Judges—Gen. Rodney C. Ward, Dr. A. Ferber. Rev. H. L. Ziegenfuss, referee. Open to amateurs, rods not to exceed 11ft. 6in. Prizes—1st, gold medal, given by Chas. A. Bryan; 2d, split bamboo fly-rod, given by T. J. Conroy; 3d, trout and salmon flies, given by J. H. Keene; 4th, automatic reel, given by A. G. Spalding & Bros; 5th, Bray fly-book, given by A. G. Spalding & Bros., and silk line, given by U. S. Net and Twine Co.; 6th, subscription to FOREST AND STREAM; 7th, subscription, by W. C. Harris; 8th, subscription to *Jack*, given by Graydon Johnston. Special prize for accuracy, Julius Vom Hofe reel, given by Schoverling, Daly & Gales.

Switch Fly-Casting.—Judges—John A. Roosevelt, A. P. Van Gieson, D.D., Fred Mather. J. L. Vallotton, referee. Open to all, single-handed rods, not to exceed 11½ft. Prizes—1st, gold medal, given by the Association; 2d, cash, given by the Association; 3d, rubber coat, given by the Goodyear Rubber Co.; 4th, Levison fly-book, given by Wm. Mills & Son; 5th, tackle box, given by Levison & Lamb Manufacturing Co., and Dorsal Fin net ring, given by Wm. Mills & Son; 6th, silk line, given by U. S. Net & Twine Co.

Salmon Fly-Casting.—Judges—Dr. A. Ferber, J. L. Vallotton. Capt. Wm. Dunning, referee. Open to all, no limit as to rods. Prizes—1st, gold medal, given by the Association; 3d, silk hat, given by Messrs. Dunlap & Co.; 4th, 100 cigars, given by E. Eggert; 5th, Gogebic reel, given by A. F. Meisselbach & Bro., and silk salmon line, given by U. S. Net & Twine Co.; 6th, subscription to *Outing*, given by Outing Pub. Co.

Minnow Casting for Black Bass.—Judges—W. C. Harris, H. P. McGown. Dr. Geo. Trowbridge, referee. Open to all. Prizes—1st, gold medal, given by the Association; 2d, minnow casting reel, given by E. Vom Hofe; 3d, black bass reel, given by Von Lengerke & Detmold; 4th, luminous baits, given by Enterprise Manufacturing Co., and artificial baits, given by Chas. Plath & Son; 5th, Gogebic reel, given by A. F. Meisselbach & Bro., and silk line, given by U. S. Net & Twine Co.; 6th, tackle box, given by Levison & Lamb Manufacturing Co., and subscription, given by Wm. C. Harris. Distance casting to follow for reel given by Dukehart & Co.

SECOND DAY.

Amateur Single-handed Fly-Casting.—Judges—E. G. Blackford, W. G. Cassard. L. B. Wright, referee. Open to amateurs who have not made an association record of over 70ft. Prizes—1st, Leonard split bamboo fly-rod, independent Fitch handle, given by Wm. Mills & Son; 2d, split bamboo fly-rod and Orvis patent reel plate, given by C. F. Orvis; amateur photographic outfit, given by A. D. Fisk; 4th, flies, given by J. H. Keene; 5th, tackle box, given by Levison & Lamb Manufacturing Co., and subscription to FOREST AND STREAM; 6th, silk line, given by U. S. Net & Twine Co., and subscription, by W. C. Harris; 7th, subscription to *Jack*, given by G. Johnston.

Single-handed Fly-Casting.—Light rod contest.—Judges—W. H. Wood, Rev. H. L. Ziegenfuss. Dr. H. Ferber, referee. Open to all. Rods not to exceed 5oz. in weight, nor 11½ft. in length. All rods with solid reel seats will be allowed ½oz. Prizes—1st, gold medal, given by the Association; 2d, cash ($10) given by the Association; 3d, cash ($8) given by the Association; 4th, tackle box, given by the Levison & Lamb Manufacturing Co., and rod case, given by the Syracuse Split Bamboo Fish Rod Co.; 5th, Gogebic reel, given by A. F. Meisselbach & Bro., and silk line, given by U. S. Net & Twine Co.; 6th, one year's subscription to *Outing*, given by the Outing Pub. Co.

Heavy Bass Casting.—Judges—H. P. McGown, J. S. Van Cleef. Capt. W. Dunning, referee. Prizes—1st, gold medal, given by the Association; 2d, split bamboo bass rod, given by Jas. F. Marsters; 3d, rubber coat, given by the Goodyear Rubber Co.; 4th, flask, given by G. B. Appleton & Co., and tackle box, given by the Levison & Lamb Manufacturing Co.; 5th, Gogebic salt water reel, given by A. F. Meisselbach & Bro., and line, given by the U. S. Net & Twine Co.; 6th, one year's subscription to *Outing*, given by the Outing Pub. Co.

Fly-Casting for Black Bass.—Judges—J. Rice, Dr. J. A. Henshall, F. S. Pinckney, referee. Open to amateurs. Single-handed rods not to exceed 11½ft. in length. Only one fly required, to be furnished by the committee, and to be tied on No. 2 sproat hooks. 1st, gold medal, given by the Association; 2d, pair of boots, given by D. Harris; 3d, split bamboo fly-rod, given by A. G. Spalding & Bro.; 4th, reel, given by T. J. Conroy, and set guides and tip, given by Chas. Koebler; 5th, luminous baits, given by Enterprise Manufacturing Co., and artificial baits, given by Chas. Plath & Son; 6th, Gogebic reel, given by Messrs. A. S. Meisselbach & Bro., and subscription to FOREST AND STREAM; 7th, Gogebic reel, given by Messrs. A. S. Meisselbach & Bro., one year's subscription, given by W. C. Harris, and line, given by the U. S. Net & Twine Co.; 8th, subscription to *Jack*, given by G. Johnston.

THE AUTOMATIC REEL.

Editor Forest and Stream:

For the last week or two, I have been waiting to hear a little testimony on the subject of the automatic reel, but the ground seems already pretty well covered. My own experience with [that ingenious novelty was not particularly felicitous, and some years ago I laid my automatic on a high shelf where it would out be of the way and out of sight. The automatic reel works well—theoretically, when it is not attached to a line run through the guides of a pliant rod and fastened at the further end to a good fish in a piece of lively water. Under these circumstances it is about as inconvenient and cumbersome a piece of mechanism as one could well be blessed with. The pull of a moderately heavy fish on a pliant rod in water with any sort of current will bring the "automatic" to a standstill, unless the fish accommodatingly swims up to your boat, and this he seldom is kind enough to do. If not, the fish will have to be hauled in by that humiliating process known as "stripping the line," with the thumb and fingers. In minnow casting, as has already been broadly intimated, the automatic reel is not at all available; and while it may possibly be used in fly-casting, it is open to all the objections which exist against it in landing any fish after it is once hooked. It is, of course, simply impossible to adjust any spring to the ever-varying resistance at the end of the line, and because of this impossibility the automatic reel can never replace the trained judgment and deft touch of the experienced angler.

For all-round fishing, in the humble opinion of the writer, no reel is equal to a good multiplier, with an adjustable click. No drag, no stop, no "thumb lever" to destroy the delicate touch which regulates the amount of resistance necessary to keep the fish in check. I have in my kit a quadruplex steel pivot reel of this description, which is always kept well oiled, and which has a click so delicate as scarcely to interfere with the free running of the reel. But for minnow casting, fly-fishing and trolling it is equally serviceable, and only the slightest touch is required to change it from a click reel to a free running one. And though I have generally carried four reels in my tackle box, this one is always my favorite for trout, black bass and maskallonge. JAY BEEBE.

TOLEDO, O., May 7.

Editor Forest and Stream:

I am very sorry that Mr. Plummer does not admire the automatic reel. There is no accounting for tastes, but as his reasons for refusing to acknowledge its many good points may deter some one, I wish to protest. He must be exceptional if in his experience his line never tangled or acted as if the d—l was in it on a crank reel. He must be a happy man who never lost a large fish for some cause on the best windlass ever made. Mr. Plummer, to be consistent, should refuse to use that king of rods, the split bamboo, because of its elasticity and happy facility in taking up slack when the loved crank is not on duty soon enough to meet an impending calamity. It may be that if our friend would take along a small boy to grind on the click while he is playing his fish on the "automatic" his musical taste would be gratified, while there would be added to his pleasure the consciousness of using the only reel fit for an artist. As to "Pesca," he undoubtedly throws his rod behind him and works his fish by hand. Forgive me for thinking it a pesky poor way.

Now if anything in these remarks may not seem in good taste I beg leave to apologize. We angle for pleasure. Let each one use that which most conduces to his enjoyment. In my boyhood we used a pole and strong cotton line, and our ecstacy was high in exact proportion to the length of our string of fish and the physical strength required to extricate them from the "circumambient." But we have passed from the alphabet to the primer and are sure that the crank reel was in the alphabet, not in the primer. H. E. STODDARD.

SYRACUSE, N. Y.

BOSTON ANGLERS IN MAINE.

THE ice lingers in the Maine lakes, and the conclusion of the angler is that the season is late. Still, a few of the earlier sportsmen have already departed. The Tuttle party, made up of Mr. Tuttle, of Boston, with his friends in this city and in Connecticut, left last week for Lake Point Cottage, on Rangeley Lake. They have met a good deal of snow and ice—so much between Phillips and Rangeley that a buckboard had hard work to get through. The ice was in the lake solid and fast up to Saturday. But time only can tell when it will go out. Heavy rains and a flood of snow water has raised the lakes, but the ice goes up with the water, breaking away at the shores, but not moving out of the lake till worn out by the sun above and the warmer water below. The latest reports from Andover, at the other end of the Rangeleys—a letter from J. A. French on Saturday—says that there is still a great amount of snow in the woods, and that the ice in the lake is still strong and will not go out before the 20th. A number of sportsmen from this city will start on the going out of the ice.

A new feature in the way of reaching Parmacheene Lake is to be put in operation by the Androscoggin Lake Transportation Company this summer. They have built a new steamer the past winter, the Aziscohos, which is to ply between Cambridge, on the Umbagog Lake, and the Magallaway River Landing. Capt. Farrar, the pioneer of the enterprise, says that the arrangements will permit of leaving Lake Side, Cambridge, at 7 o'clock and arriving at Parmacheene in good season for supper. This is an enterprise that the Captain has been for a long time interested in, and yet no more so than a great many sportsmen who would like to make a trip to Parmacheene but for the length of time it has herctofore required.

Salmon fishing at Bangor is again at a low ebb, or rather the water is at full, freshet flood. The recent rains and warm weather has brought the river up to full banks and no salmon are being taken.

Mr. Wm. Weld, with a party of Somerville friends, are to start next week for the Sebec Lakes, Maine, for landlocked salmon fishing. According to last reports the landlocked salmon fishing at Sebago had not commenced.

SPECIAL.

RANGELEY LAKES EXCURSIONS.—The Boston & Maine Railroad Company are arranging to send six personally conducted excursion parties through the Rangeley Lakes Region this summer, each party going in and out by a different route. The parties will be in charge of Capt. Charles A. J. Farrar, who is personally known to many of the readers of FOREST AND STREAM, and who with his intimate knowledge of, and long experience in, the lake country, will be a charming companion to those fortunate enough to travel with one of these parties. Each excursion will be ten or eleven days, and the price for all expenses from Boston to Boston will be only $50.00. Itineraries and full information may be obtained from the passenger department of the Boston & Maine Railroad. The first excursion is arranged to leave Boston Tuesday July 3, and the others will follow at intervals of about two weeks. The trips are not only to include all the large lakes in the chain, but the lower and upper Magalloway Rixers, and Dixville Notch, and must prove very enjoyable.

WASHINGTON, D. C.—The report of Gwynne Harris, inspector of marine products, for the month of April, shows the arrivals at the river front as follows: 5,195,500 herring, 186,273 shad, 2,990 bunches of rockfish, 1,068 bunches of eels, 17 sturgeon, 636 bunches of pike, 1,607 bunches of yellow perch, 2,329 white perch, 4,852 bunches of mullets, 660 bunches of catfish, 1 bass, 2 carp, 20,150 bushels of oysters. The supply of herring and shad is remarkable; of shad, unprecedented. The single bass was a fresh-water *Micropterus*, such as are caught in the river above tidewater. Little Falls is a favorite locality for anglers, and sometimes two or three have been caught to a rod the present season, but herring have swarmed so as to practically prevent any use of fly or minnow. The water is very clear at present. The variety of fish visiting the Potomac is an interesting study.—C. H.

THE TROUT SEASON.—In northern New York and Pennsylvania the season has been backward and few places have afforded good fishing, so far. The Rangeley lakes and the Adirondacks are still surrounded by snow, although the ice has gone from many of the lakes in northern New York. The season at Blooming Grove Park, in Pike county, Pa., has opened and some of the club have made fair catches. No doubt the warm rains during the early part of this week will improve the fishing wherever they have prevailed. On Long Island the trout have not, as a rule, risen well, and in most places the strings have been small. Some good fish have been taken in Minerva Brook, Warren county, N. Y., last week. This is a tributary of the Schroon River and is easy to reach by the Adirondack Railroad. Many sportsmen are now going into the Adirondacks.

HON. ROBERT BARNWELL ROOSEVELT.—The President has appointed the Hon. R. B. Roosevelt, well known to our readers as an angler, author and Fish Commissioner of the State of New York, to be the United States Minister to the Netherlands. Mr. Roosevelt will no doubt introduce himself to the fishes of the Schelde and the Zuyder Zee, where his ancestors dropped their hooks centuries ago.

INDIAN RIVER.—Marietta, Ga.—In the issue of May 3, the printer has made Mr. Pacetti assert that he caught "large grampus" in the Indian River. Certainly there are big fish there, and Pacetti has taken his share of them, but not I think, as yet, a grampus—which is a small species of whale, 30ft. long or so. "Grouper" was the word I wrote.—S. C. C.

MASSACHUSETTS STOCKED WATERS.—The attempt to repeal the law against fishing in ponds, streams or other waters where fish are artificially propagated without the permission of the proprietors, in the Massachusetts Legislature, was unsuccessful.

CLUB BOOKS.—We have received the constitution and by-laws of the Oxford Rod and Gun Club, of Long Island; and the Portland Gun Club, of Maine.

Fisheulture.

THE MENHADEN QUESTION.

Editor Forest and Stream:

In his effort to uphold a public nuisance Mr. D. T. Church still persists in "dodging." These manufacturers of offensive smells seem to be by nature unqualified to meet an issue fairly, squarely and honestly. I did not say, as Mr. Church asserts in his letter published in your last week's issue, that the purse nets frightened food fishes. My statement was to the effect that menhaden are among the most timid of fishes, and are driven from their accustomed feeding and spawning waters by the pursuit of the purse net steamers. The natural inference is that other fish which to a great extent subsist on menhaden follow the latter to distant waters, thus being beyond the reach of shore fishermen. Any child can understand this. Mr. Church himself knows this to be a fact. He also knows that other useful fishes do habitually swim in the wake of and eat the menhaden.

These fish boilers are well aware that at a certain season the young menhaden, millions of them, appear in our harbors, and just as long as they remain with us are constantly pursued by schools of small bluefish scarcely larger than their prey.

It is difficult for a man to keep his temper when contemplating the work these fish cooks are engaged in, but their vandalism must be, and will be, stamped out by a long-suffering and utterly disgusted people.

The innocents tell us that they do not boil bass, Spanish mackerel, etc., because, as they carelessly mention, they "do not take enough good fish to feed their crews." As a matter of fact I have been told by the very men employed in hauling purse nets that the finest of fishes are promiscuously dumped into the vats "because it would be too much trouble to pick them out of the mess." The evil work done by these people did not result in such wholesale mischief so long as sailing vessels only were used in this business of bad smells and utter selfishness, but every steamer found hauling nets within two miles of shore should have a big round shot sent through her, below the water line, and a good job done.

THOMAS CLAPHAM.

ROSLYN, L. I., May 7.

SALMON IN THE HUDSON.—Up to Saturday last, fourteen salmon have been taken in the Hudson river between Communipaw and Yonkers. The largest one weighed 10½ pounds and the smallest 8 pounds. They were taken by the shad fishermen in gill nets, and were therefore too badly injured to be returned to the water, as the law requires. The fisherman who took the fish at Yonkers did not know what it was and on cutting it open found that it was red inside and threw it away as uneatable. The stocking of the river, begun by Prof. Baird, is being continued by Col. McDonald, and about 440,000 will be planted this spring from the Cold Spring Harbor hatchery. Over half of the fry have already been planted in the trout streams of Warren county, and the end of this week will find them all in the tributaries of the upper river. The experiment seems to be proving successful in spite of the doubters.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

FIELD TRIALS.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6202.**

THE EXAGGERATION OF TYPE.

Editor Forest and Stream:

It is possible by selective breeding to make almost any desired alteration in the structural formation of fowls or mammals. In breeding to a type it is quite as easy to exaggerate the ideal as not to equal it. In poultry the breeding for certain prominent "points" to the exclusion of everything else has resulted in ruining several varieties, and it is apparent that if a halt is not soon called the same result will happen to several breeds of dogs.

A critical inspection of the leading bench shows of the present year has convinced me that in several of the classes the ideal of type has been reached and breeders are now exaggerating it. In field spaniels a long body and low legs are deemed exceedingly desirable, but there is no necessity for making a long-haired basset out of the breed. The longest-bodied and shortest-legged dogs win the prizes, and if breeding on this line is continued it will result in producing an animal with legs too short for walking. The only means of getting on will be by wriggling along on the belly like a snake, a means of locomotion for which the long body is well adapted.

A long lean head and height at shoulder are supposed to be the best points of a modern collie, at least specimens with these qualities win over smaller and shorter-headed ones which excel them in everything else. Possibly a half century from now collies will have heads as long as an alligator's and be as large as the present St. Bernard. The judges seem to have lost sight of the peculiar collie expression characteristic of the breed, as I notice that with one or two exceptions these large winners are devoid of it.

The mastiff of to-day should have a short muzzle. In Minting we really find the perfection of this type, but to see how a little exaggeration approaches a bulldog breed, one only has only to look at his kennel companion Ilford Caution.

Fair length of body is what the English fanciers exact from a prize-winning dachshund, but Rubenstein, who is considered the best specimen yet shown on this side of the Atlantic, is almost as long as a basset. There is, however, one advantage in this style of dog. In going to earth it will be a long hole that will enable him to get his tail inside, and when he closes his jaws on the quarry the owner can use the tail to draw out both dog and game.

The difficult thing to breed in a bull-terrier is that peculiar eye that gives the dog a cold, pitiless expression and suggests that its owner will never ask for mercy nor show any. Yet the majority of the winners have optics which would not be out of place if transferred to the most innocent toy. The long head, black nose, solidity of color and good body and legs are the points that please the judges. Light eyes and deafness seem to count nothing against them.

Speed and style are desired at field trials and if these qualities continue to be all important, those of the future will probably bear a close similiarity to coursing matches.

S. REICNAF.

THE POINTER CLUB.

Editor Forest and Stream:

About a dozen breeders and exhibitors of pointers met at the office of the American Kennel Club rooms on Tuesday, May 8, for the purpose of forming a pointer club. On motion of Mr. Jas. L. Anthony, Mr. C. J. Peshall was called to the chair. Mr. J. H. Winslow was nominated for secretary pro tem. and elected.

Those present were: A. C. Collins, Hartford, Conn.; E. H. Morris, Jas. L. Anthony, F. R. Hitchcock, New York; C. J. Peshall, Jersey City; Elliot Smith, New York; J. M. Arnolt, Tremont, N. Y.; J. H. Phelan, Jersey City; E. R. Bellman, Madison, N. J.; J. H. Winslow, Philadelphia; Geo. L. Wilms, Jersey City, and Jacob Pentz, New York. Communications were read from a number of gentlemen who desired to become members of the club. The following is a list of those who desire to become members of the club, but were unable to be present in person: Dr. W. W. E. Alcott, Avon, Conn.; Hon. Jno. S. Wise, Richmond, Va.; Dr. W. F. Strong, Bridgeport, Conn.; B. F. Seitner, Dayton, O.; C. M. Munhall, Cleveland, O.; Chas. Heath, Newark, N. J.; Thos. M. Steele, Dover, N. H.; Geo. N. Beckwith, Pittsburgh, Pa.; F. W. Fawcett, Savannah, Ga.; Jno. M. Tracy, Ocean Springs, Miss.; S. R. Bradley, Greenfield Hill, Conn.; M. V. D. Saunders, Detroit, Mich.; Wm. Tetterington, Wyanet, Ill.; W. A. Anderson, Kansas City, Mo.; Dr. Jno. R. Daniels, Albert Smithwright, Philip Trottner, F. S. Stockey, Cleveland, O.; Fred. Stringelin, Hartford, Conn.; J. E. Isgrigg, Indianapolis, Ind.; J. P. Swain, New York.

Mr. Anthony moved that the chair appoint a committee of three to draft a constitution and by-laws. This was seconded by Mr. Phelan and carried. The chair then appointed Mr. F. R. Hitchcock, of New York; Mr. A. C. Collins, of Hartford and Mr. James L. Anthony, of New York, to draw up a form of constitution and by-laws to be submitted to the club. This committee retired and after consultation submitted the following constitution and by-laws, which, on motion of Mr. Hitchcock and seconded by Mr. Bellman, it was unanimously adopted.

It was moved and seconded that a copy of the constitution and minutes of this meeting be furnished to the sporting papers by the secretary, and further, that the charter members be given until July 1 to join the club and pay their dues, which were placed at $5 a year; and further, that a meeting of the charter members be held on or about July 1 upon call of the chairman of this meeting. This was carried. It was then moved to adjourn.

Any one desiring to join the club can do so by forwarding their name and residence, together with $5 by or before July 1 to the temporary secretary, Mr. J. H. Winslow, 608 Chestnut street, Philadelphia. J. H. WINSLOW, Sec. pro tem.

CONSTITUTION OF THE POINTER CLUB OF AMERICA.

SECTION 1. The object of the club shall be to promote the breeding of pointers, to develop and bring to perfection the natural high qualities of the same for field use, to define and publish a description of the true type, to urge the adoption of such type on breeders, competitors at field trials and bench shows, as the standard by which such pointers should be judged, and to suggest to all field trial associations and shows where pointers compete, the names of qualified and proper judges.

SEC. 2. The club shall consist of a president, four vice-presidents, a secretary and treasurer (one person), and a committee of fifteen (including the before mentioned officers) and an unlimited number of members.

SEC. 3. Five members of the committee shall be withdrawn by lot each year, at a meeting to be held at the New York show, or at any other time or place that may be named by the committee as best suiting the convenience of the active members of the club (timely notice of at least sixty days being given of any change in the place), and five new members be elected to fill the vacancies, the retiring members to be eligible for re-election.

SEC. 4. The entire control and management of the club shall be vested in the committee, who shall have power to make by-laws and decide upon all matters in dispute not provided for by the Constitution of the club. Five shall constitute a quorum.

SEC. 5. The election of members shall be by ballot, and shall be vested solely in the committee under the provisions of Section 2—two black balls to exclude.

SEC. 6. The entrance fee for all members admitted on or before July 1, 1888, shall be five dollars each—which sum shall also include the annual dues to July 1, 1889. On and after July 1, 1888, an admission fee of five dollars shall be charged, together with the sum of five dollars as annual dues for the current year, both of which sums shall be payable at the time of election. The annual dues for each succeeding year shall be payable on the 1st of July each year in advance, and any member whose dues shall remain unpaid for the period of three months, shall after due notice be suspended, and if after a lapse of thirty days after suspension the dues still remain unpaid, shall without further notice cease to be a member.

SEC. 7. Subscriptions and donations, entrance fees and dues, shall after payment of all expenses be applied in such manner as the committee may determine in the purchase of cups or stud medals, or given in money prizes for competition by members of the club at a field trial or dog show to be held under the auspices of the club, or for general competition at any recognized field trials or bench shows at their option.

SEC. 8. Judges at field trials and dog shows (where such judges have been recommended by the club) shall be requested to send to the secretary the names of such dogs as may show excellency of merit in their work in the field, or as approaching perfection in the type fixed by the club as the true standard by which pointers should be judged on the bench, and there shall be kept and printed a register of the names, breeding, color and markings of such dogs as shall be thus favorably mentioned together with their special points of excellence as specified by the judges.

SEC. 9. Committee meetings shall be held at least once every three months, and a general meeting of members at least once a year for the election of five members of the committee as provided in Section 3. Thirty days notice shall be given each member of each general meeting, and ten days notice to each member of the committee, of any regular committee meeting, the latter may be convened at any time upon call of the president, or any three members of the committee, and a general meeting shall be called at the request of any ten members of the club given in writing to the president or secretary thirty days prior to the time named.

SEC. 10. At every general meeting the president or one of the vice-presidents shall be chairman, or failing these a member of the committee chosen by themselves, such chairman to have a casting vote at all meetings. The minutes of all meetings shall be read and approved by the next subsequent meeting and be signed by the chairman of such meeting.

SEC. 11. Any member may cease to be such by giving written notice of his intention to withdraw from the club, but no member can withdraw until his dues for the current year in which he gives notice shall have been paid.

SEC. 12. The secretary and treasurer shall at all times keep a registry of the names of the club members, also a minute book of all proceedings and an itemized account of all receipts and disbursements, all of which books shall be open to the inspection of any member in good standing.

THE BALTIMORE DOG SHOW.

AT the dog show held at Baltimore, Md., April 24 to 27, under the management of Frank Hall, there were 137 entries, of which number 127 were present. All of them received notice with the exception of two that were not for competition. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, C. Porter, Jr.'s Brother; 2d, Mrs. H. C. Van Line's Rab; 3d, S. Swann's Clito. Very high com., Mrs. A. D. Iasigi's Lion. *Bitches:* No entries. *Puppies:* 1st and sweepstakes, W. P. Riggs's The Moor.

ST. BERNARDS.—ROUGH—*Dogs:* 1st, G. C. Haskill's Bonaventure; 2d and sweepstakes, J. & J. Gault's Robin Hood; 3d, ——— Leo. Com., F. Leggemann's Nero. Bitches and puppies absent. —SMOOTH—*Dogs:* 1st, Dr. W. H. Martenet's Leonine. *Bitches:* No entries.—PUPPIES—*Bitches:* 1st, A. L. Bosley's Irene.

NEWFOUNDLANDS.—1st, T. J. Sherbrook's Follie; 2d, A. H. New's Nellie.

DEERHOUNDS.—1st, Dr. J. W. Downey's Thora II.

POINTERS—.CHAMPION—C. W. Littlejohn's Fritz.—OPEN—LARGE—1st, J. Carrigan, Jr.'s, Guy; 2d, S. Morgau's Princess; 3d, J. E. Duker's Bravo. High com., J. B. Scott's Turk.—SMALL—1st, C. W. Littlejohn's Virginius; 2d, D. W. Oyster's Telie Doe; 3d and puppy sweepstakes, F. Pitzer's Hindoo Fritz. Very high com., M. Lenzberg's Tell.

ENGLISH SETTERS.—*Dogs:* 1st, E. W. Jester's Blue Prince-2d, J. F. Busey's Gus Bondnu II.; 3d, H. L. Clark's Duke of Ma; genta. Very high com. and puppy sweepstakes, E. W. Jester's Don Du. High com., M. Lenzberg's Doctor and J. E. Duker's Geb. Com., D. J. L. McCormick's Beppo. *Bitches:* 1st and 2d, E. W. Jester's Sleeping Beauty and Clip. Very high com., C. J. Carroll's Countess Reikah. Com., J. E. Bardroff's Queen B. *Puppies:* 1st and 2d, D. and B. N. Smith's David and Dora. Special (Llewellin), A. L. Bosley's Lady Dixon.

BLACK AND TAN SETTERS.—1st, Mrs. Albert Grendall's Fannie.

IRISH SETTERS.—*Dogs:* 1st, J. F. Busey's Hella; 2d, T. J. Foley's Elcho, Jr.; 3d, J. E. Duker's Con. Very high com., W. L. Washington's Count. High com., W. P. Zollinger, Jr's Bruce. Com., H. Wenzing's Elko IV. and L. Dieterich's Roller. *Bitches:* No entries. *Puppies:* 1st, E. W. Jester's Norah Mavourneen; 2d, D. Williams's Aileen.

GORDON SETTERS.—CHAMPION—Absent.—*Dogs:* 1st, M. McCormick's Dan; 2d A. R. Redsecker's Dan. *Bitches:* 1st, M. McCormick's Nix. *Puppies:* 1st, E. V. Cordell's Fleet.

IRISH WATER SPANIELS.—1st, W S. Medinger's Rosie.

COCKER SPANIELS.—CHAMPION—C. M. Nelles's Mike. OPEN—1st, A. H. Whitridge's Toodles.

FOXHOUNDS.—*Dogs:* 1st, 2d and 3d, A. Brown's Somerby, Statesman and Richmond. Very high com., Elk Ridge Club's General. *Bitches:* 1st, 2d, 3d, very high com. and high com. (4), A. Brown's Rose, Handmaid, Bashful, Rutuful, Fancy, Thora, Rapid and Vanity. High com., Elk Ridge Club's Maido, Juno and Singwell. *Puppies:* 1st and sweepstakes, A. Brown's Sport; 2d, G. H. Hagedorn's Frank.

BEAGLES.—CHAMPION—*Dog:* W. S. Clark's Fitzhugh Lee. Reserve, A. L. Bosley's Rattler III. *Bitch:* A. L. Bosley's Myrtle.—OPEN—*Dogs:* 1st, A. L. Bosley's Chimer. *Bitches:* 1st, F. A. Bond's Blanche; 2d, A. L. Bosley's Thorn II.; 3d, F. C. Stauf's Tiney.—PUPPIES—*Dogs:* 1st, F. C. Stauf's Stonewall Jackson. *Bitches:* 1st, A. L. Bosley's Endy.

DACHSHUNDE.—1st, A. Roeder's Max.

BASSET HOUNDS.—1st, F. A. Bond's Philadelphia.

FOX-TERRIERS—*Dogs:* 1st, A. Webb's Grit. *Bitches:* 1st, J. H. Voss's Flirt.—PUPPIES—*Dogs:* 1st, W. Barrie's Dot; 2d, Dr. W. H. Martenet's Bess. *Bitches:* 1st, A. L. Bosley's Pretty Kniff.—WIRE-HAIRED—1st, A. L. Bosley's Frank O.

COLLIES.—CHAMPION—*Dog:* M. Harrison's Nullamore. *Bitch:* M. Harrison's Jersey Lass.—OPEN—*Dogs:* 1st, J. W. Rice's Nero; 2d and 3d, M. Harrison's Strephon and Roslyn. Very high com., R. G. Williams's Larry. High com., Miss Helen Wyman's Homewood. *Bitches:* 1st, M. Harrison's Flurry III.; 2d, W. G. Long's Belle O'B.—PUPPIES—*Dogs:* 1st, M. Harrison's Roslyn; 2d, Miss Florence G. Horwitz's Royal Bruce. *Bitches:* 1st, R. G. Williams's Scotina.

BULLDOGS.—CHAMPION—C. D. Cugle's Merry Monarch.—OPEN—*Dogs:* 1st, J. H. Sanderson's Sandy; 2d, A. L. Bosley's Tostig. *Bitches:* 1st, C. D. Cugle's Soudan.

BULL-TERRIERS.—*Dogs:* 1st, A. L. Bosley's Jackson; 2d, S. M. Gilbert's Tough. High com., L. R. Foley's Rolly and Turk II. *Bitches:* 1st, N. Higs' Bronta; 2d, F. W. Clotworthy's Kate.

BLACK AND TAN TERRIERS.—1st, A. J. Grindall's Royal Duke.

DANDIE DINMONT TERRIERS.—1st, A. J. Black's Jed.

IRISH TERRIERS.—1st, W. Harrison's Breda Jim.

SKYE TERRIERS.—1st, J. B. Bingham's Jennie.

PUGS.—*Dogs:* 1st, Miss Marion E. Bannister's Jumbo, Jr.; 2d, G. A. O'Donnell's Bob; 3d, F. A. Schilling's Rex. *Bitches:* 1st, C. D. Bannister's The Duchess. *Puppies:* 1st, C. D. Bannister's Saxon; 2d, G. A. O'Donnell's Sully.

KING CHARLES SPANIELS.—1st, M. O'Shea's Stanley.

ITALIAN GREYHOUNDS.—1st and 2d, Mrs. Annie M. Kramer's Lillie and Roman; 3d, Mrs. A. W. Jay's Beauty.

POODLES.—C. R. Thompson's Vixen.

THE POINTER STANDARD.

Editor Forest and Stream:

As the Pointer Club of America is bound to be a strong club, the matter of a standard for judging should be carefully and impartially discussed. I think "Stonehenge" should be carefully improved (by a committee) and by dropping any words or sentences that can have a double meaning culled. I am under the impression that said standard can be "boiled down" so that it cannot be construed several ways. Pointer lovers, breeders and exhibitors, speak for your favorites. Write your opinion about the adopting of a standard. I would suggest that *nom de plumes* be discarded, and place yourself squarely on record for or against a standard. I am for adopting "Stonehenge" with some changes, not to suit any dog in particular, for I have no dogs to boom and therefore have no ax to grind. The A. E. Beagle Club have a standard that I think the best in the field, no ambiguous terms, very simple and one that the breeders understand. I hope to see the day when I can visit a bench show and see such a uniformity of type in pointers as we now see in beagles. Pointer lovers, we can accomplish this by working harmoniously and in the interest of pointers. Shall we do it?

A. C. COLLINS.

HARTFORD, Conn., May M.

THE SOUTHERN FIELD TRIALS CLUB.

[Special dispatch to Forest and Stream.]

CHATTANOOGA, Tenn., May 24.—*Editor Forest and Stream:* The Southern Field Trials Club was organized here to-day with thirty-five charter members. Major J. W. Renfroe, Atlanta, Ga., was elected president, Capt. Pat Henry, Clarksville, Tenn., and Mr. W. R. Holliday, Prairie, Miss., vice-presidents, T. M. Brumby, Marietta, Ga., secretary and treasurer. We have a paid up guarantee fund of $2,000 and our inaugural trials will be run, beginning Dec. 3, place to be announced next week. The following stakes will be run: The Derby with $750; entries close July 1. The All-Aged Setter Stake with $500, and the All-Aged Pointer Stake with $500. T. M. BRUMBY, Secretary.

EASTERN FIELD TRIALS DERBY.

FOLLOWING is a list of the entries for the Derby of the Eastern Field Trials Club for 1888. All were whelped in 1887.

ENGLISH SETTERS.

BOI GLADSTONE (Geo. T. Hodgson, Athens, Ga.), black, white and tan dog, April 22 (Gladstone—Ruby II.).

COUNT PIEDMONT (Edward Dexter, Boston, Mass.), black, white and tan dog, Aug. 9 (Count Noble—Belle of Piedmont).

DAISY'S HOPE (R. M. Dudley, Nashville, Tenn.), lemon and white bitch, April 9 (Gath's Hope—Daisy F.).

DIOMED (Chas. Tucker, Stanton Depot, Tenn.), black, white and tan dog, April 22 (Gladstone—Ruby II.).

FELIX M. (Dr. Geo. Knapp, New York), lemon and white dog, April 9 (Gath's Hope—Daisy F.).

GUY (S. B. Duryea, Brooklyn, N. Y.), black and white dog, Jan. 2 (Ned—Leindor).

GLEN PIEDMONT (Edward Dexter, Boston, Mass.), black, white and tan dog, Aug. 9 (Count Noble—Belle of Piedmont).

HOPE'S LASS (J. O'H. Denny, Ligonier, Pa.), black, white and tan bitch, July 1 (Gath's Hope—Lady May).

JANY C. (Alfred Boyd, Mason, Tenn.), orange and white bitch, May 24 (Gath's Mark—Dell).

LADY CASE (N. B. Nesbitt, Chesterville, Tenn.), lemon and white bitch, June 15 (King Noble—Queen Vashti).

LINDO (Mt. Washington Kennels, Pittsburgh, Pa.), black, white and tan dog, Jan. 2 (Gladstone—Flounce).

LONSDALE (John Mardt, Jersey City, N. J.), black, white and tan dog, Aug. 7 (Swatara—Liberty).

LUFRA'S GIRL (T. B. C. Lucas, St. Louis, Mo.), black, white and tan bitch, May 23 (Gath's Mark—Lufra).

LADY PIEDMONT (Geo. T. Hodgson, Athens, Ga.), black, white and tan bitch, March 19 (Dashing Rover—Ranee).

MARKER (Geo. T. Hodgson, Athens, Ga.), black, white and tan dog, April 22 (Gath's Mark—Lufra).

MAUDE FOREMAN (E. F. Thomas, Denver, Col.), black, white and tan bitch, July 7 (Foreman—Miss Elsie).

MILDRED (Edward Dexter, Boston, Mass.), lemon and white bitch, Feb. 25 (Dashing Rover—Muriel).

MISS MONARCH (C. C. Gray, Providence, R. I.), blue belton bitch, June 19 (Roy Monarch—Flossie).

OLIVER TWIST (B. F. Wilson, Pittsburgh, Pa.), black and white dog, Jan. 5 (Count Noble—Fannie W.).

RUBY'S GIRL (Chas. Tucker, Stanton Depot, Tenn.), black, white and tan bitch, April 22 (Gladstone—Ruby II.).

ST. HELEN (John Mardt, Jersey City, N. J.), black, white and tan bitch, Aug. 7 (Swatara—Liberty).

TERRY (Stockton Terry, Lynchburg, Va.), black, white and tan dog, July 19 (Dashing Rover—Terry's Mag).

UNNAMED (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan 3 dogs and 3 bitches, June (Roderigo—Bo-Peep).

IRISH SETTERS.

KATRINA (Major J. F. Jones, Black's, S. C.), bitch, Jan. 26 (Elcho—Lorna).

VIC (G. T. Hodgson, Athens, Ga.), bitch, March 23 (Dan—Nora).

POINTERS.

BASS (Dr. Chas. E. Michel, St. Louis, Mo.), white and black dog, May 17 (Osborne Ale—Carson's Keswick).

BLOOMO II. (Graphic Kennels, Netherwood, N. J.), liver and white bitch, March 24 (Lad of Bow—Bloomo).

CAROLINIA (Lebanon Kennels, Lebanon, Pa.), lemon and white bitch, June 19 (Bang Bang—Virginia).

CONRAD (R. M. Hutchings, Galveston, Tex.) liver and white dog, June (Naso of Kippen—Delia).

CONTEST (L. W. White, Thomasville, N. C.), liver and white dog, June 28 (Consolation—Graceful).

COUNT FAUSTER (Dr. J. G. F. Holston, Zanesville, O.), liver, white and tan dog, March 4 (Mainspring—Dolly Fauster).

DONALD VI. (Graphic Kennels, Netherwood, N. J.), liver and white dog, Aug. 19 (Donald—Revel III.).

FRED (Bayard Thayer, Boston, Mass.), liver and white dog, June 28 (Robert le Diable—Tuck).

GALENA (J. E. Gill, Franklin, Pa.), liver and white bitch, April 26 (Trinket's Bang—Cremorne).

GLAMORIGAN (L. A. Beddle, Philadelphia, Pa.) liver and white dog, June 28 (Robert le Diable—Tuck).

GLAUCUS (Thos. Hitchcock, Jr., New York), liver and white dog, July 3 (Naso of Kippen—Glauca).

GUYMARD (Neversink Lodge Kennels, Guymard, N. Y.), lemon and white dog, June (Bang Bang—Jilt).

JOYCE OF HALL'S ISLAND (O. W. Donner, Coosaw, S. C.), liver and white bitch, March 24 (Lad of Bow—Bloomo).

KESWICK'S DAN (J. R. Dougherty, St. Louis, Mo.), liver and white dog, May 17 (Osborne Ale—Carson's Keswick).

MUSE (Dr. Chas. E. Michel, St. Louis, Mo.), lemon and white dog, May 17 (Osborne Ale—Carson's Keswick).

NED (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, June 19 (Bang Bang—Virginia).

NELLIE GRACE (Lebanon Kennels, Lebanon, Pa.), lemon and white bitch, April 1 (Bang Bang—Lalla Rookh).

PETER THE GREAT (F. O. de Luze, New York), liver and white dog, July 23 (Naso of Kippen—Luckystone).

PETRARCH (Highland Kennels, Red Bank, N. J.), liver and white dog, June 24 (Robert le Diable—Malite).

REVEL VI. (Graphic Kennels, Netherwood, N. J.), liver and white bitch, Aug. 19 (Donald—Revel III.).

ROSWELL (John S. Wise, Richmond, Va.), liver and white dog, March 5 (Robert le Diable—Young Beulah).

RUMOR (Graphic Kennels, Netherwood, N. J.), liver and white dog, Aug. 19 (Donald—Revel III.).

SALLY BRASS II. (H. P. Dortch and J. A. English, Goldsboro, N. C.), liver and white bitch, May 29 (Graphic—Meally).

SATENELLA (Highland Kennels, Red Bank, N. J.), liver and white bitch, June 28 (Robert le Diable—Tuck).

SLANDER (Graphic Kennels, Netherwood, N. J.), liver and white dog, Aug. 19 (Donald—Reve) III.).

SPINAWAY III. (Westminster Kennel Club, Babylon, L. I.), liver and white bitch, June 25 (Naso of Kippen—Spinaway).

STELLA (F. R. Hitchcock, New York), liver and white bitch, Jan. 22 (Naso of Kippen—Boski).

STONEHENGE (Graphic Kennels, Netherwood, N. J.), liver and white dog, Aug. 19 (Donald—Revel III.).

VIC (T. H. Gibbes, Columbia, S. C.) liver and white bitch, April 26 (Meteor—Mamie).

WESTMINSTER MAGGIE (John Mardt, Jersey City, N. J.), liver and white bitch, Jan. 25 (Naso of Kippen—Moonstone).

BERTIE—SIR COLIN.

WESTMINSTER KENNEL CLUB, Babylon, L. I., May 15.—*Editor Forest and Stream:* Severe affliction caused by the dangerous illness of my eldest son is the sole reason why I have neglected to reply to Mr. John F. Campbell's letter which appeared in your issue of the 3d inst. It was my intention to have replied fully this week, but reading your editorial of the 10th and finding that you had constituted yourself both judge and jury in this case, even going so far as to pass sentence without a hearing, I must content myself for the present with the simple statement that Mr. Campbell's letter is grossly incorrect and wholly misleading, and leave the issue with the American Kennel Club, before which body I in justice to myself demand that this case be speedily brought. JAS. MORTIMER, Sup't of Westminster Kennel Club Bench Show, 1887.

"COLONEL BLOOD IN MASTIFFS."—*Editor Forest and Stream:* I would like to scribble for hours on the matters raised by Mr. Mason under the above title, but neither of us has the time to spare just now. I have always been told that Negress was a real good bitch. Be that as it may, her throwing Crown Princess was of itself enough to stamp her as a queen of the kennel. Colonel's son getting such a crack as Dictator out of a bitch of unfashionable breeding gave him fame enough, and these two instances are enough for my purpose of demonstrating the very great value of the Colonel blood. "Porcupine" has "spoke my mind" as to Colonel, Caution, etc., so I need not enlarge on it; but I would suggest that Mr. Mason must have had Colonel's bodily characteristics in mind when he wrote of him as "truly formed," and in the same breath suggests Caution's head as typical, for it would be hard to find two more dissimilar heads among mastiffs. My citation of Turk, Colonel, Prince (Hanbury's was the one I meant, not Nichol's; he and Wolsey were brothers) and Wolsey was entirely on the point of head, as contrasting the old ideas with the present pug type, as in Orlando, Lady Gladys, Caution, etc.; and I think Mr. Mason will bear me out in saying that there was a nearer approach to similarity in head of the dogs I cited than any of them present to Caution, Orlando, etc. I would be much obliged if Mr. Mason would oblige all mastiff fanciers by defining the dogs he describes; as it is, we cannot tell to which dog either description applies. Taken altogether, while Mr. Mason's article instructs and interests, it doesn't move me from any of my former points.—W. WADE (Hulton, Pa., May 7).

BEAGLES AT NEW HAVEN.—*Editor Forest and Stream:* Mr. Mason's report of the New Haven show appears to me in the main correct, even the criticisms of my beagles, Little Duchess and Rob. He says he is not a beagle man, but he sizes up the specimens very accurately. Perhaps some one may ask why I showed the dogs if I was aware of their imperfections. The New Haven men are royal fellows, and, besides encouraging their show, I went a little on the plan of Dan Mace in a race when he had an inferior horse and drove for all there was left. Just one word about the above dogs. Rob is a good hunter, and Duchess, being litter sister to champion Little Duke, is a fine brood bitch. The long body that Mr. Mason alludes to is desirable if large litters are desired. In one point several of the fraternity think Mr. Mason is off—in his praise of the veterinary Dr. Ross. The beagle bitch Lou had the mange decidedly, as was agreed by many disinterested dog men, none of Mr. Mason's skinned vets included, but Dr. Ross would not admit it. One exhibitor, whose dog was benched next to Lou, after taking competent advice, removed him to a different stall. The mange rule should be enforced in every show, no matter whom it hurts.—FRANK D. HALLETT (Winsted, Conn., April 30).

MAINE FOXES.—Oxford, Me., May 14.—*Editor Forest and Stream:* In reply to the ungentlemanly attack of a Mr. Newall respecting those nine foxes that were shot here, I will explain that the fox that I shot was a dog fox chased by a pair of puppies. The foxes that Mr. Rowe shot he brought home the same day, and he had eight pelts. The foxes were shot in the last days of February. Foxes are very plenty here and poultry farmers suffer from their depredations. One farmer killed 33 foxes last summer. It is no unusual case to get two foxes in a day and four have been captured at one time. I saw four foxes come out of a piece of woods last fall, closely pursued by four of my dogs, and Wm. Lombard killed two of them the first time he fired his gun; 27 foxes and 3 coons were killed ahead of my hounds in as many days. If "S. Reicfan" will come down into Maine we can show him some English foxhounds that are all marked alike and will run as long as the best of them, single or double. I will also state for the benefit of Mr. Newall that "Josh Jeems" has perfect liberty from me to put all items of truth respecting this individual in any paper he sees fit and which they will publish.—L. N. EDWARDS.

PROPOSED GORDON SETTER CLUB.—Baltimore, May 9.—*Editor Forest and Stream:* Will you please state in your next issue, that I desire the names at once of all owners of pure bred Gordon setters, any dog or bitch five generations removed from the black and tan setter Turk or Queen Bess to be admitted as Gordon. I wish with all my fellow lovers of this strain of setter, to form at once a Gordon setter club. The object of this club is to see that Gordon setters have a class of their own at bench shows; secondly, to select our own judges; thirdly, to have the Gordon separated from the black and tan setter in the stud books. As to standard we are, as the majority have decreed it, well fixed.—HARRY MALCOLM.

NEWTON ABBOT PREFIXES.—The prefix "Newton Abbot" has been claimed by both Mr. A. C. Wilmerding and by Mr. E. M. Oldham. By mutual agreement the understanding between these gentlemen is that the prefix may be adopted by both parties. They have no mutual interest in any dog or dogs.

PUG AWARDS AT CINCINNATI.—Columbus, O., May 8.—*Editor Forest and Stream:* Please correct statement of awards of Cincinnati dog show. Kash, pug dog, winner of first in open class, is owned by me, not City View Kennels, as reported.—A. E. PITTS.

ESSEX COUNTY KENNEL CLUB.—Lynn, Mass., May 12.—*Editor Forest and Stream:* At the annual meeting of the Essex County Kennel Club, May 7, these officers were elected: President, Robert Leslie; vice-president, Dr. O. P. Macalaster; secretary, Ernest C. Tarr; treasurer, Chas. H. Leonard. Executive committee: Robert Leslie, Warren H. Beede, Willey Barker. A. J. Hoitt, Wm. H. Walton. Finance committee: A. M. Babb, chairman, N. J. Wales, David A. Williams. Membership committee: Benj. Phillips chairman, Henry H. Carr, Frank G. Bradford. This club will henceforth be known as the Massachusetts Kennel Club, that name having been unanimously adopted at this meeting. There was also a committee of four appointed to nominate a bench show committee and report the same at the special meeting to be held at the Revere House Monday evening, May 14, prior to the first annual banquet given by the club.—ERNEST C. TARR, Sec'y.

EASTERN FIELD TRIALS CLUB.—The regular quarterly meeting of the Eastern Field Trials Club will be held at the St. James Hotel, corner Broadway and Twenty-sixth street, New York, May 22, at 8:15 P. M. A full attendance is requested.

WASHINGTON DOG SHOW.—There will be a dog show at Washington, D. C., May 29 to June 1, held under the management of Frank Hall. The prizes will consist of bronze and silver ware and diplomas.

IN BEAGLES AGAIN.—Mr. W. S. Diffenderffer, whose retirement from beagle circles was announced a short time since, has returned to his old love, and will astonish fanciers of the breed at future shows.

THE HORNELL CLUB was expelled by the A. K. C., instead of "suspended for two years," as stated last week.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

E T Stephens	6	8	7—21	J F Beeching	5	5 4—14
G F Browning	10	6	5—21			

In the evening the work of organizing the Western Massachusetts Rifle Association was completed. The constitution and by-laws are, with a few minor exceptions, the same as those governing the National Rifle Association. The officers of the association, which will be called the Western Massachusetts Rifle Association, will be a board of fifteen directors, of whom the first five are to hold office until the first Wednesday in March, 1893, the second five until the first Wednesday in March, 1892, and the third five until the first Wednesday in March, 1891. The directors shall elect from their body a president, vice-president, secretary and treasurer. They will also appoint standing committees to be known as the finance committee, range committee and prize committee. The executive committee will be the officers and three directors. Any person can become a member by giving his name, age, residence and business address, and paying $2, which will include the dues for one year. A special inducement is made to military companies to join by a provision that if any company shall join as a body, there shall be a rebate of one-half the yearly dues to each member. The following were elected directors: Henry McDonald, E. T. Stephens, J. H. Wood (Pittsfield), W. Milton Farrow (Holyoke), C. S. Axtell (Holyoke), Z. C. Talbot, A. F. Bardwell (Amherst), Henry Adams (Amherst), M. W. Bull, S. K. Hindley, F. F. Whitcomb (Holyoke), Jas. Kimball, T. T. Cartwright, W. W. Tracy (Pittsfield), H. K. Cooley. The association starts off with a membership of 30, which it is expected will soon be increased to nearly 100.

PAINE—BENNETT.—Providence, R. I., May 10.—A conference was held at the Girard House to-day between Chevalier Ira A. Paine and the representatives of Frederic E. Bennett, with reference to the forthcoming match for $2,000 and the revolver shooting championship of America. It is agreed that the first and second days' shooting, 600 shots each day, shall be done at Springfield, Mass., in Hampden Park. The Springfield Gun Club, through their Secretary, Mr. Ware, has written to both the contestants, tendering courtesies. It is undecided yet whether two days of the match will be shot in Boston. The start at Springfield will be made Monday, June 4, and the finish on June 8 and 9, at Narragansett Park, Providence. If there is no possibility of securing a satisfactory place in Boston for two days in the middle of the week the match will be shot through at Springfield and Providence, with the possibilitity of a day at Bridgeport, Conn.

NIAGARA FALLS, Ont., May 8.—The annual meeting of the 44th Battalion Rifle Association was held at the Windsor House on Monday evening, May 7, when the officers were elected: Dr. John Ferguson, Patron; Col. J. E. Morin, M.P.P., Vice-Patron; Capt. G. A. McMicking, President; Major H. Bender, First Vice-President; Staff Sergeant J. Bamfield, Second Vice-President; S. Bradley, Third Vice-President; W. J. McMurray, Secretary; Lieut. J. A. Vandersluys, Treasurer; Lieut. R. P. Skinner and Corp. A. Purden, Finance Committee; Corp. J. Wilson and Wm. M. Parker, Auditors.

OWENSVILLE, Ind., May 8.—The Owensville Ballard rifle team, wind two points from 4 o'clock, standard target, 200yds. off-hand:

J Montgomery	9	10	8	7	7	9	8	9	6	5—78
R Spick	8	6	10	6	9	6	7	9	9	6—76
J Daugherty	6	7	7	10	5	8	7	7	10	7—74
Chas Sumners	8	4	9	3	7	5	6	10	10	9—71
Wm Roberts	10	8	10	6	7	5	6	6	6	4—68
McG. Daugherty	10	6	4	5	7	9	6	5	7	5—64

R. Spick won medal.—J. MONTGOMERY, JR., Secretary.

BOSTON, May 9.—The weather conditions were very good today at the Massachusetts rifle range, but the gathering of shooters was small. Mr. Lee's score of 90 is worthy of mention as well as Mr. Johnson's revolver shooting:

Victory Medal Match.

H L Lee	8	9	10	9	9	9	8	8	10	10—90
A Huntington	8	9	9	10	8	9	5	10	10	6—87
B S Day	7	7	9	10	10	6	8	10	7	10—84

B Sumner	6	9	8	7	8	8	8	7	7	10—78
J Wyman	5	9	8	5	4	5	6	6	6	5—59

May 12.—Though a very stormy day, a good number gathered at the Massachusetts rifle range to shoot in the regular matches. This association will hold a spring meeting of four days, beginning Wednesday, May 30, and ending Saturday, June 2. A large number of prizes will be offered for rest, off-hand and revolver shooting. Below are the best scores shot to-day:

Practice Match, Off-Hand, 200yds.

J A Frye	10	4	10	9	6	10	7	9	7	9—81
C B Edwards	8	9	6	6	9	8	9	8	10	6—79
A L Davis	7	6	10	6	8	7	8	9	6	5—72
S T James	7	5	9	7	8	8	5	9	6	5—69
F D Hart	9	4	6	9	7	8	4	10	6	5—68

Victory Medal Match, 200yds.

H L Lee	10	7	8	9	10	10	9	6	10	7—86
A Huntington	9	10	8	7	7	10	9	7	10	6—83

C Towne	12	8	7	8	9	11	8	11	8	11—93

TOPEKA, Kas.—The Rifle Club here is all torn up over the exposures of alleged false scoring and feeling pro and con runs very high. A member of the club has prepared and published the following statement: "The secretary of the Topeka Rifle Club, Mr. J. L. Paine, has been caught marking his scores higher than he made them with his rifle, and officially reporting them as genuine. Here are the facts. On April 2, 1888, in a friendly contest with the Springfield, O., Rifle Club—who said 'we will not require you to exchange targets, we believe in you'—a member of the Topeka Club, who had several times found Mr. Paine marking up his scores, again detected him raising each of his 3 scores, thereby cheating the consisting team out of 9 points. This outrage was reported to the club, who winked at it, merely asking Mr. Paine to resign as scorer. The score record at the range is made in pencil. Mr. Paine obtained the detective's figures and marked his own back to nearly agree with them; the glass showing three changes made in a single figure. He then calls a special meeting and summons the detective to prove his charges. These pencil scores, marked back, agreed so nearly with the true scores the club declared Mr. P. innocent; but he (Paine) had made the fatal blunder of sending the spurious scores to Springfield before these charges were preferred. The club refused to adjourn till they could be obtained. This manifest unfairness caused the detective, who is Mr. F. G. Minkler, to send in his resignation. It must be noted that up to this point no charges were brought against Mr. Minkler. The president of the club, on receipt of Mr. M.'s resignation called a secret meeting, no citation being given to Mr. M. to appear. Mr. Martin moved to accept the resignation; Mr. Leonard objected, and moved that he be expelled, saying if allowed to resign he might say ugly things about the club. Mr. Minkler has not yet received official notice of the action of that mock tribunal. The day following this farce, the fraudulent scores arrived from Springfield, O. Every figure agreed perfectly with Mr. Minkler's. They were at once shown to the president, who flatly refused to look at them, saying he didn't care a d—n if John Paine fired 100 shots and marked them all up. This man presided at the mock tribunal that expelled Mr. Minkler. The following sworn statements show a bad state of affairs in the club.—I. R. MCCARTER."' The affidavits are by I. R. McCarter to the effect that Paine raised one of his (McCarter's) scores by subsequently firing two shots in pit, scoring 9 instead of 00; and by F. G. Minkler that he had detected Paine raising his own scores.

WORCESTER, Mass., May 11.—Yesterday was the first anniversary of the muster in of the Emmet Guards of this city, Co. G, 9th Regiment M.V.M. The observance of the day included a visit to Pratt Meadow Range and a target shoot. Three of the active members of the Guards with a total of 15 or more out of a possible 25 follows: Capt. William Regan, 15; 1st Lieut. Bernard J. Wilmot, 16, 2d Lieut. Michael J. Sullivan, 16; 1st Sergt. William E. McCann, 15; 3d Sergt. Robert M. Burns, 20; 4th Sergt. Mathew E. Hinds, 15; Corporal Daniel F. Sullivan, 15; Privates John H. O'Keefe, 20; Maurice Nugents, 20; Francis T. Plunkett; 18; Daniel C. Daley, 15; William Tone, 15; Jeremiah Sullivan, 15; P. F. Hurley, 15. Those of the 43 honorary members who shot for a score the following made ten or more out of a possible 25 points: J. B. Willard, 19; Lieut. James Early, 18; William Walsh, 14; P. H. Hurley, 13; John Murphy, 13; Capt. John E. Merrill, 13; Geo. McAleer, 12; J. J. Quinn, 12; D. F. O'Connell, 12; H. F. McManus, 10.

SAN FRANCISCO, May 6.—The first monthly shooting of the Independent Rifles at Shell Mound Park range this afternoon resulted as follows, 200yds:

H Tonemacher	4	4	4	5	4	5	5	4	4	5—44
J D Heise	2	3	3	3	4	5	4	4	4	3—35
J Schlichtmann	4	4	5	4	3	3	3	4	3	3—35
J Werthman	2	4	3	4	3	3	3	3	3	4—33
J Faltings	4	4	4	0	4	3	3	4	3	4—33
J Haman	2	4	2	4	0	3	2	3	3	4—27
P Eckhoff	0	0	4	4	3	3	3	3	3	4—27
L Goldhammer	3	4	3	4	3	3	4	0	3	C—26
Captain Joost	0	0	3	4	4	5	3	4	3	0—26

TOPEKA, Kan., May 10.—The following scores were made by the Topeka Rifle Club:

J L Paine	83	84	87—254	G J Mulvane	66	74	70—210	
C R Paine	79	77	76—232	J H Leonard	60	69	72—201	
R R Moore	74	72	78—224	T W Bean	68	53	76—197	
R Thompson	74	73	76—223					

AMHERST, Mass., May 12.—The annual meeting of the Amherst Gun Club was held Friday evening, May 11, when officers were chosen: President, A. F. Bardwell; Secretary and Treasurer, Henry Adams. The following scores were made at Mountain View Range May 11:

Henry Adams	10	10	6	6	8	8	9	10	7	9—83
J S Thomas	9	7	8	10	7	9	7	5	6	9—77
Maj P D Bridges (mil)	5	4	3	4	5	4	4	2—29		
Sergt A F Bardwell (mil)	4	5	2	4	4	5	4—28			
Lieut H D Messinger (mil)	4	3	4	3	4	4	3—25			

GARDNER, Mass., May 10.—At the last regular meeting of the Gardner Rifle Club at Hackmatack range the American standard target was used. Distance 200yds., shooting off-hand. The work of the three scores were as follows:

Sporting Rifle.

C N Edgell	84	80	76—240	D Newton	62	78	80—220
S L Walker	72	73	81—226	G F Ellsworth	86	78	w—164
F B Edgell	69	73	77—219				

Military Rifle.

A E Knowlton	58	67	67+15—207	G C Goodale	58	66	76+15—205

NEWARK, N. J.—A 100-shot open match at the Shooting Park will open on the 17th, and will doubtless result in some big scores, as the most expert marksmen in this section are entered. Among them may be mentioned M. Dorrler, B. Walthers, the Zettler brothers, Charles and Barney; W. Hayes, J. Coppersmith, A. Lober, A. Bagerow, D. Ungerich and Dr. Boyken. The match will start at 1 o'clock.

COLLEGE SHOTS.—A team from the University of Pennsylvania beat a team chosen to represent Harvard at the range in Watertown, Mass., May 10, by a score of 131 birds to 125. The individual scores were as follows:

University of Pennsylvania.						Harvard.					
Dolan	9	8	8	9—34		Clyde	9	6	8	7—28	
Smith	9	7	10	7—33		Austin	8	7	8	7—30	
Randolph	8	7	8	8—31		Palmer	8	9	9	9—35	
Farquhar	10	9	8	6—33—131		Greene	10	6	10	6—32—125	
Average				32¾		Average				31½	

The officers of the meeting were: Judges, G. C. Charles, Jamaica Plain Gun Club, and Capt. J. B. Sawyer, Massachusetts Rifle Association; referee, R. Schaeffer, Wellington Gun Club; scorers, J. A. Frye, Massachusetts Rifle Association, and D. C. Holder, Harvard Shooting Club.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

THE FOREST AND STREAM DECORATION DAY TROPHY, a solid silver cup, costing more than $100, and made expressly for this event, will be contested for this year by teams of three men from any organized gun club. The conditions provide that each team may shoot on its home club grounds, 15 artificial targets per man, prize to be won by best aggregate of three scores in five shoots, held between May 15 and Sept. 15, 1888. First prize, the Trophy; second, 50 per cent. of all the entrance moneys; third, 30 per cent.; fourth, 20 per cent. Entries will close on May 31.

THE TUCKER SYSTEM.

WE have received from M. Buell Lamberson, 27 Stark st., Portland, Oregon, a copy of his circular descriptive of the Tucker system of pool shooting, which takes its name from Mr. S. H. Tucker, of Parker gun fame. It says:

There are multitudes of men who are fond of the sport and would take part in club shoots if they were not kept back by the presence of one or more crack shots against whom they feel they have no chance. A trial of the "Tucker" system will show that all grades of shooters may enter in the same match and every contestant will get what he wants, and has a right to expect a fair show. The system will be better understood by reference to the following sample score of ten bird match:

	Total.	
A	1111111—6	1110—3 9
B	1111110—5	1111—4 9 wins 2d.
C	1111111—6	1111—4 10 wins 1st.
D	1110111—5	1110—3 8
E	1111100—4	1111—4 8 wins 3d.
F	1101101—4	1011—3 7
G	1100001—3	Withdraws
H	1100000—2	Withdraws

C kills all his birds and wins first. B wins second over A because he out-shot him on the tie. E wins third for the same reason. A makes 9, the same aggregate score as B, but the latter makes a clean score on ties and so is entitled to the prize. If C had dropped a bird on his ties it would have let him out of the race entirely, and B would have won first, E second and F third.

At the beginning of this race each shooter puts in 50 cents, or any sum sufficient to pay for his birds in the main shoot. At the end of the main shoot G and H, thinking they have no chance to win, withdraw. The other shooters pay into the pool any amount that may have been agreed upon before the main shoot commenced, say $1 each—$6, which amount is divided, 50, 30 and 20 per cent.

When the entries are larger than 10 or 12 it is recommended that the number of birds be increased to 8 and 5=13 as below:

	Total.	
A	11111111—8	11111—5—13 wins 1st.
B	11111110—8	11110—4—12
C	11111111—8	10011—3—11
D	01111111—7	11111—5—12 } divide
E	11110111—7	11111—5—12 } 2d.
F	11111110—7	10011—3—10
G	11011101—6	11011—4—10
H	11101101—6	11111—5—11 wins 3d.
I	10111110—6	11001—3— 9
J	11010111—6	00111—3— 9
K	11100011—5	11111—5—10
L	10110011—5	Withdraws.
M	11000101—4	Withdraws.
N	10100011—4	Withdraws.

In this example if A had dropped a bird in the last five, D and E would have divided first; H would take second and K third.

The special feature of the system, and that which makes it a new departure, is the plan of dividing the shoot into two parts. In a ten bird match the first six birds are made to classify the shooters, and the remaining four answer for tie birds. The first and second parts added together show the total birds killed. The man who kills straight wins in this, as in any other match. The vital principle in the Tucker system is the value placed on tie birds, and in combining them with those killed in the main shoot to decide the match. The best explanation of this is a reference to above specimen score. B wins second, not because he killed more birds than A, but because he killed his ties straight.

The advantages of the Tucker system cannot be fully set forth on paper, but some of them are mentioned below. "The proof of the pudding is eating the string." Give this plan a thorough trial and you will never go back to the old system. It prevents the working of combinations and dropping birds for place. Makes every man shoot his best when his money is up. Divides the money equitably. No one obliged to enter unless he has a show to win. Encourages all classes to shoot together. Reduces the number of ties and avoids the usual long delays in tie shooting.

THE OHIO LEAGUE SHOOT.

GALION, O., May 8.—The first day of the State tournament of the Ohio Trap Shooters' League opened this afternoon at 1 o'clock. It rained all morning and gave promise of being a bad day, but contrary to expectations it turned out to be a delightful afternoon, barring only the wind. About thirty shooters from abroad were present, and everything passed off pleasantly. The grounds are nicely located, and every provision for the convenience of the shooters has been made. The second semi-annual tournament of the Ohio League is an assured success.

The following is a list of the winners in to-day's contests:

First event—9 blue rocks, fifteen entries. Winners in first class: First, Sheldon and North 9; second, Taylor and Heikes 8; third, Valentine and Robey 7. Winners in second class: First, Joseph H., Miller and Bass 6; second, Sheckler, Bruce and Hale 5; third, Keifer, Hubbard and Chubb 4.

Second event—Nine Peoria blackbirds, eighteen entries. Winners in first class: First money, Heifer, Heikes, Heal, Pinckney and North, 9; second, Taylor, Gault, Burnison and Loville, 8; third, Bruce and Hubbard, 7. Second class: First, Chubb, Dr. Beecher, Kelly, Snyder, Robey and Ball, 6; second, Alsop, Sheckler and Parnell, 5; third, Murphy, 4.

Third event—Twelve blue rocks, seventeen entries. Winners in first class: First, Heikes, 12; second, Gault, Heal, Hoffman and Chubb, 11; third, Miller and Sheldon, 10. Second class: First, Burnison, Keifer and North, 9; second, Taylor, 8; third Maynard and Murphy, 7.

Fourth event—Twelve Peoria blackbirds, thirteen entries. Winners in first class: First, Gault and Taylor, 12; second, Heikes, Murphy and Burnison, 11; third, Sheldon and Dr Beecher, 10. Winners in second class: First, Keifer and Miller, 9; second, Chubb, 8. There was no third place.

Fifth event—9 blue rocks, 21 entries. Winners in first class: First, Heikes, Taylor and Sheldon 9; second, North, Murphy, Sheckler 8; third, Keifer, Valentine and Parnell 7. Winners in second class: First, Bruce, Maynard and Hoffman 6; second, Ball, Heal and Robey 5; third, Loville 4.

Sixth event—15 blue rocks, 22 entries. Winners in first class: First, Sheldon, Heikes and Bruce 15; second, Keifer and Hoffman 14; third, Pickney 13. Winners in second class: First, Burnison, Valentine, Gault, North, Parnell and Bass 12; second, Ball, Joe H. and Sheckler 11; third, Robey 10. The seventh and eighth events were omitted on account of rain and darkness.

At the business meeting of the League held in the evening the

following officers were elected: President, J. E. Miller, of Cincinnati; Vice-President, Rolla Heikes, of Dayton; Secretary and Treasurer, Ed Taylor, of Cincinnati; Executive Committee, Al Bandle, of Cincinnati; R. E. Sheldon, of Cleveland; William Pratchill, of Dayton; J. H. Keifer, of Dayton. The time has not yet been decided upon. The annual shoot will be at Cleveland, commencing on the second Tuesday in May.

May 9.—The second day's shoot opened under more favorable circumstances. The weather was fair throughout, and as a result the entries in each contest were larger than yesterday. Al. Bandle from Cincinnati arrived last night, and to-day kept the shooters in good humor by his witty sayings. The best record made to-day is that of Sheldon, which is indeed a remarkably good one, he having broken 114 out of 117 shot at. Heikes, Burnison, Murphy, Bandle, Cole, Valentine, North, Taylor and Joe H. were among the leaders in to-day's contests.

First event—15 Peoria blackbirds, twenty-nine entries: Winners in first class, first, Sheldon, Heikes and Taylor 15; second, Murphy, Bandle, North and Bruce 14; third, Gault, Keifer and Beecher 13. Winners in second class, first, Burnison, Cole, Mason, Girton, Joe H., Heal and Parnell 12; second, Miller and Dick 11; third, Ford 10.

Second event—9 standards, 30 entries.—Winners in first class: First, Bandle, North, Heikes, Murphy and Burnison, 7; second, Sheldon, Pickney and Cloak, 8; third, Girton and Keifer, 7. Winners in second class; first, Bruce, Miller and Ford 6; second, Cole, Parnell, Heal and Laville, 5; third, Reese, 5.

Third event—9 Peoria blackbirds, 38 entries—Winners in first class: First, Bandle, Joseph H., Sheldon, Murphy and Cole, 9; second, Burnison, Girton and North, 8; third, Pickney and Dr. Beecher, 7. Winners in second class: First, Ball, Valentine and Richards, 6; second, Roach, Caldwell and Habbard 5; third, Reese and Heal, 4.

Fourth event—12 blue rocks, 98 entries.—Winners in first class: First, Sheldon, Ford and Valentine, 12; second, Heikes, Bandle, North and Taylor, 11; third, Richards and Bruce, 10. Winners in second class: First, Cole, Ball, Keifer, Miller and Parnell, 9; second, Murphy 8; third, Chubb, 7.

Sixth event—Fifteen blue rocks, twenty-nine entries. Winners in first class: First, Heikes, North and Sheldon, 14; second, Cole, Burnison and Mason, 13; third, Parnell, Dr. Beecher, Reese and Richards, 12. Winners in second class: First, Murphy, Quayle, Pickney and Smith, 11; second, Roach and Ball, 10; third, Gault, 9.

Seventh event—Nine blue rocks, thirty-two entries. Winners in first class: First, Sheldon, Taylor, Mason, Valentine, Shinn and Miller, 9; second, Murphy, North, Hoffman and Quayle, 8; third, Burnison and Girton, 7. Winners in second class: First, Parnell, Smith, Cole, Ball, Bauer and Roach, 6; second, Richards, 5; third, Maynard, Joseph H., and Reese, 4.

Eighth event—Fifteen Peoria blackbirds, seventeen entries. Winners in first class: First, Heikes, Hoffman, Valentine and Murphy, 15; second, Sheldon, Bandle and North 14; third; Ford and Richards, 13. Winners in second class: First, Burnison, Smith and Girton, 12; second, Chubb and Mason, 11; third, Cole, 10.

May 10.—The third and last day of the Ohio Trap Shooters' League was a notable shooting event. The day was a pleasant one, and a large crowd of spectators was present from the beginning to the end of the shoot. Among the spectators were a great many ladies. The day's shoot opened with the eighth event, postponed from yesterday.

First event—Nine Peoria blackbirds, 36 entries. Winners in first class: First, Bandle, Heikes, Ball and Murphy, 9; second class: First, Chubb, Guy, Richards, Cole and Robinson, 6; second, Snyder and Joseph H., 5; third, Reese, 1.

Second event—9 blue rocks, 24 entries. Winners in first class: First, North, Ford and Ball, 9; second, Heikes and Bruce, 8; third, Murphy, Shott, Gault, Joseph H. and Hoffman, 7. Winners in second class: First, all were ruled out on account of having previously won in higher classes; second, Reese, Alsop and Chase, 5; third, Girton, 4.

After this part of the programme was finished the contest for the L. C. Smith silver Ohio State championship cup, valued at $500, was at once commenced. There were 26 entries, and 39 single blue rocks were the birds shot at. The contest was intensely interesting throughout. The referee was H. A. Penrose, of the Keystone Target and Trap Company, of Corry, Pa. His work was fine, and the shooters pronounced it the most satisfactory they had ever seen. The following is the score:

Heikes	1111111011111111111111111111—29
Sheldon	1111101111111111111111111110—28

Schaelle	1011110O0 withdrawn.

As will be seen by the score, the Forest City boy missed his last bird, thus giving the championship cup of the State of Ohio to Rolla O. Heikes, of Dayton, without any tie. Among the first to tender their good wishes to the winner were Al. Bandle, of Cincinnati, and Sheldon, the noted shot from Cleveland. Heikes is at present the holder of the Central Ohio championship medal, which he has held for three successive years, having first won it at Dayton in the spring of 1886, making a score of sixteen out of twenty, half double and half single birds. He won it again at Greenville in the fall of 1886, making a score of nineteen out of twenty, half doubles and half singles. And in 1887 he again won it at Lima, making eighteen out of twenty, half doubles and half singles. He also was awarded the medal of the Dayton club ten times in succession last summer. The first real test of his ability was with Sheldon in the Bandle tournament, held at Cincinnati, in July, 1887, when a tie was shot off, it requiring seventy birds to decide the contest, but Heikes missed his seventieth bird and Sheldon won the stakes.

The following is an official report of the best averages made during the tournament, excepting the trophy shoot: Heikes, birds shot at, 189; missed, 6; awarded the first prize of the $50 purse for best average, amounting to $25. Sheldon, birds shot at, 189; missed 9; awarded second prize for second best average, amounting to $15. Paul North, birds shot at, 189; missed 14; awarded third prize, amounting to $10. Heikes shot a 10-gauge Lefevre, Sheldon shot a 10-gauge Smith and Paul North shot a 12-gauge Parker.

In the evening a business meeting was held and it was resolved to amend the constitution so that non-residents of the State cannot enter the league nor participate in its tournaments. It was also decided that at the next tournament two days should be open to the league only and two days to the world.

CLEVELAND, May 10.—The Cleveland Gun Club held its semi-monthly shoot at the club range this afternoon. The conditions of the club match were fifteen single and five pairs of blue rocks at eighteen yards rise. W. A. Bassett won the A class badge and W. H. Tamblyn the B class. The scores follow:

W Roberts	0111111111111110 00 10 11 11 00—18
W A Bassett	0101111111111111 11 11 11 00 10—20

W Bell	0010001000001111 01 10 10 11 10—13

WELLINGTON, Mass., May 12.—There was a good attendance at the grounds of the Wellington Club to-day, and the weather conditions were fair for good scores. Following are the points scored in the merchandise match: Stanton first 19, Swift and Perry second with 18, Nichols third with 17, Sanborn and Stone fourth with 16, Payson, Edwards and Phelps fifth with 15, Grimes, DeRochemont and Brown sixth with 14, Schaefer seventh with 12, and Conant, Snow and Melcher eighth with 11 each.

WINCHENDON, Mass., May 10.—Winchendon Gun Club match at 10 birds:

F T Hopgood	1010111111—8	E M Whitney	1111001011—7
H J Lawrence	1111111111—8	F E Manu	1101110001—6
A D Lawreuce	1101101111—8		

CANADIAN TRAP NOTES.

AT the monthly meeting of the Owl Gun Club of Toronto, on May 8, after the election of a number of new members, Mr. J. C. Unwin, the secretary of the club for the first two years of its existence, was presented with a handsome gold watch in recognition of his services and in token of the esteem in which he is held as a brother member. Mr. J. R. Humphreys made the presentation in a few well chosen words, and Mr. Unwin, who was really taken by surprise, replied feelingly.

A well-known trap shooter of Toronto writes: "I am going to try and get the members of my club to stop shooting pigeons during their breeding season. I think that if the different clubs would discountenance it, they would not lay themselves open to charges of cruelty, besides giving the birds a chance to multiply. I should like to get it stopped, say from 1st of April to 1st of September."

May 9.—The Toronto hotel-keepers' shot at Stark's athletic grounds this afternoon for the silver cup presented by Mr. Stark. The match was at live pigeons. The weather was favorable. At 25yds. rise; Toronto Gun Club rules:

S Stanelaud	0011111110rct— 8	C Ayre	101111110010 ret— 8
G Briggs	1111110011110111—12	J Douglas	1011101010 ret — 6
W Lush	0101100 ret — 3	F Mallett	1011101111100ret—10
J Worden	1010111000 ret — 3	H Powers	1000 ret — 1

Any one missing three birds retired at 10 birds. All except Messrs. Briggs and Mallett had dropped out. Mr. Briggs missed his 12th, and Mr. Mallett did too, thus allowing all the competitors to come in again.

May 10.—In the match at 30 pigeons, 26yds. rise, between Gilroy and McQuay, at Ayre's grounds to-day, for $50 a side, Gilroy won easily, only missing two out of the 30 birds:

Gilroy	111111101111111111111111011111—28
McQuay	100011010101910001001101101111—13

May 11.—At the monthly shoot of the Chatham, Ont., Gun Club to-day, Caleb Wheeler won the first prize with 9 out of 15 birds, in his first class, and Thos. Nichols first in the second class.

The fifth shoot for the Enos James gun, presented to the West Toronto Junction Gun Club by Mr. Chas. Stark, took place to-day. Twenty blackbirds, 3 screened traps, 18yds.: D. Blea 20, H. George 17, P. Wakefield 16, J. Bailey 15, E. Dollery 15, D. W. Walton 14, Clark 12, E. D. Eye 8, W. Jones 8.

The President's medal was shot for. Fifteen blackbirds, 8 screened traps, 18yds. rise: H. George 14, P. Wakefield 13, J. Bailey 13, E. Dollery 15, D. Walton 11, Clarke 10, E. E. Eye 8.

The West Toronto Junction Gun Club would like to arrange a telegraph team shoot (five men per team) with some organized club, at artificial birds. The secretary's address is P. Wakefield, Carlton West.

A NEW YORK SHOOTING GROUND.

AT a meeting called at the office of the Atlantic Ammunition Co., and adjourned to the office of the Winchester Arms Co., in this city last Friday, to take steps for the establishment of a shooting ground accessible to New York, the following gentlemen were present: Messrs. J. Tredwell Richards, Wm. H. Andurin, Chas. Tatham, Chas. Richards, Aug. Schmitt, Geo. V. Hudson, Oscar E. Morton, P. G. Sanford, Elliott Smith and W. A. Wilmerding. The plan, as outlined, is this: Grounds will be leased for a term of years, probably at Claremont, on the Central Railroad of New Jersey, erect a club house, provide traps and a rifle range (200yds.), and have attendants always on the grounds, so that there will be every convenience for shooting at all times.

The proposed grounds are within 18 minutes from the foot of Liberty street, or 20 minutes from the City Hall; trains run at 30-minute intervals in the forenoon and 15-minute intervals in the afternoon; fare for round trip, from New York, 15 cents. To carry out this plan a stock company under the title of the New York Suburban Shooting Grounds Association, is now forming, with a capital of $5,000 in 100 shares of $50. Each share of stock will carry with it a membership privilege, subject to by-laws, entitling its owner to use of club house and grounds, and any targets or other material at lowest possible cost. Contributing members will also be taken upon payment of annual dues, but such members shall have no voice in the management of the association, nor participate in its profits.

A circular giving full details of the scheme may be had on application to the following committee, who are also ready to receive subscriptions to the stock: CHAS. RICHARDS, care The Atlantic Ammunition Co. (Limited), 291 Broadway, New York. AUG. SCHMITT, 602 Broadway, New York. CHAS. B. REYNOLDS, office of FOREST AND STREAM, 318 Broadway, New York.

JERSEYVILLE, Ill., May 8. The following scores were made at our weekly club shoot to-day. Clay bird medal at 20 clays:

Warren	11101011111111111—17	Hutch'n	11010011101111010110—13
Hansell	11101010111111011111—15	Chappell	11011111111011111111—18
Burleigh	10011100101011011113	Smith	10011111010101011001—13
	00100101011011110111—12	Tack	10101111100111011101—14

Sweepstakes at 7 clays, 3 moneys:

Chappell	1001111—5	Warren	1101010—4
Tack	0011001—3	Burleigh	1110101—5
Hansell	1110100—4	Porrings	1110010—4
Smith	1101011—5	Hutchinson	1111010—5

Warren and Porrings tied again on 12 and divided. Sweep at 6 clays, 3 moneys:

Chappell	011111—5	Warren	010110—3
Hutchinson	111111—6	Smith	011110—4
Tack	001100—2	Hansell	101011—4

WORCESTER, Mass., May 10.—The classification shooting at Coal Mine Brook Range under the auspices of the Worcester Sportsmen's Club was continued this week. In the classification score there were three strings of clay-pigeons and three of blue rocks with a possible 30 birds, the class shoots a possible 10 and the ties a possible 5. The work in detail was as follows:

Class A.

	C.P.	B.R.	C.P.	B.R.	C.P.	B.R.	
E T Smith	2	4	5	5	4	4	24
A R Bowdish	4	4	3	2	5	5	24
G W Russell	3	4	4	4	5	5	25
C H Howe	5	2	4	3	5	4	22
E F Swan	2	4	4	1	5	5	21
M D Gilman	3	5	3	4	4	5	24
H W Eager	4	5	5	3	5	4	26
A H Franklin	4	4	4	4	5	5	27
W L Davis	5	4	5	3	5	5	27
Dr Bowers	1	4	5	4	4	5	23
A R B Claflin	4	2	2	4	5	5	22
H Calvin	2	4	3	4	4	3	20
V D Kennison	1	4	3	4	5	3	20
Geo Sampson	4	4	3	5	5	5	26
G J Rugg	4	5	3	3	4	5	24

Class B.

G W Wheeler	4	4	3	3	2	2—18
A S Atkin	3	3	2	1	5	4—18
J B Tongas	1	3	5	3	2	4—18
E Jewett	2	1	3	1	3	2—12
S R Hudson	4	2	2	3	3	3—17
V F Prentiss	3	1	2	1	2	1—10
C Crompton	4	3	2	2	3	3—17
C H Morsel	0	2	1	1	4	2—10
Dr Frank	2	2	3	1	3	2—13

In class A Smith took the first prize of $7.50, Bowdish and Russell divided the second of $4.50 and Gilman, Franklin and Eager the third of $3. In class B Wheeler had the first prize of $5, Larkin the second of $3 and Tongas and Jewett divided the third of $2.

SAN DIEGO VS. LOS ANGELES.—The special match arranged between the San Diego Gun Club and the Rod and Gun Club of Los Angeles, took place on the afternoon of April 30, at the race track, and resulted in a brilliant victory for the latter club. The conditions of the match were six men a side, 10 single blackbirds, at 18yds. rise. It is not improbable that another match will take place in the near future:

Los Angeles Rod and Gun Club.		San Diego Gun Club.	
Walker	1111101110— 8	W C Hinman	0111111100—8
Cline	1111111010— 8	W Hamilton	1111110111—9
Maxwell	1110101111— 8	Geo Bidwell	0110111001—6
Unger	1111111111—10	M Chick	1111110111—9
Winston	1111011011— 8	D B Hinman	1110001100—5
West	1101101100— 6—48	B C Hinman	1010011011—6—43

BROOKLYN, May 12.—The members of the Fountain Gun Club, having been somewhat dissatisfied with the arrangements for shooting at Woodlawn Park, L. I., decided to make a change and selected the grounds at Dexter Park, on the Jamaica Plank Road. Owing to the short announcement of the change comparatively few members were on hand to-day to shoot for the handsome silver cup presented by Mr. Chas. Lange, the secretary of the club. On the shoot-off C. A. Seddons won, killing 2 birds to his opponent's misses:

Dr Munn (21)	1111111—7	M Bondan (21)	1100101—4
C A Seddons (21)	1111111—7	M J Kearney (27)	0101111—5
J H Sawyer (22)	1001001—3	J Wheeler (24)	1100110—4

Referee and scorer, Mr. C. A. Dellar.

BROOKLYN, N. Y., May 10.—Unknown Gun Club regular shoot for the gold medal and extra prizes at Dexter Park:

H O'Brien (21)	0001100—2	R Myers (28)	1011111—6
C Ring (21)	0110010—3	J Rathjen (28)	1011101—5
H Rankin (23)	0111001—4	A Hass (24)	1110011—5
H Van Staden (2:)	1111111—7	E Ulmer (23)	0010001—2
H Paulsen (25)	000w.	H Knebel, Sr (25)	1011111—6
J Skidmore (25)	1100111—6	W Gilman (23)	1011001—4
J Boyle (22)	1110100—4	Dr Hopkins (25)	1111060—4
H Cahill (23)	0111110—5	C Plate (26)	0011011—4
H Knebel, Jr (25)	1111111—7	J Harned (24)	0111011—5

Ties for medal and first—H. Van Staden 1, H. Knebel, Jr. 2. Ties for third—J. Skidmore 1, H. O'Brien 0, H. Cahill 0, J. Rathjen 0, A. Hass 0, J. Harned 0. Referee, Mr. H. Knebel, Sr.; scorer, Mr. J. Boyle. Sweepstakes, 3 birds, 25yds.—C. Plate, J. Skidmore, A. Hass and H. Knebel, Jr. killed all their birds, and on shooting off, miss and out, Skidmore missed and the others killed, dividing the sweepstakes.

SACRAMENTO, Cal., May 4.—A rather remarkable match took place here to-day. The contestants were F. M. Coons and Geo. Wittenbrock, well-known sportsmen. The match was arranged and F. Francis, a San Francisco stock broker, laden with $15,000 came to Sacramento to back Wittenbrock. He was willing to place the entire amount on his favorite, but there was a hitch as to who should be stakeholder. The Sacramentans wanted Thos. Allen, of Elk Grove, but to this Francis would not agree. It looked as if everything would be declared off, but at 2 o'clock yesterday afternoon a match for $6,000 was arranged, with John Barrett as stakeholder. W. D. Harlow is said to have put up $5,000 on Coons, while Charles H. Eldred backed him to the extent of $1,000. Carriages were at once secured, and the principals and a select few went to the spot which had been selected for the match. The conditions of the shoot were 12 birds, 21yds., only one barrel to be used. Both Coons and Wittenbrock are splendid shots, but when Coons had missed one bird and Wittenbrock none, Harlow offered to wager $5,000 against $1,000 that Coons would win. There was no taker, and shortly afterward Wittenbrock missed two birds and Coons brought down his bird each time to the close, the match resulting, Coons 11, Wittenbrock 10.

ST. LOUIS, May 5.—An event which created no end of interest among the trap shots in this city was contested this morning at Compton Avenue Park, between S. C. Edgar, Dr. J. G. Parrish, L. D. Dozier and John W. Gates. It was a match shot at 50 birds each, 26yds. rise, St. Louis Gun Club rules to govern. These called for plunge traps and the use of one barrel. Live tame birds were used, and Fred Thresher had an uncommonly good lot on hand. Mortimer Taylor acted as referee, and Hunt Wilson and John Coles as scorers and judges. It was originally intended to pair off and shoot pair against pair, but it was afterward decided to shoot individually. The two losers were to pay for the birds used and the breakfast for the party. In the first half of the match the race was most exciting, and when the half-way mark was reached Edgar, Parrish and Dozier were tied with 19 birds each, while Gates was close up with 18. Following are the scores:

John W Gates	11100100110011111111111011111111011—39
L D Dozier	11111001111111111111111001100111101110011011111101—37
Dr J G Parrish	16111111111110101001110110000011111011110011110—33
S C Egar	10111111111101111100011060001010001101100111111—32

ROBERT DELISLE.—Detroit, Mich., May 7.—A dispatch to his parents in this city announces the death of Robert Delisle, a well known marksman and fancy shot, at Boerne, Kendall county, Tex., by the explosion of his gun. Delisle had been giving exhibitions throughout the east, and left a few days ago for an Australian trip. He stopped off for a visit in Texas, and in showing the cowboys of the Don Carlos ranch some of his marksmanship, his gun exploded, mutilating his face beyond recogniton and blowing the entire top of his head off. He is widely known over the country, and although but 20 years old had been giving exhibitions at the trap and with the rifle for 4 years.

NEW YORK STATE SHOOT.—The programme for the meeting at Auburn, May 28 to June 3, has been prepared. The prizes will amount in value to $4,211. Every club in the State and every member of every club is invited. The shooting will open May 28 at 9 o'clock in the morning. In order to encourage less brilliant marksmen, the competitors will be divided into classes according to records made at previous shoots. In the first contest the competitors are divided into four grades. The first is the 90 per cent. class, the second 80 per cent., the third 70 and the fourth 60.

OTTAWA, May 1.—At the annual meeting of the Guards' Rifle Association, held at the drill hall, the following officers were elected for the ensuing year: Hon. President, Lieut.-Col. MacPherson; President, Major Todd; Vice-President, Capt. Toller; Secretary-Treasurer, Lieut. Winter; Assistant Treasurer, Private Fairweather; Committee of Management—No. 1 Company, Corp. Watts and Private Nutting; No. 2 Company, Color-Sergt. Mailden and Sergt. Codd; No. 3 Company, Color-Sergt. Heinrichs and Private Morrison; No. 4 Company, Corp. Carroll and Corp. Behan; No. 5 Company, Color-Sergt. Ross and Sergt. McCarthy; No. 6, Lance-Corp. Shea and Lance-Corp. Pegg. Arrangements have been made for the Association to have the exclusive use of four targets on the range. Special attention will be paid this year to the younger shots and prospects for the season are good.

WASHINGTON, D. C., May 10.—Match between Seymour Cunningham and Joseph H. Hunter at 50 blue rocks apiece, Cunningham using a 9½lb., 10-gauge Scott, 4drs. FFFG. powder and 1⅛oz. No. 8 shot. Hunter, 8lb., 12-gauge L. C. Smith, Peters' shells, 3¼drs. powder and 1oz. No. 8 shot.

Cunningham,(18)	11111101011110111011110001111101111011—40
Hunter (16)	11101111111111011011111101111001111111111—42

THE SENECA (MO.) GUN CLUB has organized and elected as officers: M. C. Murdock, President; John L. Walker, Vice-President; R. H. Fesperman, Treasurer; Jno. W. Bryant, Secretary. The first regular shoot came off May 7 at the club grounds. Only eight members participated in the shoot, and in view of the fact that several of the boys had never before seen a trap or black bird, the score was by no means discreditable as a whole. Ten blackbirds, single trap, 22yds.:

H Yust	1100000000—3	M F Dunbar	1100011110—6
M C Murdock	0001010100 -3	D J Hassel tine	1110300000—3

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div.: R. W. Bailey, W. R. Huntington, J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div.: Henry Stanton, A. S. Pennington, E. W. Brown, 146 B'way, N.Y.
Eastern Div.: L. Q. Jones, Geo. M. Barney, W. B. Davidson, Hartford.
N'thern Div.: A. D. T. McCachen, W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 28. Regatta begins Tuesday, July 10.

FIXTURES.

MAY.

24. Toronto, Cruise. Mimico.
24. Lindsay Camp, Sturgeon Pt.
30. Pittsburgh, Opening.
20-31. Eastern Division Cruising Meet, Connecticut River.

JUNE.

9. Knickerbocker Annual.
9. Ianthe, Spring.

23. Brooklyn, Annual.
30-July 5. PassaicRiver Meet.

JULY.

7-23. W. C. A. Meet, Ballast Is.
—. Atlantic Div. Meet.
17-23. Pequot Camp, Norwalk Island.
—. Northern Div. Meet, Lake Couchiching.

AUGUST.

10-24. A.C.A. Meet, Lake George

FLAG CIRCULAR.

THE regatta committee of the A. C. A. have sent the following circular to the secretaries of forty clubs, and hope by June 1 to get favorable answers from a majority of them. The programme will be published in the FOREST AND STREAM, issue of May 31. In the same issue will be given a list of clubs that have guaranteed flags for prizes:

DEAR SIR: We propose this year to ask the canoe clubs of the A. C. A. to provide the regatta prizes, and not depend as heretofore on the voluntary contributions of individual members. Can we count on your club to provide one flag, the value of which is to be not less than $5, of a design, material and size to be determined upon later? Or, if you prefer it, will you send the chairman of this committee $5, in the name of your club, by or before June 1, so we can provide such prize, giving credit for the same to your club? Inclosed please find postal card for reply. A month's time is allowed, in order that the matter can be brought before your club at a regular meeting. Trusting to get an early reply from you, we remain, very truly yours, C. BOWYER VAUX, chairman, 34 Cortlandt street, New York; PAUL BUTLER, Lowell, Mass.; W. A. LEYS, Toronto, Canada, Regatta Committee.

The following clubs have been sent to: Amsterdam, N. Y., Arlington, N. J., Bayonne, N. J., Brockville, Can., Brooklyn, N.Y., Buffalo, N. Y., Capital City, Harrisburg, Pa.; Deowanista, Rome, N. Y.; Descionto, Can., Essex, Newark, N. J.; Harvard, Cambridge, Mass.; Hartford, Conn., Ianthe, Newark, N. J.; Jabberwock, Ohio, Knickerbocker, N. Y., Lake St. Louis, Can., Mohican, Albany, N. Y.; Newburgh, N. Y., Newton, Mass., New York, N.Y., Oakland, Cal., Oswego, N. Y., Ottawa, Can., Paterson, N. J., Pequot, Conn., Peterboro, Can., Philadelphia, Pa., Pittsburgh, Pa., Potomac, Washington, Quaker City, Pa., Rochester, N. Y., Rondout, N. Y., Shattemuc, Sing Sing, N. Y., South Boston, Mass., Springfield, Mass., Toronto, Can., Trenton, N. J., Vesper, Lowell, Mass.; Washington, D. C., Watertown, N. Y., Yonkers, N. Y. There will be about forty prizes needed, and as some of the above clubs may not be heard from, contributions from others, not on this list, will be gratefully received.

THE MAN IN THE RAG CANOE IS COMING.

AND, pursuant to promise, he drops me a postal card as often as he gets a chance. I have had five of them up to date, brief but suggestive. As "Tarpon" is—or was—a member of the A.C.A., I venture to copy his terse notes for the perusal of all canoeists who take a lively interest in adventurous cruising. Taking them seriatum, they read as follows:

I.

LITTLE SARASOTA, Fla., April 3, '88.—My dear N.: On the way at last. Left Tarpon Springs last Monday in a S.W. gale, and paddled to Yellow Bluff. Next day the weather moderated and went to Rocky Pass. The day after sailed to Egmont. Left there yesterday and got here last night. Am feeling well. Shall go to Casey's Pass to-day, and be in Charlotte Harbor to-morrow.—TARPON.

II.

ST. JAMES, Pine Island, April 7.—Dear N.: Got here last night safe and sound. Rag canoe all right. Well and hearty.—TARPON.

III.

NAPLES, Fla., April 12.—This, "a new town," I reached safely today. Have had a very good trip so far. Met two professional bird butchers yesterday. D—n 'em. By the way, did you ever think what a left-handed advertisement this trip is to the canoe builders? Home-made rag canoe.—TARPON. (Well, perhaps, yes. But there are some long open reaches to be made on the Atlantic coast, and suppose the rag canoe is caught in a blow off shore. Would she live, do you think?—N.)

IV.

BIG MARCO, Fla., April 14.—All correct. Few fish, no birds; all well. Will write at length when I get a chance. The rag canoe is still afloat.—TARPON.

V.

APRIL 22.—My dear N.: Got past Shark River on the 19th. Most forbidding looking place I ever saw. No landing whatever, deep water up to the trees, and a confused tangle of roots, stumps, treetops, etc., with the surf dashing in and out. There would be no use for your little canoe there. Made Cape Sable all right on the 20th. Took in water and started across the bay for Florida Reef. This is a queer country. Mangroves, mud-flats, deep channels, sharks, stingrays, pelicans, etc. Am writing this at Twin Keys, inside of Matticombe Island, and in sight of Alligator Reef light. Shall mail the first chance, but post offices are few in this region. Drop me a line to St. Augustine, to be kept till called for. All well and hearty, and so along.—TARPON.

As this was dated sixteen days ago and I have not heard from the writer since, I am fearful that the rag canoe has met disaster. I am not usually reckoned up for a timid canoeist myself, but I should hesitate to attempt a cruise of 200 miles down the Gulf coast, around the Florida capes and up the Atlantic coast to New York in a canvas canoe 14ft.×28in., with mainsail and dandy to manage, and with only the double-blade for board and ballast. I only want to add that it is the most daring canoe cruise I have ever known, and one must be lucky as well as plucky to succeed.

NESSMUK.

TIPPY C. C. NOTES.

THE canoeing season has already been inaugurated in Chicago waters. The Indians have been blessed with a spell of warm weather recently, quite unlooked for at this stage of the game, but which could only result in luring the true canoeist from his lair.

Mr. Kitchin was the first to put on his war paint; following whom, one after another of the tribe have made their appearance, until now all the old boats of the club are in commission, and being put into shape for the racing season to follow.

A visit to the boat house of the club, however, only half discloses the healthy condition of the sport in these waters, and is properly supplemented by a glance into the shops of Douglas & Co., at Waukegan, a revelation to most of us, by the way.

The only effect of the destructive fire of last fall seems to have been a general enlargement of their vast establishment, until now they have an elaborate plant, adapted, as they have demonstrated, for turning out any thing in the boat line up to a 50ft. launch or a 10-ton cutter, admirable in its completeness, and which no boating enthusiast could see and fail to appreciate.

Passing by, however, the steam launches and other larger craft, which stand on the stocks in various stages of completion, the canoeist's unerring instinct guides him to another portion of the establishment, taken up by alternate benches and stocks, where a score of canoes of almost as many types are gradually assuming shape.

The mode of construction is essentially the same in all, a modification of the old lap streak build—the planks being lapped with a broad bevel and the projections fined down until a practically smooth skin is obtained—while the attention given to details and general finish leaves little room for improvement.

The largest of this year's crop is a craft 17ft.×36in., designed by Capt. Crane, of the T. C. C., for his own use; a fine weatherly boat, intended for the open waters of Lake Michigan, but which is expected to give a good account of herself in the Class C races at Ballast Island.

Another is a Class B boat, 15ft. 6in.×30¾in., for Mr. Wood, while near it are sister boats, 16×30, for Messrs. Keogh and Lee. These three, like the first mentioned, were designed by Capt. Crane, chiefly with reference to open-water sailing, but will probably swell the list of entries at Ballast Island.

A fifth boat, from the same designing board, is a paddling craft, 16×29, for Mr. Dunham and wife, while Commodore Latham's new flagship, Scheherezade, brings the number of new boats for the "Tippys" up to an even half dozen. This craft was designed by Mr. Nixon, and a feature both novel and striking will be a deck of birdseye maple with partner pieces of mahogany.

In addition to these flyers the fleet will include a club boat—a Class D canoe—donated to the club by Mr. Nixon. The Jiber, for such she has been christened, is a staunch little boat, 5ft.×8ft. (square stern), fitted with catrig and centerboard, and in type is strictly *sui generis*. Rumor had it that she would fly the broad pennant of the W. C. A. this season, but it looks now as if the Jiber would be supplanted by a more comely rival, and be devoted principally to fishing, setting out buoys, etc.

The regatta course opposite the club house will be laid off shortly, and weekly regattas will be the regular order of things during the summer months.

BRITISH CANOEING.—The new rules of the Royal C. C. limit the sail area to 112ft., with mainsail not to exceed three-fourths of total area, spinakers not measured. This limits the mainsail to 84ft. The deck position is being generally adopted, with little ballast. Mr. Baden-Powell has sold the '87 Nautilus and is building a new cruising canoe, 16×30 and 11in. deep, to be fitted for single or tandem crew. She will have two bilge drop keels or boards, an idea with which Mr. Powell is now experimenting, the trunks being placed in each bilge, leaving room, of course, for the canoeist to sit between them, while the entire middle of the boat, from end to end, is unobstructed. In sailing the leeward board is lowered, projecting almost at right angles from the bilge. Mr. Powell will race this season on the Thames in a canoe-shaped boat 19×4ft. 6in., 2ft. 6in. deep inside, and 1ft. draft, also fitted with the bilge keels. She will enter against the Thames gigs and other small craft in the up-river clubs.

A. C. A. AMENDMENT TO CONSTITUTION.—New York, May 8.—*Editor Forest and Stream:* The Executive Committee have given a majority of votes in favor of the amendments to the constitution, as published in the FOREST AND STREAM April 5, except that the last word but one in the amendments as then published, should be "his" instead of "their," relating to the duties of Vice-Commodore and not to the duties of the Committees. Com. Gibson has referred to the Executive Committee the question of his late change of residence, asking whether they considered it necessary to take any action upon it, which the committee decided was not necessary.

HARRISBURG, C. C.—Officers, 1888: Com., Chas. S. Snyder; Pres., Ed. R. Dasher; Vice-Com., Geo. G. McFarland; Sec., Mart. W. Fager; Treas., W. Frank Witman. The boat house is undergoing some extensive repairs and will be more comfortable for the entertainment of visiting canoeists of which we have five different clubs represented on our log-book of last summer. Any information about the Susquehanna will be willingly and cheerfully given by correspondence.

NEWBURGH CANOE AND BOATING ASSOCIATION.—This club has moved into its handsome new quarters on the Hudson at Newburgh, a two-story building 80x30ft., with a balcony extending across the river front. Below is the boat-room, the full size of the building, with dressing and reception rooms in the second story. The club has now 59 members.

THE CUP FUNDS.—We have received from the Brooklyn C. C. the following subscription to the fund for the purchase of two extra cups for the A. C. A.: Wm. Whitlock, $5; Reginald S. Blake, $2; T. G. Budington, $2; Chas. P. Weekes, $2; John Johnson, $2; Robt. Liptrott, $2; Robt. J. Wilkin, $2; M. V. Brokaw, $2; F. L. Dunnell, $2; total, $21. Total to date, $83.50.

A. C. A. MEMBERSHIP.—W. Scott, Ottawa; M. J. Herbert, G. G. Brown, R. H. Booth, Thos. World, G. S. Jaquith, T. H. Robinson, H. Lloyd, J. W. Slavin, Ed. C. Moore, A. W. Murton, H. Cook, Orillia.—S. BRITTON, Purser N. D. of A. C. A.

PEQUOT C. C.—This club, organized in 1886, has now 26 members, the officers being: Com., R. P. Wakeman; Vice-Com., F. P. Sherwood: Sec.-Treas., F. P. Lewis; Meas., E. C. Bogert; Captains, J. H. Rowland, J. H. Demarest. The club will camp from July 17 to 23 at Norwalk Island.

LINDSAY C. C.—The officers for 1888 are: Capt., J. Britton; Mate, J. G. Edwards; Purser, J. G. Montgomery; Treas., R. H. Hopkins. A challenge cup has been presented to the club. The spring meet will be held at Sturgeon Point on May 24.

BAYONNE C. C.—This club has purchased the large floating house of the Hudson Boat Club, and it is now moored in Newark Bay at Bayonne.

KNICKERBOCKER C. C.—The regatta of the Knickerbocker C. C. will take place on June 9, at the foot of 155th street, North River.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. G., Boston, Mass.—Kindly give the usual interpretation of the following points under National trap shooting rules. 1. A sportsman belonging to clubs in two or more cities, is the "home club" necessarily the one where domiciled or is it the one first joined? 2. Can honorary members of over a month standing shoot on their club team in competitive matches. Ans. 1. Club where domiciled. 2. If not prohibited by conditions.

HUNTING COMPANIONS WANTED.—Fort Worth, Texas, May 9. Can you put me in communication with a party that would like to make a hunting tour through the West, starting about the 1st of August and remaining, say, two or three months? I desire to connect myself with a body of hunters to make a fall hunting trip through the best hunting regions of Colorado, Wyoming and Montana. If you will kindly publish this in FOREST AND STREAM it may find a response.—CELT.

New Publications.

THE ETHICS OF BOXING AND MANLY SPORT, by John Boyle O'Reilly (Boston, Ticknor & Co., $1.50.) is a title calculated to strike some very estimable people with a suspicion of incongruity. Other writers have written on the manly art of self-defense, but writing under the consciousness that the art they sought to glorify was stigmatized by the popular verdict as brutal and degrading, they addressed themselves only to the habitues of the prize ring and the young bloods who might be relied on to gloat over their forbidden pages in secret; but John Boyle O'Reilly is a writer of quite another calibre, a man capable of forming his own opinion of boxing as of any other subject, unbiassed by popular opinion or prejudice, and having reached the conclusion that boxing severed from the degrading associations of the prize ring is elevating in its tendency and conducive to the culture of fortitude, self-reliance and other noble qualities, fulfils Emerson's definition of genius by displaying the courage of his convictions and daring to believe that what is true for him in his private heart is true for all men. And our author is right. He is right when he tells us "that the very fact that professionals and gamblers fasten on a sport is the highest proof of its value to the people;" and no less right when he asks: "Where else in one compressed hour can be witnessed the supreme test and tension of such precious living qualities as courage, temper, endurance, bodily strength, clear-mindedness in excited action, and above all that heroic spirit that puts aside the cloak of defeat though it fall anew a hundred and a thousand times, and in the end reaches out and grasps the silvered mantle of success." In fact our author regards valor as an essential attribute of true manhood, and pleads for boxing as one of the most important of those manly sports so conducive to the development of a sound mind in a sound body. The author gives a review of the art as practiced in Greece and Rome, notices the most conspicuous of modern heroes of the ring in England and America gives the rules of the ring, with a very careful review of the effects of training and overtraining, the exercises necessary to the development of the physical powers, dietetic rules, etc., etc. The latter half of the volume has no necessary connection with the former half. There are some very interesting chapters on the ancient weapons and games of Ireland, followed by narratives of canoeing adventure on the Connecticut, the Susquehanna and the Delaware, written in a charming style worthy of a man who has already achieved renown as a poet. There are few men in our author's position who would have imperiled their reputation in defense of a sport so generally condemned; but O'Reilly's "Ethics of Boxing" is safe to be one of the successful books of the season. There is a heroism higher than that displayed by Tom Sayers when, with his arm broken, he stood up resolutely for two hours before the giant Heenan, but the world knows little of it. Our author glorifies a species of heroism to which all men, and, for that matter, all women too, do in their inmost hearts yield reverence. It wanted only O'Reilly's book to compel judgment on the courage displayed in the prize ring, apart from the brutality which is too frequently, but not necessarily, associated with it.

A NOVEL SINGLEHANDER.

Editor Forest and Stream:

It is recorded that our ancestors wove the cloths they wore through the tedious medium of the hand looms; the world had progressed slowly and attained a good old age before the present excellent and more expeditious machinery was conceived. For many years various nations, particularly the English and American, have made it a very serious study to produce fast and seaworthy yachts; the results have been quite gratifying, more so than the general public is aware of. Hence these few lines to expound a new theory and invention.

Your subscriber, a Californian, needing recreation and desiring to see the beauties of the New England and Atlantic shores, proposed last fall to go to New York to buy or build a boat adapted for singlehanded cruising. To make a voyage from the coast of Maine along the whole of the Atlantic, Gulf of Mexico and Carribbean shores to Colon; there to make a portage on the railroad to Panama and then proceed to San Francisco, touching at all the intermediate ports; following the sun north to Maine, south to Aspinwall, then north again to destination, and so find himself a year in perpetual summer.

Before leaving San Francisco I had read in the Report of the Commission of Navigation to the Secretary of the Treasury, and in the Patent Office Reports, specifications of a recent invention by Capt. E. L. Norton, to produce fast sailing vessels uncapsizable, unsinkable, and ballasted with water acting upon air cushions. Although well impressed with the matter I submitted the specifications to the editor of the *Scientific Press* there; who, to my great chagrin, believed to have found an objection in the construction of such a vessel, which would prejudice it for my purposes. However, upon reaching New York a working model of the invention was shown me, the objection alluded to, that the water ballast would leave the ballast chambers when she reached her beam ends, overcome by the fact that it did not exist; and hearing what had already been done with the system both here and in foreign countries, I immediately ordered a boat, and consequently shall have the pleasure of being the first in the field with a yacht built on Capt. Norton's principles, all other boats, so far, having been built for life-saving purposes only.

The Alista will be yawl rigged, 30ft. long over all, 9ft. beam, 42in. in depth, and will draw with a 6in. false keel but 30in., enabling her to sail in very shallow waters, in which she is likely to find herself now and then in her cruise of 7,000 miles. To demonstrate her great stability and give her speed she will spread some 900 sq. ft. of canvas. The cabin will be 12ft. long, with all home comforts and accommodations for a whist party. The cockpit will be 6×7ft.

Abaft of the mainmast to the center of the cockpit, along the bottom and on each side of the keelson, are six water-ballasting chambers between the floor beams, varying in size from amidship fore and aft. A description of the midship chamber will convey to the investigator an idea of the whole. The midship water-ballasting chamber is 2ft. 9in. long, 3ft. 9in. wide from keelson to bilge, 16in. deep at the keelson, taking the bevel at the bottom of the timbers and tapering to 12½in. with the top of the chamber, at the bilge; whence the chamber ascends again some 10in. and swells to 8in. across to form the air cushion. Upon launching the water enters instantly through holes 6in. in diameter near the keel, in the bottom of the chambers and boat. A pipe and valve connected with the chambers will permit sufficient exit of air to allow the ballast water to reach a line along the bilge; here it is checked by the remainder of air in the chambers, extending somewhat above the water line of the craft.

When the vessel heels to one side, the direct pressure of the sea, through the holes in her bottom and ballast chambers, against the air cushions above the bilge line, and the dead weight

of the ballast water on the other or windward side, pulls, depresses her back to her equilibrium, the two agencies—on one side, the leeward pressure of water against air; on the other side, the weight of the water that is being lifted—overcome the possibility of capsizing; and in order that the craft shall not sink if overwhelmed by a sea, an air chamber is inserted in the bow, one in her overhang astern and a few above the berths, in such a manner that no desirable space is lost.

A remarkable feature of this system consists in the fact that the boat does not carry her ballast; on the contrary, the ballast carries her by her inner bottom, the top of the ballast chambers. The weight of the water in these is felt by her only when it becomes a desideratum to windward immediately the boat heels, to leeward the sea presses against the air cushions to bring her to an upright position again.

Surely, the captain has reversed the old adage:

"Little boats should keep near shore,
Larger boats can venture more."

My little craft, supplied with a floating anchor and an oil distributing attachment, an invention from Middletown, Conn., to hold her nose to the wind, will ride out like a thing of life a gale that would prove disastrous to the large vessel.

My object in penning these lines is to bring to the notice of the many readers of the FOREST AND STREAM this innovation, in order that my fellow yachtsmen and yacht builders may investigate it and that we may cease to jeopardize lives and avoid disasters with the systems in vogue, that mar, too often, the pleasantest of all recreations, yachting.

Let it be recorded that in the latter part of the 19th century it was the custom to encumber vessels with lead and iron for ballast, to obtain stability, with immense spars and sails to propel these through the water, until it was discovered that water acting upon air, were the proper mediums to do this with less sail pressure and establish an imperishable vessel on the sea.

WILMINGTON, Del., May 8. E. O. WIENER.

SEAWANHAKA CORINTHIAN Y. C.

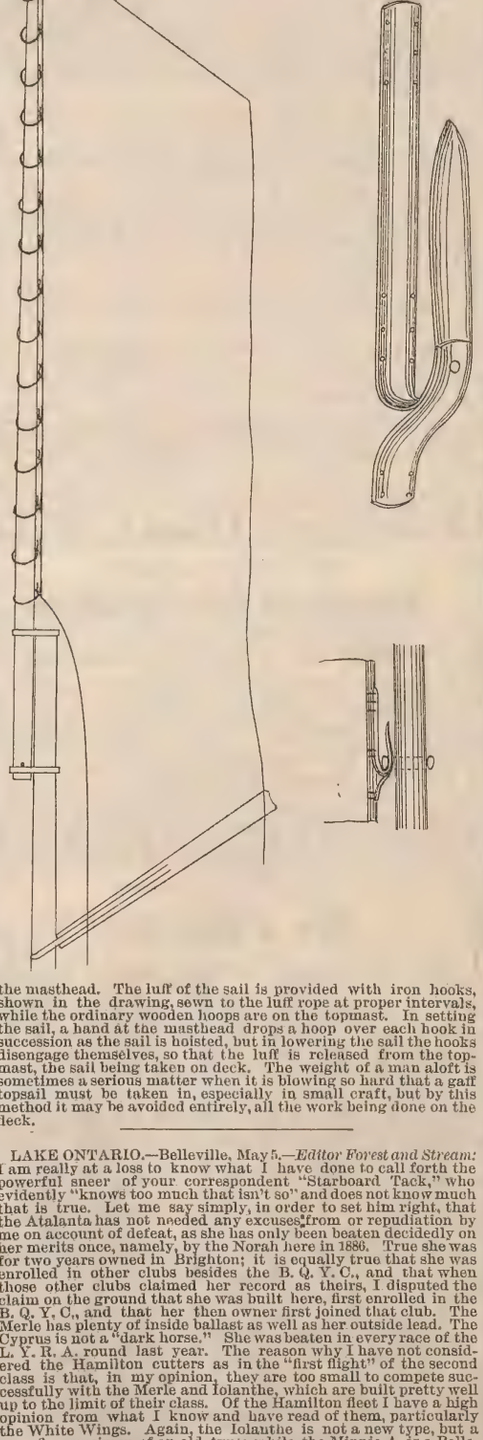
THE third regular meeting of the S. C. Y. C. was held on May 12, with Rear-Com. Ellis in the chair. The proposal to allow clubtopsails in Classes V., VI., VII., VIII., was not passed. Mr. Hyslop offered a motion to amend the table of time allowances by taking $^{5}/_{10}$ of the theoretic speed in place of $^{4}/_{10}$, which was adopted. The secretary, Mr. D'Oremieulx, spoke on the subject of the need of a national yacht racing association, and offered the following resolution, which was adopted: "Resolved, That the committee on yachting interests be and hereby are requested to consider the expediency of the formation of a general yacht racing association, or of one to include the principal clubs of the Atlantic coast, such formation to include as far as possible a uniform classification, a uniform system of measurement, and uniform racing rules. They are hereby authorized to add to their number, appoint sub-committees, represent this club officially at all meetings with representatives of other clubs, and to do any and all things which may become necessary to accomplish the object in view. They are further requested to consider the present method of measuring sails and the ratio of sail area to l.w.l. length in the present system of measurement of the club, in its equitable bearing upon the different types of existing vessels, and the sparring and canvassing of safe and seaworthy racing yachts, and to report their conclusions to the club."

This Committee, consisting of Com. Canfield, Measurer Hyslop, and Mr. Wm. Krebs, was appointed at the first meeting of the year. In connection with the motion Mr. D'Oremieulx spoke at length of the present needs of American yachting, of some intelligent direction by those interested, and of the three great wants: 1st, A uniform classification for yachts in all the principal clubs, enabling owners to build intelligently to any given class, and to race in the same class and with the same boats, all along the coast; alluding to the attempt in this direction made first by the Seawanhaka C. Y. C. last year, the result being that now an almost uniform classification exists in the Seawanhaka, Eastern, New York, Atlantic and Larchmont clubs; 2d, A uniform system of measurement which, however, need not of necessity involve a uniform table of time allowances; the sail area and length rule first proposed by Seawanhaka C. Y. C. in 1882 is now in use by the Eastern, Knickerbocker and the Lake Y. R. A. of Lake Ontario, and with some modification by the New York Y. C. and the Y. R. A. of Great Britain. 3d, The formation of an American or Atlantic Coast Y. R. A., to be simply a legislative body, modeled on the plan of the British Y. R. A., and designed to carry out the same objects, the principal of which are uniform racing regulations for all clubs, the possible formation of a board of supreme control, arbitration and appeal; and the securing of uniformity in all details of yacht racing.

LARCHMONT Y. C.

THERE are very few clubs of any kind that at the end of but eight years can show such substantial evidences of present prosperity and future success as the Larchmont Y. C. laid before its members and guests, who to the number of some 400 gathered about the new house and grounds on Saturday last. The club was founded in 1880 by a few owners of small craft who lived at Larchmont Manor and sailed about the harbor. These men contributed $5 each toward building a landing stage in the Horseshoe, a small shoal pocket in the shore. The Larchmont Boat Club, as the young organization modestly called itself, soon found friends near by and at the same time became known to yachtsmen about New York, and in a season blossomed out as a full-fledged yacht club, with a fleet of open racing boats. The Horseshoe was given up, a house on shore chartered, and the boat landing moved to the east side. The club house was in turn replaced by a larger one, which the club has occupied for some years, a fairly comfortable place, but far too small, as the membership limit of 400 was complete, with a strong effort under way to increase it to 500. The many races of the club, the scrub races that were constantly sailed by the smaller yachts being no less important than the regular club events, made the place a favorite with racing men, and the leading New York yachts, large and small, were in time added to the fleet.

A couple of years since it became evident that some radical step must be taken to secure larger quarters, owned entirely by the club, and a number of schemes were canvassed. The boldest of these was one proposed by a few of the leading men, Com. Alley, Ex-Com. Munroe, and others, but the extent of the scheme at first alarmed many of the members. The proposal was to purchase the Carver estate and mansion, adjoining the property on which the club house then stood, but to the east of it. The estimated cost of the whole scheme was upward of $100,000, a heavy debt for a club of 400, but its promoters had considered the matter long and carefully, and when they finally laid the details before the club their plans were accepted. The necessary cash was raised by the issue of bonds, which were promptly taken within the club; the Carver property was purchased, and last fall the work of remodeling the house and grounds was begun.



A new sea wall was first built in front of the grounds, an iron bridge from it leading to the landing stage 2½×50ft., with a second stage at another part for the loading of ice and supplies for the yachts. On the high ground back of the sea wall, commanding a view of the harbor and Sound, including the race courses of the club, is the Carver mansion, a very handsome building erected in 1882. This of itself was too small, so a wing 70×34ft. and four stories high has been added on the east side, a wide piazza running along the entire front of the old and new buildings. In this wing are the kitchens, a large dining hall on the first floor, and two stories above for guests' rooms. The main building contains a large entrance hall, from which open a neat little parlor, used as a committee room, and the smoking room, with French windows overlooking the Sound; the bar, a small dining room and the toilet rooms occupy the rest of the floor. On the second floor is the library, a large, handsome apartment commanding a wide view of the Sound and the opposite shore, the rest of the house being divided into rooms for the members, each neatly furnished, with the servants' quarters in the upper story. On the beach are bath houses with fresh water showers. The plans for a second wing are now ready, and will ultimately be needed.

On Saturday at 4:30 the members gathered about the house, with a large number of guests, were formed into ranks, headed by Com. Lowery, and to the music of Capp's 7th Reg. Band they marched to the first home of the club, over in the Horseshoe. Here the ceremonies were commenced by a farewell to the place, the band playing "Old Lang Syne" as the procession moved on to the second house. After calling in turn at the third house, the one in use for the past five years, the band struck up "The Girl I Left Behind Me" as the procession approached the new building. When the big flagpole in front of it was reached a halt was called, and Com. Lowery broke out the colors, the blue and white vertical stripes, with a salute of three guns and many hearty cheers for the club and its officers. In the evening a dinner was served, the first in the new hall; after which came a musical entertainment.

In the harbor during the day were Vice-Com. Eaton's cutter Rajah; Thistle, sloop, Mr. Wm. Ziegler, Eurybia, sloop, Mr. C. W. Pryer; Mischief, sloop, E. S. Auchincloss, and Dauntless, schr., Vice-Com. Colt, New York Y. C. The latter vessel grounded on the Hen and Chickens in entering the harbor but got off next tide. The festivities were sadly marred by an accident early in the day to the club janitor. John Lunbladt, who in getting ready one of the guns discharged it while standing in front of the muzzle, the wad passing through the upper part of the leg. He was promptly attended by Fleet Surgeon Allen and two other doctors and removed to a hospital in New York, where he died on Sunday night. The sad accident was aggravated by the fact that he was a general favorite with all the members. The success of the Larchmont Y. C. is due very largely to the hard work of a few of the leading members, among whom Ex-Com. Augustin Munroe deserves the first mention, as he has given his time and much hard work to the club's interests from the first inception of the original plan in 1880, and has been specially active in the superintending the present improvements.

A NEW METHOD OF SETTING TOPSAILS.

A PATENT has just been granted to Mr. Chas. A. Post, of the sloop Beatrice, Corinthian and Seawanhaka C. Y. C., for a new method of setting the ordinary gaff topsail, by which it can be taken in from the deck without the necessity of sending a hand aloft to cast off the lacing, and avoiding all stowing of the sail at

the masthead. The luff of the sail is provided with iron hooks, shown in the drawing, sewn to the luff rope at proper intervals, while the ordinary wooden hoops are on the topmast. In setting the sail, a hand at the masthead drops a hoop over each hook in succession as the sail is hoisted, but in lowering the sail the hooks disengage themselves, so that the luff is released from the topmast, the sail being taken on deck. The weight of a man aloft is sometimes a serious matter when it is blowing so hard that a gaff topsail must be taken in, especially in small craft, but by this method it may be avoided entirely, all the work being done on the deck.

LAKE ONTARIO.—Belleville, May 5.—*Editor Forest and Stream:* I am really at a loss to know what I have done to call forth the powerful sneer of your correspondent "Starboard Tack," who evidently "knows too much that isn't so" and does not know much that is true. Let me say simply, in order to set him right, that the Atalanta has not needed any excuses from or repudiation by me on account of defeat, as she has only been beaten decidedly on her merits once, namely, by the Norah here in 1886. True she was for two years owned in Brighton; it is equally true that she was enrolled in other clubs besides the B. Q. Y. C., and that when those other clubs claimed her record as theirs, I disputed the claim on the ground that she was built here, first enrolled in the B. Q. Y. C., and that her then owner first joined that club. The Merle has plenty of inside ballast as well as her outside lead. The Cyprus is not a "dark horse." She was beaten in every race of the L. Y. R. A. round last year. The reason why I have not considered the Hamilton cutters as in the "first flight" of the second class is that, in my opinion, they are too small to compete successfully with the Merle and Iolanthe, which are built pretty well up to the limit of their class. Of the Hamilton fleet I have a high opinion from what I know and have read of them, particularly the White Wings. Again, the Iolanthe is not a new type, but a very fine specimen of an old type; while the Minnie A. is a Belleville production and capable of making it very interesting for anything when she has a light breeze, such as favored her here in 1886. With these few remarks, which I tender in the best spirit to my critical friend who has been on the wrong tack, I am—PORT TACK.

LANCASHIRE WITCH, steam yacht, owned by Capt. F. L. James, arrived at New York from Charleston on May 15. She left Portsmouth, England, on Jan. 4, with her owner and the Earl of Scarborough, Mr. W. D. James, Hon. W. Ponsonby and Mr. J. Bailey on board. Since then she has visited Madeira and many West Indian ports.

BRENDA.—The new cutter by this name built for Everett Paine, of Marblehead, by Wm. Eddy, was launched on May 14. She is 29ft. 6in. over all, 22ft. 6in. l.w.l., 8ft. 6in. beam, 5ft. 3in. draft, with 4,300lbs. of lead on keel. Her pole mast is 38ft. 6in. heel to truck, boom 26ft., gaff 18ft., bowsprit 13ft. outboard. She will be cutter rigged.

THE BRIDESMAID—ATLANTIS MATCH.

THE following logs of the Bridesmaid and Atlantis in the ocean sail from Southampton to Madeira are taken from *Land and Water* of April 28:

The Bridesmaid, ketch, Mr. E. W. Buller, is 69ft. 5in. l.w.l., and 19ft. beam. Her greatest draft is 9ft. 8½in., and her sail area 4,447 sq. ft. Her height at stem is 6ft. 7in., at stern 3ft. 0½in., least freeboard 2ft. 10½in., with 2ft. 3in. in depth of bulwark. She shows a fine deck, and one of the roomy modern companions does not look clumsy, nor in the way, owing to her great beam. At the head of the companion stairs is a large ship clock, which was presented to Mr. Buller in recognition of services rendered by the Bridesmaid in saving the crew of the Russian barque Helios, which was wrecked on the Gunfleet in the winter of 1884. One feature below is a large cabin, which Mr. Buller has had fitted as chart room. It is stored with almost numberless nautical instruments, and we believe we counted no fewer than eight chronometers. She is built as strong as wood and metal can make her, and Mr. Buller has good reason to be proud of his ship.

The Atlantis, cutter, is steel throughout, 70ft. l.w.l., 13ft. beam, and greatest draft 11ft. 6in. She was built last year from a design by Mr. A. H. Brown, and, it may be said, is a well-modeled craft, with a pretty top. Owing to the weight put on the vessel above water over and above what her designer calculated she swam deeper than projected, but since being converted to cutter rig she has been lightened, and is a very much faster vessel than last year. The Atlantis has great below deck accomodation, and is beautifully fitted. She may, perhaps, try her speed against something swifter than the Bridesmaid before the season is out.

LOG OF THE BRIDESMAID.

Wednesday, April 4.—Started from Hythe at noon and crossed the line with Atlantis half a cable's length ahead, lying fine on the lee bow. A gathering breeze from S.S.E. gave a long close-hauled reach well on to Hamble Spit, and with Atlantis increasing her lead. Southampton Water was worked down in a snow-storm. At 4 P. M. the wind backed to N.N.E., which Bridesmaid took first, and with everything flowing, passed Atlantis at the Calshot Spit light vessel. In a light following wind the Solent was run down, the squaresail and raffee being set and carried to the Needles, which were passed at 6 P. M., with a lead of two miles. On clearing the sea gates the squaresail was hauled and the spinaker set for the night, and before a freshening breeze she ran fast and had Portland high light bearing N. by E. ½ E. at 11:30 P. M.

Thursday, April 5.—The wind veered to the eastward and freshened during the night, and the morning watch took in spinaker and set squaresail and raffee. A course was laid straight for Ushant, and Atlantis was not sighted during the day, but presumably was following in Bridesmaid's track. At noon Ushant bore S.W. ½ W., distant 55 miles, and by observation the ship's position was lat. 49.18 N., long. 4.30 W. The course was then altered from W. by S. ½ S., to S.W., and at 6 P. M. signaled number passing Ushant, and with a rising wind took in first jib and set No. 3 and hauled down the mizen topsail. Distance run at midnight from start of the race, 161 miles.

Friday, April 6.—At 2 A. M., running 10 knots before a fresh breeze from the eastward, and at 9 A. M. hauled down yard topsail and set jibheader. At 2 P. M. took in raffee and set the mizen staysail, the wind increasing and the sea getting high. The weather was looking wild, and at 5:30 P. M. the squaresail yard-arm broke, and at 6 P. M., with a falling barometer, got down the jibheaded topsail and mizen staysail, and at midnight put a reef in the mainsail and mizen. At noon the Finisterre land (Cape Villano) bore S.W. ½ S., distant 183 miles; the lat., by account, being 46.9 N., and long., by time, 7.30 W.; distance run 222 miles.

Saturday, April 7.—The day commenced with a fresh gale from the eastward, the course steered being S.W. ½ S. At 4 A. M. the mizen was stowed and the maintopmast housed, and at 6 A. M. the Finisterre land bore S.E. by S., about 20 miles distant. In the forenoon the wind moderated, and at 10 A. M. the topmast was got up and a jibheader set, and at noon a stunsail was hauled out. At 1 P. M. the reefs were shaken out of the mainsail and mizen and the squaresailyard repaired and re-rigged and the big sail set. At 4 P. M. blew away raffee yard and then set the sail jibheaded. The wind backed to the N.E. in the afternoon and kept increasing, and a very high sea got up. The vessel was hard driven, and at 5:30 the squaresailyard broke in the slings, and with some trouble the square canvas was gathered in. Lat., at noon, 42.36 N.; long., 9.50 W.; distance run, 235 miles. At noon it was computed that Pargo Point, Madeira, was 683 miles distant.

Sunday, April 8.—The northeast gale continued, and vessel was running heavy, about 10 knots. At 8 A. M. set main boom water sail, and tried mizen spinaker, but the sea was too high. At midday was running before the northeast trade winds, but they came puffy and it was too rough and cloudy for accurate observations. Before nightfall the vessel was snugged to small jib, stunsail, mainsail, and jibheader, and was then reeling off 10 knots. At noon Pargo Point bore S.W. by W., distant 447 miles. Lat., 39.25 N.; long., 12.18 W.; distance run, 235 miles.

Monday, April 9.—The wind backed northerly, with rain, and the sea smoothed, and at 8 A. M. set the yard topsail, balloon foresail, and the mizen topsail, as a main water sail. At noon it veered to the northeast and the main spinaker was set and carried until 8:30 P. M., when the stunsail was hauled out in its place, and after dark the wind kept increasing. At noon Pargo Point bore S.W. ¾ W.; distant 239 miles. Lat. 36.31 N., by observation; long., by chronometer, 14.44 W.; distance run, 211 miles.

Tuesday, April 10.—Opened with frequent rain squalls and shifts of wind, but, coming finer at 6 A. M., the spinaker was set, and at 9 A. M. a veering of the wind brought about a jibe. Made more sail and drove hard, and at 2 P. M. the western point of the Island of Madeira was sighted right ahead. The spinaker, which had been got off on the jibe, was reset at 3 P. M., and carried till 7 P. M., when the yard broke. At 8:15 P. M., abreast of Pargo Point, and observed lights shown at signal station, so displayed three blue lights in triangle, as given in the conditions. The wind then died out, and at midnight the vessel had bare steerage way. Latitude at noon 35.56 N., long. 16.45 W.; distance run, 190 miles.

Wednesday, April 11.—Lying in the doldrums off Cruz Point till noon, when a light breeze sprung up. At 3 P. M. observed a yacht, supposed to be Atlantis, in the offing. At 4:25 P. M. passed the meridian of Loo Rock Fort, winner of match, and proceeded to anchorage, and at 9 P. M. was hailed by Atlantis alongside.

ABSTRACT OF THE LOG.

	Lat. N.	Long. W.	Miles.	Wind.
April 5..	49.18....	4.30.....	161...	Strong easterly.
April 6..	46.09....	7.30.....	222...	Very strong easterly.
April 7..	42.36....	9.50.....	235...	Very strong from N.E. to E. by S.
April 8..	39.25....	12.18.....	235...	Very strong N.E.
April 9..	36.31....	14.44.....	211...	Strong N. by W. to N.E.
April 10..	33.56....	16.45.....	190...	Strong, squally, N.N.E. to E.
April 10 to April 11	To Pargo Point, hence to Madeira		71...	Calms and light breezes.
			1,325	

LOG OF THE ATLANTIS.

Wednesday, April 4.—Started at noon from Winterton Hall, off Hythe, in a light breeze, and beat down Southampton Water under all big fore and aft sail to Calshot. At 2:30 P. M. Bridesmaid was about one mile and a half astern, but at 3 P. M. she picked up a northeast wind, and came up and passed Atlantis. At 3:20 P. M. passed the Spit light vessel, set spinaker, and ran before a light breeze down the Solent. At 7 P. M. passed the Needles; Bridesmaid leading by two miles. On night closing in lost sight of Bridesmaid, and at 11:15 P. M. had Portland Lights on a northerly bearing, seven miles distant. Ran with all possible sail; wind moderate from the N.E., and at 4:45 A. M. considered the yacht's position to be abreast of the Start, but it was too hazy to see the light, and from this point departure was taken.

Thursday, April 5.—At noon lat., by observation, 49.32 N., long. 4.57.30 W.; distance run since noon of the day previous, 175 miles: course S.W. by W. Wind moderate from the north-northeast. At 4 P. M. passed through a large fleet of fishing vessels. Wind strong from the northeast during the night.

Friday, April 8.—At noon lat., by observation, 44.45 N., long. 7.30 W. Distance run during the twenty-four hours 155 miles. Breeze strong from the north-northeast throughout the day and night. At 4 A. M. snow squall.

Saturday, April 7.—At noon lat., by observation, 44.45 N., long. 10.26 W. Distance run during the twenty-four hours 214 miles. At 7 P. M. wind increasing, reefed mainsail and took in topsail; 8 P. M. weather looking very dirty. At 2 P. M. heavy rain squalls, wind veering from E.N.E to E.S.E.; yacht running very heavy during the night. At 7 A. M. double reefed mainsail and housed topmast. At 8 A. M. wind backed to the E.N.E., and increasing greatly in force with a very heavy cross-sea running. At 9.30 A. M. shipped a sea which carried away three stanchions on port quarter and washed the sail-room hatch overboard. Atlantis kept running in a tremendously high sea, and making ten knots under trysail and square sail.

Sunday, April 8.—The sun was obscured, and no observations possible. Lat. at noon, by account, 41 N.; Long., 11.47 W. Distance run in the 24 hours, 249 miles. At 1 P. M. the weather was

squally, with heavy sea, and there was no change during the afternoon and evening. At 10 P. M. the trysailsheets carried away during a heavy squall, but managed to secure them. At 4 A. M. heavy passing squalls with light rain, but the sea was getting more true, yet still running very high.

Monday, April 9.—Lat. by observation, 38.32 N.; Long., 13.40 W. Distance run during the 24 hours, 190 miles; course S. by W. 1 P. M. heavy swell from the N.E., and strong wind from the same quarter. No change during the afternoon, but hard rain at intervals all night. At 2 P. M. a fierce squall was experienced, but the vessel was kept running under trysail and squaresail with topmast housed. At 7 A. M. the wind took off a little, so the trysail was lowered, and the mainsail set single reefed.

Tuesday, April 10.—Lat., by observation, 35.46 N., long. 15.45 W. Distance run in the 24 hours, 192 miles; course S. 34 W., true. One o'clock P. M. sea going down very fast; moderate breeze from N.N.E. and sky clear; took in squaresail and set spinaker. At 2 P. M. a sharp squall compelled the spinaker to be got in, but it was reset at 4 P. M. Toward dark the weather looked very wild, and the squaresail was put on for the night in place of spinaker and the vessel was kept going through heavy squalls of wind with rain and vivid forked lightning.

Wednesday, April 11.—At noon the northwestern point of Madeira bore by compass S. by W., distant about two miles; the distance run in the 24 hours being 191 miles. On rounding the point a ketch, supposed to be Bridesmaid, was sighted about 5 miles ahead, the wind at the time being very light and baffling. Atlantis being under the lee of the island. At 4 P. M. the vessel was lying becalmed about 10 miles from Funchal Bay, and at the time saw Bridesmaid take a breeze and sail across the winning line about 5:30 P. M. It continued calm until 6:30 P. M., when a light breeze sprang up and Atlantis crossed the meridian of the Loo Rock Fort at 7:55 P. M., loser of the match.

ABSTRACT OF THE LOG.

Date.	Lat. N.	Long. W.	Miles.	Wind.
April 5	49.32	4.57.30	175	Moderate to strong N. E.
April 6	47.37	7.20.0	155	Strong N.N.E.
April 7	44.45	10.26,0	215	Moderate gale from E.N.E. to E.S.E.
April 8	41.00	11 47.0	240	Moderate gale N.E.
April 9	38.22	13.40.0	190	Strong N.E.
April 10	35.46	15.45.0	192	Moderate to strong N.E.
April 11	To Wess Point, Madeira and hence to finish		208	Light variable breeze and calms.
			1,375	

WORK AT CITY ISLAND.—The work on the hull of the Elma is completed, and she will be ready for launching this week. The iron fin put on last year at Wilmington has been removed and all the keel and garboards cut away in the middle of the yacht; then a new keel was put in, deepening her section 2ft. New angle-iron floors were bent and put in beside the old ones, which were left in place; the garboards are entirely new. The ballast has been melted into the new trough keel in part, the remainder being stowed in blocks; but the center of gravity of the lead is considerably lower. The mast partners for the two masts are in and the new chain plates are in place. A cockpit has been added on the deck and the interior is being refitted. The spars are ready to step, the old mast and bowsprit, as well as the boom and gaff, being used again, with a new mainmast. The hull above water will remain unchanged save in the rig. The schooner Atalanta is also on the ways for general repairs, including a new stem and refastening. The new Auchincloss yacht is now plated up and the planksheer in place. Mr. Piepgrass has every reason to be proud of her, as she is the best job of steel or iron work yet turned out in an American yard.

TORONTO Y. C.—On May 7 the annual meeting of the Toronto Y. C. was held, with Com. McGaw in the chair. The officers elected were: Com., Thos. McGaw; Vice-Com., G. P. Reid; Capt., Hume Blake; Hon. Sec'y-Treas., W. H. Parsons; Committee, Messrs. Wm. Dickson, F. B. Polson, D. Armour, F. Arnoldi, A. F. Manning and W. S. Jackson. The following delegates were elected to the Lake Yacht Racing Association meeting: Capt. H. Blake, Mr. J. W. Morse and Hugh Evans. The paid secretary was by motion appointed to take the place of the secretary-treasurer and treasurer. The following amendment to the constitution was read and adopted. Sec. 1 will read: "The members of the club shall be divided into four classes—honorary, ordinary, life and junior." Sec. 4 was amended so as to admit members between the ages of 15 and 21. They shall have all privileges of the club except holding offices and taking part in proceedings of meetings. The report of the amalgamation joint committee was read, and it was decided to drop all negotiations for a union with the Royal Canadian Y. C.

BAY OF QUINTE Y. C.—On May 2 the annual meeting was held, the following officers being elected: Com., C. S. Hostage; Vice-Com., Col. S. S. Lazier; Captain, W. H. Campbell; Hon. Sec'y and Treas., Geo. N. Leavens; Measurers, W. S. Drewry and F. L. Fellowes. Executive Committee—H. Corby, M.P., Chairman; S. B. Burdett, M.P., Jno. Bell, Q.C., Thos. Ritchie, Mayor Wilson, Wm. Webster, D. Pitceathly, A. Forbes, C. S. Levin, E. Byers, and W. H. Biggar. Regatta Committee—Wm. N. Ponton, Chairman; W. L. Fellowes, D. R. Leavens, Jas. Jenkins T. S. Hill, E. Corby, J. H. Starling, J. L. Biggar, S. R. Balkwell. Delegates to Lake Yacht Racing Association—Commodore Hostage, Vice-Commodore Lazier and ex-Commodore W. H. Biggar.

QUAKER CITY Y. C.—This club has prepared a full programme of races for the season, as follows: May 30, opening cruise and opening of club house; June 18, annual regatta over club course, from Gloucester to Marcus Hook and return; June 30, Trenton cruise, up the Delaware River as far as practicable, returning on July 1 or 2; July 4, Corinthian regatta; July 21, club day, match and moonlight sail; Aug. 25 to Sept. 8, annual cruise, from Philadelphia by Delaware River and Delaware and Raritan Canal to New York, thence through the Sound to New London, returning by outside route if the weather is favorable. The season will end with a cruise and review on Sept. 29.

MONTGOMERY SAILING CLUB.—Norristown, Pa., May 14.—The fourth cruise was attempted yesterday, but owing to very light winds none of the boats finished inside the time limit of 2h. 30m. Eleven boats started but only 5 rounded the buoy at Indian Creek. The skiff Gracie started at 1:30:40 and rounded the mark at 3:12, followed half an hour later by the canoe Sadie, which was closely followed by two tuckups and the hiker Pennsylvania, the latter carrying 40yds. of sail. The Gracie was half a mile from the finish when the time limit expired. Judge, Wm. Alcorn

CYTHERA.—Nothing has been heard of Cythera, and the belief is becoming general that she was in collision on the first night of the blizzard, March 12. On Sunday the steamer Finance arrived at New York with the captain and crew of the schooner Alice Montgomery, which foundered on the night of March 12. They were rescued by the bark Guy C. Goss, from Philadelphia for Japan, and landed at Pernambuco, coming from there in the Finance. It is, of course, possible that the Cythera's crew may have been taken off by a vessel bound for some distant port.

YACHT GUNS.—The Strong Fire Arms Co. have this season added to their list two new guns especially designed for small yachts. The larger of these is 15in. long with ⅞in. bore, for No. 8 shell, and is mounted for a rail 7in. high. The smaller size is but 10in. long, of bronze, the bore being $^{11}/_{16}$in., for No. 16 shell, while it is mounted to clear a 5in. rail. It is intended especially for steam launches and very small yachts. Another novelty is a 10in. bronze gun on an iron carriage with wheels, taking a 12-gauge brass or paper shell.

BAYADERE, cutter, has been sold, through Mr. Burgess, to T. W. Merrill, of Boston. She was designed by Mr. Watson for Vice-Com. Forbes, and built at Cuizean by Wm. Fife, Jr., in 1884, being brought to Boston by steamer. Her 20 ton lead keel was cast by Lawley after she arrived at Boston. She was ordered before Puritan was thought of; but by the time she was ready Mr. Forbes was so much interested in that yacht that he never used the Scotch boat. She is a deep but moderately wide cutter, 45ft. l.w.l. and 10ft. beam.

NEW YORK Y. C.—The report that the N. Y. Y. C. has in view the purchase of land on City Island for an anchorage and coaling station, has been current again of late, but no official steps have been taken. The report that the club had appropriated $3,000 for a fall regatta, was incorrect, no money being voted.

A NEW YACHTING SONG.—Wm. A. Pond & Co., New York, have lately published a very spirited yachting song, both words and music, being by Mr. Gilbert H. Wilson, the maker of Volunteer's sails. The subject of the song is the first race between Volunteer and Thistle.

RAMBLER, schooner, has been sold at private sale by E. I. Chapman to J. M. Reed, British Consul at Aspinwall, for $5,750. She will hail from Aspinwall in the future. Rambler was offered at auction two weeks ago, but failed to bring the upset price, $4,000.

"SEGEL ALMANACH."—We have received a copy of the Segel Almanach, the German yacht list, for 1888, published by the *Wassersport*. It contains a full list of yachts, with sailing rules and other useful tables.

MARGUERITE, schr., which was found to leak badly in launching, has been on Lawley's ways for repairs. The leaks were due to bad rivetting about the iron trunk.

BRUNHILDE.—A catboat with this name was launched lately by Wallin & Gorman, Bay Ridge, for Com. C. T. Willis, Columbia Y. C. She is 32ft. long over all.

PAPPOOSE.—The new owner of Pappoose, Mr. John Simpkins, has engaged Capt. Nat. B. Watson, who was in charge of Huron under the late Mr. Gray.

OENONE.—This name has been given to Col. Cochrane's schooner, now building. Capt. Ferrin, of the Latona, schooner, will be in command.

SPERANZA, schooner, Geo. H. Ketchum, was at Vineyard Haven on May 9, bound for the St. Lawrence River and the Lakes.

SILVIE, schr., Com. C. V. Whitten, has had her foremast shifted 3ft. forward and mainmast 4ft. She has been thoroughly overhauled below.

INDOLENT, sloop, has been out at Poillon's for a lead shoe of 1,500lbs. and new mast and bowsprit. Sawyer will fit her with her new sails.

MOHICAN.—On May 11 the steam yacht Mohican, with Mr. Clark and friends on board, arrived at Greenock, Scotland.

GITANA, schooner, has a new mainmast aft, longer than the old, and will ship a new bowsprit, both of Oregon pine.

WHITE CAP, yawl, David Hall Rice, has been lengthened forward at Frisbee's yard, Salem.

BANSHEE, sloop, has had 1,125lbs. of lead added to the fore end of keel at Piepgrass's yard.

POSY has had 450lbs. of lead added, with new hollow bowsprit and topmast.

TIOGA, schr., has been sold by Col. Cochrane to S. L. Husted, of New York.

ESPIRITO, sloop, has been sold by R. B. Hartshorne to G. L. Haight.

TRITON, schooner, is at Poillon's for a new and longer stern.

The Spalding Premier Split Bamboo Rods.

With Patent Serrated Waterproof Ferrules, are built with special reference to Uniformity of Spring and Durability, and have no equal. We guarantee them to be absolutely perfect. The reputation they have gained is a guarantee of their merits.

Fig. 1.

Fig. 2.

Fig. 1 shows the male and female ferrules. Fig. 2 shows the same mounted, the serrated ends being wound with silk and varnished, which not only increases the strength of the ferrule but also excludes all moisture and gives it a neat appearance.

THE SERRATED, SHOULDERED WATERPROOF FERRULE is unquestionably the BEST FERRULE FOR SPLIT BAMBOO RODS EVER INVENTED, as it strengthens the joint AT THE FERRULE, which is the weak point in all other makes of split bamboo rods. All other ferrules, whether SPLIT or otherwise, present a stiff, unyielding edge to the bamboo, which tends to cut or crack the enamel when the rod is subjected to a strain, thereby increasing the liability of breaking the joint. This cannot happen if **the Serrated Ferrule is used, as it presents no edge to the Bamboo whatever,** and this, with the "shoulder," which permits of the full size of the joint being used without cutting away, as is necessary with the ordinary ferrule, makes the rod

Stronger at the Ferrules than at any other part.

We carry constantly in stock the following weights and styles, but should some special weight or pattern be desired which is not here mentioned, we would be pleased to build same at as short a notice as possible, and make no extra charge.

FLY RODS.

		Each.
No. O.	Extra light, 9½ft., 3 piece, extra tip, 4½ to 5½oz.	$25 00

The Mayell Combination Split Bamboo Rod, built after pattern of Spalding Combination, German Silver mounted and milled. Each **$20 00**

SPALDING'S

Metal Center Enamelled Line.

A good idea in the way of a Line for Casting was abandoned several years ago on account of the inability of manufacturers to make same without many objectionable features. We refer to the old Hair and Silk Line, which was, until a few years ago, THE LINE for fine fishing. The properties which made it so were its springy and stiff nature, which prevented it when striking on a tree or bush from clinging and fastening itself to every twig. This was so good a feature that, despite that it was rough, knotty and kinky, still made it very popular, but so many smooth and fine lines came on the market that the good quality of the Hair and Silk was given up with regret that it could not be had with a line combining other good qualities with it. Until the present year nothing was found, but now in our Patent Metal Center Line we think that we have it. It possesses the springy quality of the line referred to, at the same time in all other respects is an absolutely perfect line, is soft and elegant, with a perfect enamel which will not crack off, and we feel positive that it will be a very popular line with anglers. The prices are as follows:

Level, 25yds. in coil, 4 connected, thus making a 100yd. line if desired.

H. 6c., G. 6c., F. 7c., E. 8c., D. 9c. per yd.

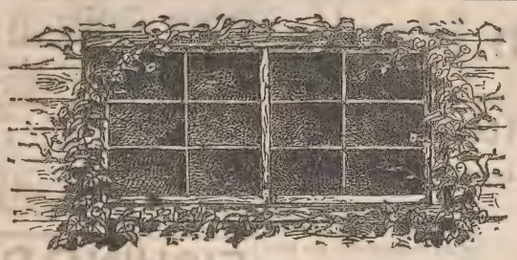
The Audubon Magazine

BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.



It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

Forest and Stream Publishing Co.,

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

LONDON: DAVIES & CO., 1 FINCH LANE.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." As the general appearance is the same, it is easy to be deceived. These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

ANSWERS TO CORRESPONDENTS.

AFTER LIVE BUFFALO.

THE expedition after live buffalo headed by Mr. C. J. Jones, of Kansas, has reached northern Texas, and has already secured five calves. No doubt under such leadership it will be successful and will, when it returns, bring back a considerable number of the few remaining buffalo which range in the waterless Pan Handle.

The present expedition has long been contemplated by Mr. Jones, who has several times journeyed down to Texas for the purpose of capturing buffalo calves. All the individuals, which make up a herd of about forty head, now domesticated at his ranch in Kansas, have been secured in this way. The present expedition, however, is much more pretentious than any of those which he has made up to this time. Heretofore he has contented himself with capturing calves. This time he intends—if it be possible—to take all the buffalo that he can find, young and old, bulls, cows and calves, and he is very likely to succeed. To do so will require, however, much hard riding. Last winter when Mr. Jones was in New York he advised us confidentially of his intended trip, and the matter was talked over at length and discussed from all points. It had been thought by many of those who had considered the subject that this spring there would be no calves born in this southern bunch of buffalo, for it was supposed that the constant harrying and chasing to which they are subjected would operate against their breeding. Mr. Jones's success in getting five calves in the short time he had been out shows this supposition to have been erroneous.

The calves when captured are given over to foster mothers, milch cows, of which a number have been taken along for this purpose. Besides, the calves, which are usually born in April, are large enough now to pick a little bit of grass, and yet are not so strong as to make so swift and determined a race for liberty as they would in July or August, when it takes a very good horse to catch one.

The story of the capture of the last calf taken is worth telling. Mr. Jones was driving the wagon around a ravine on Beaver Creek, when he suddenly came upon two cows and a calf, which at once took to their heels. Jones had no saddle, but in a moment he stopped his team, pulled the harness off one of the horses, caught up a picket rope which was in the wagon, and followed swift after the buffalo. After a hard ride he overtook them and succeeded in cutting out the calf, but the swinging of his rope as he was about to throw it frightened the horse, which was untrained, and it became unmanageable. Before he could get it started again the calf had gained a good deal. The rest of the story may be told in Mr. Jones's own words. He says:

"We had already traveled at least five miles, and as we went clumping down the grade I fully realized for the first time that I had no saddle. Yet this was possibly the last chance in this world or those to come to catch a genuine wild buffalo calf, so I rose superior to all discomforts. Just in the nick of time another member of the party, mounted on a fine horse, came in sight. I halted for a moment until he reached me, changed horses and took his lasso quicker than it can be told, and away like a cannon ball shot after the much fatigued calf. My lasso hissed through the air, and one desperate throw placed it around the neck of a beautiful heifer calf. It was, as all young buffaloes are, a pale red or auburn color."

It is to be hoped that Mr. Jones will capture not only all the calves but all the adult members of this Texas herd, and bring them back with him in safety to his Kansas ranch. Every buffalo which is saved from death and converted into a breeder is worth a great deal.

THE ALBANY GRIST.

THE New York Legislature was not so productive of new game laws this year as it has been in the past. There were as many bills as usual, good, bad and worse, but few of them succeeded in getting beyond the committee rooms or a third reading. Of those which failed to pass none was more outrageous than Mr. Flaherty's cool proposal to allow "sportsmen's clubs"on the occasion of side-hunts to kill all animate things, human kind and domestic stock excepted. The so-called Roosevelt code did not pass, as indeed it was clearly evident from the beginning that it would not. The list of other unsuccessful Assembly measures includes bills to open the woodcock season Sept. 1, to permit the killing of robins and blackbirds, to forbid the use of fyke and other nets in Keuka Lake, to make the season for wildfowl from March to September, to make the Delaware county woodcock season open August 1, to permit the leasing of Adirondack camp sites, to extend the deer season to Nov. 1, to make the deer season Aug. 15 to Nov. 15 with hounding from Sept. 1 to Oct. 5, to extend the rabbit season to March 1, to provide a superintendent of game protectors, to protect the robin, to make the deer season in Hamilton county Aug. 1 to Nov. 1 with hounding between those dates, to allow a bounty of two cents per head on English sparrows, to make lawful the taking of salmon trout in September and October, to make the quail and rabbit season Nov. 15 to Jan. 15, to forbid the capture of lake trout in Lake George from Sept. 1 to Feb. 1, to require all dogs to wear a collar with owner's name on it or to be killed, to prohibit fishing for bullheads in Lake George between April and July, (by Mr. Platt) to exempt Dutchess county from all game laws, to forbid shooting ducks from steamers in Gardner's and Peconic bays, to permit the taking of bass in Friends (or Brant) Lake from Jan. 1 to Aug 1. Senate bills which failed to become laws were to make the woodcock, gray squirrel and ruffed grouse season Sept. 1 to Nov. 30 and to open the wildfowl season April 1. This list does not give all the bills, but it affords sufficient illustration of the unwise and demoralizing system of working at cross purposes and tug-of-war style of game legislation. If it were possible for a majority of the shooters of the State to agree among themselves as to what they want it might then be practicable to control the game committees of the two houses and suppress seven-eighths of the incipient measures without loss of time.

Bills passed included those to provide a fishway for Chittenango Creek, to protect homing pigeons, to allow clubs to sell real estate to members, to provide for the appointment of fifteen game protectors, to protect fish in Seneca River, to appropriate $30,000 for the Fish Commission, and to permit the Forest Commission to use its appropriation as it may see fit instead of for specified objects.

The most important change made by the Legislature is that embodied in Mr. Ainsworth's bill, which adds twenty days to the deer hunting season and gives fifteen more days of hounding. As a concession to the still-hunting sportsmen this is very proper, but the extension of the hounding season is pernicious. The hounds have too much license under the present law; if they are to be let loose for a season gradually lengthened from year to year, the deer law might as well be repealed entirely and have done with it. Governor Hill, we understand, has not yet signed the bill, but he may safely be depended on to give it his approval.

THE BIRD HOSTS.

A GENERAL impression seems to prevail among those who watch the coming of the birds that this spring the migrating species in and about New York city are more numerous than is usually the case. Various causes are assigned to explain this apparent abundance, the favorite one being that the severe storm of early March destroyed a large proportion of the English sparrows hereabouts, and in their places are now found robins, orioles, thrushes, catbirds and other native species.

It certainly seems true that many of our birds are more abundant this year than is commonly the case. On Wednesday, May 8, the newly mown lawn of the City Hall Park was fairly covered with brown thrashers, wood thrushes and catbirds. There must have been fifty individuals of these three species, besides a few chippies and English sparrows, all hard at work feeding. The sight was so unusual that it attracted crowds of passers-by, who wondered what the strange birds were. At least one pair of the brown thrashers still linger in the Park and act as if they were going to build. Further north in the city, in the upper parks and where the houses do not stand so close together, orioles, warblers and scarlet tanagers are abundant, one observer having seen no less than five of the last named brilliant birds at one view.

It may be doubted whether the blizzard of March last caused any very large mortality among the English sparrows. If they did perish in great numbers, the abundance of our native birds would be in part explained. It seems quite as likely, however, that the Audubon Society, which by its efficient work has almost entirely put down the fashion of wearing feathers for ornamentation, deserves a large share of the credit for the return in such numbers of our bright-plumed songsters.

Still this abundance is probably more apparent than real. The spring has been cold and backward, and migration was retarded for a while. Then when the bright, warm, pleasant days brought the birds, they came with a rush, all together, and so seemed more numerous than they really were.

It would be interesting to know whether the blizzard did have any noticeable effect on the number of the English sparrows.

SNAP SHOTS.

THE prevailing weather this spring might not inaptly have been described in the phrase of "John Phœnix," who said of Oregon that "it rained there forty days and forty nights and then set in for a long storm." The unusual rainfall has caused in certain quarters much apprehension for the game supply, but there is no good ground for thinking that the effect has been specially injurious. Young woodcock may have been destroyed in some instances, but the quail and grouse have probably been unaffected.

"Buffalo Bill" and his "Wild West" company have returned from England covered with glory and laden with British gold. The animals have all returned in safety, among them being sixteen buffaloes and ten elk, with Mexican burros, bronchos and steers reputed to be wild. These with the Indians, cowboys, road agents, Deadwood stage and other integral factors of "Buffallo Bill's" astounding exhibitions will spend the summer at Erastina, Staten Island.

After a day's tramp, even in perfectly fitting and easy boots or shoes, a change of foot gear gives comfort. Old shoes are never more grateful than in camp. Moccasins are even better for this than old shoes, and they are now so cheap that it is very poor economy to be without more than one pair of them in camp.

The indications for bay snipe shooting this season are excellent. Large numbers of yelpers and yellowlegs are reported from the Long Island shore. Shooting will not open until July.

The offices of the FOREST AND STREAM are at 318 Broadway, corner of Pearl street.

The Sportsman Tourist.

A POND THAT NOBODY KNOWS.

I heard of a trout stream that nobody knows
(A friend told it me and I vowed I'd ne'er tell).
The world after all had a *couleur de rose*,
And my dreams were of trout creels, rods, reels and—well,
I resolved to explore this wonderful stream.
—*H. W. D. L., in* FOREST AND STREAM.

WHO has not at some time heard of a wonderful trout stream or bass water "that nobody knows;" a stream in some forest fastness, never, or scarcely ever, trod by foot of white man; or a black bass pond on the top of some almost impregnable mountain, secretly stocked and rarely visited except by beasts and birds. These streams are generally found in winter when somebody's grandfather or great-grandfather was lost, and noticed it in his bewildered wanderings when he was without hook or line, and the fish it contained were only seen, or, if by chance fish were hooked, they were too big to save with ordinary tackle. The location of the stream is always misty and vague, but the information, such as it is, is handed down from generation to generation, each one doing a little independent embellishing, and the result is as reliable as any other species of mythology. I pity the angler who has never heard of one of these streams; his life has been a failure. In 1885 I heard of a bass pond that nobody knows; or rather my friend Judge Ranger heard of it first and told me what he learned, which was precious little. Bit by bit we unraveled the mystery surrounding the pond; and who could wish for anything clearer for a starter! The cold-featured, sifted facts were about as follows:

A deer hunter in following a wounded deer on an early snow in the mountains between Lakes George and Champlain had seen a pond under a mountain cliff, and it looked to him like a bass pond, although he never had even heard of it before. This coming to the ears of one of the oldest inhabitants had caused him to search the recesses of his memory, and he told the Judge in whispers, with many injunctions to secrecy, that he had heard of a man, who learned from another man that the second man's grandfather had been told of such a pond by the "Last of the Mohicans," when he was on his death bed; and that the grandsire, with the courage and endurance that characterized the early pioneers, had, "the year of the big snow," taken half a dozen black bass from Lake George and gone to and deposited them in this forest and mountain encircled pond. The exertion of getting to and from the pond did the old man up, and he never reaped the reward of his labor, nor was he able to give a very concise idea of the location of the pond. A timber hunter had found a pond "way off up there," and to his surprise it was full of big black bass; they were on their spawning beds, and for food only, as he was famishing, he had killed seven which weighed 45½ pounds; and he selected the smaller ones as he was unarmed. What could be more conclusive? The grandsire's stocked pond and the timber hunter's discovery were one and the same, but where was it? We could trace it as "over beyond the slide somewhere," but "the slide" was the obstacle beyond which no one that we could find had passed. In whichever direction we turned "the slide" loomed up as a barrier to further information or progress, and seemed to be a sort of Chinese Wall with nineteenth century improvements. At first the slide was of smooth rock with its top projecting and overhanging its base, but by a rigid cross-examination we got it "about straight up, but leanin' back some; the allfiredest place you ever seen, unless for a critter that's got wings." The evidence of the last witness was a corker, but we still had faith in the grandsire and the "Last of the Mohicans," although it was evident that the pond was not ripe enough for us to pluck.

I went to Back Bay of Lake Champlain and remained all summer, leaving the Judge near the base of operations to sit in a court of secret inquiry further concerning the mysterious pond. The last of August he wrote me from Lake George: "If we are to make an attempt to reach the pond this year it must be early next month, or it may be too cold for pleasure. I can learn nothing to change the opinion expressed in my last, that we will at the best have a rough time in getting to the pond, provided we find it. So far, I think, none of the fishermen here suspect what we are trying so hard to accomplish, but we will not blow any bugles until we return. If at any time I think I am getting too much elated over what this pond promises in the way of big bass, I let my memory jog along back about twenty-five years to the time that you and I made a forced march to the unknown 'Mash' Pond, on Luzerne Mountain, for trout. One thought of the 'Mash' and I am as serious as a bronze owl." The Marsh Pond referred to was another of those ponds that "nobody knows." It was supposed to contain trout, but as near as we could discover the secret of its existence had been religiously kept from the entire trout family. In replying to the Judge's letter I was obliged to say that I should not leave Back Bay until the middle of September, and I had promised then to go to Brant Lake. So it came about that during an entire winter we speculated, conjectured and quietly inquired about what we had come to consider our pond. When the days were the coldest and the snow was the deepest and we discussed the pond and its approaches, we were half inclined to consider it a sort of salted claim; with lengthening days and a warmer sun our faith grew stronger, and our greatest anxiety was about getting the bass that we would catch down "the slide" safely.

When summer came again we had learned little, if anything, new about the pond, but we determined that the season should not close without our making an attempt to reach it. In May when we went to Lake George for lake trout trolling we sat for hours on the verandah of the Judge's cottage on one of the islands and talked of the pond, while our eyes were turned to the mountains that concealed it; there was a witchery about it that excited our liveliest imagination and we figuratively hugged ourselves at the thoughts of the pleasure it was to yield us.

In June I went fishing with a friend, and while driving home in the evening twilight (an hour that begets confidences), elated with our outing, for we had no fish worth mentioning, he said, almost in a whisper, "I know of a pond that was stocked with black bass years ago and it has not been fished since. It is in the mountains back of Lake George and—" "Where! Back of which mountain?" "Back of Buck Mountain; but what's the matter with you?" "Nothing is the matter, if your pond is back of Buck Mountain; but don't tell me about it now, for I scarcely think that I am in a condition to contain information about a new unknown pond. I have had one such pond on my mind for a year and it is making me round-shouldered, and I am sure I cannot bear the burden and endure the strain that information regarding two unknown ponds would cause."

For a moment I was alarmed at the whispered confidence, fearing that our pond had been actually discovered and located on earth, while to the Judge and me it was still in the clouds; but Buck Mountain being seven or eight miles from the region of our claim, I calmly relighted my cigar that had gone out during my temporary excitement.

Aug. 22 I received a note from the Judge, dated at his Lake George cottage, asking me to come up at once, as he had made all arrangements possible to start for the long-talked-of and much-thought-of pond.

Soon after reading the letter, within an hour or two, my friend above referred to called and asked if I would go to his unknown pond back of Buck Mountain, and I made a clean breast of what I was about starting to do, and described to him the location of our pond as well as I was able. He thought he had heard of it from a woodsman, and, if he was correct, he could reach it from the Lake Champlain side of the mountain, and would meet us in two days at our proposed camp. I was sure that we would not see him.

The following morning I took the first train and steamer, and before noon I was landed at the cottage, received with open arms by the Judge, and warmly welcomed by his family.

When, after dinner, we were seated on the verandah with lighted cigars, looking out on the clear waters of the lake which to me is ever charming and alluring, I cared little whether we ascended the mountains facing us or not. In fact I was not hungry for bass, exploring or anything else, except it was one of those quiet chats with the Judge which we have been chatting together more or less during all the years since we were boys. Nigh to forty years of companionship has brought us nearer and nearer together in the warmest of friendship, and I question if any two men can sit down and get more real pleasure out of pure reminiscences of sport with rod and gun, than can the two who were seated together that afternoon on the porch of the Judge's comfortable home-like cottage.

I have a warm attachment for that hospitable roof which has sheltered me so often, and I was rather loath to leave it even to gain renown as an explorer. I think it must have been about as the second cigars were burned to ashes that the Judge's son, Mr. William Ranger, brought us back from our mental journey into the past, to a realizing sense of the journey of the morrow, to be performed with feet and legs, by the greeting, shouted from his canoe as he paddled up to the wharf: "Mr. Livingston and Mr. Stanley the men are over at the hotel waiting for orders about packing." It was a matter of regret that Billy was not going with his father and me, for year after year he had been one of the party when we were on a fishing trip, but as he, too, had a guest, he was obliged to remain behind.

The Hundred Island House, on the main shore of the lake and facing Ranger Island, is little more than a hundred rods distant, and hither we repaired. Bony McCabe, a wiry young fellow, was the Judge's boatman, employed each season at the island, but familiar with the woods and mountains. Anthony Dagles was a giant in stature, a good-natured, laughing giant and a skilled woodsman, having lumbered in the mountains about Lake George for twenty or more years. These two were the men who were to go with us, but neither had been nearer to our pond than the "slide," although each had an idea where it was to be found. In the absence of a pack basket, Anthony, upon whose broad shoulders the greater part of our plunder was to rest, arranged a cracker box with straps through which to thrust his arms, after the manner of a knapsack, and he insisted upon loading the box with more weight than we thought he could carry. Bony was awarded the blankets, rubber clothing and an axe. I selected the fish rods and a haversack, and the Judge, bearing in mind the size of the bass we had heard of, took a gun, upon the muzzle of which hung a can of grasshoppers and crickets, our only bait. Anthony lived about two and a half miles away and he was to join us as we passed his house in the morning, so he took himself away with the cracker box, which I know was loaded. In the evening we looked in upon the dancers at the hotel, then went to the cottage and burned tobacco until midnight, when we retired to be called at 3 o'clock ante meridian. The first stage of our journey was by water, a distance of about two miles, and Billy Ranger and his friend, Mr. Peoli, volunteered to row us, as, when they learned the hour of our departure, they said it would be about the time they would return from the hop at the hotel, which was mild sarcasm. When I was called in the morning I was convinced that it was but 2 o'clock and I had been cheated out of an hour's sleep, although I could not prove it as Miss Ranger had the day before kindly taken charge of my watch as something I would have no use for, and might lose or ruin if I carried it on the trip.

When daylight came, after our breakfast, the clouds indicated that there might possibly be rain in them, but we got into the boat and started, for our object in getting off early was to avoid the heat of mid-day if we could. There was a cool air on the water considering it was August, and we deemed ourselves favored, provided there should be no rain. From the lake shore, where we landed, to Anthony's house it was up hill all the way, and we thought it steep until we had had greater experience later. Anthony was ready and waiting, but was undecided about the weather, so we sat on his porch and watched the clouds for half an hour. Years ago rattlesnakes were abundant about that region, but the supervisors of an adjoining county offered fifty cents for each snake killed within the borders of the county and presented to the county clerk, and this destroyed not only the snakes in the county that offered the bounty, but it cleaned them nearly out of sister counties. The bounty is still offered, but in recent years I think most of the snakes that have been presented to the county clerk came from the West or Florida. Since the inter-State commerce bill was passed the snake market has been dull in the county referred to. Anthony had preserved a few snake stories, however, and as we waited he sprung them on us. I sat facing the gate, and he said a snake once came in that gate, came up the steps and coiled itself about where my chair was placed. "When was that?" "About twenty years ago." "Too aged, Anthony; give us something not quite so musty." "Well, one night I could not sleep because of the heat, and I told my wife if she would give me a quilt I would lie on the floor. She went to a closet, opened it, went in, brought out a quilt and gave it to me; all this, mind you, in the dark. As I spread the quilt out I thought I would take a smoke before trying to sleep, and so filled my pipe, and as I struck a match I heard a fellow sing in that closet my wife had just come from. Instead of lighting my pipe I lighted a candle, opened the closet and found a big snake coiled and singing for all he was worth. I killed it and could find no place where it could have got in except through a knot hole in the floor, and it must have come that way, though the snake was bigger than any of the knot holes. There was no under-pinning under part of the house, and I killed several snakes under the house, first and last." "Anthony, was it necessary to lie on the floor after that?" In spite of the question I have no doubt but Anthony told the truth to the best of his knowledge and belief. When asked if there were snakes about there then, A.D. 1886, Anthony said no; and so bidding good-bye to Billy and Mr. Peoli we took up our burdens and marched.

Following the road—a winter log road—for a short distance, we turned and crossed some fields and entered the woods, finding an old wood or lumber road much overgrown; but it was good traveling, for a road that was up, up, ever up. As the Judge, with his silvery hair and beard, and his spare figure clothed in light corduroy, stepped along jauntily before me like a man with his work cut out for him, it occurred to me that if I was ever to down him on a tramp it would be then, for I thought I was in rather the better condition, he having taken few tramps since a tedious illness; but as we placed mile after mile behind us, and he kept up the stride that has broken my heart on more than one occasion, I concluded to give up all thoughts of rivalry and simply devote myself to "getting there," no matter how or when. A bend in the road and an opening in the trees showed us a hill, a sort of toboggan shute, and I whispered to the Judge, "Fred, that is probably the famous slide, but let us show no surprise when we get to it; simply say we have steeper hills in our back yards at home." The men plodded on up the hill without a word, and when I got to the top and had gathered sufficient breath to speak, I said, "Anthony, the ground has been so near level for the last half mile I can't tell which way the water runs; whether to Lake George or elsewhere." With a laugh that made the cracker box rise and fall like a ship at sea, Anthony replied, "Well, you're a good one! I can tell that the water is running down my back." At which we all smiled. We were surprised that the men said nothing about the slide, and as they may have felt chagrined that we came up it so easily, we said nothing to increase their mortification.

A quarter of a mile further on and another turn and opening showed another hill, longer, steeper and meaner than the first. "Just look at that! Did you ever hear of two slides that we would have to climb?" "No, and if I had seen a foot of down hill since we started I should think we were traveling in a circle; but brace up and take the medicine like a man." Soon after passing the crest of the second hill we came to a log cabin and a cold spring, and we halted as long as we dared in our heated condition. There was up to this time no word from the men about the slide, and we actually thought we had passed it once, if not more times, and it really was what such things sometimes prove, the product of a vivid imagination. Half a mile beyond the cabin Anthony turned from the log road that we had followed and struck off into the woods where there was no path. From where we turned off I must be excused from ever guessing at distances. I do know that I was tired and that I was looking at the ground to see where I placed my feet when Anthony said: "There, gentlemen, is the slide." I looked up until there was danger of dislocating my neck, and beheld a wall reaching up into the sky. I could not have said anything even had I known what was appropriate to say. I simply sat myself down and looked up. Sometimes under intense excitement or sudden surprise there will escape from the Judge fragments of unparliamentary or extra-judicial language, that at some early and unknown period must have secreted itself about his person. It is not haughty, nor is it loud, but there is a earnestness with it that is refreshing to one in sympathy and there is a subtle flavor about it that is apt to strike the listener at once as coming from a man that is either vexed or mad about something or other. When the Judge had grasped the magnitude of the slide there was a eruption, which I encouraged, as I considered it a proper occasion for fragments of language to turn themselves loose.

To cliff dwellers or "Yo's" Rock Climbers the prospect would perhaps have been inviting, but we were neither dwellers nor climbers by occupation or education, although we claimed to have some staying qualities, even as a race horse will run and "stay" in a race that is hopeless. My coat was tied to the slings of the haversack, and with the bundle of rods slung on my back I was ready. Each man selected his own place to make the ascent and started for the first resting place, a shelf about two-thirds of the way up. Bony was at the left, Anthony a hundred feet to the right of him, with the Judge behind or rather just under him, and I a hundred feet to the right of Anthony. A projecting rock, an open seam, a stunted shrub or its roots, a climbing vine, one and all, afforded aid in getting up and at times prevented our falling back. Once while clinging to the face of the slide and resting to get breath, I looked over to see how the Judge was doing. Just as I looked at him he had one eye cocked skyward and hugging the slide like a chicken that sees a hawk in the air; he was, rapidly as possible, making an oblique course toward me. The expression on his face made me laugh as I asked, "Fred, what is the matter?" "Matter! I have just discovered that Anthony's 240lbs. of flesh is directly over me, and if he should slip or that cracker box should come off, he or it would fall square on my head. I don't see anything funny about it. A man that will laugh now would laugh at a funeral."

With my breath coming as hot as escaping steam, I

head feeling as though it required hoops to keep it from splitting open, my heart loudly thumping against my collar button in an attempt to burst the collar band of my shirt, my flesh quivering and reeking in perspiration, while I shook like one with the palsy, I crawled over the edge of the shelf and threw myself flat down. Anthony grasped as much of his shirt as he could in his hands and wrung it out as one would wring a wet towel. He and I were the heavy-weights. At that time I weighed about 220, and Anthony 20lbs. more, while the Judge and Bony together probably did not weigh much more than 250. In a pocket of my vest I had placed a box of wax matches, and while resting on the shelf I got out a cigar and felt for the matches. The pasteboard box had returned to paper pulp and the matches to liquid wax, and the vest itself was as wet from perspiration as though I had been out in a heavy rain. The remainder of the slide was much easier to climb, and soon after reaching the top we began to descend a little. The crests of the mountains were still above and about us, but the "lay of the land" told where to look for the pond.

Less than two miles of down hill work brought us to the pond, and just before we caught sight of it the rain, which had threatened since we started, began to fall. When I had taken a good look at the pond and its surroundings I was not surprised that nobody knew it; I was only surprised that any one should wish to know it. It was little better than a mud hole, and if there were black bass in it they deserved sympathy. It was after 1 o'clock when we arrived, and the first thing to be considered was dinner. A little back from the water was an opening in the trees, and there we went. This space was about one hundred feet square and covered waist high with fire weeds. (If the editor knows of a meaner weed than fire weed will he please blue-pencil "fire weed" and write in the other kind, for that is what it was.) At one side of the clearing was a one-man lean-to of old, damp, half-rotten plank, and there for the first time since starting Anthony unharnessed from the cracker box. As a mere matter of form, for we were as wet as we could well be, we asked Bony for our rubber coats, and the bundle of coats and blankets was missing. It did not make any difference where the coats were so long as they were not where we needed them. There were some old logs on which the lean-to rested, and we rested on them also while Anthony built a fire and Bony went for water. The Judge remarked that it was a fine hole for a camp and asked Anthony if he supposed that snakes were ever found there. Anthony said that we were at least five miles from where a snake had ever been, and then he started for wood, walking through the weeds, striking them right and left with a stick of kindling wood to knock the water from them. He was not fifty feet from where we sat when he startled us by exclaiming: "Here's the biggest snake I ever saw!"

Although I have put that in quotation marks it is not exactly what he said, for it would not be polite for me to give his introductory remarks, and pen and paper cannot reproduce the vigor of his words; for he had raised his foot to step on a log when he saw that the log had been engaged as a sort of reserved seat. Anyway, he went nearly over backward in his attempt not to take the log away from its occupant. The Judge seized the gun, I took a stick from near the fire, and we both ran through the weeds, cross lots, to Anthony. Bony arrived about as we did, and he had an axe. "Where's the snake?" "He just went into that clump of bushes, and he's an old settler." The Judge thought he saw the snake and fired, but just then it stuck its head out on the opposite side of the bush and Bony cut it nearly in two with his axe, and I mashed its head. We returned to the fire, but in single file, stepping high, going slow and looking sharp. The snake was 4½ft. long and had twelve rattles. The strange part of it was, the snake did not rattle nor did it attempt to coil, although Anthony struck it with the light stick he had in his hand when he discovered it.

We ate our dinner in the rain and went down to the pond. If we needed more evidence than the lean-to that the pond was not known, we found it when we discovered a miserable leaky boat pulled up on the shore in the mud. The Judge and I got into the boat and pushed out, and I came very near not being here at this time to make that statement. We told the men to build a raft and then slowly and sadly made our way to the camp-fire and watched for the mate to the dead snake, for both men insisted that the mate was around there. It was evident that there was some way of getting to the pond besides climbing the slide, for the boat, which had been used for jacking deer, and the planks in the lean-to never came over the slide boulevard. We had one felt blanket which we stretched over the lean-to, and by letting our legs stick out in the rain we could keep our heads and shoulders dry, except in such places as the roof leaked. It took the men until time to get night wood to build the raft, so the Judge and I kept fire, smoked, visited with each other, and prepared the supper. The dead snake had been stretched out on a log, but thinking we would need the log for wood I laid the snake out on the roof of the lean-to, only a foot or two from where the fish rods were leaning. When the men came from raft-building Anthony knocked one of the rods down, and as he replaced it his eyes wandered from the butt up toward the tip to see if it had been injured by the fall. When his glance got up to the roof he yelled, "Another snake!" and for the second time that day he tried to stand on his head by turning backward.

It would have been a miserable attempt at a mean joke, for I believe such things are called jokes by some people, if I had intended such an outcome from placing the dead snake on the roof; but I had no such idea, and only the falling of the rod could have brought about the scare, for otherwise Anthony would have seen the snake before he got his nose within eighteen inches of it. The affair did not trouble Anthony in the least, but it did trouble me. I like a harmless joke, but don't think I could be guilty of acts that are sometimes performed by thoughtless people and miscalled jokes. When I was a boy I went several miles out of town with a party of young people on a picnic. One of the girls was terribly afraid of snakes, which fact all the party knew. Some one killed a little garter snake and placed it in a path and arranged for the girl in question to discover it. She saw the snake, and with one terrible shriek sank to the ground in a heap with eyes closed and hands clenched. I had driven my sisters and others to the picnic in a carryall, in this the girl was placed almost by force and then I ran the horses all the way to town, the unfortunate victim of the joke uttering piercing screams almost every moment until I thought reason was dethroned. At her house a physician was called and it was hours before she could open her eyes, and days, if not weeks, before she recovered from the shock to her nervous system. That was more than thirty years ago, and to this day I have not ceased to be glad that I had nothing to do with putting that snake in that path. That is a digression, but if it could be the means of preventing some young readers of FOREST AND STREAM from doing that which causes fright or pain to others, it will be the best part of my letter.

At our camp the rain continued all the afternoon and during the night, but the men kept up a roaring fire, so we did not mind the drenching. At times during the night one or another would try to get a nap under the miserable lean-to, around the back and sides of which the rank weeds grew in profusion. We had a lantern with a reflector, and this was placed to throw the light just beyond our heads when lying down. With a piece of a log for a pillow, I curled up for a nap, which was very short; as I opened my eyes I looked inward, and there near the Judge's head was coiled a snake with head erect. I scarcely breathed as, hastily, I put my thoughts in operation to discover a way out of the predicament. As I gazed earnestly at the snake in the gloom, not more than three feet away from my head, it slowly assumed the form of a piece of inch rope, coiled, with a spliced loop sticking up in the middle. I awakened the men who sat in the rain with their heads in their hands, and promised a drum-head court martial on the spot if the fire was again allowed to go down.

I tried once more to sleep, but woke with every nerve alert because of the queer motion of something against my leg just back of my knee. I did not move for perhaps a minute. I was prepared for a snake and not prepared for anything else, but I could not make out what it was that produced the queer feeling. Slowly raising my head and turning my neck I saw Anthony asleep just outside the lean to, his head on his arm, which was probably asleep also, and his finger-tips just reached and played nervously on my leg under my knee. I gave up trying to sleep after that, nor did I let any one else sleep, except Bony, who can sleep through any noise, for I tried him with my singing. Just before dawn the rain ceased and with the first gleam of light we got breakfast and proceeded to the pond. The raft was a little uncertain so we put the so-called boat on the raft and nailed it fast. The result of the fishing is quickly told, and the more quickly the better. I used crickets and the Judge used hoppers for bait. I caught two bass of perhaps 1lb. each, then the Judge had a bite and lost the fish. I caught the third bass and proposed to stop and sound the pond, but the Judge insisted that there was one more fish in there and he must catch it, as it had taken his hopper. Bony said my last fish had a hopper in its maw and the Judge thought that was his bass and the last one in the pond. We spent several hours sounding the bottom and did it thoroughly, but could not find anything but weeds, mud and ooze; not a single place suitable for a spawning bed.

This is a sample of some of the fish stocking that is going on to-day. Whoever put the bass in the pond did herculean work, but it was labor thrown away because the pond is only fit for lizards. Personally I think it a waste of time and fish to stock small ponds with black bass, and it is certainly worse than useless if there is lack of proper food, proper water and breeding places.

We ate our dinner, shouldered our duffle and started on our return journey, which was simply the reverse of that of the day before, and without special incident except that we lost the trail for half an hour. From the slide we had, through an opening in the hills below, a fine view of the lake. We had not noticed the view the day before, partly because of the overcast sky and the mist, and partly because we were too tired. We reached the cottage on Ranger Island before dark, and that evening as we sat on the verandah, footsore and weary, the Judge looked up toward the mountains as he contentedly smoked his cigar, and remarked: "I would not for fifty dollars have missed the trip to our unknown pond." As a reply was expected I said: "And I would not for a thousand, take it again; but if you hear of another unknown pond let me know at your earliest convenience and together we will seek it."

A. N. CHENEY.

GLENS FALLS, N. Y.

THROUGH MIRAMICHI WITH ROD AND RIFLE.—II.

PROCEEDING some four miles above the Grand Falls, we reached another rocky gorge called the Narrows, about one-quarter of a mile in length, through which the river roared hoarsely. Here must have been at one time the scene of an imposing cataract, but centuries of attrition had completed their work, and cut out a channel. All our stuff had to be portaged by the path; but the men were able to pole up the empty canoe. It took them some length of time and furnished me with a very pretty spectacle. Looking over the brow of the cliff, below in diminished perspective the Indians with every nerve and muscle at full tension were to be seen forcing the canoe through the seething water, sometimes scarcely gaining a foot in five minutes. The picture was framed by the walls of dark rocks on both sides of them.

Once more we were pitching our camp as evening fell; this time on a grassy meadow at the mouth of Nine-Mile Brook. While the camping preparations were going forward, I put my rod together and killed sufficient trout for the pan in a few minutes. In fact small trout swarmed everywhere in this part of the river. I caught one trout 6in. in length, distended in an abnormal fashion; and found on investigation that its stomach contained a young mole. How the fish swallowed the animal and was able to take the fly when the tail was actually protruding from its throat puzzled me very much. In the upper pools I afterward frequently caught large fish with an imitation mouse made of fur twisted on the hook. I also heard of squirrels being swallowed (on undoubted testimony) as they swam across the pools; but these fish were over 4lbs. in weight, while this midge was only 4oz., and had swallowed a creature almost as heavy as himself.

On the following day Forty-two Mile Brook was reached. Landing on the river bank I walked ahead of the canoe for some distance and shot a number of juicy young partridges and two rather tough shield ducks to vary the fare. The beauty of a large part of the river had been sadly marred by recent fires, and it was with no small relief that we found the ravages of fire had here terminated, and once more we welcomed the green woods.

Fire has been the great curse of New Brunswick. The terrible Miramichi fire that occurred some sixty years since is one of the most terrible instances on record of the ravages of that element. Picture the Miramichi River with farmhouses and clearings bordering its banks on both sides for a distance of upward of one hundred miles. Flanking this double strip of cultivated and inhabited country, extended the unbroken forest of spruce and pine in every direction. The summer of 1826 had proved exceptionally hot and dry. All nature was parched and scorched. A party of unlucky hunters had kindled a camp-fire and allowed it to get beyond control. The flames spread with fearful rapidity, devouring the feast the extraordinary drought had prepared for them. One fatal evening the dwellers on the banks of the Miramichi beheld the sun sink red as blood, and when night fell saw lurid gleams shoot high into the sky, and the air grow dense with smoke and resinous vapors. With a hideous roaring and crackling the fire closed upon the wretched people with a speed exceeding the pace of a fast horse. So intense was the heat that every fibre of wood was licked up in its progress and the very rocks seemed to melt before it. Hundreds were overtaken in the act of flight and burned to death; men in lumber camps were first stifled and then consumed ere they left their tents. Large numbers rushing from death by fire met death in the river by the over-crowding of boats. Whole villages were swept away. Families were dispersed never to be re-united. Thousands were left bereft of homes, property, kindred and every earthly possession. Subscriptions were mercifully set on foot for the miserable survivors, and the tragic tale aroused the sympathy and pity of England and America. A fire so disastrous to humanity told with added force against the helpless animals of the forest. Many touching stories are recorded of the terror of the dumb creation, who seemed to lose all fear of man in presence of the dreadful calamity. Even birds were seen to fall from a height overpowered by the heat, and moose and bears cowered peacefully together in the saving waters of the river. Almost all, however, fell victims to the fury of the fire. For many years the hunter's occupation was gone. No game survived but the mink and otter and beaver, which could exist below the surface of the water. Hundreds of square miles of most valuable timber land were left bare as the Sahara. The district we had now reached had suffered severely. Though sixty years had elapsed, only in a few places had any vigorous growth of trees developed. Cowering under the effects of that paralyzing blow, the earth seemed powerless to re-clothe its nakedness, except in tattered shreds and patches.

Joe pointed out the site of a lumber camp where seventeen men had been burned in their beds. Uninviting as was this spot for a camping ground, we determined to halt here for a day, as there was a good lake for black duck within reach, and bears were known to be attracted to the neighboring hills by a prolific growth of blueberries. So our tent poles were erected on a dry bank close to the murmuring river, whence we had a fine opportunity of observing the range of hills on the opposite side, where we expected to see bears. Nor were we disappointed. We had bagged three widgeon and a teal in Red Pine Lake, and were eating some of Joe's rather tough pancakes when that worthy began to knit his brows and focus his eyesight upon a small black object on a bare hill opposite. After many minutes of close observation we settled it that the object moved, and that it must be a bear. In a few minutes we were across the river and toiling over prostrate trees that had been killed by fire and fallen in inextricable confusion. It took us a good hour to get to the leeward of bruin, where we could plan our attack. A deep ravine, through which a small brook brawled and nourished with its moisture a tangled growth of hemlock, intervened between us and the summit of a hill from which we felt confident we should get a shot at our game.

It took us a long time to struggle through this valley and reach the eminence beyond. Slowly we raised our heads above the brow of the hill; and there, some 150yds. away, was the unconscious bear, with head down, biting at the sprays of luscious blueberries, as he moved leisurely along. My Winchester was held true, as was evident from the bear's actions, for suddenly rolling and striking at his side with his forepaw, he started off for a thicket only a few yards away and was lost to sight. "Come away," said Joe, "I'll skin him to-morrow morning." The wisdom of this proceeding was made evident on the following morning when in searching the thicket we found the carcass. The ball had gone through the stomach and had we disturbed him after he lay down, he might have traveled a long distance and been lost to us. Returning to camp with the skin and choice bits of the meat, we were delighted by the hunter-like aspect of things. The bear meat simmered in the pot (the Indians putting in a fork every once in a while), while the skin was artistically stretched out by Joe to dry on stakes erected for the purpose.

Of course bear stories were the order of the day. Joe delighted in presenting bruin in comical aspects, telling how once a bear broke into a lumber camp, and drawing the molasses tap rolled over and over in the sweet flood; then breaking up a flour barrel rolled over and over in the flour. When the men returned they were startled to find a white bear in their house. "This is the only instance, I suppose, Joe, where the white bear has been seen in New Brunswick," I said. "No, sir; I once heard of a white bear with pink eyes killed on this river." Could this have been an albino, or was Joe hoaxing? Once Joe saw a bear seated on the top of a beaver house, trying in vain to hit the beavers a blow with his paw as they swam past him in a tantalizing manner, just beyond reach. Once when out with a brother hunter, Tom Isaacs by name, an otter was stolen from Tom's steel trap by a bear; made evident by the telltale track. Tom swore a terrible revenge, for an otter was worth about $12. Wandering afterward in a neighboring barren, he came quietly upon a bear feeding on berries. "Where's my otter?" thundered Tom. The bear jumped aside nearly twenty feet, and failing a satisfactory answer was shot dead by Tom. On another occasion he watched a bear on a large log amusing himself by delivering a series of blows on a poor calf that he had just captured. Every blow, delivered at intervals, elicited a loud roar from the terrified beast, which seemed to afford bruin vast amusement. This ani-

mal is a curious mixture of bravado and timidity. He will not pass through an open door; but if a hut is sealed up will use every endeavor to break through, especially if he scents the odor of molasses or pork. A common plan of protection is to leave a chain stretched across the open door of the storehouse, the clank of which frightens bruin when he touches it.

At this camp a curious nocturnal bird kept on the wing until after midnight, uttering a harsh short note that jarred the ear accustomed to silence at that hour. Numbers of kingfishers had perforated the bank beneath us for their nests; we found the holes invariably sloping upward, doubtless to afford more dryness by draining off the water.

Above this point we were delighted with the fresh green woods on either side, so refreshing after the fire-scathed country through which we had passed. Lovely maples and elms and ash greeted us and a few noble spruce and pine that had escaped the lumberman's axe reared themselves nobly aloft, "fit for the mast of some great admiral." Indian Falls gave us a rather severe portage of nearly a mile, but somewhat repaid this inconvenience by the charming and romantic scenery it presented.

At the Devil's Elbow we halted for two days. This is the name bestowed on the best big trout pool of the river. What connection the Prince of Darkness can have with these lovely surroundings we failed to discover. Our tent poles went up on a sloping pebbly beach, where the river makes a sharp turn. Here we saw traces of our American friends in the shape of heads of enormous trout, wings of the shield duck and partridge. We have omitted to record that we daily shot numbers of these birds. We afterward learned that our friends had killed an immense number of large trout, some six or seven pounds in weight, had shot a wildcat swimming the river and had unsuccessfully stalked a bear. We caught some very large trout here, the largest drawing the scale to 5½lbs. Some were beautifully tinted with red and ochre, but their symmetry was sadly marred by the enormous size of their heads, which gave them a look of ferocity.

Two miles above this fine trout pool we found the camp of a young Yale student showing unmistakeable evidence of successful hunting. One bear skin was stretched out with cords on a frame work of stakes in the process of drying; two more already well dried were spread as rugs on the floor of the tent; a fine beaver skin and the enormous wings of a golden eagle, some mink and musquash were also among his trophies of war. A message, written with charcoal on a bit of birch bark, informed us that he had gone on to the Lakes and would return in a few days; near his tent was a deserted lumber camp that had been a favorite resort of bears owing to some stores having been left there.

Rugged hills now loomed up blue in the distance and beckoned us on. Pleasant bits of intervale were crowded with a growth of choke-cherries, tree-cranberries and squaw-bushes, whose fruit is so prized by bruin.

Joe observed that he never saw more "works" about the river, referring to the bears, which indeed had trampled down the bushes well along the shore to get at the berries, especially the fruit of the squaw-bushes, which is white and has an acid, not disagreeable flavor. Squaw-bushes are probably so-called because they are much used by the Indian squaws for withes and basket making.

We passed several pools full of enormous trout, but we desisted from killing trout over four pounds in weight simply because the sport had become monotonous. At Lyman's Pool, so called after an American lawyer who roughed it here in the brush with my man Joe for three successive seasons, I killed a male fish of four and a quarter pounds weight, most exquisitely marked with carmine and orange, especially on his ventrals and pectorals. Joe had many stories to relate of his trip with Mr. Lyman. Here Mr. Lyman shot a bear; there fell a bull moose while standing in that "bogan" or cove; at that point a fine caribou was missed, and so on. At the mouth of Portage Brook, a stream of no inconsiderable size, we found fine camping ground, evidently often used in the past. Here we remained for two days attracted by the beauty of the spot. Large trout lay in a pool some hundred yards below the mouth well across the stream toward the opposite bank. Fresh tracks both of moose and caribou were seen in some meadow land close to the river, while the numerous stalings of bears betrayed their recent presence. We were evidently in a good game country. Toward night we heard more than once a stealthy crackling among some dry timber, but were at a loss as to what class of game to attribute the noise. We found about a mile to the eastward of the river a bog and meadow intersected with moose paths. However, we did not stumble across anything. Joe called in the evening, making rather a poor effort, however, in comparison with the scientific skill of the Micmacs of Nova Scotia, and to no effect.

Partridges were very plentiful about this camp, and by straying some fifty yards away we were sure of several shots. I now began to use my rifle upon them, and succeeded after a little practice in decapitating the bird at almost every shot. Occasionally the ball would hit the body, when it would be mangled to such a degree as to be useless. A few shield ducks passed up and down the river in search of feeding grounds, and afforded some wing practice. They proved very tough and inferior eating, and we were obliged to stew them to make them at all palatable. The hills at a distance of three miles were seen to be wrapped in a dense smoke that must have been caused by large forest fires to the windward. This was disappointing, for Joe had hoped to descry bears feeding on the rich blueberry feast which their steep sides offered.

Some sugar having been spilled here on the floor of our camp, a surprising number of semi-colon butterflies (*Grapta s.*) visited us and indulged in graceful air dances. The *Vanessa milberti* butterfly, somewhat dwarfed in size, was also on the wing in numbers, and a few of those bird-like flyers, *Danais arduppus*, were also observed; but on the whole insect life seemed very scarce. I much missed the cheerful notes of the cicadas which in Nova Scotia fairly make the woods resound, and have a mirthful, exhilarating effect, when all else in nature is steeped in the languor of a summer afternoon.

I asked Joe if he had ever seen them. On describing the insect he said oh, yes; his father once offered him a pair of snowshoes if he caught one that he heard whistling in a high tree, For a long time he looked this way, that way, for the cicada is literally a ventriloquist; at last he climbed the tree at haphazard, saw him walking down the trunk, made a prisoner of him, and got the coveted snowshoes. Joe continued that some have checkers marked on their wings, some dominoes, and some card spots, and that if you keep such wings in your pocket you will excel at these games.

Seeing many signs of bears about, we constructed a dead-fall trap, so arranged that when bruin seizes the bit of pork smeared with molasses (or still surer bait with the rank smelling oil from the beaver castors), he brings down upon his back a load of logs and stones that crushes the life out of him. Joe maintains that bruin always foresees his doom before he enters the fatal dead-fall, but cannot help going to his doom. Destiny drives him onward. He never goes straight for the bait, but promenades quite around the inclosure. Joe once found a young bear caught in his trap and the old dam keeping guard over her dead offspring; refusing to escape, she fell a victim to Joe's rifle—a striking instance of the force of the maternal instinct in the brute creation.

Near our camp is a grassy plot known as the Unlucky Wigan. Every one that visits this spot, says Joe, is sure to cut himself or injure himself soon after. The ground is accursed. A lumber camp was once built there, but one and another cut themselves with knives and axes, till finally it had to be abandoned.

In the evening, the small saw-whet owl flitted around the fire. "Do not mock him," said Joe, "whoever laughs at him is sure to burn himself as a punishment."

These anecdotes serve to illustrate the superstitious character of the Indian. Yet there is a strong vein of humor through all their superstitions, which save them from being degrading. The Indian character is not well disciplined; he is the victim of moods, one day bright and cheerful and obedient; the next, perhaps sulky, churlish and discourteous. He has an evident affection for "the beasts," as he calls the denizens of the woods, and spares them when he cannot use their hides or flesh. I consider him the superior of the coarse boorish lout, the common type of the lumberman. Among themselves the Indians are kindly, unselfish and hospitable. I often think of Les Carbot's description of the Nova Scotian Micmacs when he went among them with that French courtesy and suavity which won its way to the Indian heart and made them the firm allies of France. Writing in 1620 he says: "Verily of some families I know there be among them some with whom, were they not Pagans, Christ would come in and dwell."

A close intimacy with the Indian character reveals many lovable traits, much of the rough diamond. They universally deplore the coming among them of the white man. Before his advent fish and game, they say, abounded everywhere and were easily killed, and small estimation is set upon what the whites have given them in return. How pathetic is their decline, melting like snow at the touch of spring sunshine.

Though I call Joe Indian, yet his lineal tree shows a strain of white blood three generations back. A certain John Young, adventurer from England, where his life was forfeited to the Crown, made a lucky escape, and, coming hither in a trading ship, married a squaw and became a great sachem or chief. He lived to a ripe old age, and before his death sent home to His Majesty of England three canoe loads of bear, beaver and otter skins, with a petition for a grant of land for the Indians; and this was assented to. John Young was Joe's great-grandfather, and though Newgate lost a victim for the noose, Bathurst gained a useful citizen.

Our canoe showing symptoms of leaking, we hauled her up on the bank to dry, bottom up in the sun, preparatory to applying rosin. Here let me express my intense admiration of the birch bark canoe, that incomparable vehicle of river navigation; let me pay tribute to its lightness and strength, its beauty and fitness.

> "All the forest life is in it,
> All its mystery and magic,
> All the toughness of the cedar,
> All the lightness of the birch bark:
> And it glides upon the waters
> Like a yellow leaf in autumn—
> Like a yellow water lily."

The very soul and poetry of motion, how serenely it rests upon the distracted waters, calm as the iris that broods over the raging cataract, and with how gentle and swift a flight it can traverse the placid lake, as silently as the silver moon beam that steals across its surface.

No wonder that when the old Micmac warrior lay down for his last sleep, to be borne by his weeping braves to the great burial place at Ponhook, or Sable Island near the shore, where the sea was forever to chant his funeral dirge, he was rolled in the sheet of yellow bark which during his life had served him in such good stead. Had it not formed the house that had sheltered him from the scorching sun and driving snows? Had it not made the flamb eau with which he had searched the dark stream by night for the lurking salmon? Had it not meant for him kitchen utensils, pots and pans, cups and saucers? Out of it had he not fashioned the horn with which he had lured the mighty moose to his doom? Best of all, had it not equipped him with the canoe? As has well been said: "What the steed is to the Arab, the camel to the Abyssinian, that is (or was) the canoe to the Micmac Indian."

He believes that Providence had his needs in view when were created birch bark and cedar bark—these seeming requisite for supporting life in the North American forest. When from the cedar is torn the outer bark, a shaggy covering, there is found inside a strong fibrous sheet, like wood pulp felt, which being cut into long strips furnishes both cord and rope. Moreover, the wood of the cedar being very light, is valuable as a lining for the canoe, and when the summer heats have dried up the streams so that even this light draft boat scrapes on the sharp rocks of the river bottom, he lovingly protects the frail sides of the vessel with long strips of cedar splints bound together so that it glides unharmed over the pebbly bottom.

ARTHUR P. SILVER.

In another column will be found the advertisement of Isaac J. Boothe, Birmingham, Conn., with some things of interest to anglers. He makes a large line of reels, rod trimmings, tie guides, etc., and is prepared to meet the demand for best quality of work. —*Adv.*

Natural History.

SOME AUTUMN BIRDS OF THE ST. MARY'S LAKE REGION.

BY GEO. BIRD GRINNELL.

THE region covered by the very superficial observations to be detailed below is quite limited, but from the varied character of the country, and the fact that it lies directly in the path of migration of many species of our water fowl, its bird fauna is one of unusual interest. This is the more true because few ornithologists have visited the northern portions of Montana, and there are many species of birds which, while we feel certain that they must occur here, have never been recorded from this region, nor indeed from anywhere near it.

The St. Mary's Lake region has been described in these columns by various correspondents within the past three years, and its features require but a brief notice.

The parallels of 48° 30′ and 49° north latitude and the meridians of 112° 30′ and 113° 30′ west longitude will take in the extremes of this country.

The area covered by these notes lies chiefly about the headwaters of the St. Mary's River, an important stream which forms the south branch of Belly River, and in the volume of water which it carries quite equals, if it does not surpass, in size the north branch, which bears the name of the main stream. The lakes from which this river flows are of considerable size, the lower being from 6 to 8 miles long and the upper somewhat longer. At their broadest part they are perhaps a mile in width. The lower lake is bounded on either side by rolling ridges, for the most part timbered with pines, spruces and aspens. These extend back on the west for half a mile or a mile, and then the foothills of Flat-top or Bastion Mountain rise more sharply, until they meet the cliffs of bare rock. On the east side the hills are lower, but the ascent is still very sharp, so much so that it is only here and there that a wagon can be hauled out. When the summit of the ridge is passed, however, another drainage is met with, the waters flowing into tributaries of Milk River and so through the Missouri and Mississippi into the Gulf of Mexico. This lake lies nearly due north and south.

The upper lake, which receives almost all the water which flows through the St. Mary's River, is bent almost at right angles about one-third way back from its outlet, its lower third lying nearly north and south while its upper two-thirds lie nearly east and west. It is walled in on either hand by mountains of great height and steepness, and has, except at its lower end, no valley, properly so-called. On its western and northern side Singleshot, Otu Kómi, Goat Mountain and Going to the Sun form its inclosing walls, while to the east and south Red Eagle, Little Chief and other peaks, as yet nameless, overlook it. These mountains are all snow-clad for the greater part of the year, and in many of their sheltered basins there are far-reaching fields of perpetual snow.

About five miles below the outlet of the Lower Lake a mountain torrent, fitly named Swift Current, enters the St. Mary's River from the west. It carries a large volume of water, and near its sources, which are in two or more extensive glaciers among the peaks less than twenty miles from its mouth, are a chain of at least thirteen little glacial lakes. The valley of this stream is very narrow and is inclosed on either hand by very high, rough mountains.

To the north and east of the Lower St. Mary's Lake is the prairie, at first rough and rolling, the streams all flowing through deep cañons, across which it is only here and there possible to drive a wagon, but gradually becoming lower, smoother, and with wider valleys. On this prairie, especially to the north of the North Fork of Milk River, but on that drainage, are innumerable shallow prairie lakes.

To the south, after passing over Milk River Ridge, the mountains are not less rugged and precipitous than about the St. Mary's Lakes. The heads of Milk River, except the south branch, rise in the prairie, at the foot of, rather than in, the mountains; but the two streams next south, Cut Bank and Two Medicine Lodge Creek, have their heads far back in the mountains, and flow through narrow gorges.

The region is one of great precipitation. The warm, moisture-laden winds from the west striking the tops of the cold high mountains are condensed and fall as rain or snow. A number of glaciers exist at the heads of cold narrow valleys which the sun warms only for a short part of each day. During the month of September it rains or snows every day, and the wind blows with great violence for the greater part of the time. In October there is less rain and more snow, with some very cold weather. Winter usually sets in during November, but sometimes not until Christmas.

The altitude varies from about 5,000ft. at the foothills to 10,000ft. or more on the highest peaks.

The map which accompanies these notes is based principally on the observations of Lieutenant S. C. Robertson, U.S.A., to whose kindness I owe a copy of his Map of a Reconnoissance from Ft. Assinaboine to St. Mary's Lake, M. T. This map, if I mistake not, was made from notes taken in the autumn of 1885, after my first visit to the country. To this map some details were added by Lieutenant J. H. Beacom, U.S.A., who took compass bearings during the few days which he spent at the lakes in October and November, 1887, when in my company he penetrated to within a few miles of the glacier which he has named for me. Finally having ascended this glacier, and from the summit of several high peaks gained some idea of the general character of the country, and having visited Red Eagle Lake, I have ventured to add to the map some of the more important features of the last named lake and its outlet, and of the heads of the two branches of Swift Current. For these additions I alone am responsible, and, while they do not profess to be exact, they are sufficiently so to serve as a guide to any one who may hereafter visit the region. In other words, they are better than nothing. I am unable to learn that up to the date of my visit to the lakes in 1885, any one had ever been to Red Eagle Lake or had pushed further up Swift Current than the lake above the lower falls. This map gives an idea of a few miles of both these valleys.

While attached to the Northern Boundary Survey in 1873, Dr. Coues passed to the north of this region, and it

MAP OF THE ST. MARY'S LAKE REGION.

has been approached on the south by Dr. J. C. Merrill, who, however, did not get within two hundred miles of it. It offers a rich field to the intelligent ornithologist, and many points of very great interest might be cleared up by an energetic, painstaking collector, who could devote a season to work in these mountains.

(TO BE CONCLUDED.)

SNAKE BITE AND ITS ANTIDOTE.—II.

Experiments With Crotalus Venom and Reputed Antidotes, with Notes on the Saliva of Heloderma ("Gila Monster").

BY H. C. YARROW, M.D.

Curator Department Reptiles, U. S. National Museum.

LET us now examine the testimony of others as to the efficacy of the permanganate as an antidote to serpent venom. The first to repeat de Lacerda's experiments was his former assistant Dr. Couty, who declared in the *Compt. Rend. Acad. des Sc.*, Par., 1882, April 24, that the permanganate was not an antidote, and that a favorable opinion upon its merits should be reserved until further experiments had been tried.

M. Vulpian, in *Compt. Rend. Acad. des Sc.*, Par., 1882, March 6, 613, states that he endeavored to repeat de Lacerda's experiments with the permanganate of potash and had come to the conclusion that an intravenous injection of some centigrams of permanganate can have no influence upon venom after it has been taken up by the circulation, particularly as it is decomposed after a few instants, and in case an effective dose be given, death might result from the antidote. In fact he says it is difficult to explain how the bites of *Bothrops* were cured in Brazil by the permanganate unless such bites are not always mortal. In his *resumé* he says there can be no doubt but that the permanganate can only be useful after recent bites, for if one or several hours elapse no antidotal effects can be produced. He also states that it would be wrong to rely upon this drug in cases of bites of other venomous reptiles in which the bites are often, or more rapidly mortal.

Dr. G. Badaloni reports in the *Lancet. London*, 1883, I., 768, that from his experiments with the permanganate he is led to believe it is of no avail in cases of poisoning from viper bite. Mr. Vincent Richards, of Calcutta, who used permanganate in a great number of experiments regarding its antidotal power over the cobra venom, has reached the following conclusion:

I. "That in dogs no appreciable symptoms of cobra poisoning followed the hypodermic or intravenous injection of a watery solution of from two to seven centigrammes of cobra poison, when previously mixed with from one to three decigrammes of permanganate of potash, though, under ordinary circumstances, such quantities hypodermically injected are more than sufficient to produce fatal results." This statement simply proves that the salt renders the poison inert when mixed together in a vessel, not in the body of an animal, and our own experiments show a similar condition.

II. "That when similar quantities of a watery solution of cobra poison were hypodermically injected into dogs and were followed either immediately or after an interval of four minutes (the longest interval I have yet sufficiently tested), by the hypodermic injection with the same part of a watery solution of permanganate of potash (one to six decigrammes) no appreciable symptom of cobra poisoning resulted." This experience of Mr. Richards differs entirely in its result from ours, as is shown by the notes given above.

III. "That when glycerine was used instead of water, to dissolve the dried cobra poison, the permanganate of potash appeared to have no power over the virulence of the virus." This statement, it is thought, has been disproved by our own experiments already related.

IV. "That after the development of symptoms of cobra poisoning the injection of permanganate of potash, whether hypodermic or intravenous, or both, failed to exercise any influence upon the symptoms."

V. "That permanganate of potassa possesses no prophyllactic properties, since death followed the hypodermic injection of 3½ centigrammes of cobra poison in watery solution in the case of a dog which had been hypodermically injected a few hours previously with 8 decigrammes of the agent in solution."

VI. "That it would appear to be absolutely necessary that the permanganate to be efficacious should come into actual contact with the cobra poison."

VII. "That although no symptoms of cobra poisoning followed the injection of cobra poison and permanganate of potash, sloughing of the part injected sometimes followed." Sloughing we found to be extrenely rare in our cases, as will be seen from the notes, in fact a 5 per cent. solution of the permanganate injected several times into the leg of a rabbit had no appreciable effect.

VIII. "That up to the present time it has never been experimentally shown that any agent has either the power to neutralize the cobra poison lying in the tissues, nor to prevent death when four minutes had elapsed from the time of injection of the poison to that of treatment."

IX. "That if permanganate of potash has such power to destroy so subtle a poison as that of the cobra it is probable that the hypodermic injection of the agent in the bite of a rabid animal, would destroy the virus which causes that terrible disease hydrophobia."

The writer would remark that as early as 1870 he treated three cases of persons bitten by rabid animals with applications of a solution of permanganate of potassa after incision of the bites had been performed; none of the patients had *rabies canina*.

Sir Joseph Fayrer states in his address to the Medical Society of London, speaking of Richards's views, as follows: "I agree with Richards that so far as it goes it is a good local application and as such ought to be used; or, in its absence, tannic acid or *liquor potassæ* might be resorted to with the same object; but as a constitutional remedy, as a physiological antidote, it is powerless, like all others that have been tried and failed to do good." Dr. de Lacerda himself, although he attributes the highest value to it as a chemical antidote, both as a powerful oxidizing agent and by the action of the potash, says, as to the idea of finding a physiological antidote for snake poisoning: "I entirely agree with you that it is a Utopia; although I found that *liquor potassæ* practically answered the same purpose as permanganate of potash, it did not decompose the venom, but merely destroyed the tissues in which the venom was lying, thereby preventing its absorption; and it was subsequently discharged with the slough. This was proved by the fact that when the venom and *liquor potassæ* were mixed and injected subcutaneously, no constitutional effect followed; but if the same mixture was diluted with water and injected into a vein or into the peritoneal cavity of an animal, symptoms of cobra poisoning were soon manifest, and the animal died."

As opposed to the opinion of the persons quoted, we have on the affirmative side of the question only de Lacerda's statements and cases, and one or two others. The first is mentioned by Dr. de Fourier in the *Journal de Hygiène* for Sept. 22, 1882, in which a case is mentioned of an individual having been bitten by a very large serpent

supposed to be poisonous, to whom a solution of the permanganate was given internally and hypodermic injections were also employed; the patient recovered. Another case is related by Dr. E. Bories, in the *Polyclinic, Philadelphia*, 1883, I., 57, in which the patient was bitten by a rattlesnake. Four hours after the bite one-half grain of permanganate of potash was injected subcutaneously and two grains were given internally every hour. Ammonia was applied to the wound and the patient recovered.

Before leaving the subject of the permanganate, it may be well to state de Lacerda's hypothesis of the action of this salt as he himself communicates it in a letter to Dr. Fayrer: "Passing now to the essential point of the discussion that took place in the Medical Society, I will give in a few words how I comprehend and how I judge that the efficacious effect of permanganate of potash should be comprehended. You yourself, by experiments made in 1869, recognized that permanganate of potash mixed with the venom took from it its noxious properties. Certain conditions of the experiments led you, however, to deny the efficacy of this chemical agent in the cases in which the venom had been inoculated in the tissues. As you know, however, I have demonstrated by numerous experiments and innumerable clinical facts that the neutralization takes place even in the midst of the tissues, which makes this substance a chemical antidote of great value. The permanganate of potash acts upon the venom, destroying it in two ways: first as a powerful oxidizing agent, second by the potash that forms the base of the salt, passing a current of nascent oxygen through a concentrated solution of the venom, which loses entirely its noxious properties. This experiment, which I have repeated many times, gave me always the same result. Let us suppose now, then, an individual is bitten. If injections are made in the place of the bite from five to ten minutes after the inoculation of the venom, this is promptly neutralized *in situ* and the individual runs no further danger. A great number of facts have been observed like this in Brazil. If aid is given late, hours after the bite, when the tumefaction of the wounded part is very pronounced and the phenomena that indicate the entrance of the venom into the circulation have already declared themselves, injections repeated in various parts of the wounded members parting from the wounds made by the fangs of the reptiles still give very good results. Nor is it difficult to explain the good results in this case. The v nom as I have said acts first locally and only enters the general circulation after the lapse of a certain time, and by portions. The permanganate of potash meeting in the tissues with the venom, which is little by little diffusing itself, neutralizes it in the various points when it has been diffused and thus stops the source of supply. The entrance of new and successive portions of the venom into the general circulation being thus impeded, the organism takes charge of the elimination of what has already been introduced and which was insufficient to compromise the life of the individual."

It is only fair to add that the poison of the *Bothrops* is much less venomous apparently than that of the cobra and *Crotalus*, and this may account for the good results obtained by Dr. de Lacerda, but we should not forget also that Mitchell makes the statement that at least seven-eighths of patients (bitten by the *Crotalus*) recover, and that the mere fact of their surviving can assuredly be no test of the value of any particular form of treatment.

Dr. E. R. Sisson, of New Bedford, Mass., sends to the Tampa (Fla.) *Journal* this report of his successful treatment of a dog bitten by a rattlesnake:

"On March 1 my pointer Joe was bitten by a rattlesnake. It being my custom, while hunting in Florida, to go prepared for an emergency of this kind, and being present at the time of the accident, I lost no time in applying the treatment.

"First, I pressed the wound to make it bleed as freely as possible; then I sucked it; after this applied five drops concentrated spirits of ammonia to the open wound, immediately following by ten drops of the fluid extract of jaborandi hypodermically, holding it in the punctnre for two minutes. After making these local applications to destroy the action of the poison on the blood, I gave 1oz. of whisky with a drop of the ammonia internally every hour. After this, stopped the ammonia and gave whisky and milk. Six ounces of milk to six teaspoonsful of whisky, decreasing gradually the whisky for the first twenty-four hours, as the circulation and strength improved, when I stopped it altogether, and gave 6oz. of beef tea, making the tea of Liebig's extract, usual strength, alternately with the same quantity of milk, once in six hours. This course was followed for sixty hours, when the animal voluntarily took small pieces of fresh beef. From this time on his improvement has been continual, having hunted the dog twice within the last three days, with all his usual vigor, and no loss in the strength of his nose.

"This is my first experience in the treatment of a rattlesnake bite, and I give it to sportsmen for what it is worth.

"No treatment, in my opinion, will amount to much in such a case, where the circulation is involved, unless applied immediately and continued regularly for at least seventy hours or more, with rest and freedom from all excitement. E. R. SISSON, M.D."

Dr. Yarrow advises us that Lieut.-Com. William P. Randall, U. S. Navy, also vouches for the above.

PANTHERS CLIMB TREES.

OUR correspondent from Rifle Creek, Colorado, is probably satisfied by this time that mountain lions or panthers (*Felis concolor*) do sometimes climb trees. The letters which we print this week from old hunters of the Adirondack region contain interesting testimony on this point.

Editor Forest and Stream:

The query "if the panther or American cougar (*Felis concolor*) can and does climb trees" can only be answered definitely by the person who has seen the creature perform the feat. From the structure of the animal I have no doubt of their ability to do so; but I have not seen it either in the act of climbing or up the tree. I have been told by several men whose word I do not doubt, such as Charles Marsh, Micajah Ackerman, A. L. Greenfield, Jesse Irish, William C. Hall and Alanson Curtis of them having each of them at different times killed panthers in trees, where they had driven them with their dogs. Now I do not suppose that they climb trees as a habit, in sport or in search of prey, but merely to reach a place of safety from pursuit. The first panther that I ever saw was walking along the body of a pine tree about one foot in diameter that had been blown down and lay about ten feet from the ground. I have since frequently seen their tracks where they had walked on timber high from the ground. JAMES MCKEE.

EDWARDS, N. Y., May 8.

Editor Forest and Stream:

In the fall of 1880, I treed a panther with a dog, and saw it climb a tree. The tree was about 20in. through at the butt, and about 80ft. high, and was a spruce tree. The panther climbed to the top up in the limbs. I usually shoot them in the brains, but this one I shot through the body as I could not see his head. The panther fell from the top and struck a log about 6ft. from the ground, and ran between 30 and 40ft. toward me. I shot it the second time and broke its neck. That is the only panther I ever saw climb.

HIRAM HUTCHINS.

CANTON, N. Y., May 8.

Editor Forest and Stream:

In December, 1865, Chas. Marsh and myself, with two dogs, treed a panther—a full grown female—on the mountain north of Basout Point. I did not see her climb but I saw her on the tree. It was a spruce, about 20in. through. She had two kittens. Will Marsh got one of them, after a day or two, and punched the other one in to the rocks so far that he could not get him.

JOHN H. WARD.

FINE, N. Y., May 9.

CANADIAN NATURAL HISTORY.—We have received a paper, extracted from the Transactions of the Royal Society of Canada, "On Some Marine Invertebrate, dredged or otherwise collected by Dr. G. M. Dawson, in 1855, on the coast of British Columbia; with a supplementary list of a few land and fresh-water shells, fishes, birds, etc., from the same region." This report is by Mr. J. F. Whiteaves, of the Geological Survey of Canada. The report embraces about 185 species of marine invertebrates. The supplementary lists, so called, are lamentably meager, as will be seen by the following enumeration: Fresh-water shells, 1; land shells, 4; fishes, 8; batrachia, 1; ophidia, 1; birds, 20; mammals, 4. Mr. Whiteaves, we believe, is zoölogist of the Canadian Survey.

Game Bag and Gun.

SCHULTZE POWDER.

Editor Forest and Stream:

"Amateur," in the issue of April 19 of your valuable paper, gives his experience with Schultze powder and states that he has not been able to get as close patterns with it as with black, and that the recoil of the charge used was unpleasantly heavy. With your kind permission I would like to reply to "Amateur;" and as many sportsmen when first trying Schultze powder go wrong and use it in the same manner that "Amateur" has, I hope my article may be of general interest. "Amateur" states that his favorite load is 3½drs. of FFG dead shot powder in his 7½lbs. 12-bore Clabrough gun, and states that he tried 3½drs. of Schultze with a priming of black powder, 3 pink-edge wads and 1¼oz. of shot. In the first place. Schultze powder should not be classed with any of the cheap grades of black powder, because it is considerably stronger, both as regards the propelling force, accumulative energy, as well as in initial pressure. When comparing Schultze powder with black, you will have to compare it with the highest cost and strongest black powders. The standard black powder for shotgun use in England is Curtis & Harvey diamond grain No. 4, and the Schultze powder is made to conform to the action of this powder as near as possible. While the Schultze powder gives full as high a velocity to the shot as No. 4 black, the pattern is generally better, while the bursting or initial pressure is somewhat less. The reason for this is that the initial combustion is slower than that of No. 4 black powder, whereas it develops a larger volume of gas on account of a more perfect and complete combustion throughout the length of the barrel, sending the shot with greater velocity out of the muzzle.

The lower grades of black powder have not near the initial or bursting pressure of high grades of black powder, nor do they give the same velocity to the charge as either Schultze or high grades of black. Owing to this fact they will always give less recoil. Schultze powder, when properly loaded, though not giving the heavy long blow of the best black powders, load for load, does give quite a sharp noticeable recoil, and although an advantage of less recoil might be claimed by the manufacturers, it is not considered of importance, as recoil will always be more or less governed by the force of the powder charge in a gun.

The cause of "Amateur's" excessive recoil is therefore very plain and natural. In the first place, 3½drs. (48grs.) of Schultze in a 7½lbs. 12-bore gun is a very heavy charge, but without priming of black powder will not give as much recoil as 3½drs. of black powder of many kinds. However, when priming with black you will greatly increase the recoil because the initial velocity and explosion will be the same as of black and add to that of the Schultze, in many instances spoiling the pattern. Priming with black powder will be found necessary for best results with the ordinary American primers, but care should be taken that no more is used than fills the cap hole in the bottom of the shell, or if a little more is used a corresponding reduction of charge of Schultze powder should be made.

However, there is no need for priming with black powder when using the new strong American primers, which are of corresponding force as the standard English caps. With these the Schultze fires as promptly as black powder, without the least idea of a slow or hang fire.

The introduction of Schultze powder has to battle with several difficulties, such as related by "Amateur," on account of not being properly handled. Excessive charges will be used, too much black powder will be put in the bottom of the shells, the powder will be rammed and loaded in many other and improper manners, and not give the satisfaction that it always does when properly loaded. This is caused by the fact that, inasmuch as some 90 per cent. of all black powders used in gunnery in this country are of a low, cheap grade, heavier charges by far are generally used than in England, where the higher grades of powders predominate for shotgun use. We find that 3½drs. of our black powders are considered but an ordinary load for 12-gauge guns, and the same will be used of Schultze, whereas in England 42grs., or 3drs., are the standard charge and sufficient for all ordinary purposes. Our 10-gauge guns are made to sing to the tune of 4½ and 5drs. of FG powders, and the Schultze will in many instances be used in the same way, when black shoulders, if nothing worse, can tell the story.

Mistakes will also be made by confounding the Schultze with the old American wood powder. The latter had to be well primed and used in heavy quantities and rammed to perform well, 4drs. for 12-bore, 5drs. for 10-bore being the favorite loads. The Schultze powder on the contrary should not be rammed, the wads needing only a firm hand pressure, and 3 and 4drs. will give the corresponding results of 4 and 5drs. of the former.

To prevent future occurrences like "Amateur's" unpleasant experience I here give the proper manner of loading the Schultze powder: The correct average charges for 16-bores are from 2 to 2½drs., for 12-bore 2½ to 3½drs., for 10-bores 3½ to 4drs. For extra heavy good guns a little more might be taken. Use the new strong primers, if not procurable fill the cap hole in bottom of shell with fine grain of black powder, and then put charge of Schultze on top. Put first a common card wad on powder and press firmly down with your hand, then add two, three or four pink or black edge wads in same manner. Use the shot and crimp as ordinarily.

When so loaded nobody can fail to receive the best of results and satisfaction from the use of Schultze powder.

For "Amateur's" information I add that the members of the Country Club use 3 and 4drs. of Schultze powder in both English and strong primer American shells without priming of black powder. JUSTUS VON LENGERKE.

THE MONROE MARSH CASE.

THE case from the first has been a most stubborn one, and fought with the determination on both sides of men who sought their rights against usurpers. As before stated the Court stood three in favor to two against the company. This week we present an equally full and exhaustive opinion of the minority of the Court submitted by Judge Campbell. The opinions of these gentlemen will undoubtedly receive a careful perusal, if for no other reason than to see how far men supposed to be well versed in the fundamental principles of law can honestly differ:

The action is one of trespass and not of cause and is in the form trespass *quare clausum fregit*. It avers the tortious entry on a close covered with water—breaking down and destroying the wild rice and grass there growing, and shooting at, wounding and killing and frightening away the wild ducks and other game there resting and feeding.

While I do not myself regard the question of title to the bottom of the bay in question as material under the facts, yet inasmuch as it is the starting point of the plaintiff's theoretical claim, and has been discussed it may be worth some attention. I think there is some doubt whether the plaintiff, who claims under some supposed trust conveyances, represents under our statute of uses and trusts the title delivered from the State, even if valid. There was testimony which contradicted the whole claim of title or in any of his grantors, which should in any event have gone to the jury.

The place where defendant is claimed to have done what is complained of is a bay now opening on Lake Erie and not seriously denied to be navigable in fact and used more or less as a water way. * * * There is an abundance of testimony that for many years past the bay has been connected with Lake Erie by a opening, much larger than that at the mouth of some of the considerable bays along the Great Lakes. And there is a good deal of reason to suppose that if this entrance was ever closed up it was by a sand bar and not by firm land. That it is now navigable water was held by the Court below and cannot be reasonably disputed. But as some of the testimony bears upon the legality of plaintiff's title, not only to this water, but also to the land lying near it, a reference may be had to the facts.

It appears from the record that in 1810 Aaron Greeley, the United States surveyor of private claims, in advance of any of the regular linear surveys, surveyed the private claim No. 512 and included all the territory in question in that survey. There is no evidence that this survey was ever lawfully changed. The private claims confirmed were those which Congress provided for confirming in accordance with Jay's treaty, and at the time of this survey there was no statute preventing claimants from having all their old possessions confirmed, as this seems to have been. By that survey that claim extended all the way to Lake Erie from the River Raisin and left no land east of it. It would have been contrary to the French usages not to make it reach the open water. That this plat was subsequently tampered with is shown by some marks on the reduced copy of the township map made long after. But there is no evidence that the survey was ever altered, and it is clear it could not have been. In 1819, when there could have been no power in the Land Department to deprive the owners of their land, a survey was made by William Ives, comprising to cover the easterly part of what was included in claim 512, and in the survey of land and water the place in controversy here was marked as a part of a fractional section. * * * The map made up in the General Land Office is not produced except in reduced form. As reduced, however, there are several islands marked, and named as such, scattered over the space inside the sandbar, indicating at least that the surface was water and not land, and the so-called sand beach is itself marked between parallel lines in a way not usual in depicting uncovered land. There is nothing to break the water surface near the spot in question. * * * Between 1850 and 1882 the testimony tends to show, if it does not show conclusively, that this tract had become open water, whatever it had been before, and was recognized and used as such. In 1882 some one procured this assumed land, which was then what it is now, to be patented to the State as swamp lands, and a few months thereafter plaintiff and his associates procured a patent of it from the State Land Office. But as already suggested, the proof is that before the public surveys and more than three-quarters of a century ago, this land, if it is land, had been confirmed to private claimants and ceased to be public lands. Had this been otherwise I am unable to see by what authority the open waters of a navigable bay become liable to treatment as swamp lands. There is no decision, which has been brought to our notice, which authorizes any official either of the United States or of the State of Michigan, to convey navigable water as land. Swamp and overflowed lands have been defined with some care, but no definition has been broad enough to cover open waters which form part of our great lakes and are not to be distinguished from any other part of those waters. * * * The State constitution prohibits interference with navigable water in express terms. * * * If plaintiff did not own the land under the water he could not complain of anything whatever done upon the bay. But in the view I take of the case, I do not think it makes any difference who owns the bed of this bay, so far as defendant's conduct is concerned, inasmuch as it is admitted to be navigable in the full sense of the term. * * * * * * *

It is everywhere admitted that originally the common law concerning the capture of wild creatures was in substance the same as the civil law, and that the restrictions arose out of the feudal and royal encroachments. If so then it is easy to see that fishing in public streams was a common right. So far as all wild animals are concerned the early text writers make no difference between beasts, fish and fowl, and are uniform in holding that in all cases they belong to the captor.

It is the law of this State that the riparian owner on any kind of water has presumptively the right to such uses in the shores and bed of the stream as are compatible with the public rights if any exist. * * * In streams purely private the enjoyment of rights in the bed of the stream is very important. * * * Every

benefit which can be drawn from the use of private waters belongs to the private owners, and no one but the owners have any right to go upon or to use them for any purpose whatever—without license from the owner. But where waters are public there is no part of the open water from which the riparian owner can exclude the public, and while he can make such erections and appropriations near the shore as will not interfere with the public convenience, he can not prevent the public from using any part of the water not so shut off. So long as the water is open the riparian owner's rights in the bed away from the shore are purely theoretical and valueless. He can do nothing to impair navigation or any of its incidents. * * *

All of our great lakes and their connecting waters have been declared as well as used as public navigable waters, and are such in their entirety. * * * In considering the respective rights claimed to exist in this case, therefore, we have nothing to do with the questions which arise in private waters. * * * Assuming all that was claimed as to ownership of the bottom of the lake or bay, there is no ground for claiming the place of occurrence is not open to the public, and therefore to the defendent for all the incidents of boating and navigation. And this being so, there is not, as I conceive, any rule of law which deprived defendant of the right of taking or killing there any wild creature of air or water. * * * It should not be forgotten that the usages on our public waters, especially as to shooting and fishing, existed under the French custom for nearly a century, and it would hardly be consistent with our institutions to subject our people to any less liberal usages than those which were not only tolerated but favored under a very despotic government. The common law which we inherit is the common law untainted by feudalism or royal prerogative, and if we eliminate these elements and their statutory modifications, this case presents no difficulties. * * * According to all the elementary common law writers no one had any interest whatever in any wild creature of earth, air or water until he had taken it into his own keeping, alive or dead, and then only so long as it did not escape from his custody. * * * The American cases do not favor any doctrine which would restrict rights on public waters, and we can not shut our eyes to the uniform usages in our own waters, which we are bound to respect. If the present action will lie it must follow that there is not any stream or water in the State open to public fowling or fishing. There is no difference in principle or authority between fish and fowl. * * *

There was never any principle or practice which confined rights of travel on highways by land or by water to commercial purposes. Boats and vehicles are as lawfully used for pleasure and recreation as for any other purposes. * * * If a person, who has a right to be where he is, cannot lawfully take there what any of the public own when captured and not before, the reason is beyond the common understanding. It is no concern of the borderer on a highway what any other person does upon it, if he neither encroaches on the soil nor is guilty of any public or private nuisance. Even a riparian proprietor does not own the water which flows over his land. His soil, if he has any, is where no boat can injure it. It is not as a riparian owner that plaintiff complains here. He claims the bed without owning very much of the banks. But no harm is pretended to his upland interests. There is nothing that can sustain trespass.

It is not decisive in this case, perhaps, but it is of some significance that our Legislature has attempted to regulate sporting and fishing, and has made provision by money and by other means for propagating fish. It is at least questionable whether this can lawfully be done in aid of interests which on the theory of this case are all private. We cannot attribute to them any such purpose, and it would not be tolerated. There has been some legislation that is capable of oppressive application, and it was probably got through in some cases for sinister purposes. In my opinion this case is not sustainable on any theory of the common law or of any other law, and the judgment should be reversed.

The above opinion is clearly and strongly set forth, and is diametrically in opposition to the just as clear and able opinion of Judge Chaplain. How, after hearing both sides of a question so thoroughly expounded as was this one, there should be such a diversity of opinion among the "learned judges," is certainly a wonderment to the uninformed. It is said that Judge Morse, the other dissenting justice, goes even further in the same direction than does Justice Campbell. If these opinions are based upon the fundamental principles of law, either one side or the other must have looked at them through the "butt end of the glass," and they by no means suggest infallibility or unanimity of the Supreme Court upon questions of common law. The Liberal Club, we are informed, has raised $1,500 and expended $1,300 in the prosecution of this suit, and in view of the opinion of Justices Campbell and Morse, we are further informed, they will try to get their case before the Supreme Court of the United States, even if they have to go over the ground again.—*Monroe (Mich.) Democrat.*

YELLOWSTONE PARK PETITION.

THE lists of signers of the Yellowstone National Park petition are continued from the last issue, as below:

CALIFORNIA.

Alex. Drynan, John Regan, N. B. Shepard, Saml. L. McKim, James Hill, Frank Maguire, William Wilkinson, Barney Maguire, Gardner Hill, John O'Brien, M. Skehan, James Regan, Wm. B. Simmons, Wm. J. Hill, John Taylor, A. Tebbitts, R. S. Ogden, W. D. Blue, G. A. Wurgat, Thomas P. Blue, Joseph Chew, John Davis, Peter Drunzer, John Heinson, O. R. Cloudman, C. Newbergin, S. Chander, R. B. Chew, Gus Anderson, J. S. Goodwin, T. P. Riggs, Peter Matthieson, W. W. Stovall, Thomas Patterson, B. J. Griffiths, F. T. Maguire, Geo. H. Levy, William Bowen, C. Runckel, John Rodarick, Peter Rose, Philip Bailey, P. J. Moyer, J. Lever, Daniel Leves, Jerry Levee, Jr., Joseph Riendeau, J. Holland, George Rose, M. Enright, A. Joyce, Hiram Bottomley, R. Bottomley, H. R. Ogden, Henry Veal, R. D. Ogden, A. G. Ogden, G. W. Hyde, P. H. Lohman, C. Oscar Barker, Wm. Davis, R. Richardson, F. E. Snell, C. H. Powers, D. C. Harris, Philip Gunnip, B. F. Snell, Wm. H. Harris, J. M. Barney.

LONG ISLAND.—The Cedars, Oakdale, May 15.—The indications this spring for good bay snipe shooting the coming summer are very favorable, as large numbers of yelpers and yellowlegs have stopped to lunch on my meadows every day since the 2d inst. The spring law is respected here, and the birds have gone on their way to the breeding grounds unmolested.—ALFRED A. FRASEE.

THE LYMAN SIGHT.—Mr. William Lyman, of Middlefield, Conn., has sent us a new edition of his catalogue of sights for rifle and shotgun.

SUMMER TOURS.—Round-trip excursion tickets at low rates are now on sale via the Burlington Route, C., B. & Q. R. R. from Chicago, Peoria and St. Louis to Denver, Colorado Springs, Pueblo, Salt Lake City, Ogden, St. Paul, Minneapolis, and resorts West and Northwest. The "Burlington" is the only line running sleeping cars from Chicago to Denver without change. It is the only line by which you can go from Chicago to Denver and be but one night on the road. It is the picturesque line to St. Paul and Minneapolis. It runs daily "fast trains" to Kansas City, St. Joseph, Atchison, Council Bluffs, Omaha, Lincoln, Cheyenne and Denver. Fine Government Lands are located on its new lines in Nebraska. It is the best line by which to reach all principal land points in the West and Northwest. Tickets via the Burlington Route can be obtained of coupon ticket agents of connecting lines. Send in postage to Paul Morton, Gen'l Pass. and Ticket Agent C., B. & Q. R. R., Chicago, Ill., four cents for a copy of the Burlington Route Guide, or six cents for an illustrated book about Colorado and the Garden of the Gods.—*Adv.*

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz.: The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Sea and River Fishing.

OLD ANTELOPE'S SECRET.

Editor Forest and Stream:

It will perhaps be noticed by the observant editor that I, like other migratory birds, have wandered from accustomed haunts. Just how I happen to be near the headwaters of Humboldt River, Humboldt Valley, Nevada, does not greatly matter. However, I may say that I am engaged in lawful and ordinary business when not a-hunting or a-fishing. The FOREST AND STREAM comes to my feet out here in the sage brush just the same, and as you do not in all probability receive notes from my locality often, I will contribute my mite.

I alighted here in December, and it was so very cold I was compelled to change legs every few minutes, contract my long neck, and look more doleful than usual adown my long bill. The whole of this sage brush scope was covered with snow and the little river frozen solid for three months, while one of those thermometers (whatever that is) of mankind registered, I overheard it said, from 15° to 60° below zero. The frogs and minnows were frozen up so solidly that I was near starvation for some very long days and weeks. Many cattle and other beasts of your advancing civilization perished, and your people in these parts kept very closely in their houses, while even the native Shoshones huddled together in their wickeyups and were invisible for many weeks.

Coming, as I did, from a much warmer and better land, you can imagine that I found it very chilly, as it were. Crows and magpies alone kept me company, and I was fain to pop a few of them over with my gun just to keep in practice; but I considered that the poor fellows suffered enough during the cold spell, and refrained. About the middle of February the sun shone warmer, the river began to thaw about its edges, and I found an occasional frog or minnow (which seemed like icicles going down my long throat, however), and there were bare spots on the sides of hills where the snow had melted away. Then my friends began to arrive—first the little teal ducks came in numbers, then mallards and sprigs, and once in a while a flock of gray geese and cranes, so that now these fowls are numerous and plentiful in the valley, where they hatch and remain. Besides these, as the snow melted, sage hens were frequently seen and another species of grouse, called prairie chickens here, but which are much smaller than the pinnated grouse east of the Rockies. Then the Shoshones began to come in to the "store" from various directions with deer, antelope, bear and mountain sheep skins in abundance, with beaver, otter, mink, cross-fox, wolf, lynx and other pelts; so that it is evident game is plentiful indeed over toward the surrounding mountains.

As the ice went out of the river I saw trout, I was pretty sure, and even succeeded in catching three or four small ones in March, thinking I had the first of the season; but I was chagrined on the same day to see old Antelope, a very old Indian, with a string of about twenty, all of which were much larger than any I had seen before, and they were beauties. The smallest would weigh 8oz., while two or three would go from 2lbs. to 3lbs. In my migrations I have seen many trout, but never any to equal in size and beauty these of the Humboldt, which stream is, by the way, as fine a one to get at and fish as could be imagined. It runs for about 100 miles, with many tributaries, is just rapid enough, with deep and broad holes and nice riffles through the almost level valley and around the bases of projecting hills, with just a fringe of willows along its banks. But to return to the trout themselves, they are everything that a trout could or should be, with all the rainbow colors and large scattering bright spots, with a tinge of the salmon color under their gills—something I never noticed on trout before. When they bite they make everything whizz, the line shoots away like a flash, and if the fish is hooked, firm handling is necessary. This reminds me of my trouble—I can't find the right bait. At this time the fish will not take to flies, and only Lo knows the secret; he knows what bait to use and uses it successfully.

After vain trials at fishing I got my thinking apparatus to work and evolved the following idea: "I will waylay Antelope and bribe him; aye, buy him body and soul if necessary; the time is come for action, why stand ye here idle?" So I watched and waited, and finally my vigilance was rewarded; I saw the old man moving toward the river with a bag for fish and a willow pole. I stole a march on him and arrived just ahead of him at the banks of the stream, where we transacted the following business.

I was smoking and said, "Hello, Antelope!" Antelope said, "Hello; you give smoke me?"

I gave him a cigar. Then he pointed to the one I was smoking and said, "Fire."

I handed him my cigar for a light and he put it promptly in his mouth and the one I had given him into his pocket, a very ragged pocket. I sighed, for it was my last, but said pleasantly, "You catch 'em fish?"

He said, "Fish?" I said, "Yes." Then he said, "Yes."

I said "How you catchum fish?"

He pondered a minute and queried "Good cigar?" and he blew the smoke of my cigar through his big nose. I replied, "Yes, good. How you catchum fish?" He said, "Ketchum?"

I said, "Yes," then he said "yes," adding solemnly, "you got tobakko?"

I told him sadly, no, and again questioned, "You catchum fish with hook, same as mine, here?"

"Yes?" he queried, rather than affirmed.

"You put minnow on, Antelope?" I asked, showing him a minnow, which he took, looked at, and then put in his pocket.

"You got matches?" he asked.

I gave him some matches and then he started off, bending down now and then to rub his tottering rheumatic old legs, saying, "Heap sick, heap sick, too old now."

I called him, and following tried to make him understand that I wanted to catch some fish, but he couldn't understand. I showed him a big silver dollar and motioned for him to catch some fish with my pole, but he only queried, "No tobakko?" and started off again. I said, "Good-bye, Antelope."

"No more smoke?" he asked. "No more," I replied. Then he said "Good-bye, to-night I come your house; you maybe so buy um fish?" I said "Yes," and he said "Yes," and vanished into the willows by the stream.

In the evening the old man came with a fine string of big trout, and it was astonishing how well he understood and could speak while closing a bargain.

As soon as the weather gets warm enough I will try my luck with grasshoppers. If I am fortunate I expect to take a trip to the mountains for antelope, mountain sheep and deer, and will make notes of any interesting adventures that may occur. STORK.

ANGLING IN ICE-COLD WATERS.

THE ice is out of the Androscoggin lakes. A dispatch from H. T. Kimball, of the Mountain View House, Rangeley, on Monday evening, said that the ice had left that lake. This is seven days later than the average, which is the 13th. The season is remarkably cold and backward. Ice formed nearly every night in the lakes during the week before it finally broke up, but high water, from the rain and the volume of melting snow in the woods, started the ice even sooner than was anticipated. The ice left Umbagog on Thursday, before it left the other lakes. But at last accounts the woods were full of snow, and the early trout fishermen will find it cold and dreary. Still they have been crazy to be off for more than a couple of weeks. They have gathered at the tackle dealers, and have discussed prospects day after day. Several have become tired of waiting and have started even before the word came that the ice was gone. They have reached the lakes, through more or less of snowdrifts, only to wait patiently, or impatiently, for the ice to move. The Tuttle party started five or six days before the ice had left, and they have done some fishing off the shores, where the ice had broken away, but without any particular catches. Another party followed them later in the week, only to meet the same fortune—a lake full of ice, and cold winter weather. On the opening of Umbagog the route to the Middle Dam was opened, via Bethel and Cambridge, thence to Sunday Cove and by buckboard across the carry to the Middle Dam. A party of six immediately left Boston for this well known resort. Camp Stevens has been opened for some time at the Narrows. The proprietors, some of them, were to go in over the snow, and wait for the ice to leave the lakes. Mr. Stevens is one of the earliest at the lakes each year.

Some very pleasant parties are to make the spring fishing trip to the Androscoggin waters this season. On Wednesday Mr. E. H. Clapp, with Mrs. Clapp and a party of five Boston gentlemen, with some at least of their wives, are to start for Rangeley. In the party are Mr. and Mrs. G. W. Wardsworth, Mr. J. F. Rogers, and Mr. Horace Haskins. These gentlemen are all sportsmen, the most of them having visited these lakes every year for a number of years. But to their wives it is generally their first trip to the Maine trout waters. They will stop at Esty's, at Greenvale, for three or four days, then over to Richardson's on the Big Lake. There they will stay for several days, going home by way of Upper Dam, Andover and the Grand Trunk. They make the round trip in order that the ladies of the party may see as much as possible of the Maine woods and waters.

Now and then the Maine trout waters add another string to their score in the way of being the finest trout waters in the world, in spite of the fact that much is said in praise of the West. Especially is this marked in the case of Mr. Fred Perkins, once a resident of this part of the country, but now a dweller in Mackinaw, Mich. Mr. Perkins is now in Boston waiting for the weather to get warm enough for him to make his annual fishing trip to the Middle Dam. He says that the ice has been out of the Straits at home for some weeks, though they are as far north as the Richardson Lakes. But he has to come every year to the Maine waters to catch trout. Generally Mrs. Perkins accompanies him, but this year she is kept at home. Mr. Perkins has long been a convert to "taking our wives and sisters with us." It does them more good than it does us masculines and they take in more of the enjoyment, coming back with a still further lease of life. Uncle Steve Morse of Upton has been guide for Mr. Perkins for years.

The ice is out of the Weld Ponds, in Maine, and they are taking some good-sized landlocked salmon there. Several prominent Maine sportsmen are in camp there. Among them Judges Whitehouse and Wilson. But the ice was late about getting out, the same as in all the landlocked salmon waters, and hence the season for these fish has hardly commenced. The salmon fishing at Bangor has been suspended by the continued high water, and parties have grown tired and have gone home in disgust. Still a little patience and waiting for the real season would doubtless have rewarded them. There is no doubt but what there is yet to be a good run of salmon at that point. But few fish have yet been taken in the nets at Buckport and other points below, plainly indicating that the run of salmon has not yet set in.

So they go. It seems as though the trouting fever is stronger than ever this spring. At least it is stronger than ever in Boston. But perhaps this city is noted for fevers of that sort. Indeed, it is pretty certain that there are more enthusiasts with the rod and line to the square inch than anywhere else on the globe. This is natural. Most of Boston's best business men were born either in Maine or New Hampshire, and they learned in boyhood to love the lake, the woods, and the stream. To-day they have not forgotten their first love. They talk of trout, they dream of trout, and last, but not least, they catch trout, when there are any trout to be caught. But for fresh fish is not the only purpose of this annual visit to the Maine woods and waters. There are other reasons, nearer and dearer ties. The once brown and glossy heads are becoming thinned and smitten with the frost of summers gone by, and this yearly trip takes them by some old and dilapidated farmhouse, perhaps long since gone to disuse. But there is a graveyard close by. It can tell the story that chokes the sportsman; once the country boy, now the prominent Boston merchant. But that old farmhouse, that churchyard, that winding roadway among the hills has a charm that time cannot obliterate. SPECIAL.

PASSAIC COUNTY (N. J.) WARDEN.—The term of Fish Warden Keenan expired some time ago, but he held over under the law which provides that fish wardens shall hold their offices until their successors have been appointed and qualified. Whom to appoint as warden for this county was a question, The Commissioners some time ago appointed Mr. George Waldron for Ringwood and vicinity. Mr. Waldron is a gamekeeper in the employ of Cooper & Hewitt and his appointment of fish warden invests him with more authority. The question as to who should look after the interests of fish and game for the whole county was not settled until recently. The Fish Commissioners every year have offered supplies of trout for the streams of Passaic county, but no advantage was ever taken of their offer. This year the streams in this county are to be stocked, and what was wanted was somebody who would have the supervision of this as well as other similar matters. The Fish Commissioners were willing to appoint any person who should be recommended by the Passaic County Fish and Game Protective Association. There were a number of candidates, and the Commissioners, as happens at times, appointed a man who was not looking for the position, and who would not have accepted it had it not been for the solicitations of prominent sportsmen. The present fish warden for Passaic county is Mr. Charles A. Shriner, the secretary of the Passaic County Association. It was thought best to have all the interests of fish and game centered in one person. In the past it has happened at times that the association and the warden were working at cross-purposes, though both were anxious to do the best that could be done. Now everything of this nature in the county will be done under the new fish warden. The result will be to materially strengthen the association. It has among its members a number of constables who have in the past been employed in enforcing the fish and game laws. Now they can be made more useful, as the funds of the State will be available together with those of the association. Some years ago the position of fish warden meant police work on the part of the incumbent, but of late years fish protection means propagation and care as well as the enforcement of the laws during the close season.—*Paterson Press.*

SALMON IN THE HUDSON.—Notwithstanding the law of New York which forbids the capture of salmon in the Hudson River by other means than with hook and line, the fish are daily taken in the shad nets, and the label "North River salmon" is frequent on fish in the markets of New York city. The bright appearance of these fish is evidence that they are freshly caught and are but a few days from the sea. As they are all taken in the gill-nets which are drifted in the river from the entrance of the Highlands to Staten Island, it is probable that the fish are dead before the fishermen get them, but after June 15 the law forbids shad fishing, and it is hoped that some fish will escape the netters. The stocking of the river has proved a success, and it is a pity that the first fish should be sent to market before they have a chance to spawn.

IN THE ADIRONDACKS.—The ice went out of most of the lakes by the 10th of May, and five days later it was gone from all. Meacham Lake is open and many have gone in to Fuller's, where the trout fishing is always good. On the Fulton Chain considerable fishing has been done, but not a great number of fish have been taken. Fish Commissioner Blackford has been the guest of Mr. Durant, at his private camp on Fourth Lake, and has taken some fair fish. Further west the snow went off early, and the season opened on West Canada Creek by the first of the month. W. G. Stimson has leased Matteson's Mountain Home and will run it as a hotel. The Wilmurt Lake Club are building a house on the lake which will soon be opened. The season is earlier all through than was expected, and the trout are rising freely, where there are any.—M.

MORRISTOWN, N. J.—The *Democrat* reports that Mrs. Louis A. Thebaud caught and landed at Split Rock, one day last week, a pickerel that weighed exactly 8lbs. And it was done on a 7oz. split bamboo rod, too. This is the largest fish that has been caught with rod and reel in this section in many years, and we are happy to state the record has been made by a lady. Split Rock is a famous fishing spot, and Mr. and Mrs. Thebaud, Mr. McCurdy and others have had fine sport there recently. They took on one occasion 40lbs. of pickerel in two hours.

THE FLY-CASTING TOURNAMENT, which began yesterday and is in progress to-day, will be fully reported in our next issue.

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

FIRST DAY'S PROCEEDINGS.

THE seventeenth annual meeting of this society was held in Elks Hall, Detroit, Mich., on May 15 and 16. The attendance was larger than usual and many States were represented, the result of a special invitation of United States Fish Commissioner McDonald to the different State Commissioners to meet him and devise some system of co-operation between the States having common fishery interests, and also between them and the general Government. There was a meeting of the Commissioners in the evening, a report of which will be found elsewhere.

The meeting was called to order Tuesday morning, May 15, President W. L. May, of Nebraska, in the chair. Dr. R. O. Sweeny, of Minnesota, made a happy opening address in which he alluded to the call of Col. McDonald for a conference of Commissioners and pointed out the great benefits that would come to all by uniting and working in concert. The following new members were elected: Messrs. Henry C. Ford, James V. Long, and W. H. Powell, of the Pennsylvania Fish Commission; M. E. O'Brien, Supt. Nebraska Commission; Richard Rathbun, of the U. S. Commission; Hon. C. V. Osborn, James C. Hofer, and A. C. Williams, of the Ohio Commission; John H. Law, of Cincinnati, O.; Hon. J. J. Stranahan, of Chagrin Falls, O.; and Daniel Fitzhugh, of Bay City, Mich.

An invitation to visit the Lake St. Clair Fishing and Shooting Club was tendered by its president, Mr. W. C. Colburn, and accepted for Wednesday afternoon. The Society then adjourned until 2 P. M. and visited the whitefish hatchery of the Michigan Commission, in the city, where several millions of the eggs of the pike-perch were to be seen in the jars, and some trout and adult grayling were shown in aquaria, the whitefish season being passed.

At the opening of the session Prof. David S. Jordan read a long and interesting paper on the distribution of fishes. Mr. Fred Mather read some extracts from a private letter from W. O. Chambers, Esq., Secretary of the National Fish-

cultural Society of England, in which he described an invention of his for feeding fry, by keeping the food in constant suspension, with drawings; also extracts from a letter from Mr. K. Ito, President of the Fisheries Society of Northern Japan, together with the headings of the articles in the last report of that Society. Col. Marshall McDonald read, by title, a paper entitled "Parallel between Agriculture and Aquaculture in their Origin, Methods and Results," and the secretary read a letter from Mr. Seth Green announcing that Jonathan Mason had succeeded in hatching the mascalonge.

Dr. W. M. Hudson moved that a committee be appointed to draft a resolution of regret at the death of Prof. S. F. Baird, and the president named Dr. Hudson, Dr. Sweeny, and Mr. J. H. Bissell as such committee. Later on they reported the following, which was accepted by the Society:

IN MEMORY OF SPENCER F. BAIRD.

"Since the last meeting of this Society, our associate, Prof. Spencer F. Baird, United States Commissioner, has been removed from the scene of his labors by death. This Society hereby puts on record its appreciation of the great efficiency and admirable administrative qualifications by which he caused the position of U. S. Commissioner to be regarded as the first in the entire world, and mourns the loss of one who by his lovable qualities had endeared himself to all who came in contact with him."

Mr. Wm. Alden Smith, fish and game warden for the State of Michigan, spoke on the Regulation of the Fisheries. Mr. M. E. O'Brien read a paper on the breeding of natural food for fry. Dr. J. C. Parker read a paper, prepared by a friend of his, on the black bass, and their breeding habits. Mr. Fred Mather announced that evidences of the success of planting salmon in the Hudson were accumulating, and cited figures of the catch of different years.

Mr. Otto Kirchner was on the programme for a paper on "The Jurisdiction over the Waters between the Federal Government and the States," but he was unavoidably absent and the paper is promised for the report. The meeting then adjourned until the next day. In following issues we will give a more detailed notice of the papers and of the discussions which followed them.

CONFERENCE OF FISH COMMISSIONERS.

IN compliance with a call from U. S. Fish Commissioner Marshall McDonald, for the purpose of discussing plans of co-operation, a meeting was held in a parlor of the Russell House, Detroit, Mich., at 8 P. M., Tuesday, May 15. The following States were represented by Commissioners: Connecticut, Dr. Wm. M. Hudson; Michigan, John H. Bissell and Dr. J. C. Parker; Minnesota, Dr. Robert Ormsby Sweeny; Nebraska, Wm. L. May; Ohio, Hon. C. V. Osborn and A. C. Williams; Pennsylvania, Henry C. Ford, James V. Long and W. L. Powell; Wisconsin, Philo Dunning; Illinois, S. P. Bartlett. No Commissioner from New York being present, Supt. Fred Mather was invited to attend the conference, as was also Prof. D. S. Jordan and others.

The convention was called to order by Mr. W. L. May, President of the American Fisheries Society, who invited U. S. Fish Commissioner McDonald to take the chair. Col. McDonald said that it had struck him that concert of action was necessary, and that only by all who had interests in common pulling together, could the maximum results of their work be attained, and if certain field work was mapped out and each State worked in unison with its neighbors we would strengthen, instead of crippling each other. He disclaimed any intention of interfering in the work now being carried on, and deemed it important that he should not touch on ground which was completely covered by any of the States, but wished to assist where such assistance was needed. For instance, the work of propagating the shad, which extends along the Atlantic coast and does not confine itself to State lines, can best be done by the United States, with its corps of experts and extensive appliances, than by single States, and greater results might be obtained at a less expenditure than under individual effort. State co-operation in theory is right, but practically it cannot well be carried out, for there will be contention, more or less, and the regulations of one State, and its restrictions on an inter-State river, will be counteracted by other bordering or neighboring States. The same can be said of the whitefish work on the great lakes, although the latter fish are more local than the shad. The assumption of this work by the general Government would relieve the States of this burden and reserve a portion of their appropriations for other fields of labor, in their inland lakes and streams. If Ohio engages in the propagation of whitefish, a portion of the result goes to the States of Michigan and Pennsylvania, and the breeding of salmon in Yukon benefits the whole Pacific coast down to the Sacramento. The work of the United States Commission is to increase the food fishes of the country and only incidentally to increase those species which are valued by sportsmen. To this end he would have centers of distribution established and let the general Government bear the expense of these, and hence he had asked the Commissioners to meet him and confer with a view of understanding what fields the States wish to work in. As a result of the introduction of the German carp, of which sixty specimens were imported ten years ago, 10,000,000lbs. have been produced, making an increase of food to the amount of $500,000, mainly in waters where no food of any kind was produced before.

Mr. Powell agreed with Col. McDonald in his remarks about the shad, it is indeed a great field, and would call attention to the fact that the Susquehanna River has four hundred miles of water, and the Pennsylvania Commission has its hands full and will be glad to co-operate. In that river they have abolished the destructive fish baskets and weirs, but there are fourteen miles of the river which lie within the borders of Maryland where these engines are still permitted, and there it is almost completely dammed with them, and they destroy even the young shad and other fishes which have been planted at great expense. In Maryland these traps are licensed and it would be a step in advance if that State could be brought to co-operate. If Pennsylvania protects 400 miles of the river Maryland should certainly take care of fourteen.

Dr. Sweeny was of the opinion that if the United States should recommend to Maryland to abolish these traps, and all the State Commissioners should join in such a request, it would have great weight. We might, perhaps, through Congress, accomplish great results, not only in this case but in similar ones.

Col. McDonald called attention to the fact that Dr. Sweeny knew the usual course in such matters; they are referred to a committee, which is usually composed of members who have an interest in these things that we want to get rid of, and but few members will support such action as is desired. What is true of the Susquehanna is also true of other rivers, and it is doubtful if State coöperation can be made to influence legislation to any great degree. Get recognition by Congress of the right to control interstate waters, first through the Legislatures of States, and we may in time secure such laws as will benefit all; until that is done these questions will remain unsettled. If the States will unite the matter may be simple. It has been charged that Massachusetts stocked the Connecticut River with salmon and that the State of Connecticut caught them all, and the work was stopped, and now there are no salmon there. These States have had a quarrel over this.

Dr. Hudson wished to correct a misapprehension in regard to this latter statement. As a matter of fact in 1874 Massachusetts, Connecticut, and New Hampshire combined to stock the river, Massachusetts had previously stocked the Merrimac with salmon, but under the combined action 1,100,000 salmon were planted. In 1888 he went to the Legislature to beg for a law to protect them, but did not succeed. The interests of the shad fishermen were too strong. New York fish dealers were offering a dollar a pound for Connecticut salmon, and a ten pound salmon was too great a prize to return so the water, besides, they were caught in gill-nets and were usually dead. He wished to correct the impression that Massachusetts did all the planting. As to co-operation he agreed with Col. McDonald in the policy he had outlined, and that the salmon and shad work, as well as the exchange of foreign fishes, should all belong to the United States. He had thought that out of an appropriation of $250,000 the expenditure of $200,000 in purely scientific work was too great a proportion, and although in favor of sea sounding and the investigation of marine life, both large and small, there should be a more equitable division of the expenditures. If the United States is to assume the work of the culture of shad, whitefish; carp, etc., more money will be required for fishculture. Shad in Connecticut are diminishing, although we plant, but we cannot say why this is so, nor why some rivers have plenty in some seasons and others but few. If the U. S. takes this in hand it will be for the benefit of all, as with its vast machinery it can operate to greater advantage and at less expense. The distribution of trout and black bass had better be done by the States. Another thing, although not so important, is the confusion which is caused by the continual change of the scientific names of fishes. Once we knew the small-mouth black bass as *Grystes nigricans*, then it became *Micropterus salmoides*, and now it is *M. dolomieu*. The shad was *Alosa prestabilis*, now it is *Clupea sapidissima*, and this is continually going on until we can't say where it will end.

Prof. D. S. Jordan arose and said that perhaps he had been as great a sinner in this respect, but that there had been much confusion and it was necessary that we get back to the places of departure and will soon strike bottom. A new edition of his Manual of the Vertebrates will soon be issued and in that there will be much that is new and he has tried to strike bottom. He cited examples of carelessness in early writers which has led to this confusion.

Dr. Hudson asked if all the shad work should be taken up by the U. S. would work be done on all the rivers.

Col. McDonald replied that the Government might not go on all the rivers to take eggs but there would be bases of supplies from which distributions would be made. He might be afraid to touch Connecticut unless Dr. Hudson should ask him to do so.

Dr. Hudson related that the people of Connecticut felt sure that no shad equalled that of their own rivers, and that once when some fry of southern shad were introduced there the people complained that they were inferior fish and would produce mongrels, but he had assured them that the species was the same and that any shad introduced in their river would be true Connecticut river shad, when grown.

Col. McDonald said that he would get two hundred million shad eggs this year, and at a less cost than fifteen million were formerly obtained. He had recently had sent him a 9lb. shad from the Potomac river and doubted if Connecticut could beat that. On the Pacific coast there had been objections raised to the planting of salmon from the Clackamas river, in other streams, but they were the same fish.

Mr. Mather said that on all the northern rivers people thought their own shad the best, probably because they get them fresher. He had hatched shad on most of the rivers from Virginia to Connecticut and eaten the shad fresh from them, and had seen as good shad from the Chesapeake, the Pamunky, and the Potomac, as from the Delaware, the Hudson, and the Connecticut. He would say, however, that the shad of Florida do not compare with those of the rivers named.

Col. McDonald stated that there were two races of shad, if not distinct species, on the Atlantic coast. South from Albemarle the great bulk of the shad have black tips to their fins, while north of that region they rarely have it, and these black-tips are not as good as the more northern race. He did not think that shad go into the St. Johns river to spawn.

Mr. Bartlett thought that this proposition to take a share of the burden from the States, thereby relieving them of a portion of the expenditure, was one that certainly should meet with no objection from the States. He was glad to see that the U. S. Fish Commission was about to assume that portion of the work which naturally belonged to it. It was a fact that in his State (Illinois), and in other States bordering on the Great Lakes, there had been a feeling of hostility to the U. S. Commisson. One of the Commissioners of his State had taken the ground that the Eastern States alone were benefitted, and it took a long time to convince him to the contrary, and that Illinois had received something from the appropriations of the general Government, and that the State had not been entirely forgotten. This meeting is a most important one and if it results in a concert of action, such as has been outlined here this evening, it will be perhaps one of the most important events which has taken place in fishculture. If Col. McDonald will give an outline of the work, Illinois will back him, for while we appreciate what has been done in the past, we feel confident that the work of fishculture will be advanced through this conference.

Col. McDonald replied that he was not aware that injustice had ever been done to any State in the matter of fishculture, or that any unfair discrimination had been made. Fishculture in America, as conducted by States, had its origin in the New England States, and the people of those States were first to appreciate its advantages and had hatching stations and experienced men, two great advantages which the U. S. Commission naturally availed itself of. The work was consequently begun where not only public sentiment called for it, but where trained men, who had the necessary practical experience in the manipulation of fish and their eggs, could be found. Therefore, when it was found that there were three hatcheries in Maine, one in Massachusetts, one in New York, and one in Virginia, it was at these places that the Government looked for both appreciation of its work and the assistants to do it. To such States as have no hatching houses, or Fish Commissions with appropriations to work with, the U. S. can only send carp, or a few trout, as may be suited to the character of their waters. Stations of distribution should be established for different fishes to which eggs could be sent from the place where they are gathered; for instance, the cut-throat trout of the Rocky Mountains will be found to be deserving of wide distribution, it is a more desirable fish than the rainbow trout, and Colorado should have a station where the eggs can be procured and distributed to the different States which have suitable waters and hatcheries, and then the State Commissioners can plant the fish in such waters as may be chosen. In the Southwest a different class of work is needed, there are no trout streams and only such fish as will thrive in warm waters are useful, and stations for breeding the better kinds of this class of fishes could be established all through that region. In the Mississippi river the fishes which are left in the pools after an overflow in the spring of the year, and which will perish in summer when those pools are dry, could be gathered, the valuable species selected, and plants of them could be made where they would have a chance for life. The U. S. Fish Commission has railroad cars adapted for this work, which will come during the two or three months in which these cars are now idle, and this is second to no other work in importance. As it is there are countless millions of fish lost every year through the overflow of the Mississippi river, and we can do effective work in saving them.

Mr. Bartlett agreed with Col. McDonald. This saving of fish was a most important work. He had seen six bushels of solid young fish hauled from a pool where they would have perished as soon as dry weather came, and he had done much work in the direction of saving these fish from destruction by planting them where they had a chance for their lives. It is not necessary that black bass should have running water. At Lanesville the railroad company built a reservoir which was supplied by tile drains from the neighboring land and in 1882, or '83, the Illinois Commission placed bass and croppies in it, none of the fish exceeding four inches in length. The last summer was very dry and it was feared that the fish might die from the drought; men were sent with nets to take out the fish, and save them to plant elsewhere, and some of the bass weighed four pounds and some of the croppies were nearly two pounds in weight. There is no doubt whatever that the saving of fish which have reached an age of from six months to two years is as important as any work undertaken by the fishculturist.

Mr. Bissell wished to call attention to the legal aspect of the proposed regulation of the fisheries by the General Government. A committee of the American Fisheries Society, now in session in this city, has invited Mr. Otto Kirchner to prepare a paper on this subject, but Mr. Kirchner had been called away, and his paper will appear in the next report of that society. The title of that paper was, "The Jurisdiction over the Waters between the Federal Government and the States," and covered the whole question. He had also paid some attention to the subject and had examined decisions of the Supreme Court in cases where the jurisdiction was disputed, and, as it stands now, the decision of the Supreme Court is that the jurisdiction over the waters resides in the States within whose borders those waters lie. Therefore, co-operation between the States, as has been suggested, is impracticable. It would not be valid for the States bordering on the Great Lakes to cede them to the United States; such action would, before it could become a law, require an amendment to the Constitution. It would, no doubt, be of great advantage; but, as the case now stands, it is impossible to get a law to regulate the fisheries from Duluth to the St. Lawrence River. The herring fishermen want small meshed nets, while the men who plant and catch whitefish want larger meshes, in order that the half-grown fishes, in which they are interested, may escape and reach maturity; and the State which makes a law to regulate either of these interests should provide for its enforcement. Possibly it may be best to turn over all the work of hatching the whitefish to the United States. In the work of propagating shad and salmon there are conditions which differ from the whitefish work; but as Col. McDonald has manifested a desire for a broad policy in fishculture, whatever he does Michigan will second.

Col. McDonald said that it was his opinion that the States should retain control of the hatcheries; the United States might collect the eggs in such work as the salmon, shad and whitefish, and relieve the States of the burden, and, by the concentration of the work, thus get larger return from it than is possible under the present system. The work, as it has been carried on by the States, has been in a sort of desultory manner, without regard to what was being done in the other States which had common interests with themselves.

Col. McDonald said that he would like to hear from New York, and Mr. Bissell remarked that it would be in order to hear New York when she had done some work in Lake Ontario.

Mr. Mather explained that as he was not one of the Commissioners of New York, merely one of the superintendents, he did not desire to discuss the policy of his superior officers. If fishculture could be conducted on a broader basis, *i. e.*, with the idea of increasing the food of the people in both the fresh and salt waters of his State, or in any other, he was in hearty sympathy with it; but in his position he had remained silent throughout the discussion, because it was not his place to reply to the criticisms on the work in his State. He regretted that none of the Commissioners of New York were present to defend their policy of confining themselves mainly to trout culture, which he had heard assailed, in private, during the meeting of the Fisheries Society, but, as he had said, this was not a matter for him to discuss. He had made efforts, which he believed were appreciated by some of the Commissioners of his State, to increase the supply of smelts and such salt-water fishes as cod, tomcod and blackfish, and of putting fishculture on the broad ground of an industry for producing food, letting sport be incidental, and in this had done something in the way of experimenting with whitefish on Long Island and in Putnam county, N. Y. Besides being a Superintendent of the N. Y. Commission since 1883, he had been longer in the service of the U. S. Commission as an assistant in charge of foreign exchanges since 1873, and since that time had traveled extensively among the fishculturists, not only of America but of Europe, and while powerless to promise coöperation on the part of his State, he was personally practicing it in his dual capacity, and was stocking the Hudson with salmon, on account of the U. S. F. C. Why Lake Ontario does not receive the attention that Mr. Bissell thinks it should, he could not answer, nor why his State was not represented by one of its five Commissioners. One of the latter, Mr. Blackford, was at present in the Adirondacks, another, Mr. R. U. Sherman, was ill, and as none of them had authorized the speaker to represent his State, he was present merely as an invited guest.

Dr. Parker said that in his opinion it would be well if the Government should secure a water frontage of two or three miles, in some selected place, and dredge it and note the contents of the dredges, next year plant whitefish and see what the results are in the following year.

Dr. Sweeny called attention to the fact that the best places to plant young whitefish were not always the best in which to catch the adults, and that there was no certainty of the fish remaining on the grounds of this water frontage.

Col. McDonald believed that statistics were needed of the entire production of the Great Lakes. We are not certain that whitefish are not sufficiently localized to enable us to follow Dr. Parker's recommendation, but, with full statistics in our possession we could have a firmer base to work on. Along the rivers of the Atlantic coast we have not only arrested the decline in the shad fisheries but have increased it to the value of over $300,000 in 1887, and what has been done with shad can be done with whitefish. Our great object is to produce food, and if we can add to the products of the country a million pounds of anything that can be eaten, it is of great value. As said before, sixty carp introduced from Germany ten years ago has since produced five millions of pounds of food. But, to return to the question; is it possible to get the co-operation of the States which border on the Great Lakes?

Mr. Bissell stated that efforts in this direction had been made, and of this he would treat in a paper which he would read before the Fisheries Society to-morrow. There was much that has been said here to-night which might appear like repetition in his paper on co-operation, but, as he had given much time to the consideration of this subject, he would read the paper as written. He thought co-operation possible only in a limited degree, and did not see how the Great Lakes were to be brought under a single jurisdiction. The fisheries of the Lakes are improving, especially in lakes Huron and Michigan, which show an increase both in numbers and in the size of the fish, and after several seasons of gradual diminution, we are getting back to catches of years ago.

Dr. Sweeny had noticed that when the hatching operations were begun the fishermen were incredulous and ridiculed the attempts to increase the fishes of the Lakes, but they are now satisfied that we have done good work and offer to assist

in it; we, as the irresistible force, have met the immovable body and have moved it.

Mr. Bissell considered that an important point in the work on the Great Lakes should be the imposing of a license fee on the fishermen, and the States can best do this. This fee should be sufficient to pay for all expenses of hatching the fish and for the enforcement of laws. The States would be loath to give up this right, and if we can raise sufficient money by license fees to carry on the work, it will be self-supporting.

Dr. Sweeny argued that while in theory there should be a license fee, in practice it was best not to impose it. Such a course would cause opposition and might antagonize the fishermen. It is better to go slow and get the fishermen educated in the matter of the benefits of fishculture.

Dr. Parker opposed a license fee. The fisheries are for the benefit of all, as much for the benefit of those who sell fish and those who eat them, as for the men who catch them. It is just as necessary to catch fish as it is to plant them, and in his opinion the planting should be done by the general Government.

Mr. Mather remembered that two years ago, at the Chicago meeting, Mr. Booth, one of the largest fishermen of the lakes, favored a license fee, and he merely mentioned this as a matter of fact, having no opinion of his own on the subject.

Col. McDonald wanted to see the States in co-operation with the Government and the stations so well equipped that if at some future time the United States should, from any cause, cease operations in this line the work would go on, having been left in good shape for the States to continue it.

Dr. Hudson assured Commissioner McDonald that all were in sympathy with his views, but it was impossible to fix upon any definite policy of operations to-night.

Col. McDonald wanted more than sympathy, he wanted suggestions, but no one offered any more and the meeting adjourned.

AFTER MIGRATORY FISHES IN THE GRAMPUS.

A CORRESPONDENT of the Belfast, Me., *Republican Journal* writes from Fortress Monroe, under date of April 26, as follows:

On the morning of the 7th we left Wood's Holl for southern waters, there to cruise on the mackerel grounds and report the migratory movements of mackerel, menhaden, bluefish, etc. The weather being fine a vigilant watch was kept for any "signs" of fish, such as slicks on the water, or phalaropes, better known as sea geese. These are regarded by fishermen as sure indications of the presence of mackerel. On the afternoon of the 9th "slicks" and phalaropes were reported from the masthead. Later in the evening, when in lat. 37.27; long. 74.48, small "pods" of fish were seen under the bow, and announced to be mackerel. Mackerel, unlike herring or menhaden, move with a quick, sinuous motion when frightened, and when darting from under a vessel's bow at night can be distinguished in that manner, especially if there be but a few in the school; but if large schools, or "rafts," as the fishermen term them, are run into it is much more difficult to distinguish the difference, they being so compact, and appear as one large sheet of fire moving rapidly over the surface of the ocean.

To watch schools of fish from the masthead of a vessel on a dark night, when the water is full of phosphorescence, is an interesting and a very exciting sight, made more so when the watcher is entirely dependent on the capture of a certain quantity of them for his daily bread. Standing upon the deck of a steamer watching the fiery wake as it disappears in the gloom of night is interesting; but to see old ocean in one of its grandest displays is to witness a fleet of mackerel seiners engaged in night "fishing." Imagine two hundred sail of fishermen in close proximity to each other, all tacking and jibing about to avoid collision, or to get the inside track of some half dozen other nocturnal rivals who are anxious to get the first set at some particular school, that happen to be "showing up" much better than the rest.

It often happens that mackerel will only school at night, and then can only be seen when there is no moon and the sky is overcast. On such occasions a lively time is anticipated by the fishermen. It is not an unusual sight to see as high as 50 or 60 seine boats away from their vessels, either setting or about to set their seines. They make a pretty picture to look upon, as they all leave a fiery path behind them.

Fishermen as a rule are blessed with good lungs, and when a boat has succeeded in capturing the school set at, the crew are not backward in informing their less fortunate companions of their good luck. Occasionally a coasting vessel will approach near a school that is being set at, and sometimes the fish are sunk by them, at which times the occupants of the seine boats will give full vent to their feelings in language which would be anything but pleasing to a purist. When rowing around a school of mackerel or pursing up the seine, every man is supposed to exert himself to his utmost, and if one is caught shirking he is soon reminded of it. But such cases are rare, as the crew of mackerel seiners are on shares, and are only too glad to get a chance to pull upon a purse line. After a school has been surrounded by twine and the fish are playing at the surface everybody is terribly excited, for within the circle of corks and twine can be seen that which, if captured, will buy home comforts and supply the family with the necessities of life. After the seine is pursed the work of "drying in" is begun, which is to haul all of the slack twine and corks into the boat, thereby putting the fish into as small a compass as possible. After this is done the vessel is skillfully brought alongside and the contents of the seine bailed out and deposited on the vessel's deck.

If a very large school has been captured it is turned into a large pocket made of extra heavy twine which is fastened to the mainrail on the starboard side of the vessel. This pocket is capable of withstanding the rapacious attacks of the innumerable dogfish which frequent out coast in summer. Every fisherman looks upon a dogfish as his nemesis, and never lets one escape alive, whenever an opportunity presents itself to kill it. These pests of the ocean are so numerous, that after a school has been captured they will frequently eat the entire bottom from the seine, in trying to get at the mackerel. Sometimes a whole trip is lost in this way before the vessel can be got to the boat. These wolves of the ocean are far more ferocious at night than in the daytime and as the god of day sinks below the horizon they seem to steal forth from their deep submarine caverns for the sole purpose of tantalizing fishermen.

Occasionally a sudden display of torches will be seen, which indicates that a vessel has captured a school, and that the crew are engaged in dressing them. When from 100 to 200 sail of seiners are huddled together, all illuminated, they present a queer sight—especially if there is a rough, choppy sea going—all rolling and pitching in different directions, which would cause one approaching from a distance to imagine that a marine pyrotechnic display was being held in honor of Neptune.

Steamers frequently go out of their path in order to give the passengers on board an opportunity of seeing such a novel sight. In rough weather "night fishing" becomes extremely dangerous, as it is carried on when the crews and captains of vessels ought to be on board, instead of being in boats battling with the elements. But fishermen as a rule are very intrepid, and often risk their lives when it is thought that a few dollars can be realized by so doing. This may sound strange to those who are not followers of the sea; but it is nevertheless true. A few years ago thirteen men were lost in one night in Massachusetts Bay, all belonging to mackerel seiners. These men were so eager to procure a fare of fish that they forgot all about their perilous position and clung to their nets so long that before their vessels could reach them the boats filled and turned bottom up. During this time vessels were laboring under double-reefed sails.

A short time after falling in with the fish before spoken of, the vessel was hove to and mackerel and herring nets put out. On hauling them the next morning not a single specimen was obtained—not even enough to satisfy the cook, who was standing ready to claim his share. As the weather looked threatening we bore away for Hampton Roads, Va., where we anchored at 9 A. M., close to some American men-of-war, which, judging from their models and rigs, must have been derelicts in the early part of this century. On our arrival here we received orders to immediately proceed to Chesapeake Bay and investigate the shad fisheries. Four days were spent cruising in the Chesapeake. Fish traps are numerous in all parts of the bay. Those situated at the mouths of York and Rappahannock rivers and Tangiers Sound have thus far this year taken more shad than for the past eight years. Fishermen all over the bay speak as though the coming season would be a fruitful one. They all state that to the work of the Fish Commission is due the annual increase of shad in the Chesapeake and Delaware bays.

On the morning of the 17th we passed Cape Henry, southward bound. A week was spent in making trial for mackerel with toll bait and gill-nets, but without success until the night of the 21st, when a tinker mackerel was caught in the nets; lat. 37.07 deg. N.; long. 74.48 deg. W. Various sizes of surface tow nets were used during the day, which generally collect any floating fish eggs, crustacea and minute marine life which may be floating at the surface, all of which is food for mackerel. Hourly temperatures of the water were taken at the surface; also bottom temperatures several times each day, and the exact position noted. The temperature of the water greatly affects the movements of mackerel in their northward journey. The water this spring is found to be several degrees colder than last, which no doubt accounts for no mackerel being seen at the surface up to date. The most southern position reached was in lat. 35.46 deg. N.; long. 74.55 deg. W., where an abundance of whales, porpoises, phalaropes and gannets were found. Every indication went to show that mackerel or other fish that school at the surface were present, although no specimens were obtained.

Because mackerel do not rise and take the hook when toll bait is thrown is no sign that they are not near. In years heretofore a large fleet of seiners have roamed over the southern mackerel ground, looking for fish; and in some cases weeks have elapsed ere they found any. This year no fishing vessels are on the ground, so consequently one single vessel is not likely to fall in with a large quantity even if they should be quite plentiful along the coast.

From the position last mentioned repeated trials were made as far north as 37 deg. and 40 min. On the night of the 24th, when in lat. 37 deg. 31 min. and 45 sec. north, long. 74 deg. and 39 min. west, one herring was taken. This comprises all the fish caught during the cruise, except dogfish, which may be caught in our quarter of the globe on any kind of bait, or any kind of hooks.

As our supply of water was nearly gone, the morning of the 25th we bore away for Hampton Roads, Va., where we anchored at 6:50 P. M. In a few days we shall be ready for sea again, and it is hoped that the coming cruise will prove a more profitable one than the last. ALEXANDER.

THE MENHADEN QUESTION.

TIVERTON, R. I., May 21.—*Editor Forest and Stream:* "Acoxet" thinks I have all the work cut out that I want to attend to, which is true, for there is not much satisfaction fighting antagonists that know but little of the subject under consideration. I presume "Acoxet" thinks menhaden are scarce, because we and others think of leaving the business, when as a matter of fact one of the largest bodies of that fish ever known was located between Barnegat and Hatteras last October; it was not a few square miles but thousands. In four years our company's menhaden products alone have shrunk in market value over $400,000, resulting in a heavy loss during 1887; on that account we have concluded to abandon the business.

The U. S. Fish Commission were a unit on our side of this question in their testimony given before the Congressional Committee last winter; and as they are disinterested men of acknowledged ability, and have, at the Government's expense, thoroughly investigated the subject, it would seem that their verdict should be final. Huxley, in his investigation of Great Britain's fisheries, learned that improved methods for catching fish adopted by fishermen almost always excited the bitter opposition of fishermen that did not use the new methods; probably our hook and line smackmen have a little weakness that way themselves. I should like for "Acoxet" to find out from the smack men he quotes from if they ever went after the bass they have seen keeping company with menhaden from three to forty miles from land. I have yet to hear of a menhaden or mackerel seiner catching a school, which would be the case if they were there, for they are worth from two to three hundred dollars per ton.

Tautog is another fish I would call "Acoxet's" attention to. Most of them were frozen to death during the cold winter of 1875, since then they have been as plenty as ever before known and now they are scarce again.

It would seem with the illustrations which scup, seabass, weakfish, and tautog have furnished of being plenty and scarce at different times since 1870, that the opponents of free fishing should be silenced forever.

DANIEL T. CHURCH.

TIVERTON, R. I., May 21.—Thomas Clapham is on deck again. This time he tells us of bad smells, big round shot and what I know, which I beg to say is what I don't know. The menhaden fishermen are one of the largest producers of ammonia and fish-oil in the world, and on that account are public benefactors, for the reason that their product cheapens fertilizers and oil, in which all the people are interested. Spencer F. Baird, who I presume even friend Clapham will admit was disinterested authority, thought enough of the menhaden fishery to take models and pictures of their factories, steamers and apparatus, and exhibit them in Germany and England at the last fishery exhibitions, and then bring them back and put them on public exhibition in the Smithsonian Institution. Within two years we have had representatives from two foreign governments visit us for the purpose of examining our mode of fishing and manufacturing, and their knowledge of our fishery came through the London Fishery Exhibition. I gathered from them that American fishermen in their apparatus for reaping the harvests of the sea are far ahead of any other on earth. If so, would it not be well for friend Clapham to attend to his own business (in which I am told he excels) and let us attend to ours. DANIEL T. CHURCH.

HATCHING THE MASCALONGE.—Mr. Jonathan Mason, one of the old employees of the N. Y. Fish Commission at the Caledonia station, has succeeded in hatching the *Esox nobilior*. He has hatched between 20,000 and 30,000 and has proved these points: The fish spawns in May, in western New York, the eggs are free and not adhesive in the least, and are about one-tenth of an inch in diameter. It is the first time that the eggs of this fish have been taken artificially. The hatching was done at Chautauqua Lake, and people in the vicinity are greatly pleased at the prospect of a replenished supply.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

FIELD TRIALS.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6202.**

THE ENGLISH FIELD TRIALS.

THE ENGLISH KENNEL CLUB'S field trials were run on the Duke of Portland's estate commencing April 24, with the Derby. Of the 93 nominations there were 85 starters, 13 pointers and 12 setters. The winner was Mr. James Bishop's black, white and tan English setter bitch Bonnie Daisy (Sailor—Flora).

The All-Aged Stake for pointers and setters had 10 entries, 5 pointers and 5 setters. First was won by Mr. J. F. Hatfield-Carter's black and white English setter bitch Blue Maude of Cranfield (Ranging Aaron—Little Bess), second by Mr. C. C. Ellis's red setter bitch Mac's Little Nell (Cocksure—Graunnaile), third to same owner's red dog Drogheda (Frisco—Grouse II.).

THE NATIONAL TRIALS.

The National Club's field trials commenced May 1 with the Pointer Puppy Stakes, for which there were 21 entries. First was won by Mr. G. Pilkington's liver and white dog Woolton Game) Gough—Larkspur), second by Mr. B. Field's liver and white dog Melton (Lake—Magnet), third by Mr. R. J. Lloyd Price's liver and white dog Ben Ultimus (Little Ben—Bellona), fourth by Col. Cotes's liver and white dog Don Carlos (Carlo—Dixey). The Setter Puppy Stakes had 17 entries. First was won by Bonnie Daisy, the winner of the Kennel Club's Derby; second by Mr. W. L. Nicholson's black, white and tan dog Master Sam (Monk of Furness—Bonny Belle), third by R. Ll. Purcell Llewellin's black, white and tan bitch Princess of Orange (Dashing Duke—Duchess Placid), and fourth by James Bishop's black, white and ticked bitch Bouncing Kate (Tunbridge—Beauty).

ACTON REYNALD STAKES.

This stake (limited to twelve) filled with seven pointers and five setters, but one of each breed did not start. First was won by A. P. Heywood-Lonsdale's liver and white English setter dog Woodhill Bruce (Baron Deveridge—Norah). Best pointer, Mr. R. J. Lloyd Price's liver and white dog Luck of the Goat (Luck of Edenhall—Belle of Rhiwlas). Second best of either breed, Sir Richard Sutton's black, white and tan English setter dog Roderick of Altenberg (Roderick of Braunfels—Flanka).

THE CLOVERLY STAKES

for braces had ten brace. First was won by Mr. W. Mortimer's liver and white pointers Moor and Mast (Sam—Blanche). Second by Mr. R. Ll. Purcell Llewellin's black and white English setter bitches Coquet B (Dashing Bondhu—Duchess Primrose) and Belle Bondhu (Dashing Bondhu—Duchess Placid). Third by Mr. T. Lauder's black and white English setters Kate (Rake—Heather Belle) and Jack (Bang—Heather Belle).

THE POINTER CLUB TRIALS.

The inaugural trials of the Pointer Club commenced March 8 with the Puppy Stake, for which there were 28 entries, with 8 starters. First was won by Mr. F. C. Lowe's liver and white dog Rocket R. (Sussex Don II.—Milton Ringlet), second by Mr. R. J. L. Price's liver and white dog Ben Ultimus (Little Ben—Bellona), third by Mr. C. H. Beck's liver and white bitch Madge of Upton (Naso of Upton—Eros) and fourth by Mr. R. J. L. Price's liver and white dog Sir Watkin (Jasper—Mink). The All-Aged Stake had 28 entries, with 17 starters. First was won by Mr. A. P. Heywood-Lonstale's liver and white bitch Deuce, April, 1886 (Wynastay—Dainty); second and third was divided between R. J. L. Price's liver and white bitch Miss Sixpence (Lucky Sixpence—Golden Slipper) and Mr. C. H. Beck's lemon and white bitch Quit's Baby (Prior—Quit's II.), and fourth by Col. C. J. Cote's liver and white bitch Chloe (Carlo—Dixey).

THE SAN FRANCISCO DOG SHOW.

Editor Forest and Stream:

In your issue of April 19 appeared a very meager report of the San Francisco dog show, from which one would suppose that the very attentive officers in charge and the huge Mechanics' Pavillion, in which the show was held, were the principal attraction of the exhibition. I quite agree with your reporter in his praise of the officers of the club, too much credit cannot be given them for their untiring zeal, not only during the exhibition, but for months preceding that event, many of them spending much time and money to insure the success of the inaugural show of the club.

But what about the dogs? Did we have dogs of merit? Dogs fit to compete with Eastern bench winners? One would be led to believe by the general tone of your correspondent's article that we did not. I believe we did; particularly in the sporting classes. Mr. John Davidson, the gentleman who judged these classes, and who is acknowledged to be the peer of any man in America in this particular branch, a man who has judged at shows since their inauguration in this country, a man who not only judges, but owns, breeds, and hunts dogs, and who for the last thirty-five years has averaged 100 days in the year behind his favorites in the field, tells us we have good dogs, dogs fit to show in any company. He said, not behind the door, but on the floor of the hall, to a good, generous crowd, that the pointers were a fine lot, and would do credit to any Eastern show; and of the setters, that eight of them would compare very favorably with any eight exhibited at the recent show of the Westminster Kennel Club.

In speaking of pointers your reporter says: "Tom Pinch is not a dog that shows well." He showed well enough in 1886 under Mr. Davidson to win first in his class, and two gold medals for best pointer and best dog in the show, and at our recent show to win first and six specials for the same, one of which (omitted in your report) was for best pointer with a field trial record.

When such dogs as Tom Pinch, Dick H., Rush T., Donna Sensation, Climax, Patti Croxteth, Pilot, Mike T., Lady Elcho and others I might mention are described in from one to three lines and the whole sporting classes in a paltry thirty lines, a space that Mr. C. H. Mason would occupy in discussing the points of a dog that did not secure a card and when we pay for what we consider first-class judges and

are told we have fine dogs, good enough to show anywhere, and see afterward such a thin, measly and derogatory report in so popular and widely circulated a journal as the FOREST AND STREAM we feel like selling out and quitting the show business.

It is consoling, however, to know that it is the opinion of your reporter against the positive statements of a well-known judge. The Irishman said when asked if one man's word was as good as another's, "Yis, and bether, too," and Mr. Davidson's word will be considered "bether too" until we have some more conclusive evidence than the opinion of an anonymous reporter. J. MARTIN BARNEY.

DUTCH FLAT, Cal., May 8.

DOG TALK.

HERE is a man in trouble about selling dogs. Mr. W. W. McCain writes from Springfield, Pa., thus: "Please say to readers of FOREST AND STREAM that my Irish setters advertised in your columns two weeks ago are all sold, and thereby saved me the annoyance of answering *scores* of letters: Three dogs advertised in FOREST AND STREAM and sold on their merits need an army back of them to supply the demand."

Of the new edition of "Standards and Points of Judging," Mr. Victor M. Haldeman says: "I see you have made it very thorough so that it will be the authority for some time to come."

Our Natural History columns give an account of how Dr. E. R. Sisson saved his dog bitten by a rattlesnake. It is worth making a note of, for more than one good dog's untimely taking off is caused by this vicious serpent.

Mr. J. H. Winslow, of Philadelphia, has two litters of pointers, from which he hopes to pick out something good enough to win with next year. Dr. Cryer is another Quaker City breeder who is preparing for the future with some nice pug puppies out of champion Bessie.

The National Dog Club members will receive a circular in a few days asking for votes for the committee proposed by the temporary organization committee.

The English Spaniel Club, at a meeting held May 1, voted that the weight of cocker spaniels shall not exceed 28lbs. The limit formerly was 25lbs.

Mr. E. S. Porter, New Haven, has sailed for Europe. Letters to the New Haven Kennel Club should be addressed to W. D. Peck, Box 1369, New Haven, Conn.

Mr. F. F. Dole sails for England next week. Bicycles and bull-terriers will receive his attention while absent.

The Massachusetts Kennel Club celebrated its first anniversary at Lynn, Mass., on the evening of May 14, with a banquet. A committee was appointed to take measures for the holding of a dog show.

Twenty-one entries were received for the Pacific Coast Field Trial Club Derby up to the night of closing, with more to be heard from by mail.

Mr. Wm. Schreiber, of San Francisco, has received a brace of pointers from the kennels of Mr. J. J. Pollock, Auchindean, Scotland. One is an eleven months puppy by Gladsome out of Forest Queen II.; the other, a bitch by Bragg IV. out of Forest Queen II. Both are lemon and white.

The late San Francisco dog show was run at a loss of $200. Considering the great outlays and the liberal way in which things were carried on, the club is to be congratulated on getting out so well.

It is said that New Haven lost $400 over its show.

A Philadelphia dealer had a dog returned because he would not oblige the customer by making a pedigree for him tracing to "imported." The applicant should have purchased from the well-known Bostonian who supplies dogs and pedigrees to order.

Permission has been obtained from the Fairmont Park Commissioners, Philadelphia, for the holding of sheep dog trials. The collie club on whose behalf the permission was granted is singularly lax in doing anything in the matter.

Mr. A. R. Kyle writes us that he has a pure white collie puppy with the exception of a brown spot the size of a nickel.

Col. Stuart Taylor having resigned the presidency of the Pacific Kennel Club, the club has elected Mr. Ramon E. Wilson to fill the vacancy.

The summer show of the English Kennel Club will be held the first week in July in the grounds of the Ranleigh Club, at Barn Elms.

A TREATISE ON THE DISEASES OF THE DOG; being a Manual of Canine Pathology. By John Henry Steele, M.R.C.V.S., A.V.D. John Wiley & Sons, New York, 1888.—The volume in hand is without doubt the most pretentious from a medical and scientific standpoint, of those yet published on this subject. We have had many works on the dog, Youatt, Blaine, "Stonehenge," Mayhew, "Ashmont," etc., but almost without exception, these have treated the subject in a popular and not in a scientific manner. The medical spirit of the present time is toward the pathology of disease. It is an accepted fact that the pathology of diseases being understood the treatment becomes no longer empirical, but rational and directed at the root and cause of the ailment. Steele has written a book which is up to date. The study of equine and canine pathology has but recently found any definite place in this country, but at the present day and for the last ten years we have had some excellent teachers in New York and other large cities. The importance of the study of comparative anatomy and pathology cannot be over-estimated. The great school of Johns Hopkins University at Baltimore, Md., is notably foremost in this branch. Space will not permit an exhaustive review of Dr. Steele's book. The general hints and remarks contained in his introduction are given in plain popular language, and are intelligible to the most ordinary mind, and in fact the reading matter throughout is placed in as near a popular form as the scientific nature of the work will permit. The fact that micro-organisms play a most important part as a causative agent in canine pathology is emphasized, as, for example, in rabies and distemper. Authorities and their theories are extensively quoted. The work is largely and judiciously illustrated, including microscopic slides of parasites, micro-organisms and general plates representing the position of animals in different diseases, methods of handling and administering medicines, etc. The last few pages are occupied with a "Tabular statement of doses and special actions and uses of medicines in canine practice." The book is a *sine qua non* for kennel owners.

BEAGLES AT NEW HAVEN, Baltimore, May 19.—*Editor Forest and Stream:* I cannot let the letter of Mr. Hallett, in your last issue, in which he says my beagle bitch Lou "had the mange decidedly," pass unnoticed. I consider it very bad form and quite uncalled for, being simply a repetition of what another disappointed exhibitor said in the show. In a letter from Mr. Lacy he says "Certain parties tried very hard to have Lou put away, but I was one too many for them, they could not find a sore on her." I was not aware that there was any mange about her, indeed, I am assured there was not; had I the least knowledge that she was mangy she would not have gone from my kennel. All dogs, in fact all animals at spring time suffer from some slight skin eruption, the blood or digestive organs being out of order, possibly through climate changes or influences. Among these troubles we have erythema and exzema, both non-contagious, simple diseases. Mange is a disease communicable to animals of the same species. Now Mr. Hallett says "Lou had the mange decidedly." This I deny, and this is verified by the fact that she shows no evidence of having it, nor do the dogs with whom she has been kenneled since her return from New Haven show any signs of being affected. Mr. Hallett speaks about "skinned vets." Who on earth ever heard of skinned vets? There may be vets who can skin a fellow, but the idea that Mr. Mason skins them is utterly utter. One vet would not admit that he was skinned and decided that Lou did not have the mange. The exhibitor who removed his dog to a different stall was very considerate, yet it is not stated if the competent advice came from a skinned vet. I fully agree with Mr. Hallett that the mange rule should be enforced in every show, no matter whom it hurts, and that the regularly-appointed veterinary surgeon shall alone decide as to mange or contagious diseases.—W. STEWART DIFFENDERFFER.

AMERICAN FIELD TRIALS CLUB'S DERBY.—Cincinnati, O., May 19.—*Editor Forest and Stream:* The following additional prizes will be made by the American Field Trials Club for its Derby this year: $50 to the fourth and $50 to the fifth best dogs, the judges to select the dogs entitled to it; so that the prizes for the Derby will be as follows: First, $300; second, $200; third, $150; fourth, $50, and fifth, $50, making $750. Entries close June 1.—C. W. PARIS, Sec. and Treas.

MERRY MONARCH.—*Editor Forest and Stream:* I notice in the catalogue of the Baltimore Kennel Club show, held April 24-27, that I am down as being the breeder of my imported bulldog Merry Monarch. This is a mistake of the types. It is well known that Mr. John Henshall, England, is the breeder of this dog, and I do not care to claim honors that do not belong to me.—CHAS. D. CUGLE.

CLIPPING BULL-TERRIERS' EARS.—Utica, N. Y., May 11.—*Editor Forest and Stream:* Do all first-class bull-terriers have their ears clipped? Is it not getting to be popular in England not to clip the ears?—O. A. MEYER. [The standard of the Bull-Terrier Club of England says, "The ears are always cropped for the show bench."]

ALBANY DOG SHOW.—There will be a dog show at Albany, N. Y., June 12 to 15. Mr. Chas. H. Mason has been invited to judge all classes.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Doctor. By Chas. F. Peasley, Lawrence, Mass., for brindle and white bulldog, whelped Sept. 22, 1887, by Dr. Rush (A.K.R. 4616) out of Atossa (A.K.R. 3487).

Rifle and Trap Shooting.

RANGE AND GALLERY.

MASSACHUSETTS RIFLE ASSOCIATION.—The spring meeting of the Massachusetts Rifle Association will be held at Walnut Hill May 30 and 31, June 1 and 2. The first event will be the Boston *Herald* cup match, on standard American target, and open to all comers. The conditions are: 200yds.; position, standing; rounds, 7; rifle, any within the rules; five scores to count; entries unlimited, at 50 cents each. An equal number of points total will be considered a tie. Ties will be decided by the next best score or scores, without regard to rank or value of shots. Winners will be allowed a choice of prizes. This match will close on Saturday at 4 P. M. No score cards will be received by the scorers after that hour. There are 50 prizes; value, $306. The second event is a rest match, standard American target (rest bullseye), open to all comers. The conditions are: Distance, 200yds.; rounds, 7; rifle, any, without restrictions in regard to weight, sights or trigger pull, except that hair triggers must be provided with safety lock; any position or rest allowed, provided the rifle be shot from the shoulder; five scores to count; entries unlimited at 50 cents each; ties in this match will be decided by the rule laid down for Match 1. The nine prizes are all cash, ranging from $20 to $2. The third event is a revolver match (standard American target reduced to 100yds.), open to all comers. The conditions are: Distance, 50yds.; rounds, 6; rules of M. R. A. to govern; position, standing, with arm extended; revolver, .32-cal. or over; minimum trigger pull, 3lbs; plain open sight; maximum length of bore, 10in.; no cleaning allowed except between scores; five scores to count; entries unlimited at 25 cents each; ties to be decided by the rule laid down in Match 1. The prizes are two victory medals, a silver and a bronze, and six cash prizes. A novelty in the contests will be a military match, on standard American target, open to all comers. Conditions: 200yds.; rounds, 7; rifle, any issued by the State of Massachusetts; trigger pull, 6lbs.; cleaning only between scores; five scores to count; ties to be decided as in Match 1. There will be nine prizes, to the value of $65. There will be the usual bullseye practice during the meet.

BOSTON, May 19.—Notwithstanding the dismal weather, the attendance at the regular Walnut Hill shoot to-day was good, including quite a number who have not been seen at the range for several weeks. The weather conditions were quite good, as the shooting will show. The scores of the day are as follows:

Rest Match, 200yds.

J Francis	10	12	11	11	12	12	11	12	10	12	—113
D L Chase	12	0	11	11	12	12	10	12	11	12	—112

F Carter	5	6	8	7	0	7	10	8	9	7—76

SAN FRANCISO, May 13.—The San Francisco Schuetzen Verein held the inaugural opening of its May festival to-day at Shell Mound Park, Berkeley. The company, 110 strong, captained by John Bolts, left this city on the 9 o'clock boat for the grounds, and shooting was kept up until 6 o'clock in the evening, when time of departure arrived. The following are the names and scores recorded by the successful marksmen in the contests at the company target:

T A Freeze, first	21 24 20—65	C Theirback	20 19 18—57
L Haake	20 24 20—64	A Meyer	24 17 16—57
W Schmadeke	22 24 17—63	F Hugemann, Jr	19 17 20—56
C Rapp	19 21 22—62	O W Likendey	19 19 17—55
K Wertheimer	20 22 20—62	J H Winter	18 20 16—54
C Scheurer	22 18 21—61	H. F. Fortman	20 23 10—53

J. Frazer made the first bullseye in the forenoon and E. Hovey last in the forenoon. J. Frazer made also the first bullseye in the afternoon and Rahwyler the last bullseye. The first prize in public target shooting was won by E. Hovey with a score of 94; second by Freese, score 94; third by Rahwyler, score 92. The festival will close with the shooting at the American eagle, distance 75yds.

Apart from the extensive rifle shooting done by the marksmen of the Schuetzen Verein to-day at the Berkeley ranges, some excellent scores at the 200yds. range were made by members of the National Guard. Messrs. Johnson and Robinson, of Company G, of the Nationals, had a little special shoot. They made the the following score:

Johnson	4	4	5	5	4	5	4	5	5	5—46
Robinson	4	5	5	4	5	5	4	5	5	4—46

According to Creedmoor rules Johnson won the match. Company G of the Third Infantry Regiment made the appended scores at the 200yds. range, 10 shots, Creedmoor target:

Sergt M J Sheehan	39	Pvt W Ozias	32
Pvt A Lennis	37	Pvt G Jewett	34
Pvt W C Gunther	41	Sergt W S Thurgood	42
Pvt C A Driscoll	34	Mus N O'Connor	41
Pvt U G Morris	35		

NEWARK, N. J., May 17.—The shooting in the Park to-day brought out quite a number of New Yorkers as well as local marksmen. The day was a fair one, as far as light was concerned, but the riflemen had to contend against a bad "fish-tail" wind, and in consequence the scores were not remarkable. Walther got 217, Hayes 216, Coppersmith 212, Dr. Boyken 212, Gentsch 205, Nunley, Germayne, Reinhard and Townsend 202 each. The 100 shot open match announced for this afternoon was postponed to the coming Thursday, when it will positively be called at 1 o'clock. About 25 marksmen will compete. The German three-quarter inch ring target will be used.

OMAHA, Neb., May 16.—The Omaha Rifle Club held its first out-door shoot of the season, which has been deferred owing to wet weather, at the practice range, on the bottoms, between Clark and Grace streets, to-day. The club retains it old range and will hold bi-weekly meetings at Bellevue. The club will give two medals, one of which will be known as the Collins medal, and will be worn by the member making the highest score until the close of the season, when it returns to the Collins Gun Company. The Berlin medal will be worn by the member making the highest score each week, and at the close of the season it is to become the property of the member having held it the largest number of times. The first ten shots fired by each member shall be kept as a club record for the season. Each member, however, shall, at his option, be entitled to three shots in which to sight his gun. The officers of the club at present are: Pres., Dr. C. G. Sprague; Vice-Pres., A. J. Martin; Sec., Richard S. Berlin; Treas., S. C. Sample; Capt., P. H. Ray, U. S. A.; First Lieut., J. W. Dunmire; Second Lieut., C. A. Thompson.

ST. LOUIS, May 20.—Seventeen members of the Pistol Club attended the last shoot. Mr. W. H. Hettel proved himself the winner with the very creditable score of 117. The following are the scores, distance 12yds.; bullseye 1¾in.; possible 120: W. H. Hettel 117, M. C. Bilimeyer 116, G. W. Alexander 115, O. Neuhaus 114, F. A. Fodde 113, A. E. Bengel 111, E. C. Mohrstadt 111, W. H. Bonnell 111, W. Bauer 111, G. T. Dunn 110, W. J. Lard 109, L. V. D. Perret 107, O. Wallace 104, J. Sinninskie 100, W. C. Mackwitz 99, W. Clark 96, W. Clark 96.

McVITTIE IN CANADA.—Mr. R. McVittie, the famous Scotch rifleman, has taken up his residence in Toronto. He is not only a crack marksman, but was probably the best authority on rifle shooting in the United Kingdom. Few men were so widely known in shooting circles, and his advice was sought from far and near on all matters connected with rifle shooting. The veteran marksman will be missed at Wimbledon, where his face has been familiar to the frequenters of that meeting for about twenty years. He was a member of the Scotch rifle team visiting Creedmoor in 1876.

BRADFORD, Ont., May 14.—A match took place here to-day between the Aurora and Bradford rifle clubs, the latter winning by 14 points. Position standing; ranges 100 and 200 yards. Highest possible score, 50:

Bradford.	100	200		Aurora.	100	200	
B Kilborn	23	23	—46	D Eade	23	14	—37

N. D. WARD, Sec'y.

CINCINNATI.—A one day's rifle shooting tournament will take place under the management of Wick and Bandle on the Cincinnati Rifle Association range the middle part of June; $100 cash will be guaranteed the shooters.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TOURNAMENT DATES.

May 24 to 26.—Southern Illinois Sportsmen's Association, East St. Louis.
May 28 to 31.—North End Gun Club Tournament, Gentlemen's Driving Park, Philadelphia.
May 28 to June 3.—New York State Tournament, Auburn.
May 29 to 30.—Worcester Gun Club, Worcester, Mass.
July 24 to 27.—Central Illinois Sportsmen's Association, Jerseyville.

CANADIAN TRAP NOTES.

OTTAWA, May 16.—The St. Huberts are wasting no time in preparing for their tournament on the 24th, and to-day shot in very bad weather at times, the bird flying 50yds. before the scorer could see it. At 15 birds each the following was the score: P. Trudeau 10, J. Stewart 9, A. Stewart 8, P. Thompson 9, H. Equis 8, J. Deslaurier 9, R. G. Dalton 8.

A team match followed at 10 birds, the sides being captained by Messrs. Morton and Thompson:

E White	10	J Deslaurier	9
A Throop	7	Geo White	9
J Stewars	7	P Thompson	7
A Stewart	4	P Trudeau	4
Dr A Martin	4	R G Dalton	6
T McLean	4	H Equis	6—41

—36

A sweepstake at 10 birds each followed: P. Trudeau 9, W. White 8, Dr. A. Martin 6, Geo. White 5, P. Thompson 8, T. McLean 8, J. Stewart 5, A. Throop 5. Shooting off the ties at 8 each McLean made 5 straight and won.

OTTAWA, May 17.—The Ottawa and St. Hubert Gun Clubs shot to-day for the club cup. This cup is a handsome trophy for the monthly competition between teams from the clubs, the match to-day being the first. The weather was fine and the birds very fast, the scoring of the Ottawas causing great disappointment. Mr. H. Street, their field captain, a grand shot, only shot 4 out of 15. A sweep at 5 each was first shot: J. Deslauriers 5, P. Thompson 4, E. White 3, A. Throop 3, P. Trudeau 3, G. White 3, J. Lucas 2. In the ties of 3 E. White had to break 6 straight to win.

Club cup match, teams St. Hubert's and Ottawa Gun Clubs, 15 birds each, 18yds. rise:

St. Hubert's.		Ottawa Gun Club.	
R Thompson	13	J Stewart	10
R G Dalton	12	W H Baldwin	8
E White	12	A Stewart	8
Dr Martin	11	J Manuel	7
P Trudeau	9	W H Tracey	6
T McLellan	9	L Labelle	5
A Throop	8	R Rothwell	5
J Deslauriers	6	H Street	4
J Tache	5—85	E Smith	3—56

Entries for the tournament close on the 19th inst. Any entries after that day will be charged 25 per cent. extra. Entries for the Governor-General's trophy cup for teams have already been received from the Owls and Toronto Gun Clubs, of Toronto; the Montreal, Dominion and Lachine clubs, of Montreal, and the Hit or Miss Club, of Buckingham. Several others are expected, and the entries for individual prizes will be very large.

TORONTO.—The Toronto Gun Club will send two teams of 5 men each to the Ottawa tournament on May 24. The prizes include the Governor-General's challenge trophy, which is to be annually shot for in Ottawa, a valuable cup represented by citizens and 5 medals. The Toronto Gun Club's representatives have been making excellent scores in their practice this week, and they will be found hard nuts to crack by the other competing teams. Twelve members have been selected to represent the club. Among them are Messrs. Wyness, Briggs, Pearsall, Pearson, Clegg, Milloy, Sandys, McDowall, Blea, Wakefield and D. Black.

The West Toronto Junction Gun Club have arranged a telegraph match with the Port Colborne Gun Club, 5 men each, at 20 Canada blackbirds each man, for Tuesday, May 22. The following team will represent West Toronto Junction: Dan Blea, W. A. Clara, P. Wakefield, J. Bailey and E. Dollery.

NORWALK, Conn., May 12.—Fountain Gun Club and visitors. The day was fine and the members turned out in good shape. Match at 7 blue rocks, 3 traps, 18yds. rise, National rules:

Saunders	0111111—6	Lockwood	1101110—5
Yardley	1011111—6	Richards	1111001—5
Woodruff	1111111—7	Downs	0011001—3
Manley	1011111—6	Green	0001011—3
Gardiner	1101111—6	Capron	1011111—6
Ferris	1111111—7	Aiken	0100010—2
Smith	0111101—5		

Ties on 7 divided, on 6 won by Saunders, on 5 by Smith.

Match at 7 clays, 18yds.:

Yardley	1111111—7	Saunders	1111011—6
Capron	0 01011—4	Lycett	1011111—6
Woodruff	1011111—6	Lockwood	0101110—4
Manley	0111000—3	Aiken	1111110—6
Gardiner	0010111—4	Ferris	1110101—5
Smith	1111110—6	Sanford	0011000—2

Woodruff second on tie.

Match at 7 blue rocks:

Saunders	0111100—4	Gardiner	0111111—6
Smith	1001110—4	Lycett	0011000—2
Yardley	1111110—6	Sanford	1111100—5
Capron	0001111—4	Ferris	1110011—5
Manley	1111101—6	Lockwood	1111000—4
Woodruff	1001011—4	Downs	1111011—6

Yardley first on tie, second divided. Saunders and Woodruff third.

WELLINGTON, Mass., May 16.—To-day has been a lively one at the Wellington range. The individual blackbird badge was taken from Strater, after a close contest, by Stanton. In the team badge contest, the Wellington teams Nos. 1 and 2 tied, but did not shoot off the tie, as the badge would be, in either case, the property of the Wellington Club. The team badge contest resulted as follows: Wellington Gun Club, first team—E. Swift 8, Perry 8, Dan 7, H. Swift 8, Stanton 8, total 39. Wellington Gun Club, second team—Sanborn 8, Lang 7, Chase 8, Schaefer 7, T. Hall 9, total 39. Massachusetts Rifle Association team—Eager 9, Snow 7, Lefever 4, Sampson 9, Wheeler 7, total 36. Wellington Gun Club, third team—Brown 8, Lee 9, Adams 7, Stone 5, Baxter 7, total 36. The individual badge match, 29 entries—Stanton, Eager and Bartlett tied with 13 broken birds, and the shoot-off gave the badge to Stanton. The winners in other events follow: Six pigeons, 16 entries, Bartlett, Wheeler and Eager; 6 blue rocks, 16 entries, Stanton and Eager; 6 blue rocks, 16 entries, Stanton; 6 pigeons, 16 entries, Hall, Schaefer and Simpson; 6 blue rocks, 15 entries, Wheeler and Stanton; 4 pair pigeons, 15 entries, Stanton; 6 blue rocks, 17 entries, Hall; 6 pigeons, 23 entries, Tinker, Sampson and Schaefer; 6 blue rocks, 22 entries, Sanborn; 6 blue rocks, 18 entries, Adams, Bartlett and Wheeler; 6 pigeons, 22 entries, Brown, Swift, Stanton and Adams; 5 blue rocks, 16 entries, Stanton; 6 pigeons, straightaway, 20 entries, Lang; 15 blue rocks, 29 entries, Eager, Stanton and Bartlett; 10 pigeons, 20 entries, Eager, Hall and Sampson; 6 blue rocks, 25 entries, Swift and Adams; 6 pigeons, 31 entries, Short, Scott, Brown, Nichols and Baxter; 10 blue rocks, 12 entries, Eager; 6 pigeons, 29 entries, Eager, Brown and Lee; 6 blue rocks, 25 entries, Chase and Hall; 6 blue rocks, 19 entries, Adams, Eager, Moore and Hall; 6 pigeons, 21 entries, Snow; 6 blue rocks, 18 entries, H. Swift, Sanborn and Schaefer; 6 blue rocks, 15 entries, Eager; 6 pigeons, 17 entries, Strong, Stanton and Snow.

May 19.—There was a good attendance at the grounds of the Wellington club to-day and some good scores were made in the merchandise match. In this match points were scored as follows: Scott first, with 19; Stanton and Swift second, with 18; Baxter and Sanborn third, with 17; Best and Perry fourth, with 16; Snow, Shumway, Brown and Chase fifth, with 15; DeRochemont, Schaefer and Nichols sixth, with 14; Grimes seventh, with 13, and Bond and Hart eighth, with 12 out of 20 birds. Following are the winners in the sweepstake matches: 1, 6 blue rocks, Snow; 2, 6 clay pigeons, Stanton, Bert and DeRochemont; 3, 6 blue rocks, Snow and Melcher; 4, 6 blue rocks, Bert Melcher and Stanton; 5, 6 clay pigeons, Bert, Chase and Walton; 6, 6 blue rocks, Swift, Chase and Schaefer; 7, 6 blue rocks, Shumway; 8, 6 clay pigeons, Stanton and Scott; 9, 6 blue rocks, Scott and Bert; 10, 10 clay pigeons, merchandise match, Sanborn, Hart and Stanton; 11, 10 blue rocks, merchandise match, Scott; 12, 6 blue rocks, Baxter and Melcher; 13, 7 clay pigeons, Perry; 14, 6 clay pigeons, Grimes prize, Scott and Baxter—Stanton won the Grimes prize; 15, 6 blue rocks, Scott.

LOS ANGELES, Cal., May 13.—The monthly shoot of the Los Angeles Rod and Gun Club took place this afternoon at the Agricultural Park. The contestants were handicapped with a stiff breeze, which interfered very much with the blue rocks. The live birds were all good flyers, and quite a number carried several loads of shot out of bounds, where they fell dead. Unger killed every one of his live birds with his first barrel, and the reason of his poor score at single blue rocks was attributable to the defective trap from which the birds were all sprung. The following is the complete score:

Ten live birds, 5 ground traps, 30yds. rise, Hurlingham rules:

Birn	0011111101—7	West	0110111111—7
Jordan	1101101111—8	Walker	1001111011—7
Foster	1011101001—6	Unger	1111111111—10
Maxwell	0101111110—7	Slotterbeck	1110111110—8
Winston	0101111111—8		

Ten single blue rocks, 18yds. rise:

Bird	1011111110—8	West	1111001010—6
Jordan	0001111000—4	Walker	1000011000—3
Maxwell	0011111100—6	Unger	0100110100—4
Winston	0101111111—8		

Five pair double blue rocks, 15yds. rise:

Bird	11 10 10 10 00—5	West	00 10 10 00 01—3
Jordan	11 11 10 10 00—5	Walker	10 10 01 10 00—4
Maxwell	11 10 10 11 01—7	Unger	01 11 11 11 10—8
Winston	11 10 00 10 10—5		

E. Unger, championship medal, 22; J. W. Winston, first class medal, 21.

On the first Sunday in June the Recreation Gun Club and the Los Angeles Gun Club are to try conclusions, 10 men a side, at 20 blue rocks.

The Rod and Gun Club has challenged the San Diego Gun Club to another match, which will in all probability come off at San Diego later this month.

The Recreation Gun Club held their third practice shoot to-day at blue rocks, and, considering that this club has done but very little trap-shooting for the last three years, the scores are remarkably good; 10 blue rocks per man. First match: Cline 9, Hazard 8, Taylor 7, White 10, Ingalls 8, Richardson 10, Holbrook 7, Benchley 8, Payne 6, Brown 7. Second match: Cline 10, Hazard 8, Taylor 9, White 9, Ingalls 9, Richardson 10, Holbrook 8, Benchley 9, Payne 8, Brown 9. Third match: Cline 9, Hazard 10, Taylor 9, White 10, Richardson 8, Holbrook 9, Benchley 10, Payne 9, Brown 8, Ingalls 10.

SAN FRANCISCO, May 12.—The third monthly shoot of the Alameda County Sportsman's Club took place to-day at Bird's Point, Alameda. The attendance was excellent, the full membership of the club appearing to be on the ground. For pigeon shooting the weather was all that could be desired, a stiff northwest breeze giving the marksmen no small job to grass the flyers inside of the 100-yard boundary line. Pigeons furnished by Bird were particularly active. In the club shoot there were 19 entries, 12 birds at 100yds. boundary. The scores were excellent, but Boardman carried off the palm by killing 12 straight. Maynard, Adams, Norton and Schrader tied for second place with 11 to their credit. Following is the complete score:

Slade	1120211010—7	Knowles	1112100001—5
Kellogg	1121210101—7	Mayhew	0102211101—7
Mayhew	1010121102—7	Maynard	1010221001—5
Maynard	1122021111—9	Cadman	0101111222—7
Cadman	1121202211—8	Schrader	1212102121—8
Haskell	2201122110—7	Boardman	2112111211—9
Adams	1212111021—8	Houghton	1100 2122010—8
Norton	2101111111—9	Bell	0221101200—7
Osborn	1011011112—8	Brown	1011211101—8
Beck	1102102221—7		

Owing to the length of the foregoing match the usual freeze-outs and sweepstake matches were dispensed with.

INDEPENDENT GUN CLUB.—Solomon City, Kan., May 14.

C H Smith	1111011111111—14	M Rotacker	0000011000 — 4

C Crompton	1111110110—8	C H Howe	10110000w—6

Ties on 8 won by Snow and Sampson; on 7 by Bowdish.

BALTIMORE, May 18.—A meeting was held to-day at the store of Wm. H. Linthicum, corner Charles and Baltimore streets, for the purpose of reorganizing the Baltimore Gun Club. A number of the old members were present, and applications for membership were received from gentlemen who had not heretofore been associated with the club. Captain George Russell was elected president of the club, with Mr. E. C. Hall as vice-president; W. H. Linthicum, secretary; W. D. Buckbee, treasurer, and W. H. Linthicum field captain. Messrs. F. M. Denny, George Sharretts and H. Lee Clarke were appointed a committee on grounds. It was decided that the club should practice every Wednesday afternoon at Acton's Park. During the summer the club will arrange matches with clubs from Maryland and other States. Clay-pigeons were decided upon to be used in practice.

CAPITAL CITY GUN CLUB.—Washington, D. C., May 17.—Blue rocks, 5 traps. Third match, for championship of club. Wilson (16yds.) used Greener hammerless, 12-gauge, 7¾lbs., 3¼drs, King's quick shot powder, 1¼oz, No 8 soft shot, 3¼drs; American wood powder, first barrel on doubles. Wagner (18yds.) used Lefever, 10-gauge, 9¼lbs., 4drs, King's quick shot powder, 1¼oz. soft shot, American wood powder in first barrel on doubles. Mills (16yds.) used L. C. Smith 12-gauge, 7¾lbs., 3½drs. FFFG powder, 1¼oz. No. 8 shot.

Wilson.

MASSACHUSETTS TRAP NOTES.—The Jamaica Plain Gun Club held a well-attended shoot at the Clarendon Hills range on May 19, good scores being made. Charles made the best record, breaking 20 birds out of a possible 28 in the shoot for the merchandise prizes:—1. Five blackbirds—Brown and Cobb. 2. Five blue rocks—Ingersoll and Brown. 3. Five clay pigeons—Brown. 4. Five bats—Ingersoll and Cobb. 5. Five clay pigeons—Charles. 6. Merchandise prizes, 10 blackbirds and 10 clay pigeons—Charles first, broke 20; Brown second, Ingersoll third, Cilley fourth. 7. Five blue rocks—Charles. 8. Five clay pigeons—Charles. 9. Five blackbirds—Ingersoll.—The Crescent Gun Club of Waltham visited Lexington on the afternoon of May 19. Ten picked men from the club shot a match with an equal number from the Lexington Gun Club. The match was won by the Lexington by a score of 51 points.

NEWARK, N. J.—The prize shoot of the West Newark Gun Club will be held at the club grounds, 618 Springfield avenue, on May 28, 29 and 30. All arrangements for a successful affair have been made, and the shooting will be open to all comers.

PHILADELPHIA, May 19.—D. Wilson, of Philadelphia, defeated S. Long, of West Chester, Pa., to-day in a live pigeon match, for $100 aside, 25 birds each, 25yds. rise:
Wilson.....0111111111111011111111110—22
Long.....1111111100111110001111101—19

OMAHA, Neb., May 12.—The Lefever Gun Club met this afternoon for the regular weekly contest for the season's championship and the medal. Although composed of "kids," the club is making a remarkable record for big scores. The following is the score:
Ketcham.....1111111111111111111110—24
Burgess.....0111100101111010111111110—18
Fitchett.....1111011011111111011111—21
Salisbury.....1111101110011100101101—16
Townsend.....1111101111101111111111—23
Perkins.....0000101101011011011110001—13
Chrysler.....1001110010111111111101111—19
Dunmire.....0011001001101100011011110—12

The practice range had a good company of spectators and shooters at the opening shoot on the 16th. The scores ranged from 55 to 70 out of a possible 100. Mr. W. F. Kinnear won both medals, but will have to lose one at the next shoot, as under the club rules for shooting it is almost impossible to hold both medals on the same score.

KANSAS CITY, May 17.—To-day was the day for holding the regular monthly medal shoot of the Kansas City Gun Club, but the requisite number of birds could not be secured and the shoot was postponed. Ed. Bingham and Frank Smith went to shoot for the Kansas City cup, but the match was postponed until next Thursday, when it shall be shot at Sportsmen's Park. The sweepstake shoot at 10 Peoria blackbirds, 3 moneys, 50, 30 and 20 per cent. to the first three men, was shot with the following result:

James Riley	1011111000—6	W N Reiger	0101111111—8
D Underwood	1131010001—5	F B Hamilton	1011100111—7
Geo Dugan	0100110111—6	Fred Deniser	0110101010—5
Wm White	1010011010—5	Jim Bolin	1011011011—7
W Shaw	1101111100—7	F J Smith	1111111101—9
D W Williams	0110110110—6	G Moch	1110111119—9
C P Fairman	1011111111—9	Ed Bingham	0101111111—7
G W Youmans	0101110001—5	S Underwood	0101111110—7
L Scott	1111101011—8	Savage	1100101001—5
T Underwood	1100111011—7		

Moch and Frank Smith were shot out for first money by C. P. Fairman. A sweepstake shoot at three, live birds, and a sweepstake at ten birds were held as practice shoots.

ST. LOUIS, May 19.—A friendly 50-bird pigeon match was shot this morning between Mr. S. C. Edgar and Mr. J. W. Gates at Compton Avenue Park, which resulted in favor of the former by one bird. The birds were strong flyers, and aided by a strong wind, which blew almost directly from the shooters, made them very hard to stop. Quite a number of them dropped dead just out of bounds. Mr. Edgar had considerable difficulty with his second barrel, it snapping on him quite frequently and bothered him not a little. Mr. Gates, if anything, had the hardest birds, and several of his kills with his second barrel were loudly applauded by those present. It is proposed that a return match will be shot with the same conditions as the present one. The conditions of the match were: 50 birds each from five ground traps, 30yds. rise. The loser to pay for all birds and breakfast for all present. Mr. Hunt P. Wilson acted as referee. The following is the score:
S C Edgar.....1011121202120202220211111020130012221200012122—35
J W Gates.....2001120111002100203020111021112210212002121110022—34

LIVE BIRDS IN NEW JERSEY.—The Camden *Courier* is authority for the statement that the Society for the Prevention of Cruelty to Animals has decided to rigidly enforce the law of 1883 against the killing of live pigeons at shooting matches, and to that end Secretary Story has been directed to give general notice to the public that in future clay-pigeons, glass balls or some other contrivance must be substituted for birds. A large number of communications have been received from similar societies in other counties of the State asking for co-operation in the matter.

BREWER ABROAD.—Captain John L. Brewer, of Philadelphia, champion pigeon shot of the world, is still rousing trap interest in London. He is about to compete in the all-England sweepstakes for the *Sportsman* challenge cup, valued at 200 guineas. The trophy is a magnificent one, and is well worth a hard struggle to gain. It was originally gotten up for the benefit of W. F. Carver, who won it, and subsequently placed it in pawn. The revival in shooting, brought about through Brewer's wonderful feats, accomplished there during the past winter, was an inducement for the proprietors of the *Sportsman* to again get the trophy and put it up for competition.

PERTH AMBOY, N. J., May 18.—Mystic Gun Club, at blue rocks, blue rock trap, 18yds. rise:

L Van Horn	1000010100100101— 6	G Parnell	1100111110110111—11

S Tuttle	0001010111101111— 8		

SOUTHERN ILLINOIS.—The eighth annual meeting and tournament of the Southern Illinois Sportsmen's Association begins to-day at East St. Louis, Ill., and will last through the week. The tournament will be held on the new grounds of the Indian Lake Gun Club.

NEW YORK SHOOTING GROUND.—Owing to the illness of one of the active movers in this undertaking the meeting of subscribers will not be held this week. Further announcement will be made next week.

BRIDGEPORT, Conn., May 16.—Blue rock shoot, under the management of Harry Nichols and W. Longden. About 70 shooters were present and over 4,000 standards blue rocks were shot at. Prizes of $60.—$30 the first, $15 second, $10 third, and $5 fourth: Harry Nichols 21, Waite 21, Hendee 20, Savage 22, E. Whitlock 21, J. Gould 22, N. Tolsam 23, Harvey 18, Still 22, C. Longden 20, J. Von Lengerke 24, A. Heritage 17, Fifer 19, Zom 18, Clark 18, O. Von Lengerke 24, Wm. Longden 17, Widman 22, T. Beers 21, Potter 23, Yerrington 24, O. Smith 21, Patterson 24, C. Beers 24, Bristol 22, Wood 19, Ferris 21, Albee 22, Miles 15, Geo. Platt 15, Tousey 8, Higby 20, W. B. Rice 20.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. C. K.—Choose any one of the standard makes according to your fancy.

We cannot undertake to advise correspondents what guns and rifles they shall buy.

F. N. S.—We understand that the publication is to be carried on. Your letter has been forwarded.

J. D., Ironton, O.—A live young fox has no fixed value; we cannot advise as to its worth nor the best market for it.

E. A. B., Woburn, Mass.—1. The fishing in the Adirondacks is now good. 2. To join the club you should make application to the proper committee; see our last issue.

CAMPING COMPANION.—I intend camping in West Virginia for two weeks in July, and would like to hear from any one desirous of accompanying me. Address CAMPER, Hoboken, Pa.

J. V. R. E.—For permit to shoot birds for scientific purposes apply to Mr. J. A. Allen, American Museum of Natural History, Eighth avenue and Seventy-seventh street, New York City.

E. L. K., Farmington, Me.—Wild rice should be sown in shallow water in the late fall or early spring. It can be had of Messrs. Gilchrist, Valentine and others, whose advertisements usually appear in the season when the crop is gathered.

BUCK.—1. What is the record for casting a fly with a single-handed trout rod of 7oz. or under? 2. What is the record with a two-handed salmon rod? Ans. 1. H. W. Hawes cast 85ft. with a 4½oz. rod at the tournament in 1883. 2. Hawes cast 131ft. with an 18ft. rod in 1884.

KELPIE, Central Lake, Mich.—Can you tell me which among the different parrots is considered the best talker and most adapted to general housework? About what are they worth and where best obtained? Ans. The African gray and the Mexican yellow-head are the best. Young ones cost from $10 to $15, trained old ones come higher. Chas. Reiche & Bro., Park Row, New York, can supply them; or you may find them nearer home.

H. V. S.—1. Any one of the rifles and either one of the shotguns, as your fancy make dictate. They are all standard arms of established reputation, and we cannot undertake to say that one is better than the others. 2. This extra bolt gives extra strength. 3. For the game wanted Maine is the better region. 4. It is not forbidden to chase foxes with dogs in the deer region, but the presumption would be that you were after the deer, and in all probability your dogs would as a matter of fact choose the deer. 5. We do not know the manufacturers of the trap. 6. Van Dyke's "Still-Hunter" gives more instruction in deer hunting than Caton's "Antelope and Deer of America;" the first is a practical guide, the second largely a natural history.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.
Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }
Vice-Com. Rear-Com. Purser.
Central Div.—R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div.—Henry Stanton...A. S. Pennington, E. W. Brown, 146 B'way, N.Y.
Eastern Div.—L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div.—A. D. T. McGachen, W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

MOHICAN C. C.

IT is rather late in the season to speak of winter camp-fires and in the same report give notice of canoe races and cruises; but as the official indaba of the Mohicans has not given voice to the Turtles during the winter it devolves upon a resident honorary member of the tribe to sing in its praise and honor.

The last camp-fire was held at the Windsor restaurant (I have forgotten the date), but it was somewhere in eighty-eight, and nearly the whole club, active and non-active, resident and non-resident members were present. Some official business having been transacted and several jaws exercised by the chewing of words, other things were offered to the self-same jaws in the shape of edibles and potables, notably a flowing bowl of the famous Regent Punch, by which the local Fort Orange Club once in the winter teaches the bears from the legislative garden to dance. Music by the band in toto and singing followed, Lasca on the cornet, Lea on the fiddle, Marion B. on the piano, and the absent Uncas on the cyther, while Necken delighted all by his superb voice. The last winter meet was unanimously declared to have been the most successful of all held by the finny Turtle tribe.

According to the scheme of races to be held during the canoeing season of 1888, which I inclose for the use of the fraternity of the paddle, the first were to have taken place yesterday, but evidently Father Hudson had not been informed of this important event, for he had still a 3 to 4ft. freshet on, with a current, which would have made tacking on the wind a rather awkward business.

Programme of Races.—May 12.—Grand Review, 4:30 P.M. Race—Gibson Silver Badge, 75 feet limit, 5:00 P.M. Senior flag for Junior class. May 24.—Race—Oliver Cup, limited, 5:00 P.M. Senior flag for Junior class. May 30.—Decoration Day Races at Country Club House.—1. Paddling and sailing combined, prize, flag. 2. Junior Race, prize, Senior flag. 3. Paddling, prize. 4. Paddling, open canoes, single blade, prize. June 14.—Club championship, unlimited, 5:00 P.M. Prize, Gibson Silver Cup. June 23.—Oliver Cup, 5:00 P.M. Senior flag for Junior class. July 4.—Independence Day Races at Country Club house.—1. Novice, prize, flag, for members who have not entered any race previous to 1888. 2. Unlimited as to boat, ballast or rig, prize, Thomas Silver Cup. 3. Man Overboard, 75 feet limit, prize. 4. Sailing Unset, 50 to 75 feet, in two sails, prize. 5. Hurry Scurry, Run, Swim, Paddle, prize. July 12.—Gibson Silver Badge, 75 feet limit, 5:00 P.M. Senior flag for Junior class. July 16.—Gibson Silver Cup, unlimited, 5:00 P.M. July 26.—Oliver Cup, 5:00 P.M. Senior flag for Junior class. Aug. 2.—Gibson Silver Badge, 75 feet. Senior flag for Junior class. Sept. 6.—Gibson Silver Cup, unlimited, 5:00 P.M. Sept. 13.—Oliver Cup, 5:00 P.M. Senior flag for Junior class. Sept. 20.—Gibson Silver Badge, 75 feet limit, 5:00 P.M. Senior flag for Junior class. A. C. A. regulations will govern all races. If any races are postponed, they will be sailed by the Executive Committe after this date by posted notices. The Gibson Silver Badge is for perpetual challenge, the Gibson Silver Cup becomes property of the member winning it twice in one season. The Oliver Cup.—Each winner is barred until final race, which is open to winners of previous races only. Cup to be held by each winner in turn and names inscribed, and to be property of final winner. The Thomas Silver Cup becomes property of winner.

The spring cruise, which has become an institution among the Mohicans, is to be taken again on the Susquehanna, in the hope of discovering John Boyle O'Reilley's "singing sands" and that subterranean passage, of which the FOREST AND STREAM gave such a "She"-like report some year or two ago. The names of the bold cruisers-to-be are as yet unknown to me; although it is said ten Albany canoeists in a lump will undertake the trip. Not to be one of them is the misfortune of FIOR DA LICE.

ALBANY, May 13.

NEWS FROM THE RAG CANOE.

MIAMI, Dade County, Fla., May 1.—*Editor Forest and Stream:* Here I am, well, hearty and comparatively happy, the only drawback being I can't get hold of a FOREST AND STREAM and so don't know much as to how the world goes.

Have made a very pleasant cruise so far. Our route has been through Charlotte Harbor, outside from there to Cape Sable, across to Mattecombe, and north outside the keys. Laid up four days on Key Large by N.E. gale. A large timber ship went on the reef, and we had some fun watching the wreckers.

Last night we camped on Cape Florida, within a stone's throw of the old tower, where in 1857 the light keeper was beset by Indians. He retreated to the tower, the Indians, who could not get in, managed to set fire to the wood-work inside. When the keeper was nearly roasted he thought to end it all, and so threw a keg of powder down the well hole. The powder exploding threw the fire all to the bottom of the tower, and all communication was cut off. The Indians finally left, and the keeper was rescued by some fishermen.

We sat at our camp-fire last night, our thoughts were on the sad story, and we half expected to hear the whoop of the Seminole. Nothing but the cry of a loon, however, broke the silence, and we were finally compelled to believe that the day of the Indian, in Florida at least, was passed.

Since leaving Mattecombe we have seen every description of wreckage. One can't go a half mile on the beach without finding the bones of some poor craft that have ended their days on the Florida keys.

The other day, while walking along Sands Key Beach I found a bottle; it contained a paper, which I send you in this mail. it was thrown overboard just north of the line, and a long way to the eastward of the spot where it was found. It probably went in below the Leeward Islands, through the Carribbean Sea, into the gulf between Cape Catoche and Cape San Antonia, and up along the keys and reefs to Sands Key.

I believe there are less fish on this coast than on the west side, from the latitude of Tarpon Springs south; and for birds this coast (as far as I have seen it) will bear no comparison. They tell us, however, that there are plenty of deer and some turkeys inland, and there are turtles on the beach, with crawfish and conchs in abundance. This is by all odds the most attractive place I have seen since leaving Tarpon Springs. Good cruising for small boats with beautiful shores, and the Miami is a fine river. I have made some inquiries concerning the Biscayne Bay Y. C., but failed to get any information.

"Okeechobee" is at Cocoanut Grove, some few miles south of here. I don't expect to see him, as we shall leave here to-night or to-morrow for the outside run to Lake Worth. I believe we can go inside from there to Jacksonville, but am not certain; shall find out probably. We expect to be at Old St. Augustine in about three weeks. It is uncertain setting dates, however, as in running up the beach we will have to be governed by the weather. Once in Indian River we will go on smoothly. TARPON.

ATLANTIC DIVISION MEET.

To the Members of the Atlantic Division of the A. C. A.:

The report of the camp site committee as to the time for holding the Atlantic Division meet having been submitted to the division executive committee, and the committee having resolved that a meet should be held in the Atlantic Division from July 16 to 26, 1888, and this resolution of the executive committee having been submitted to and approved by Commodore Gibson, notice is hereby given that a meet of the Atlantic Division for camping, cruising and racing will be held from July 16 to 26. The races will begin on Monday, July 23. The place for holding this meet has not as yet been definitely reported by the camp site committee, but it is expected that a definite report upon that point will be made in time for publication in the FOREST AND STREAM on the 30th inst. HENRY STANTON, Vice-Commodore.

15 BROAD STREET, New York, May 21.

BROOKLYN C. C. CHALLENGE CUP, May 19.—Six canoes started in the first race of the season for the Brooklyn C. C. challenge cup. The signal to start was given at 4:20 and the Niente, F. L. Dunnell, was the first to cross the line, almost at the word. The others were close behind in the order named: Minx, M. V. Brokaw; Eclipse, R. S. Blake; Rattler, Wm. Whitlock; Queen Bess, R. J. Wilkin. The leaders changed places several times on the run up to the stakeboat, where Eclipse went to the front; sailing a true course to the second buoy she gradually increased her lead to the finish, and rounded the home buoy at 5:08, followed by Minx at 5:10½, Rattler 5:12¾, others not timed. The winner is a new boat, built by Ruggles, very light and sailed without ballast. This is her first race, and practically a trial trip.

OAKLAND C. C.—This club, now in its third year, has issued a neat book of rules, with much information concerning the club. The active membership is now 28, with 27 canoes; an unusually large proportion of canoes to members. The canoes are of large size, mostly 15ft. by 36 to 38in. There is one article in the house rules that other clubs might well copy: "All articles left out of place will be put in the pound, and a fine of 10 cents charged for redemption. Auction sales of all unredeemed articles shall take place as often as deemed necessary by the directors."

A SUCCESSOR TO THE RESTLESS.—Mr. Thornton H. Smith, whose yawl Restless was wrecked a year ago, as told in the FOREST AND STREAM of June 9, 1887, has a new boat on the stocks at A. B. Wood & Sons, City Island, from the same moulds, to be 14ft. long, 4ft. 5in. beam, and with 160sq. ft. in a yawl rig. The new Hyacinth will be ready in time for the Connecticut River meet of May 26. She will be enrolled in the Larchmont Y. C.

ATLANTIC DIVISION MEET.—The committee wish to acknowledge letters in regard to camp site from Mr. Everett Masten, Yonkers C. C., and Dr. R. H. Cower, of Providence. The site proposed by the latter would be within the Eastern and not the Atlantic Division.

WESTERN C. A. NEW MEMBERS.—James K. Bakewell, Pittsburgh, Pa.; F. Joyner, Schenectady, N. Y.; Alfred Ely, Cleveland, O.; B. C. Bakewell, Pittsburgh, Pa.; Chas. G. Ransom, Cleveland, O.; Chas. F. Laube, Lake Linden, Mich.; G. Harton Singer, Pittsburgh, Pa.

HOME FROM FLORIDA.—Dr. and Mrs. Neidé passed through New York last week on their way from Jacksonville to Albany. Com. and Mrs. Munroe also left Florida last week for New York, where they will spend the summer.

IANTHE C. C.—Officers, 1888: Com., W. F. Marvin; Vice-Com. D. E. Woodhull; Sec'y-Treas.; W. P. Dodge; Meas., Geo. W. Baxter. Regatta Committee, R. Hobart, M. S. Farmer, L. B. Palmer.

THE CUP FUND.—We have received from Mr. Stacy B. Collins, K. C. C., $10, and from Mr. W. H. Hillier, Essex C. C., $3, making a total of $96.50 to date.

A. C. A. MEMBERSHIP.—Atlantic Division: W. H. Cammeyer, Chas. M. Paul, Robt. Liptrot, Danl. E. Woodhull, Richard Hobart.

THE COMING YACHTING SEASON.

I.—YACHTING AS A NATIONAL SPORT.

IN spite of the cold and backward weather the pleasure fleet is now nearly ready for the formal opening of the season on Decoration Day; another week will see the fleets of the Atlantic and Pacific coasts, as well as the lakes, afloat and in commission; while a few weeks more will inaugurate a racing season that promises to be the most active and instructive that has yet been seen in American waters. True, the exciting events of the last three seasons, the international races for the America's Cup, will be missed this year; but, though the stoppage of international contests is a great hindrance to all yachting interests, American and British, for the present season at least the ill results are not likely to be serious, as the impetus of the races will be felt for a time in a renewed interest in home racing. The substantial benefits that have resulted to both sides from the three series of international races are disputed by none; abroad the success of the Boston craft has hastened the abolition of the old Y. R. A. rule in favor of a far more liberal one; it has shown that narrow beam *per se* is not an element of speed in sailing yachts; and it has greatly weakened a number of time-honored traditions and prejudices. At home it has done much more in that it has enabled many to accept gracefully ideas which, though proved to be correct, were long denounced because of foreign origin.

The vigorous fight which FOREST AND STREAM and a small band of "cutter cranks" begun and carried on from 1878 up to 1885, had resulted in many substantial victories, in the acceptance by many intelligent yachtsmen of the lead keel, the deeper hull, the added displacement and the cutter rig; but there was still a large number who were firm in their adherence to the old sloop and their hatred of any imported idea. So far as technical arguments or established facts could prevail against a deep-rooted prejudice, they would probably have been as obstinate to-day, had not the white Burgess racers proved to them sugar-coated pills in which they could gracefully swallow the bitter truths of science they had so long and loudly denied, and enabled them to accept in Puritan what they condemned in Genesta. There are too many live issues now before yachtsmen to allow any waste of time over dead ones, and we do not propose to discuss the question whether the Burgess boats are sloops or cutters, it is sufficient to know that their advent hastened the end of the old American sloop and opened the way more fully to the general adoption of a safe type of yacht. This result alone is a sufficient ground for congratulation, and Mr. Burgess is entitled to the thanks of every friend of American yachting for his double victory, not only over the foreign challengers who would take the Cup, but over the many enemies of safe yachts in the home camp. Not within the last three years only have American yachts been successful in defending the Cup, but never since the original race have the results been in every way so satisfactory. Though victorious in the past many of the American yachts were of a type now generally condemned; and though faster they were inferior in many points to the sturdy ships that crossed the Atlantic to sail over the New York Y. C. course. In the late races, however, the challengers have represented the continued advance in design and construction of twenty years of keen racing, and yet they have been defeated by honest boats of a type hurriedly adopted to meet a sudden emergency, the yachts themselves being built in the greatest possible haste. The victories over Genesta, Galatea and Thistle signify not only the possession of the fastest yacht, but the ability of the American, when confronted with an obstacle or an emergency, to surmount them through pluck, ability and ingenuity; in short the new type represents not alone speed, but a substantial advance in yacht designing.

Before the regular work of the racing season begins it is worth while to review the present condition of American yachting, to consider its tendencies, its faults, and the means of remedying them. First, then, as to racing. The successes of the new yachts have placed the American racing fleet at the head of the list and endowed its movements with an importance which they never possessed before. In schooners, in single-stickers, in large and in small craft, the achievements of the last three seasons have claimed the attention of yachtsmen in all countries, and have transferred the arena for yachting contests from the English Channel, the Thames and the Clyde to Marblehead, New York and Newport. Only four years since the racing of Marjorie, Irex, Genesta, Samena, Vanduara, Erycina and Vendur was watched and studied eagerly by yachtsmen the world over, while no one outside of New York cared a rap whether Gracie beat Fanny or Fanny beat Gracie. To-day the interest has been transferred to American waters, and the performance of Volunteer, of Sachem and of Pappoose are as well known abroad as at home. While this alone is flattering to the national pride, it should awaken all American racing men to a full sense of the responsibility imposed on them, and should unite them in the effort to improve and elevate still further the national yachting.

Its place in racing we have already noted. In cruising it is not far behind; the flag is seen each year in more foreign ports, while the yachts which carry it are far in advance of their immediate predecessors. Last year Fortuna held her own with credit about the British coast, though through no fault of hers she was not in the racing; and this year the new Yampa will follow her across and show what early of a cruising yacht Americans are now building. Up and down the coast, from Labrador to the West Indies, in winter as in summer, the cruising fleet is ever in commission, from the largest schooners and steamers down to the 30-footers that dodge from port to port. Ocean cruising has become a permanent feature of American yachting, and the standing of the cruising fleet, both in *personnel* and equipment, is as in the racing fleet, rapidly improving.

A practical evidence of this is in the great interest taken in navigation by amateur sailors. The School of Navigation conducted by Capt. Howard Patterson in New York has numbered on its rolls for some time the leading yachtsmen, non-owners as well as owners; but this year a new impetus has been given by the Seawanhaka C. Y. C. Other clubs, notably the Dorchester, of Boston, have followed this example, and lectures and instruction in classes have served to occupy many yachtsmen through an unusually trying winter.

Closely connected with this subject of practical instruction is that of a Naval Reserve, another scheme originating with the Seawanhaka C. Y. C. and now favorably received by all the leading clubs. After much preliminary work the subject has been presented in such shape that it has received the hearty approval of the Secretary of the Navy, the aid of members of Congress, and yachtsmen in all cities are awake to its great importance. There is still much to be done in the way of details, but the importance of a large body of naval volunteers, as well as the benefits to yachting from such a stimulus, are recognized by all; and the success of the scheme is only a matter of time. An important step toward it is now under way, the placing in commission of a vessel to be used as a training school for yachtsmen; in which a cruise will be made in the summer and the regular course of instruction kept up under Captain Patterson.

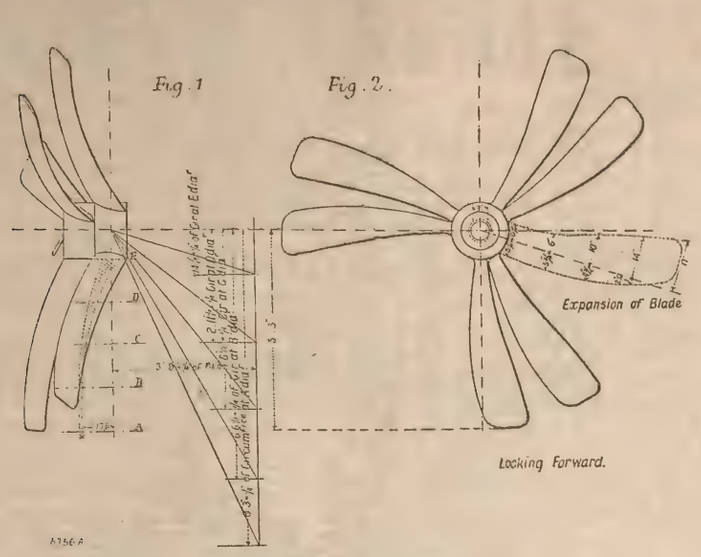
Looking at the condition of yachting in a general way, it has never been as prosperous as at present, with over 100 clubs in the United States and Canada, and with a larger and far better built and equipped fleet than ever in the past. Not only is it popular with the class from which recruits must be looked for, but the late races have brought it prominently before the general public; the patriotism of the people has been flattered, and the result is a widespread interest in yachting, such as never before has existed here. This in itself may not be of much account, but at the same time anything which brings into prominence the salt water interests of the country, whether of trade or pleasure, is doing a good work. Americans as a nation have never been distinguished as a nautical people, there are too many square miles of prairie, too great an area remote from maritime interests; and from the first these have been slighted and neglected until the result is a national disgrace. To-day not an American flag flies over a trans-Atlantic steamship, and the merchant marine, except in the coasting trade, is totally dead. Railroads traverse the land in every direction; millions of dollars have been lavished on them by the people, but ships have been utterly neglected. Such a condition of affairs must some day bring its own punishment and the remedy cannot be sought for too soon, but it must come through an awakening of the whole country to the vital importance of its marine interests, and perhaps the entering wedge may be found in the excitement and enthusiasm over the victories of Puritan and Volunteer that have penetrated to every corner of the land. It is a long time since this country has had a naval war (or even a navy), and at a small distance from the coast the interest in maritime matters is dead; the names of Hull, Lawrence, Preble, even of Farragut are forgotten. It is this pride in its navy, its merchant marine and its yacht fleet, with the love of the sea that accompanies it, that has made England what she is, and the same feeling should be fostered and encouraged in America. In so far then as yachting awakens and strengthens this feeling, as it undoubtedly has done of late, it rises above the plane of mere pleasure and recreation and becomes an important factor in the national prosperity.

Looking first at the general condition of yachting; along the Atlantic coast, from Maine to the capes of the Delaware the sport flourishes at its best, over sixty clubs and the finest vessels being included in the North Atlantic fleet. Along the coast further down yachting is less developed, but a number of active clubs, some of them newly formed, are carrying on the work with increased vigor each year. In Florida yachting is growing, largely through the presence of many Northern yachts in winter, and the visits of Northern yachtsmen who use the smaller classes of boats in the shoal waters that abound there. In New Orleans, Savannah, Wilmington, Charleston, Mobile, St. Augustine and Palatka there are established clubs, and though less advanced than in the North, the interest is growing. On the St. Lawrence and Lake Ontario are some of the most active and energetic clubs, both American and Canadian, and in point of organization and system the L. Y. R. A. is the only body of the kind in the country, save the New England Y. R. A., which deals only with small yachts. With a good system of uniform rules and a fixed round of races each year, the growth of yachting has been most satisfactory within the last four years, new clubs being formed and the old ones strengthened. Further west, on Lake Erie, less work has been done, the task of organization is less complete, and a good system of rules and classification, with a special effort to encourage a better type of yacht are still needed. On the other lakes yachting is found only in the hands of isolated clubs, and much preliminary work is yet to be done. In Chicago, great city as it is, the older clubs have declined sadly, and the best hope for better things lies in the young Corinthian Y. C., which is starting in the right way to train up the nucleus of a future yacht fleet in the racing of small craft. On the Pacific coast the same state of affairs prevails; the once active Pacific and San Francisco clubs are practically dead, the fleet of large schooners is scattered, and if it were not for a small band of sailors in the Corinthian Y. C., with a club of hardy canoe sailors, San Francisco Bay would be practically deserted. As it is, the Corinthians are going to work in the right way, with plenty of racing and many sociable outings, their numbers are increasing, their boats improving, and some day they will far surpass the best efforts of the old clubs. Yachting, however, is not confined entirely to the broader waters, and small but flourishing clubs are scattered throughout the country, many as yet hardly aspiring to the name of yacht club, but with the sailing element coming to the front each year with more and better races.

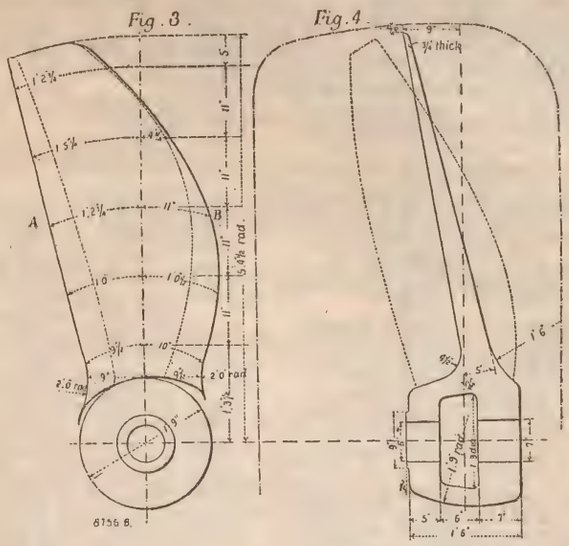
Turning now to the yachts (a fleet of somewhere over 3,000 craft, large and small), the prospect is most encouraging. Compared with but a few years back, the yachts of to-day are eminently safe, fast, commodious and well built, rigged, equipped and manned. A chance search through some old papers the other day brought to light a letter from Mr. A. Cary Smith, written in the fall of 1880, and containing the following prophecy: "And the time cometh when the keel man shall stand on one ear and point the finger of scorn at the flat man, when he hideth his head when the wind bloweth." Certainly the prophecy has been fulfilled many times and oft, the flat boat has disappeared, and the keel has supplanted it everywhere. One instance is specially noticeable, the boat built last year to prove the value of inside ballast, flat model and single jib, and that failed so signally when the wind blew at Larchmont, now she has changed to the double rig and added a lead keel, and with her die forever the theories embodied in the old sloops. Depth is found everywhere in the new boats, lead keels are universal; and it must be admitted that the present type, represented by Sachem, Sea Fox, Volunteer, Mayflower, Puritan, Katrina, Shamrock, Cinderella, and other similar boats, is in many ways superior both to the old centerboard sloop and the six beam cutter.

Compared with other types that have preceded it the deep, lead-keeled yacht, with improved cutter rig, wide beam, flush deck, handsome topsides and good accommodation, is an excellent boat, especially for racing; but this is by no means the whole length and breadth of the subject. The great question is not how good the present type is; but whether it is the very best possible for the good of yachting? Safety can be left out now that the necessity for it in any yacht is so generally recognized that it is not likely to be neglected again as in the past. With plenty of depth and lead the yachts of the future are at least sure to be safe; but there are other important qualities to consider. In speed the new craft are certainly equal to the best that have preceded them, wide or narrow, shoal or deep; but do they give the maximum of comfort and accommodation with a minimum of cost, both in first construction and in maintenance? These vital questions are not readily answered, but lead directly to other points of no less importance.

The business side of yachting has never received the least recognition in this country. There is an investment running up into the millions, presumably to secure some return, with added expenditures every year, and yet there has never been the slightest attempt on the part of any club or association of clubs to direct and regulate this expenditure so as to attain some definite end. Thousands of dollars are spent each year in the addition of new yachts to the fleet; and yet no one cares whether the rules under which these yachts are built are such as to produce a good or a bad boat. American yachtsmen are as a class successful business men, and not for a moment would they allow any enterprise with which they are connected to wag along in the shiftless, aimless and unsystematic manner that has always characterized yachting. Each man's interest in racing rules extends to his own craft and no further, as long as she is unmolested he cares nothing for rules; but let a measure be proposed that is in the least detrimental to her, and, no matter how essential it may be to the general good of yachting, he is up in arms at once. Attempts have been often made in the past by a few spirited and far-sighted yachtsmen to introduce some system into yachting, but they have met with apathy at first and finally with active opposition from those who should have been first to help.



The period from 1878 to 1888 has been the most important that American yachting has ever passed through. At its beginning the shoal, wide, badly rigged and ballasted craft, of light displacement, was in universal use. Since then the narrow, deep cutter, with lead keel and great displacement, has attacked the home boat in its own waters; and as a result the old yacht fleet has been completely wiped away, and a new type has come forward in its place. To-day this type has been very generally accepted, and the work has just begun of building a larger and more costly pleasure fleet than the country has ever seen. This, then, is the time, before another keel is laid or another nail driven, to consider well and carefully what this new fleet is going to be; how the immense sum that it will cost is to be best expended. The characteristics of the coming fleet is determined mainly by two factors—measurement and classification; but in what condition are both of these to-day? Each club is a law unto itself, independent, aggressive, and too often proud and jealous of its own supposed importance to a degree that makes any common effort impossible. The vital question of the day, measurement, is of itself working toward better things; but every effort to secure the adoption of a common system has thus far failed through the hostile efforts of some of the leading clubs and the active opposition of the older and more conservative yachtsmen to anything that savors of change or improvement. A year ago the FOREST AND STREAM took up the next important question, classification, and made a strong effort to arouse the large clubs to uniform action. Some good has resulted, but the way in which the matter has been handled gives little hope for any harmonious action among the clubs in the future, except of the sort of the lion and the lamb who laid down together—with the lamb inside.



The whole character of the future fleet, the question whether the money to be expended on it shall be well spent or wasted, depends now on three points: the adoption of one uniform system of measurement and classification of all American yachts; the determination of the proper ratio of sail area to waterline length in the measurement, and the proper method of determining the sail area for this purpose. The necessity for the first is obvious to all, a yacht built in New York will race along the coast from Maine to Delaware, and is not unlikely some day to find a home on the lakes; and, in order that owners and designers may build with certainty to any class, that class must be precisely the same in all waters in which the boat is likely to race. As it has been in the past, and is even now, a yacht built in Boston for certain clubs there is worthless for racing in New York, the same relative conditions maintaining in other places. The measurement rule, too, is concerned, as well as the classification; yacht built to a rule that rates by length and sail area is likely to be shut out from a club that rates by length and one-third overhang. In the past, with yachts identified mainly with but one club, the trouble was comparatively small, but it is increasing each year as the racing becomes more extended, and yachts are sold from one port to another. Not only is a uniform system needed, but it must be the very best possible for the development of the perfect yacht.

The system of measurement by length and sail area has made great progress within the past six years; it has driven out the old rating by length alone, and in somewhat different forms it is now adopted by the leading yacht clubs of the world. While open to some objections it is by far the most practical method yet devised, and it will probably be a very long time before anything radically different and at the same time better will be laid before yachtsmen. This rule is extending every year and is likely soon to be generally adopted in principle, but the two questions of detail, on which the results depend, are still unsettled. The first of these is how to measure the sail accurately, a somewhat difficult matter, but capable of fairly satisfactory solution when once thoroughly studied. The second and more important point is the ratio that sail area should bear to the length. The clubs have differed on this point and various proportions are now in use, but of late the opinion has been very generally advanced that the rule of the New York Y. C. does not tax sail heavy enough. Mr. Burgess has declared himself of this opinion and the Eastern Y. C. have just backed him up by abandoning the New York Y. C. rule for that adopted in 1883 by the Seawanhaka C. Y. C. A look at the spars of the new yachts will show that the step is in the right direction, the only question being whether it goes far enough, and we hold, with many competent yachtsmen, that it does not; that a still heavier tax on sail would give a yacht of at least the same speed and internal accommodation and less costly to build and run. The step from Galatea to Volunteer is a big one, from 15ft. beam to 23ft. 3in., and though the wide boat has been proved the better of the two, it has not yet been proved or even intimated that she is the best boat possible. Thistle, indeed, with all her shortcomings, shows what may be done on more moderate proportions in the way of accomodation and general good qualities.

With all the good points of the new type the possibilities are not a little alarming, in each new boat is seen larger spars, while the displacement of some these so-called sloops is already far in excess of anything yet seen in the cutters of similar length; and yet no man can say where under the present rules the end will be reached. Certainly the cost of this type, both in building and running, has already reached the limit; while, however fast it may be, the question of its seagoing qualities is as yet hardly broached. As matters stand now, however, many of these boats will be built with further increase of sail and displacemeut. They may prove all their friends expect or they may not; but before it is too late, before vested interests make a change impossible, the question of the best type to encourage, and the best rule by which it may be done, should be determined as nearly as possible.

Such a task as this can only be properly handled by a national association representing the different yachting interests and numbering in its council the wisest and most progressive of American yachtsmen. The need of such a body has long been felt and steps have been taken in the past toward its formation, but all without avail. Each year, however, with the growth of yachting, it becomes more and more evident that this growth must be properly governed and directed. The work to be done is plain enough, a permanent system of classes must be laid down, covering all sizes of yachts from the smallest upward; a single rule of measurement must be adopted that will directly foster types that, first being safe, shall possess a maximum of speed and accommodation with a minimum of cost; a thorough system of racing rules must be compiled, in such form that they may be adapted to all American clubs; a body must be provided to decide all questions arising under the rules on appeal from the decisions of the club committees; and most of all it must fuse into one harmonious and disciplined body the many conflicting elements that are now found in American yachting, it must give to it a backbone and a character, and it must lay down a definite and progressive policy for the future.

The desirability of such a body is beyond question, but the only doubt is whether it is yet practicable; whether the time is yet ripe for the serious attempt to establish an American Yacht Racing Association? The time has come when it is badly needed, but it is by no means certain that it can be permanently organized. In addition to the difficulty which always exists of awakening the average club member to an interest in anything which does not directly affect his own boat, there are three serious obstacles in the way: the conservative yachtsmen who are directly opposed to any change or improvement, the jealousy existing between the yacht clubs themselves, and the indifference of the larger clubs, as well as the owners of large boats, to the interests of the smaller clubs and of small craft generally. The first obstacle is becoming smaller each year, as fresh recruits are enlisted in the fleet and the real aims and requirements are better understood, and it must ultimately disappear before the advance of knowledge. The second obstacle has been in the past, and still is, a serious one; and has made itself felt whenever any combination has been attempted. There are some clubs whose jealousy of their supposed importance leads them to oppose any movement originating outside of themselves, and in most cases in the past they have been successful. Fortunately the number of thinking and intelligent yachtsmen is increasing, their influence is already strongly felt in many clubs, and these clubs stand ready to back the effort for improvement as soon as it is fairly started. Once the fight is begun, it will easily be seen who are working for the common good and who for any special club or faction, and if the movement be properly organized and presented to the great body of yachtsmen, no single club will be powerful enough to oppose it from mere selfish motives.

With this removed it might be possible to establish an association of the larger clubs, that would do much for yachting, but still would leave the smaller clubs to shift for themselves, as at present. There has always been a disposition on the part of the large clubs to ignore the small ones as of no importance, and to look only after the interests of the large craft; but if a truly national association is to be formed, it must be on no such basis as this. There is really no opposition, no clashing of interests, between the large and small craft; they can live and flourish together, the smaller even aiding the large, but many clubs and yachtsmen have not been disposed to take this view, they look upon the small craft as beneath their notice. In a complete and comprehensive scheme of national yachting the small craft must be at least as important as the large ones, it is in them that are directly and personally interested the great body of yachtsmen, and in them that a very large part of the cruising and racing is done. A dozen yachts like Volunteer would not of themselves make a pleasure navy of really national proportions, but they must be accompanied by the smaller craft, whose functions, though apparently insignificant, are just as essential. Of course the racing of yachts above 50 ft. must always be the most prominent feature of yachting, to be encouraged in all ways, and the rules must be suited first to the wants of these boats; but at the same time the small yachts, the clubs in which they are enrolled, and the men who sail them, must be recognized as having rights of their own, and in no way beneath the notice of an association, however large and powerful it may be.

The work to be done we have already outlined; and, while there are many intricate details to be arranged, it is not difficult to say what should be the leading characteristics of a national association. It must be above all devoted to the promotion of American yachting in all localities and including all branches of the sport; its organization must be such that, while laying down certain fixed standards, as before indicated, it shall allow the greatest liberty of action to the clubs composing it in all local matters; and, finally, it must include a legislative and executive body of representative yachtsmen from all classes and sections, which shall consider the best means of advancing a truly national system of yachting, with power to enact and enforce such laws as it deems advisable. The scheme is in no way visionary or Utopian; it has been done for years on the ball field, the cricket ground, the tennis court and in other branches of land sports; there is a national association of amateur oarsmen, a body with recognized rules and laws and with a strong and vigorous policy, which has labored successfully for years for the extension and elevation of rowing; and, last of all, there are the canoeists doing exactly what should be done by yachtsmen. The beginning of the prosperous growth of American canoeing dates from the foundation of the American Canoe Association by thirteen men in 1880, and to-day a common system of rules for building, racing and classing canoes is recognized throughout the United States and Canada. The success of the canoeists is the more remarkable from the fact that it is the work of young men with no experience in rules or racing. Under the rules and the general management of the Association a very large fleet of fine canoes has been built, races are held every week from May to November, and the work of enlisting new men and organizing clubs goes on steadily from year to year. On the other side of the Atlantic there is the Yacht Racing Association of Great Britain as an example of what may be done in yachting itself; a body that is recognized by all the clubs, and whose efforts have done so much to promote harmonious action among yachtsmen and to advance yachting in the British Islands.

If this is practicable abroad, if it can be done in other sports at home, there should be no reason why it is not possible in yachting. The pressing need of such a body is beyond dispute, the good that it might at once accomplish is plain to all; the only question is whether the time has yet come for an earnest effort toward the establishment of an association, or whether the obstacles mentioned are still strong enough to defeat such an effort. If this question were settled favorably there are many who would be ready to push the work. The Seawanhaka C. Y. C. has already started it by the resolution just passed, in which the matter was intrusted to a special committee of active and enterprising yachtsmen, and other clubs are ready to take it up. Whether or no anything will be done at present depends on the different clubs as well as on individual members, as it must be through the latter that the matter is canvassed and discussed in the clubs and in the papers, and the attention of the great majority of yachtsmen called to its importance. The latter task is no easy one, as it is always difficult to awaken in the majority of men any deep interest in abstract principles, or anything that does not immediately concern themselves, but a little well directed missionary work in the clubs and through the press can accomplish a great deal in this direction. In spite of its grand achievements and its present condition, yachting in America is still notably lacking in unity of purpose, in character, and in a definite and progressive policy; with these assured, its growth in the immediate future will be rapid and prosperous to a degree that will leave in the shade even the great progress of the last few years.

DICKENSON'S PATENT SCREW PROPELLER.

THE accompanying illustrations, for which we are indebted to *Engineering*, show a new form of propeller invented by Mr. B. Dickinson. As will be seen, each blade is divided into two or more arms, each of which acts more effectively on the water than the corresponding portions of one solid blade. The different sections are fitted separately to the shaft, so that one may be easily removed or replaced. The wheel shown in Figs. 1 and 2 was lately tested against the one shown in Figs. 3 and 4, being fitted to sister ships, each of 325 tons register. In a trial on the Thames the vessel with the new propeller made the same speed with a greater load at a saving of 11.3 per cent. in coal.

THE DEED OF GIFT AGAIN.

SINCE it became evident some time since that no challenges for the Cup could be had under the new deed of gift and that the action of the New York Y. C., if adhered to, must seriously injure the club in addition to the harm already done by its unsportsmanlike actions, there has been some conjecture as to when and how the club would attempt to remedy its blunder. This was set at rest last week by the following resolution, offered at the club meeting by Fleet Captain Kortright, one of the chief sponsors of the new deed. After letters from the Yacht Racing Association and the Royal London Y. C. condemning the terms of the deed had been read, Mr. Kortright moved as follows:

Whereas, The secretary of this club has received letters dated Nov. 26, 1887, from the Royal London Y. C. and from the Yacht Racing Association, representing the principal yacht clubs of Europe, and dated Feb. 22, 1888, regretting that the terms of the new deed of gift of the America's Cup, presented by Mr. George L. Schuyler, and dated Oct. 28, 1887, are such that foreign vessels are unable to challenge; and

Whereas, In this deed of gift by which the cup is now held by this club, any mutual agreement may be made between the challenged and challenging party; therefore

Resolved, That the terms under which the races between Genesta and Puritan, Galatea and Mayflower and Thistle and Volunteer were sailed are considered satisfactory to the club, and a challenge under these terms would be accepted, but with the positive understanding that if the cup is won by the club challenging, it shall be held under and subject to the full terms of the new deed, dated Oct. 28, 1887, inasmuch as this club believes it to be in the interest of all parties, and the terms of which are distinct, fair and sportsmanlike.

The motion was carried, there being 13 voters at the meeting.

While the offer seems on the face a fair one it by no means settles the main issue of the merits of the present deed of gift, but makes it a matter of chance, a mere toss up, which side shall be favored by the peculiar clauses of that much criticised document. As the resolution reads, the club will accept a challenge from a foreign club under the second deed, all other races to be sailed under the new deed. If, then, a British yacht comes to race next season she has just one chance, if she wins she takes the Cup home under conditions which should make it almost a certainty that it cannot be regained. If on the other hand she loses as in the past, the present obnoxious deed remains in force for all time, or until the New York Y. C. finds another pretext for further departure from the plain intentions of the men who gave the Cup. Most yachtsmen will agree with us that there is very little chance just now of a British yacht coming here with success where Thistle, Galatea and Genesta have failed; a yacht would have to be built, and thus far there is nothing to indicate that the faults of Thistle would be corrected and others perhaps as serious avoided in her, or that she would be able to win from Volunteer if the latter be kept in form, much less from the 90 footer which would be built to take her place as a defender. The challenger must put all his eggs in one basket, with the chance that he may lose them all, and on the other hand a much smaller chance that by one grand stroke he may come out far to windward of his antagonist and hold the Cup under the most favorable terms. This is a sort of juggling which is unworthy of the high office of the America's Cup, bringing it down to a game of toss for best position rather than starting each competitor on precisely the same terms. Whether or no it really represents the sentiment of the New York Y. C. is a difficult matter to decide, as out of a club of some 700 members only 13 who were eligible to vote were at the meeting.

The New York *Herald* of May 21 publishes the following interview with Gen. Paine. The question was asked of him:

"What is your idea of the intention of the New York Club in passing the resolution offering the terms of past years to challengers for the America's Cup?"

"I have not examined it carefully, but should say that it was meant to apply to all challenges until the Cup was won from the club. This action shows that the club adopted the new deed of gift as a protection to the challenger rather than the challenged, for it certainly favors the former, if anything, though fairer all around than the old deed. What was there in the old deed to prevent us from building a 100ft. boat to beat the Thistle or any other challenging craft after we knew her measurements? There was nothing to prevent such a course except the spirit of fair play, and the length provisions were made in the new deed for that reason."

"But the criticism has been made," was suggested, "that the limit was made at 90ft. for single stickers, so as to bar out a possible challenge from a 70ft. cutter?"

"If there was any such idea prevailing I never heard it expressed, but if the new deed practically compels challenges from boats up to the limit of length it does a good thing, for how absurd it would be to see two 70ft. boats racing for the Cup that represented the yachting supremacy of the world when half a dozen boats that could beat either of them were lying at anchor. When countries contest for the championship in any sport they select the best men, and not a second or third class player or athlete. Why, then, in yachting should a second or third class boat be taken when it is not the fastest? You must remember, too, in connection, that the Cup represents more than it did at first, and that since so many races have been sailed for it by the fastest boats the contests in future should also be by the fastest ones."

"It has amused me greatly," continued the General, "to read the criticisms on the deed. It has been attacked on all points, but I have never seen a criticism that did not uphold some portion of it, so that among them all they have sustained the action of the club in every point. I presume this is why the club has made no public reply, and really it has had no need of so doing."

As to the number of challenges that the club will receive under the second deed, the resolutions given indicate that one chance only was to be given. Of course if it is intended to offer the Cup for an indefinite time under the old, with the right for the winner to hold it under the new deed, the offer would be fair enough, but it would indicate that those who manage the New York Y. C. were even more foolish than they have yet shown themselves to be. If, as Gen. Paine states, it is absurd to see 70ft. boats racing for the Cup with a fleet of 90ft. boats at anchor, then the same reasoning must apply to the 90ft. boats. What right has this infallible committee to say that yachts shall stop at that size rather than 100ft. or higher? A few years ago yachtsmen would have opened their eyes at the idea of an 80ft. main boom on a sloop; now the limit of 87ft. has been reached in Volunteer, and no one is able to say that it cannot be exceeded in larger boats and with improved materials and more skillful engineering. There is no doubt that the desirable limit of size has been exceeded, and the practical limit of size, for the present, has been reached in Volunteer; but who can speak positively of the possibilities of the future? Besides, there are the schooners to be taken into account; as a mere spectacle Volunteer is insignificant beside a racing yacht as large as Yampa, how absurd then it is to race for the Cup with yachts of 90ft. and less, when far faster and grander craft are in the fleet. If Gen. Paine is correct in this, if speed is the sole end and object of racing, then it is time that all rules of time allowance be swept away, and a return be made to the good old days when boat raced against boat, when the biggest won, regardless of model. The great aim of yachtsmen for many years has been to eliminate the recognized advantage of mere size, and to make good racing possible in all classes, to promote the sport in all sizes of craft, and not to limit it to a few large vessels owned solely by wealthy men. To this end rules have been devised and improved and allowance tables made up and corrected, the amount of labor expended being something enormous; but if the ideas quoted above are correct, this work has been all in vain. Should such a view prevail it must mean the end of yacht racing as far as sail is concerned; what pleasure can there be in jogging along, in calms part of the time, making at best ten or eleven knots, when one can travel at a speed of twenty-six knots or more, with no care for the wind or calm? How absurd it is to race for a great national trophy in tubs that may lie motionless for hours at the will of the wind, when the whole length of the Sound can be traversed in four or five hours. It is no uncommon thing to waste three days in trying to sail a race of forty miles, when with steam the same distance might easily be covered in an hour and a half.

The inroads of steam on the racing fleet are already so serious as to lead all friends of yacht racing to consider carefully the evil and its remedy, but this will not be found in the exclusive fostering of the largest size of vessels obtainable; rather must it be sought in the promotion of racing in the sizes that are within the reach of yachtsmen of average means.

YACHTING IN JAPAN.

THE Yokohama Sailing Club held its first annual meeting on March 19, 1888, the committee making a very full report, from which we extract the following: "The first and leading idea of the club, that it is 'for the promotion of sailing and sailing races only,' seems thus far to be sufficient to give it life and strength without the necessity of frequent meetings, a club house, or the introduction of any purely social element.

"Notwithstanding the small annual subscription of $2, the large and increasing list of members has provided for the necessary expenses. The membership list now contains eighty-two names, and twenty-eight boats are enrolled on the club's register. Prizes to the amount of $500 have been given for the 15 races sailed.

"Light entrance fees and prizes of small money value, prized only for the honor of winning, called out good entries, and caused keen competition last year and give good promise for the coming season.

"The matter of time allowance is one which, so far as your committee can ascertain, has never in any yacht club been permanently or satisfactorily settled.

"The club's record for the season shows the absolute necessity of dividing the boats into classes, but, so far as time allowance between the various boats of the same class is concerned, the figures are somewhat puzzling, showing, as they do, that in the instances where the smaller boats won, it has generally been without having to take account of their allowance and when the larger craft have won it has usually been by so wide a margin that even double the present allowance to the smaller craft would not alter the result.

"Notwithstanding the somewhat contradictory nature of the club's record your committee are of opinion, from observation of the general working of the 'sail area and length rule,' which in some form is now almost universal, that, as at present adopted, it fails to charge a sufficient penalty for increase in size, especially in the matter of sail area, and we believe that the scale of allowance or the importance of sail area in the formula for rating could be somewhat increased with good results.

"The matter of time allowance and measurement, however, is one of great importance and should be very carefully considered before changing the rules for the coming season."

The club is purely Corinthian, and its great success thus far gives additional evidence of what may be done by the proper encouragement of small craft. This season the following prizes will be offered:

A pennant to be provided for each class, to be held by each successive winner in the regular club races. A cup to be provided for each class, to be known as the "record cup for 1888." In each regular club race the first and second boats in each class to receive respectively, two points, and one point. At the end of the season, but prior to the final club race, the boat in each class having the highest number of points to become the owner of the "record cup" in her class. Any ties in number of record points to be decided by the relative positions of the boats so tieing in the final club race. A cup to be provided for each class, to be known as the "champion cup for 1888." In the final club race of the season only winners of the "champion pennants" to be allowed to enter in Classes A, B, C, and the winner in each class to become the owner of champion cup and pennant in her class. No boat is entitled to win the champion pennant or to receive points for record prize in any but the class she is entitled to enter by her actual waterline length. Course of final race to be decided by the committee.

Two special prizes will be offered this season. First—A copy of the handsomely illustrated work "Small Yachts," by C. P. Kunhardt, for the fastest time over the club course in any club race during the season of 1888. Second—A copy of the illustrated work "Yachts, Boats and Canoes," by C. Stansfield-Hicks, for the second fastest time as above. The conditions are, over the club course

from starting line to finishing line, one round. In case of any race being arranged for more than one round, the separate rounds to be timed for records in this competition. All boats to be rated for this competition by their load waterline length when in sailing trim. The time allowance to be based on the assumption that speeds vary as the square root of lengths and that the highest speed attainable is 1¼ times the square root of length, expressed in knots per hour. Full time allowance in accordance with above formula to be given.

Mr. J. O. Averill, of Brooklyn, a former member of the Atlantic Y. C., is one of the founders and leaders in the club.

SOUTHERN Y. C. REGATTA.

THE Southern Y. C., of New Orleans, sailed its first regatta of the season on May 16, the racing being most successful. The course was 15 miles, three times around a 5-mile triangle, with a fresh southerly wind, the day being fair and warm. The starters were:

CABIN SLOOPS.

Edith, P. Labouisse owner, sailed by Alex. Brewster.....1 35 30
Susie B., C. P. Richardson owner, sailed by S. Gautier 1 32 10
Zoe, R. S. Day owner, sailed by E. O'Brien.....1 32 00

CATBOATS.

Evelyn, Andry Desport owner, sailed by R. Gage.....1 39 50
Dora D., L. C. Wilt owner, sailed by A. Pons.....1 39 10
La Belle, Charles Wilson owner, sailed by Ed Dunham.....1 41 55
Mayflower, Fred Smith owner, sailed by F. Smith 1 39 46
Carrie V., C. Spiler owner, sailed by C. Spiler.....1 41 30

WORKING SCHOONERS.

Emma Hand, J. Kohler owner, sailed by J. Kohler.....1 40 48
Excelsior, L. J. Mestier owner, sailed by E. Barbarin.....1 41 55
Camille, P. F. Nouvet owner, sailed by W. Singleton.....1 41 55
Cireno, Joseph Cireno owner, sailed by J. Cireno.....1 40 48
Harry T. Howard, C. Harvey owner, sailed by S. Roach....1 40 48
F. W. Elmer, C. Christine owner, sailed by C. Christine....1 41 15

The old anchor start was for the first time abandoned by the club, and a start under way substituted, the change being a very marked improvement. The course was a rather trying one for the crews, the legs being so short that sail was constantly shifted. Starting with spinnakers set, the cabin boats made a close race for the first mark, Zoe over the line first, but following Susie B. around the first mark, with Edith last, but on the last leg she took second place. The first round was timed:

Susie B	2 36 12	Carrie V	2 59 00
Edith	2 43 08	Dora D	3 07 20
Zoe	2 44 50	Cireno	3 07 50
Mayflower	2 52 30	La Belle	3 09 30
Evelyn	2 57 00	F. W. Elmer	3 10 30
H. T. Howard	2 57 50	Excelsior	3 12 00
Emma Hand	2 58 20	Camille	3 15 48

On the second round Edith lost a chain plate and withdrew, the times of the others being:

Susie B	3 40 27	Carrie V	4 08 00
Zoe	3 49 30	Dora D	4 13 30
Mayflower	4 01 30	Cireno	4 15 32
Emma Hand	4 03 30	La Belle	4 25 14
Evelyn	4 04 10	F. W. Elmer	4 26 52
H. T. Howard	4 07 00	Excelsior	4 28 01

The last round was timed:

Susie B	4 33 48	Emma Hand	5 08 33
Zoe	4 58 09	H. T. Howard	5 13 33
Mayflower	5 04 42	Dora D	5 19 37
Evelyn	5 06 30	Cireno	5 21 16
Carrie V	5 08 03		

The full times were:

CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Correct'd.
Susie B	1 32 10	4 33 48	3 01 38	3 01 38
Zoe	1 32 00	4 58 00	3 26 09	3 25 15
Edith	1 35 30	Disabled		

WORKING SCHOONERS.

Emma Hand	1 40 48	5 08 33	3 27 45	3 25 15
Excelsior	1 41 55	5 30 50	3 48 55	4 48 55
Camille	1 41 44	Withdrew		
Cereno	1 43 48	5 21 16	3 40 28	3 33 28
H. T. Howard	1 40 48	5 13 33	3 32 45	3 21 15
T. W. Elmer	1 41 15	Withdrew		

CATBOATS.

Carrie V	1 04 50	5 08 43	3 26 40	3 26 33
La Belle	1 41 55	5 37 03	3 40 27	3 44 23
Mayflower	1 39 40	5 04 42	3 55 08	3 23 42
Dora D	1 39 10	5 40 27	3 25 02	3 20 27
Evelyn	1 59 50	5 06 30	3 46 33	3 25 34

Susie B. wins first prize in her class, a handsome set of hand painted china; Mayflower wins first prize $20.00 in her class, with Evelyn second, $5.00; and in the schooner class Harry T. Howard wins first, $50.00, Emma Hand second, $30.00, and Cireno third, $20.00. The judges were Messrs. O. F. Valette, Harry T. Howard and William Walsh. The timers were Messrs. John Hawkins, Harry Bonnabel and James Rea. A hop was held at the club house in the evening. The next regatta will be held on June 5.

ROCHESTER Y. C.—The opening cruise occurs on May 29, the objective point being Sodus Bay. This will also be the first club race of the season as the yachts will race on their way down. At Sodus Bay the Oswego Y. C. will be met and a very pleasant time is anticipated. The time for returning will probably be May 31. As the Rochester Y. C. has now a membership of 150 and a fleet of 40 yachts, a large turnout is expected. Those members who are not attached to any yacht will be placed by Com. Newell on the morning of the cruise. It is hoped that the cutters Madge and Majel, recently bought by the members of the club, will reach here in time to participate in the opening cruise. The yacht Majel, flag-ship of the Rochester Y. C., sailed from Boston on May 5, touching at Hull on 6th, Robinstown on 8th, and after severe storm and fog through 9th, 10th and 11th reached Vineyard Haven at noon, May 12. Touched at New London on 14th, Huntington 16th, arrived at New York on 17th. Reached Albany on 19th, and is now passing through the canal, en route to Oswego. The trip from Boston to New York was very stormy with head winds and fog. Com. Newell, of the Rochester Y. C., was in command; with Vice-Com. Walbridge, Capt. H. S. Mackie, J. G. Cramer and Jno. T. Roberts. The Majel is expected in Oswego by May 24, where she will be met and escorted to Rochester by several of the local yachts.

YACHT RACING IN AUSTRALIA.—We have received the programme of an international regatta to be held in November next at Port Phillip, Melbourne, during the holding of the centennial exhibition there. The harbor of Port Phillip offers excellent water for racing in all sizes of vessels and the programme includes some thirty races, the principal one being open to all yachts, keel or centerboard, the first prize being £500 and a gold anchor valued at 100 guineas. Particulars may be obtained of the secretary of the international regatta committee, Mr. J. C. Snodgrass, Melbourne Australia.

SACHEM AND MARGUERITE.—These two yachts will sail some informal races in Boston Bay shortly, as Mr. Burgess wishes to test the two together.

LAKE Y. R. A.—The annual meeting of the Lake Y. R. A. council was held on May 12 at Kingston, Ont., the following clubs being represented: Toronto Y. C., H. Blake, W. Morse, G. E. Evans; Royal Canadian Y. C., G. Boyd, L. Y. Robertson, R. Myles; Hamilton Y. C., J. Stewart, J. F. Monk; Kingston Y. C., J. B. Carruthers, C. Hamilton, Col. Fairtclough; Belleville Y. C., W. H. Biggar, Hostage; Rochester Y. C., M. Cartwright, C. S. Davis; Oswego Y. C., John T. Mott. The following officers were elected: Pres., Com. Newell, Rochester Y. C.; First Vice-Pres., Com. McGaw, Toronto Y. C.; Second Vice-Pres., Com. Kilvert, Hamilton Y. C.; Hon. Sec.-Treas., Geo. E. Evans (re-elected), Toronto Y. C. The old classification by length and sail area was replaced by length on load waterline only, the clause being as follows: Class 1, over 30ft.; class 2, over 36 to 50ft.; class 3, over 25 to 36ft.; class 4, 25ft. and under. Each yacht will have a fixed number assigned to her to avoid the confusion of new numbers for every race. The round of regattas for 1888 was arranged as follows: Kingston, July 13; Belleville, July 16; Oswego, July 20; Rochester, July 23; Hamilton, July 28; Toronto, July 30; Royal Canadian, July 31.

DELAWARE RIVER.—Messrs. J. H. Gibson and Frank G. Rogers are having built two launches for use on Moosehead Lake. Mr. Gibson's boat, the Susan, is 35ft. 6in. on deck, 30ft. l.w.l., 5ft. 11in. beam extreme, 5ft. 8¼in. beam at l.w.l., with 6 h.p. Shipman engine. The other launch, the Sidney, is 26ft. on deck, 23ft. l.w.l., 5ft. 6in. extreme beam, 5ft. 4½in. at l.w.l. Both boats are fitted with ample air tanks and will have the Buffalo wheel. The builder is Mr. John Becket, who recently purchased the boat houses and boats at Cooper's Point from the estate of the late David Volke, to which will be added a convenient boat shop. Mr. Becket makes steam launches a specialty, although his success as a tuckup builder and in other types of sailboat is well known. He originated the bolt rope measurement, that has proved the best equalizing rule for small boats, and was commended by the FOREST AND STREAM. He has come over to Jersey to stay, and will be an acquisition to the locality. May his tent never blow down.—R. G. W.

CORINTHIAN Y. C.—The third of the spring races of the Corinthian Y. C. took place on May 15 over the club course, starting at 2:48:55 P. M. Eight boats in line. The Keystone, Fitch and Oakdale of the first class, the Item, Wilkins and Russell of the second class, and Cook and Anderson of the third class. Home stakeboat, first round; Fitch, 3:55; Keystone, 3:56:55; Oakdale out of the race, Item, 3:58:30; Wilkins 4:03:05 and went out of the race; Cook, 4:17:50; Russell, 4:32:20 and out; Anderson, 4:40:10 and out. Second round and close: Fitch, 4:50:05; Keystone, 4:51:05; Item, 4:54:20; Cook, 5:26:30. In the second of the spring races which took place on May 1, the Keystone won in the first class by 1m. 11s.; the Wilkins, in the second class by 2m. 5s. and the Anderson in the third class by 4m. 8s. The next race will take place on May 29.

SEAWANHAKA C. Y. C. CRUISE.—The rendezvous for the annual cruise of the Seawanhaka C. Y. C. will be at Oyster Bay, on July 2, the fleet proceeding to Black Rock, New London, Shelter Island, Block Island and Newport, where it will formally disband. The usual Decoration Day sail will take place on the Bay, with a dinner at the club house in the evening.

A SCOTCH YACHT FOR AMERICA.—The 40-ton cutter building by Wm. Fife & Son at Fairlie, is for Mr. Chas. H. Tweed, owner of Shona, cutter. She will be ready in July and will sail across. Capt. Chas. Barr is now in command of Shona, but will go home by steamer and cross in the new boat.

ATLANTIC Y. C.—The annual cruise will begin on July 14. A race from New London to Greenport will be sailed, $500 being appropriated for prizes.

N. R. DAVIS & SONS (Assonet), Freetown, Mass.

The Old "CRIMP," like the Muzzle-Loader, MUST GO.

The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884. MARCH 29TH, 1887.

Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns in all of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

Steam Yachts and Launches;

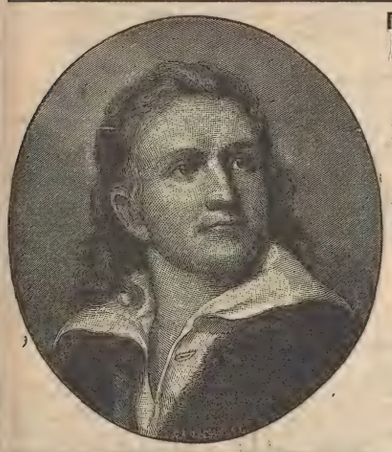
THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.



SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice. —*From Author's Preface.*

CLOTH, 240 PAGES.

Price, postpaid, $3.00.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
LONDON: DAVIES & CO., 1 FINCH LANE.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are wortbless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

The Atlantic Ammunition Company's Amateur Championship Sweepstake Tournament, 1888.

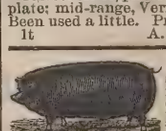
For Sale.

Rangeley Lakes.—"Birch Lodge" For Sale.

This well-known Camp, formerly the property of J. A. L. Whittier, Esq., situated at the head of the UPPER RICHARDSON LAKE, is offered for sale. The buildings comprise a house of eight rooms, kitchen, guide's house, billiard house, boat house, ice house and other smaller buildings, all well built and in excellent order. The camp is well furnished, including beds, bedding, crockery, etc., billiard table, a steam launch, numerous rowboats, and everything necessary for immediate occupancy. This is a particularly favorable opportunity for any fishing club wishing to establish permanent headquarters. For terms and further particulars apply to or address WM. C. CODMAN & J. G. FREEMAN, 40 Kilby street, Boston, Mass.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.



SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

ANSWERS TO CORRESPONDENTS.

DOGS IN COURT.

THE courts are frequently called upon to determine nice questions of law with respect to the rights and wrongs of dogs, dog owners and the public. In all great cities especially the dogs furnish constant cause for litigation. To "let dogs delight to bark and bite" is a wise enough admonition, but the barking and biting must be done with due discretion, else the owner will find himself summoned before the judge, to show cause why the dog should not be done to death, or will perhaps be called upon to defend himself in a suit for damages.

In a recent case in New York, suit was brought by the father of a little girl to recover $5,000 damages for a dog bite. The dog belonged to a physician. The child had been sent to his home on an errand, had been bitten by the dog and confined to her bed six weeks. The doctor claimed that the dog was a quiet, inoffensive, good-natured pet, and had never bitten any one before. It has already been ruled by Chief Judge McAdam, of the General Court of this city, that a dog is entitled to one bite before it can be proven to be vicious. This ruling was cited in the present case, and in default of proof that the doctor's dog had ever bitten anybody before the suit was decided in favor of the defendant.

In another case, just settled in Brooklyn, the defendant, Henry Rusch, was less fortunate; the verdict went against him and he was ordered to pay Louis Koenig, the plaintiff, $345 damages.

Another case of interest was the one decided May 9 in the Seventh District Court, of this city. It appears that when Queen Kapiolani, of the Sandwich Islands, was in this country, she rewarded the services of a colored car porter, Lawrence Richards, by giving him a St. Bernard puppy. Not long ago, the puppy having developed into a big dog, Richards gave it into the charge of an American District Telegraph messenger, Tommy Gannon, to lead down to the steamer Cherokee, and give over to a Mr. Colley, who was a passenger on the vessel, the ultimate destination of the dog being Jacksonville, Fla. Tommy led the dog away; and that was the last heard of him. Richards brought suit against the telegraph company to recover the value of the animal. The question involved was one of proper deliverance by the company. Tommy Gannon's testimony was to the effect that he was not allowed to board the steamer and so he did not deliver the dog into the hands of Colley, but he gave it to one of the waiters on the steamer who assured him that Mr. Colley should receive it. This was held not to have been an adequate fulfilling of the company's obligations, and Justice Monell awarded Richards $125.87.

"WARRENS LEDGER."

WE have received from a number of correspondents, scattered from New Hampshire to Georgia, copies of a circular called "Warren's Ledger." It purports to be sent out by one "W. W. Warren," from No. 1227 Fulton street, Brooklyn. Its publisher advertises for dead birds, birds' nests and white mice. The munificent price of one cent apiece is offered for sparrows, finches and warblers; five cents for bluebirds, redstarts, swallows, wrens, mockingbirds and others; seven cents for Baltimore orioles, bluejays, field larks; and so on up to $25 for a pied duck. No birds will be accepted unless preserved with a special "preserving cotton," which the "Ledger" man will supply in packages at fifty cents each. Birds' nests will bring the enticing reward of one dollar per hundred.

Mr. "Warren" is long on white mice, he offers to sell them at seventy-five cents a pair; and as a seductive bait avers that "during the next few years" he will want to buy 10,000 pairs at fifteen cents a pair. The "Ledger" also heralds the wares of one "Frank B. Churchill," of No. 1237 Bedford avenue, Brooklyn, who has steel traps, jack-knives and police revolvers to dispose of.

The correspondents who have sent us this circular express indignation at the inducements here held out for infractions of the laws protecting song birds. They perhaps picture to themselves a store at 1227 Fulton street into which are brought great numbers of slain songsters. As a matter of fact, however, there is no store there. No. 1227 is an apartment house; no one of the name of "W. W. Warren" lives there. The individual who sends out the "Ledger" presumably does so under a false name. No. 1237 Bedford avenue is a cigar shop. A representative of the FOREST AND STREAM, who called there to discover "Frank B. Churchill," was told that "Churchill" received his mail there, but the individual himself could not be found, and the cigar man refused to divulge his residence.

Messrs. "Warren" and "Churchill" may do an honest business, but their methods are those adopted by sawdust swindlers and others who perpetrate frauds through the mails. Their operations are less likely to diminish the song bird supply than to lessen the cash supply in the pockets of those who send for the "preserving cotton."

THE RIGHT TO DESTROY UNLAWFUL NETS.

IT has been the practice of game constables and the State Fish and Game Protectors to destroy, without process of law, nets found in waters where their use is forbidden. This practice has been in conformity with the statute, which expressly directs them to confiscate the illegal nets, Section 2, Chap. 317, Laws of 1883:

> Any net, pound or other means or device for taking or capturing fish, or whereby they may be taken or captured, set, put, floated, had, found or maintained in or upon any of the waters of this State, or upon the shores of or island in any of the waters of this State, in violation of any existing or hereafter enacted statutes or laws for the protection of fish, is hereby declared to be and is a public nuisance, and may be abated and summarily destroyed by any person, and it shall be the duty of each and every game constable, to seize and remove and forthwith destroy the same; * * * and no action for damages shall lie or be maintained against any person for or on account of any such seizure or destruction.

Under this statute it is quite within bounds to say that tens of thousands of dollars' worth of nets have been destroyed by officials and private individuals. But a case has just been decided at Watertown, which will in all probability put a stop to such summary proceedings. Certain fishermen living on Black River Bay, whose nets had been confiscated by State Fish and Game Protector Wm. N. Steele, brought suit against Steele; and also against Gen. R. U. Sherman, of the Fish Commission, and Dr. E. L. Sargent, President of the Fish and Game Association of Southern Jefferson County, under whose direction Steele had acted.

There were two minor contentions by the plaintiffs, both of which were decided against them, first, that the waters in which the nets had been seized were not included in the law, and second, that the act forbidding fishing in part of the waters of Jefferson county was unconstitutional, inasmuch as it prohibited what had hitherto been a lawful occupation for the benefit of a special class, sportsmen, and not for the public good.

Their third and chief contention, however, was that the statute, which directed the protector to confiscate the nets, was in violation of that provision of the Constitution which forbids the taking of property without due process of law.

On this Judge Williams found for the plaintiffs, holding that the statute is unconstitutional and affords no protection for Steele in making the seizure;, and he holds the defendant for the value of the net, $216, and costs of action. His rulings were:

(1.) That fishing with nets in Black River Bay or any waters mentioned in Chapter 114 of the Laws of 1886 is illegal, and those who violate the law may be indicted and also compelled to pay a penalty of $50 for each offense.

(2.) That no fish or game protector or other persons may summarily seize or destroy nets set in violation of this or any other law, and all statutes directing such seizure and destruction, without hearing or trial in court, are unconstitutional, as directing the taking of property without due process of law.

If the decision of this case shall be sustained, it will prove a serious blow to fish protection in this State. The only practicable way to break up netting in certain lawless communities is to seize and destroy the nets then and there, without waiting for "due process of law." This may not be constitutional, but it is effective, and it saves the fish. If another and less efficient mode of procedure must be followed, the work of the protectors will be impeded, and justice to poachers and pirates will be meted out with slower hand.

No candid man can hesitate, however, when the choice is between speedy punishment of fish netters on the one hand, and on the other the guaranteeing to every man of his constitutional rights. We have always held that there are abundant means of protecting game and fish without violating any principle of law, or infringing on the rights of the humblest member of society.

SNAP SHOTS.

AMONG the personals of a New York daily newspaper recently appeared an advertisement asking the whereabouts of Mr. Geo. H. Sheldon, the Fire Marshal of this city, and prompted by this the reporters at once set to work to unravel another "mysterious disappearance." It was soon discovered, however, that after a term of fifteen years of arduous service as Fire Marshal Mr. Sheldon had sent in his resignation, and to celebrate his release from office had gone off to Nova Scotia on a fishing excursion. It is hard luck if one may not go fishing without being advertised for in the daily papers; but it is not so bad as to be accused of having gone fishing with improper motives. That is what happened Col. Chas. A. Bouton, of this city, against whose property Judge Lawrence granted an attachment the other day on an allegation that he had gone "fishing to avoid his creditors." Col. Bouton promptly explained that he had not gone fishing at all, but had been absent under a subpœna to testify in another case. If incidents of this nature multiply, business men, city officers, plaintiffs, defendants, lawyers and judges will find it to their advantage to establish a public fishing register of some sort in a central point, like the FOREST AND STREAM office, where all individuals recently gone fishing or contemplating going fishing shall be compelled by law to record the fact, to the end that the public mind may be at rest until they turn up again.

The account printed elsewhere of hunting game with a camera in the Yellowstone Park is an exceedingly interesting record of novel experience. If it be a gratification to the hunter after long and arduous pursuit at length to bring down his prize and secure the trophy of skin or antlers, no less satisfaction is that which the amateur photographer experiences when after equally crafty stalking he "shoots" his game and prints on the plate the magic counterfeit of wild life. It is not every sportsman photographer to whom are given such opportunities as those enjoyed by Mr. Hofer, nor is it every one who would have the pluck and perseverance to follow up the game. The man with a gun will walk a week, or a fortnight for that matter, provided there be something to shoot at the end of the trail, but how far the man with a camera will go on the same trail remains to be demonstrated.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—X.

THAT night, Sam, Solon and Joseph were not lulled but tired to sleep by Antoine's interminable rehearsal of Canadian news, in which their chief interest was that it might come to an end. It was very confusing to hear that "Ma brudder-law, he'll come dead wid some small poxes," and then, "Ma brudder-law, he'll goin' bought it farm in T'ree River," and "Ma brudder-law gone work in mill in Mass'chusin," "Ma brudder-law, he'll want it ma fader an' mudder come leeve 'long wid it in Ogdenburg, where he'll go las' fall." But when some question was asked concerning the resurrection and ubiquity of this remarkable person, Antoine cried:

"O sacré ton sac'! Ant you'll s'pose Ah'll gat more as one brudder-law. Bah gosh! Ah'll gat more of it as Ah'll got chillens!" Poor indeed would be the Canuck of mature age who had not at least a dozen such relatives.

Antoine's recital of the various fortunes of his brothers-in-law was by no means finished, when sleep closed the ears of his unwilling listeners and he abruptly ended the first chapter.

The camp was hardly astir next morning, nor Antoine well out of his nest, where incubation of long stories had silently progressed, when he began to cackle over the lives and adventures of his sisters' husbands and his wife's brothers. Even the long-enduring patience of Joseph Hill could not keep that kindly man from uttering a sound that might be taken either as a groan or as a grunt caused by the exertion of stooping to light his pipe.

"I du most wish—I do' know, but I du quite," he said as he arose and fostered with his fingers and attentively regarded the kindling spark, "'at your sisters hedn't never merried or your womern hedn't hed no brothers, an' then you wouldn't ha' ben pestered a-tellin' baout 'em nor we a listenin'."

"It would be conjugal tu my feelin's if they wa'n't quite so numerical," Solon remarked, and when Antoine, quite unabashed by these hints, began to tell of his fifteenth "brudder-law, he'll gettin' 'long fus-rate, he'll gat two twin, t'ree tam," Sam so forgot his usual politeness as to break out:

"Dum yer blasted brother-in-laws! You'll starve us tu death on 'em. We can't live on 'em. Hurry up an' cook the breakfas', an' let them set a spell!"

Whereupon Antoine fell into a fit of sulks which silenced his tongue while it increased the unnecessary banging of the frying-pan and the clattering of the tin dishes. But these were sounds which his companions had long been accustomed to and had learned to philosophically endure. Joseph Hill remarked that "it make him feel 'sif he was to hum an' hed tol' M'ri 'at she couldn't go tu see her mother, er go tu a fun'al ten mild off."

"Did you ever da'st tu?" Sam asked.

"Wal, I da'st tu, but I do' know's I ra'ly ever did," Joseph replied after due consideration, while he poked the fire with a stick that might serve to relight his pipe; "but if I hed, I know th' 'ld ha' ben jes' sech a clatteration, the stove an' things 'ould ha' ketched it."

And Solon, as one having had experience, assented. "Yes, it is the nat'ral natur of most all created creturs tu make a audible noise someway when they're mad—women, Canucks, babies, bulls and the hull toot; if they can't du it vocabulary, they'll hammer an' kick an' carummux. A mud turkle, naow, 'at haint got no visible voice, 'ill cuss jest as wicked, a-snappin' his onspeechless jaws. It seems as 'ough the' wan't nothin' denied the comfort o' cussin', somehow."

Though Antoine vented his ill humor on his utensils, no flavor of it was imparted to the food he prepared, but on the contrary a quality that restored his good nature before the breakfast was half eaten, and its effect on the others was such that they would have listened with patience, if not absorbed interest, to a further account of his Canadian relatives and friends.

This was to be a busy day, for to-morrow they were to break camp and go at least as far as the Falls on their homeward way. For their credit as fishermen and for the pleasure of their friends at home, they must take with them fish enough to give each neighbor a mess. Danvis would expect every man of them to do his duty and bring it—a pickerel.

If the angle alone was depended on, this expectation was unlikely to be realized, for the moods of fish were uncertain. Solon and Joseph had not the acquired skill nor the gift of luck with hook and line, and Sam and Antoine could not fish for all Danvis nor the half of it. Therefore, it was decided that they should this day put their trust in the greater certainties of the silver hook and employ the fishermen who were hauling their nets every day near the mouth of Lewis Creek. Then Sam hoped he might run up that stream and try titles with some of its abundant bass, as he had more than ever wished to do since witnessing the fighting qualities of Pelatiah's Garden Island prize.

As he looked eastward from the top of the bluff beyond the broad creek and above the wall of woods, the first object that met his eye was Shellhouse Mountain, and it struck him that the outline of its long crest, rising from the north end with one short curve and another longer one to the rounded highest point, thence sloping away to the south, greatly resembled a huge fish. Not far away a kingfisher hung steadfast for a moment on vibrant wings above the shallows, then dropped like a plummet, arose almost with the upbursting splash of his plunge, and presently proclaimed his good luck with a metallic clatter of his castanets. A fishhawk, cruising vigilantly above the channel, suddenly swooped and tore from the water a prize so heavy that, in labored retreat, he barely gained the cover of the woods in time to escape the swift onslaught of an eagle, lord paramount of all air, water and earth hereabout.

"S'posin' you tackle Shellhaouse naow," Sam said as the baffled tyrant wheeled sullenly from pursuit, "I ha' no doubt you feel big enough t' think it wouldn't be more'n your sheer if 't was a fish."

Sam accepted these omens as auspicious of a good day's fishing, verifying what he had already felt in his bones and was in haste to be off.

He embarked in his canoe, the others in the scow. Going out of Little Otter and rounding the willowy sandpoint, the two craft fared across the bar toward the seining ground. Near them on the right curved the flat shore, marked here by willows, further on by a pale of rushes, the border of a great marsh that was walled south and east by the ancient forest, by the great water maples and button-woods of Lewis Creek on the north, a bay of rank marsh herbage, with islands of button bush dotting its fresh verdure with clumps of darker green. The water was so shallow, that oars and paddle often touched the bottom, crinkled with a golden net knit by sunlight and the light northern breeze.

Such voyaging was much enjoyed by Solon and Joseph, who had a wholesome dread of deep water. As the latter watched the swarms of minnows flashing their silvery sides and attended by the shadows that swam in a darker school beneath them, slipping through the tangled meshes of sunshine threads, he said: "Wal, naow, I call this a sorter sensible place for ridin' in a boat, where you c'n see what's a goin' on onderneath of you, an' if you take a notion tu, er git tired o' ridin', er your boat gits tu cuttin' up, you c'n jest git right aout anywheres an' go afoot an' go off an' let your durn'd boat cut its carlicues, or if you're a min' tu, take a holt o' the rope an' halter break it till it gits waywise, er lead it ashore. Ef I was a goin' ter hev me a lake made a puppus, I don't b'lieve I'd hev it no deeper nowheres an' this is right here. Ye see, the' couldn't nob'dy git draownded in 't 'thaout they wanted tu bad 'nough tu lay daown. an' the' 'ld be water 'nough fer fish 'at wan't tu big, an' 'nough tu drink, 'thaout 'twas better 'n this is."

"O bah gosh! Zhozeff, what you talk so foolish? "cried Antoine, "what kan' o' lake you s'posed dat was be you'll have it? De feesh be so scare for see you, he aint bit. He cook hees back wid the sun in de summer, in de winter he be freeze wid de ice. Haow you'll s'pose stimboat goin' travelled, if de water so thin he was here? Haow you'll s'pose ma brudder-law comin' from Canada in hees bateau nex' fall for git happle? Hein? He'll comin' 'f he can git ma nudder brudder-law come long of it. Ma fader hees tol' me."

"O, wal, Antwine, the fish 'ould get tame arter a spell an' when the' backs git tew hot they c'ld turn over, an' they 'ld keep good in the ice an' be 's good 's new in the spring. An' I haint got no steamboats nor bateaux, I I like tu know the airth is under me an' the water not so deep 'at like 'nough it's Chiny water on t'other side. But you c'n hev this lake jist ezackly as it is."

"Yes sah! jes' as he was, dis pooty good lake, Ah tol' you. An' sah," swelling with the pride of proprietorship, "ant you'll know de fus' man dat fan dis lake was Ferr-enchman! An' it gat hees name too-day! Champlain! Dat ant Yankee name, don't it?"

"Was he a brother-in-law o' yourn?" Sam asked, being within short earshot.

"No sah, cause he'll ant, cause he'll dead great many while 'go. But probly 'f he'll leeve two t'ree honded year an' see ma seester Marie, he'll was be; O, she'll han'somes, more han'somes as Ursule! Bah gosh! more han'somes Ah was."

"The contower of her complexion an' featur's must be most superguberous," Solon remarked.

"What I'm a wonderin' is," said Sam, "if the' is anybody in Canady 'at haint your brother-in-law, Antwine. Seem's 'ough we'd hear'd of 'nough on 'em tu fill it chuck full, an' some on 'em has got craowded aout int' the States."

"Wal, sah, boy," Antoine answered, dropping his oars and making a pretended computation on his fingers, "Ah'll b'lieve dey was two, prob'ly t'ree. Dere was de priest in Saint Cesare an' ma aunt, and'—Bah gosh! Ah'll freegit who was tudder one. But prob'ly you'll ant b'lieved Ah'll gat some brudder-law! You'll come to Canada 'long to me Ah'll showed you, boy."

"Them 'ere clams," said Joseph, still contemplating the bottom, "must be turrible happy creturs. Never in no hurry, never wantin' to go nowhere, kn•win' 't they couldn't git there 'f they did. Tu hum, wherever they git hove tu, all alone an' never gittin' scolded. I do' know, but it don't seem 's 'ough they could cuss, Solon, 'f they hed 'casion tu."

"You protrude your finger int' the' maouth an' see 'f they don't profane with a audible feelin'. The masculine paower o' their jaws is astonishin'."

"I wonder if the dum'd things is good t' eat," said Joseph, yet interested in the unio with which the sands were populous, and everywhere marked with the tracks of their slow and apparently purposeless travel, "er whether they wasn't made for nothin' only enjoyin' life."

"Ah'll try for heat it, but Ah'll ant never heat it," said Antoine. "He'll tender lak jim-rubbit,* an' ta'se mos' so good. Ah'll bile one of it two nhour, then Ah'll chaw it two nhour, an' bah gosh! he'll ant got no difference Ah can feel of it! Moosrat heat it an' tink dey can' be no better, an' dey 'll said sheephead feesh heat it, but Ah do' know 'f he can brek hees shuck, me. He can have it he 'll want it. Ah 'll ant quarly for heem wid it. Here we 'll was!"

The scow swept prostrate the rushes and made a landing that it might feel at home in, the canoe was beached alongside and the party landed. Before them a long incurved beach stretched away to the north, ending at a rocky point. The waves of immemorial years had thrown up the sand into a low breastwork that resisted now their own assaults on the marsh behind it, wherein flourished a rank growth of rushes, sedges and other aquatic plants, nourished by the undisturbed muck of its own decay. So close along the waterline that their wave-washed roots were spread like a tangled net upon the sand stood an irregular row of great water maples with tower-like trunks, buttressed, loop-holed, mossed and lichened by age, scarred by the battering rams of ice that the lake had hurled against them, with tops wind-torn and decaying, but yet sending up new smooth trunks and abroad with youthful vigor a graceful ramage of branches and fresh leafage as if they might endure for a thousand years. They are gone, now, and their ancient sites are marked only by rotting stumps on the barren unshaded shore. A meaner and deadlier foe than time or wind or waves has sapped their foundations, and years ago they were peddled out at so much a cord by their avaricious owner, who begrudged even the sands the shadow of a tree.

There were two gangs of seiners on the beach. The three men composing one gang were Canadians, those of the other Sam at once recognized as his unpleasant Garden Island acquaintances, who it would seem had not yet unearthed Arnold's hidden treasure or were masking their new opulence with this humble avocation. However it might be, he had no desire for further intercourse with them, and he and his party at once began negotiations with Antoine's compatriots.

Their chief was an old fellow of large build of greatest dimensions at the hips, tapering thence upward to his ears and downward to his bare feet. It was from the interior of this widest region, apparently, that his broken English was laboriously upheaved to the surface with intermittent guttural grunts. His face bore a grim expression of good nature and also a pock-marked red nose that much resembled in shape and color an immense strawberry. His younger assistants, who were clearing the net of sticks, weeds and clams and folding it on the broad stern of their scow, appeared to be his nephews, for they frequently addressed him as Onc' Theophile.

"Haow de du?" Sam saluted him.

"Ough! How do," Uncle Theophile grunted in labored response and then glibly gave in French an order to his nephew.

"Hevin' any luck to-day?" Sam inquired with an assumed languor of interest.

"Make, ough, one haul, ough; gat dat," Uncle Theophile answered, pointing to a bushel basket half full of pike-perch and pickerel.

"Wal, that 'll du tol'lable well" Sam said after tilting the basket till some of the bottom fish were exposed and critically examining the gaping mess, "haow much be you goin' tu tax us for, wal, say four haul?"

"Ough, twanty-fav cen' haul," Theophile answered, coiling the elm-bark seine ropes on the beach, "fo' haul, ough, dollar."

"Prehaps," said Solon, "'at them other angulars aout yunder haint so pecuniary in the' charges. Le's go an' see them."

Theophile comprehended the spirit, if not the matter of the proposal.

"Hol' John, ough, ov' dar, hees seine, ough, gat more hol,' ough, he was. He ant, ough, so longue ma seine, ough, more as half."

"Dum him! We do' want nuthin' tu du wi' him," said Sam, decidedly. "He's the chap 'at was goin' tu tax me an' Peltier tew dollars for rowin' on us over from the islan'. I druther not hev no fish 'an tu hire him."

It is not to be supposed that Antoine had been silent so long. On the contrary, he had borne well his part in an incessant interchange of French gabble with Theophile and his nephews, who no doubt were now informed of the recent discovery of his father, and to such extent as the time had permitted, of the fortunes of his brothers-in-law.

"Dese mans tol' me," he said to his companions at the end of a fresh outburst of jabber and gesticulation, "'f Ah'll helped it, dey'll give us fo' haul for eighty cen'."

"All right!" said Sam, "go ahead." And the nephews, shoving off the scow, clambered on board, one taking the oars, the other tending the seine.

They headed toward what was now an islet, though in lowest water a peninsula, lying parallel with and a hundred yards from the beach, an incline of smooth rock on this side, on the other a jagged, low escarpment, nourishing above high waterline some scant herbage, a few storm-beaten oaks and scrubby cedars. Antoine seemed to think that the service he was to render was that of chief director, and began to shout orders to the young fellows in the boat, and issue some in a lower voice to old Theophile, and though no attention was paid to them, continued to do so with no abatement of the idea that all depended on him.

The boat's course was now changed and began to describe a long curve, while the net was slowly cast out astern till the last "tommy-stick"—as the staves that spread the ends of the seine were named—went overboard with a louder splash. Then the scow headed for the beach, trailing out the bark rope till she grounded, and the crew tumbling out, began to haul on it. Antoine, now an obedient assistant, hauled with Theophile on the other rope, while the old man gave out concise orders.

"Tirer! Tirer!" or "Doucement! Douce—ment! Tirer pas ça vite!" as occasion required.

Presently the tops of the tommy-sticks appeared at the ends of the approaching curve of floats that rippled the water with a hundred wakes, and then as they climbed the long slant of the bottom and showed half their length inclined inward, one of the nephews dashed out and gave the stick at their end its proper outward pitch, while Antoine in unquestioning response to Uncle Theophile's command, waded out mid-leg deep to perform the same office for theirs.

The water inside the net was now boiling with struggling fish and the ropes were tossed with frequent splashes to frighten them back within the narrowing barrier, over which now and then some desperate captive would leap and regain freedom. Sam thought that in these instantaneous flashes of gleaming scales and glistening water drops he recognized the forms of bass, and could not help feeling glad that such gallant fish had escaped ignominious capture. But even his love of fair play could not withstand the excitement of so good a haul, and now that the ends of the net were landed and it was hauled steadily in till the bellying bag stranded its writhing and gasping burden, he was as busy as the others tossing out pike-perch, pickerel, bass, suckers, mullet, perch and sunfish that glittered on the gray sand in a great heap of mother-of-pearl, emerald, silver and gold.

"Dar, seh!" said Antoine, proudly, when the net was emptied, "ant Ah'll mek it pooty good hauls? Bah gosh! Ah'll de boy can ketch the feesh ev'ree way Ah'll man' to ketched it! De hookanline, de spear, de nets, Ah'll gat no different of it me!"

Though no one else claimed the credit or even a share of it, all were much gratified by the successful haul except the Canadians who had really made it. They seemed to feel no pride in it, but rather to begrudge having given their patrons so much for their money, and went sullenly about clearing and making ready the net.

"What's the matter ails your friends, Antoine?" Sam asked, noticing their sour looks.

"Wal, seh, Sam, Ah do' know 'f prob'ly it ant mad 'cause Ah'll ketched more feesh he was."

"Like 'nough; I never thought on't, though."

"But Ah'll ant to blem 'f Ah'll know more as he was, ant it? Dat was the way Ah'll was be mek, 'sides leetly maght Ah'll was larn."

A lumber wagon, whose jolting course across the fields had for some time been heard, now appeared, grinding its

*India rubber.

slow way over the sand to them. It was freighted with half a dozen back-countrymen eager for fish, who, seeing this seine employed, halted near the treasure-seekers and began negotiations with them. These were presently seen preparing to make a haul, while the new-comers unhitched their horses and fastened them to the hinder end of the wagon to eat their bait of hay in the shadow of the maples. This acquisition of patronage by their rivals further increased the ill-humor of the Canadians, and the sight of a big jug taken from the wagon and passed around, added bitterness to their feelings.

"I tell ye what," said Joseph, thirstily watching the passage of the social stoneware, "them ere fellers knows haow tu go a fishin'."

"Shaw!" said Sam, "nob'dy never fished no better nor hunted no better for bein' full o' sperrits."

"But," argued Joseph, "if they don't hev no luck, they c'n hev some fun, an' they're kinder prepared to stan' disapp'intment, seems 's 'ough they wus. An' jes' look at that ere feller 'at's got a holt on't naow, the one 'at fetched you an' Peltier f'm the islan', haint he? Sam Hill! won't he never le' go on't? I'll bate his mother never licked him for a holdin' his breath. I don't b'lieve she ever did, not so much as she'd orter anyway. It's a dum'd pity to waste good sperrits a wettin' sech mean sile. I c'n smell it clearn here an' it's ol' Medfo'd!" he said sorrowfully as he sniffed the favoring north breeze.

"Oh! don't feel so bad, Joseph," said Sam, "like 'nough 't ain't nothin' but water arter all or mebby cider."

"The' haint nob'dy dum'd fool 'nough tu fetch water tu the lake, I don't b'lieve, an' if it's cider thet's better'n water, the bes' way o' keepin' apples the' is. But 't ain't, it smells julluck a mad bumble bee."

"An' it's wus 'n a nest full o' mad bumble bees when it gits top on ye," said Sam, whose poor father had suffered much from the touch of that which biteth like a serpent and stingeth like an adder.

"Bah gosh!" cried Antoine, who had been intently scrutinizing the new arrival. "Ah'll bet you head dat was Onc' Lasha hol' Bob hawse! Yes seh! An' dat beeg feller was dat long John Dark dat bought it w'en Ah'll want bought it. Hoorah, Zhozeff, le's we'll go visit dat hol' hawse. Ah do' know 'f he'll ant give us introuduce of dat jawg prob'ly, hein!"

"Wal, ta' keer 'at you don't get tu well 'quainted. An' naow you c'n go ahead an' git your tother hauls, an' I'll gwup this ere crik an' see 'f I c'n ketch a bass. I'm spilin' for a tussle wi' one on 'em."

"Wal, naow, Samwell," said Joseph, "seems 's 'ough you was foolish tu go off an' leave sech fishin' 's this for the onsartinty o' not ketchin' nothin'. It don't seem 's 'ough you c'ld find no better fun 'n this."

"It's a good 'nough way tu get fish, but 't aint no gret fun fur me. The best part o' fishin' is lackin'. The' haint no fair play 'baout it, an' it makes me feel kinder mean."

"Wal, naow, Samwell," said Joseph, pondering, while he searched for his pipe in every pocket but the one it was in, "seems 's 'ough 't I was a fish, an' it mos' seems 's 'ough I was a drinkin' nothin' but water, 'at I'd livser be swep' up kinder easy in a net wi' a hull lot for comp'ny in misery an' tu be fooled wi' a worm or suthin' wi' a hook inside on't, an' then hev my jaw half tore off, julluck ol' Darkter Wood pullin' a back tooth."

"I wan't considerin' on't f'm the fish side," said Sam, "but fish does hev jes' much fun a foolin' us as we du them. Why I've seen an ol' Beav' Medder traout laugh clean tu the end of his tail when he'd peeled my hook bare naked, an' I b'lieve them 'ere 'Swagos is up tu jes' 's much fun 's a traout is."

"O, wal," said Joseph, who, having found his pipe and got it between his teeth, was now exploring his pockets with both hands for his tobacco, "if you're only a goin' —Where in Sam Hill is my terbarker?—goin' to give the fish some fun, go ahead; I guess they'll hev more'n you will, but I d' know, mebby they won't be there. They never be when I go a fishin' erless they stan' off an' gawp like a fif' calf 't haint got no tet."

ROWLAND E. ROBINSON.

THROUGH MIRAMICHI WITH ROD AND RIFLE.—III.

ON the morning of Sept. 1, a sharp thunder storm of the previous day having cooled and cleared to air, a chill nor'wester swept down the river.

Though the river dwindled much in size, it grew very pretty above, no recent fires having defaced the green woods. We passed several high blue hills or mountains, one—Spider Mountain—being very beautifully shaped—a symmetrical, ideal mountain.

Fifteen miles above Portage Brook we pitched our tent on a grassy plateau, lit a roaring fire—for there was a most unreasonable frostiness in the air—and cooked our primitive supper. About 7 P. M., Joe, having made a horn of birch bark, gave a ringing call for moose. The other man went on chopping; in fact, we violated all rules of the art of calling, we should have lit no fire, and should have made not the least noise; but we really did not expect to meet moose till we got nearer the lakes and were therefore exceedingly careless and off our guard. Joe had thrown down his horn and gone into the woods. Suddenly I heard a splash and crackling of limbs, then a low *waugh, waugh*, from a bull moose, much like the noise of a bullfrog. But the scent of our fire, or the noise we had been making, made him wary. No coaxing of Joe's could draw him nearer, although we heard him move about once or twice. He was wading in a small brook that joined the river opposite our tent, and was hidden from our view by a thick growth of small trees. About 12:30 Peter awoke us to say that he heard great splashes. This no doubt was our moose moving off, for in the morning we found his tracks going up the brook. His track prints were enormous; he must have been a monster moose.

Calling through a birch bark horn or funnel is an imitation of the voice of the cow. First the call begins with a sort of cough, then it rises loud and sonorous, falls again in cadence, becomes a subdued roar, again rises strong and full, and ends abruptly. When a full moon is rising over the lovely wilderness, and the white mists are curling upward from meadow and river, and a solemn silence has settled over the forest, to hear the stillness broken by this lone Juliet, reaching after the highest expression of feeling and passion that she knows of, sending her trembling tones vibrating through the clear air, plaintive and expressive, fairly ringing across the low cedar swamps—is something which when once heard must be ever after remembered. The effect is much heightened when one is fortunate enough to witness the response of the advancing bull. The only reply to the imploring invitation he designs to make is a brusque *waugh, waugh*, as much as to say "*Pooh, pooh*, I am coming. Don't make such fuss and feathers." He will not make himself too cheap by coming up all of a sudden, but stops ever and anon to give evidence of his superior strength and prowess, smiting down small trees by rising on his hindlegs and descending with terrific force on his forefeet; or else striking heavily his strong horns against some dead tree. So he saunters leisurely along, doubtless by such rude fashion displaying his regard, exciting boundless admiration in the breast of the patient cow. Only the young bulls come on noiselessly, either because they are afraid of the old bulls catching them and giving "it to them hot," or because they have not a sufficient sense of their value to the gentler sex and are less puffed up with vanity and conceit.

A friend of mine once heard a terrific contest during the night in a small swamp near his tent between two bull moose, dueling for a cow, which stood near waiting the result of the battle, and ready to bestow herself on the conqueror, on the principle that "none but the brave deserve the fair." The swamp was terribly torn up by the conflict; small trees were uprooted and the yielding moss furrowed as if by the plow. At last one bull considered that he had had enough, and slipped away defeated, but with regret I have to record that the brave victor did not live long to enjoy the spouse he had fairly won, but fell a victim to my friend's unerring bullet. Sometimes two bulls become tangled by the horns when fighting and both die a miserable death. It is a remarkable fact that if they hear a call miles away but once they can guide themselves in a straight line to the spot with unfailing accuracy.

On the morning of Sept. 2 we struck camp early and proceeded up the river, that here became very small and shallow. Clothed with long luxurious wild grasses that lined the edge, and with copses of hazel and alder bushes that reached out their branches to kiss the water lovingly, the banks often resembled reaches of the Upper Thames; but when the eye is withdrawn from the rich grasses and bosky masses on the shores to rest on the stern, rugged hills that rise in the background, the illusion is abruptly dispelled.

A few hundred yards from the camp the canoe swept suddenly round a sharp curve in the river, when lo! about 150yds. ahead of us on a small grassy island that marked the end of a lovely little reach of river, standing in the rank grass, was revealed an enormous cow moose, gazing at us in a beautiful attitude of attention. Startled at the sudden apparition of the canoe the animal had reared her head to attention, and plucked up her long ears, looking truly graceful and majestic, the outline of the form clearly defined against a background of thick bushes.

Joe and Peter stood as if turned to stone, watching the huge beast. Not a syllable was uttered between us. I raised the rifle and fired. My bullet fell rather low and went through the lungs. Tracking the wounded animal for about half a mile we found her in a dying state on the steep side of a beautifully wooded mountain. We found the flesh in fine condition, and stripping off the hide, which was in very good form, left the useless portions for the delectation of the bears, evidence of whose presence in large numbers appeared around us by many signs.

We reached the lakes without further adventures, killing a few partridges and some bluewing and shield ducks as we went along. At the outlet of the Upper Lake we caught a number of silvery-sided trout, very sweet eating, very much superior in flavor to the large and coarse trout we had been killing below.

The lakes, with the exception of the Upper Lake, which is environed by a fine sierra of well-wooded hills, would not strike Nova Scotians as remarkably beautiful, for they are much inferior to their famous Rosignol chain of lakes in Queen's county and dozens of others that could be named; but they are rather celebrated in this part of New Brunswick. They are well wooded to the very brink with a tangled, impenetrable forest, and are much resorted to by wildfowl. We saw numbers of hawks and one golden eagle on the wing, and in the evening found our camp visited by two immense, long-eared owls. Musquash abounded and plashed about the lakes in great numbers. Their houses, shaped like domes, were very numerous on the shallow reed marshes.

Whenever a camp was made here the familiar moose birds or the Canadian jays flitted around us in great numbers and acted as scavengers, gleaning up the scraps of meat that were thrown out. They have remarkable powers of mocking or imitating almost any noise. They frequently whistle like a man, and mock all the forest songsters in turn. Joe says if a dog is starving he will not touch their flesh however temptingly cooked—on the principle perhaps that one of the scavenger tribe is sacred to the rest.

On returning down stream we disturbed a bear in a small cove or bayou, and heard him go splashing away, but were too late to get a shot at him.

Visiting our bear trap a mile below our camp, we were delighted to find a fine bear lying prone in it, lately dead. The coat was in fair order for this season of the year, but does not assume that glossy rich appearance till the cold weather sets in, when the fur is of much greater length. The carcass was very fat, and was much enjoyed by the Indians, but I did not attempt it. The skin Joe dried by stretching with cords on a frame of stakes. We found our provisions all right, but a bear had visited the tent and eaten some large trout we had left drying on a cross pole, bearing the supports quite to the ground by his heavy weight. Doubtless in another night or two he would have summoned up sufficient courage to break into the tent.

The episode gave another instance of Joe's superstition. He had told me that morning he knew we would get some heavy game to-day. "Why, Joe?" "Oh, sir, I felt my back ache this morning and twitch, so I knew I was going to carry a heavy load of meat. Besides that I stepped on a stone that quivered and shook under my foot, and that is a sure sign of game."

We also had more bear stories of course. An Indian without a gun was once chased by an infuriated she bear, whose cub he had robbed. His only refuge was a hollow tree, down which he lowered himself with his captive. The old bear descended bear fashion, tail first. The Indian seized her by the stumpy tail, whereupon he was drawn to the top, and giving the bear a thrust off, remained at the summit of the stump, master of the situation.

Joe was once hunting on the Mata-me-din, a tributary of the Restigouche, that defines the boundary line between New Brunswick and Quebec. Now in the former province there is a bounty of $3 for a bear snout, but none in Quebec. Joe had caught an immense bear in a large steel trap by the foot and found him marching around shouldering the pole to which the trap was attatched, biting savagely at the knots and boughs of trees and inflicting terrible wounds on the defenseless wood. Joe knew there was no bounty if he shot him there on the Quebec side, so driving him across the brook he despatched him on New Brunswick soil; an instance of a sudden rise in the value of meat, for the bear by going a few yards raised his price by $3.

Another clever Indian cut off the snouts of two large Newfoundland dogs, and producing them before the magistrate, demanded the bounty money. Being asked for the customary oath he said: "Swear me in Indian, me no understand English well." "All right," said the unsuspecting justice. The wily red man then swore in the Indian tongue that he had killed two large black dogs, and pocketed the coin.

When we returned to camp Joe said, "Everything all right. No Indian devil been here?"

"Indian devil! Joe, what do you mean by that?"

"Oh, sir; sometimes he gets in camp and throws everything in the fire, and breaks up things in the tent. When he goes away sometimes he leaves tracks like a man, sometimes fox, and sometimes lucifee. Once my father said he heard of a man catching him. He had taken a lot of powder wrapped up in birch bark and put it in the fire. When it went off it rolled his eyes round till the whites were out and he could see nothing at all. The man came in and catched him and tied him to a tree outside the camp. Every day he licked him, morning and evening, too. But after seven days Indian devil run away and left tracks like a dozen men."

A veritable Puck indeed. Probably Joe's version of an old nursery tale that Indian mothers tell their children, as English Jack the Giant Killer. Coco-Soo, or Kat-Mous, is the name of the Indian devil, and some such name does duty for the wolverine—an animal now almost extinct. Once he was caught (on the authority of Joe again) by placing a man's hat on a sharp upright stake; leaping down on his supposed victim, he forthwith impaled himself. Sometimes he makes moose meat spoil; he wets the powder in the gun; springs the bear traps; calls up the bull moose by imitating the cow, and then laughs at him. How much these tales remind one of Shakespeare's impish creation.

ARTHUR P. SILVER.

LAKE MISTASSINI.

Editor Forest and Stream:

The negotiations for the settlement of the boundary between Ontario and Quebec, coupled with the action of the Quebec Geographical Society, having aroused public interest in the region beyond the Height of Land and in the true size of Great Lake Mistassini, an arrangement was entered into between the governments of the Dominion and the Province of Quebec, represented by the Geological Survey of the one and the Crown Lands Department of the other, to send out an expedition in 1884 at joint expense, to ascertain the character of the country and to scale the lake.

Mr. John Bignell, a veteran land surveyor and explorer whose life has been almost entirely spent in the woods, was by mutual consent selected as the head of the expedition and formally appointed to the command of the survey of Mistassini. Of those placed under his instructions one was a young man employed by the Geological Survey at Ottawa, who was sent out to make geological observations and collections. This young man was not a surveyor, and therefore, before joining the expedition in its work of exploration he was indentured to Mr. Bignell as a student. I have before me a copy of an official complaint made by the chief of the expedition in which he brings charges against the young geologist of insubordination and disobedience, and of having finally caused the failure of the expedition by his refractory conduct. In endeavoring to rush ahead of his chief while the latter was detained on an ordered survey of the Bersimits, the student lost himself and would undoubtedly have perished but for falling in with a Nascapee Indian named Neposhu, who had come across his tracks while visiting his traps, and knowing him to be out of his course, had followed up and brought him to a halt, while the Indian himself returned to Lake Onishtagan to await the arrival of the main body of the expedition and direct it to the location of the lost and erring one. This incident should be a sufficient warning to deter any inexperienced explorer from attempting to draw the trail that leads to Mistassini, and illustrates the absurdity of depending upon existing plans and maps of the route, all of which were at this in possession of the lost student. The necessary time in looking up and bringing back the geologist and his men occupied a month, during which the stock of provisions came near running out, and the season was so far advanced that the expedition lost the best part of a season's operations. Arrived at Mistassini, Mr. Bignell's student deserted him and returned to Ottawa against his orders, in company with the couriers that were sent back to civilization with dispatches via Lake St. John. He succeeded in his efforts to supplant his chief, and when he returned to Mistassini in the following spring he was armed with a letter of recall for Mr. Bignell, and accompanied by a party of five, having secured instructions to continue himself the survey of the lake.

The apprentice surveyor was none other than Mr. A. P. Low, of Ottawa, and the result of his alleged exploration of Mistassini is the famous Low report and map which has excited so much adverse comment and critisism on the part of all Canadians who have interested themselves in the subject.

From a communication addressed by Mr. Bignell to the Geographical Society of Quebec at the request of some of its members, I have been permitted to extract the following criticism of Mr. Low's report:

"His report that the great lake is about 100 miles long naturally causes great surprise, as it is so entirely at variance with all previously received information on the

subject, notably from Mr. Geo. Burgess, who has been in charge of the Hudson's Bay Company's post there for seven years, and who stated that he had traveled up the lake 150 miles from the post and then he could learn nothing from the Indians as to the distance from that point to the head of the lake except that beyond that 'it was very far,' and also from Mr. William Miller, in 1885, who had then been in charge of the same post for eight years and who stated that he had traveled the lake 120 miles from the post, but could gather no information as to the distance to the head. If report from the men connected with his own expedition can be relied upon, he never went to the head of the great lake at all, but with the remark that he had seen enough of it for his purpose, turned back at a certain point where it narrowed into the deceptive appearance of an entering river, in order to get back to the post in time to catch the Hudson's Bay Company canoes going down by the Rupert's River to Rupert House and thence homeward."

I am prepared to admit that I see no reason why Mr. Low's map should not be tolerably correct so far as it goes, since all south of the lake's discharge by the Rupert River has been previously explored, and it would not be a difficult task, even to a surveyor's apprentice, to complete the scaling of its outline so far as represented by Mr. Low. That he explored no further than the supposed mouths of the apparent entering rivers represented at the extreme north of his plan of the lake, is admitted by those who accompanied him.

Now either the so-called Great Mistassini is altogether a myth, or this lake depicted by Mr. Low is simply one of its bays, connected with it by the supposed entering river —a narrow strait some three four miles or so in length. Without a definite knowledge of what lies beyond the northern limit of Mr. Low's map, I have no intention of imitating him in either fixing or questioning an imaginary limit for the lake. It is his dogmatic positiveness about a great uncertainty, that all who have interested themselves in the subject are justified in protesting against. This Mistassini problem has engaged the earnest attention of a number of foremost Canadians, and it may be restful to some of your correspondents who have insinuated somewhat in their regard, to know that none of them own building lots upon its shores or have taken stock in any mammoth hotel scheme depending for success upon the booming of its size and surroundings. It matters not to them, individually, whether the lake be 100 or 300 miles is length, but they are desirous of seeing the enigma solved, once for all, and are not likely to be deterred from their object by anything of so unsatisfying a character as Mr. Low's report and accompanying map.

A Mr. Lachanel, who was for twenty-three years employed by the Hudson's Bay Company at Mistassini, recently drew a rough sketch of the lake for a friend of mine, the southerly and smaller portion of which corresponded somewhat in shape with Mr. Low's map. Just where the latter terminates at the north he drew a narrow neck or straits, and then spread out therefrom the lines representing the two sides of an immense body of water, which stretches away, according to his story, beyond his knowledge. This corroborates the prevailing Indian ideas on the subject. It is in keeping with the allegations of Mr. Gregor Burgess and of Mr. William Miller, both well qualified and reliable authorities. Against such testimony we have that of Mr. Low. Is it surprising that we are not inclined to accept his report as a final and satisfactory solution of the mystery?

I have too high an opinion of the intelligence of your American readers to suppose that they can be satisfied with the speculative and imaginative reports concerning Mistassini which are so unsatisfying to the governmental, scientific and geographical authorities of our Province.

One word more and I will pull up. Mr. Hallock has described the supposed route to Mistassini and Mr. Low has placed his seal of approval upon the directions given. Mr. Hallock has never been to Mistassini, and Mr. Low lost himself on the way thither. Those who ambition a similar experience have the route very clearly pointed out for them. But conversant as those gentlemen may be with the vast sweep of forest wilderness lying between Mistassini and Lake St. John, they are playing the part of blind guides to those whom they are directing from Quebec to Lake St. John. In apparent ignorance of the fact that the whole journey may be made to the very shores of the lake in a Pullman car in some ten to twelve hours of time, Mr. Hallock describes the old-time route by way of the Saguenay River to Chicontimi, and thence by tedious overland drives to Roberval, involving a trip of two or three days. And Mr. Low approves the directions given by Mr. Hallock! E. T. D. CHAMBERS.

QUEBEC, May 18.

Natural History.

THE AUDUBON MONUMENT.

A MEETING of the several committees who have in charge the soliciting subscriptions for the Audubon Monument Fund was held Tuesday May 22, at Columbia College. Reports of progress were made, and the various collections handed over to the General Treasurer, Dr. N. L. Britton. Among the amounts reported were the following:

For the FOREST AND STREAM Sportsmen's Fund:		
FOREST AND STREAM	$25 00	
E. D. Ward	2 00	
Frank L. Page	2 00	
Peter G. Lamont	2 00	
L. H. North	2 00	
Isaac McLellan	2 00	
S. C. Clark	1 00	
Sportsman	1 00	
An Admirer	1 00	$38 00
For the AUDUBON SOCIETY Fund:		
Forest and Stream Publishing Company for the Audubon Society	$25 00	
Miss Florence A. Merriam	5 00	
Mrs. E. S. Foster	1 00	
Mrs. Henry N. Dodge	1 00	
Miss Mary D. Dodge	50	
Mrs. Sophia Hemp	25	
Earle A. Brooks	25	$33 00
Total held by FOREST AND STREAM for Audubon Monument		$71 00

The A. O. U. Committee reports subscriptions for April and May to date amounting to $65, less $5.87 for expenses, $58.23.

SOME AUTUMN BIRDS OF THE ST. MARY'S LAKE REGION.

BY GEO. BIRD GRINNELL.

A FEW words may be necessary to explain the fragmentary character of these notes. The trip on which they were chiefly made extended through October and the first half of November, 1887, a season which, in this region, is the beginning of winter. All the summer residents had departed, and only the latest migrants and the winter birds remained. The excursion was in no sense a collecting trip, and only the more conspicuous species were noted. No species is positively mentioned in the list which was not identified to my satisfaction. These notes are of value only as indicating the ornithological possibilities of the region, which will be seen to be great, and it is with the hope of inducing some other to attempt the work which I myself may not be able to undertake next season that I here put them on record.

My most cordial thanks are due to Dr. J. C. Merrill, U. S. A., who has made an especial study of the birds of Montana, for valuable hints and assistance in the preparation of this list.

Colymbus auritus—Eared Grebe.—This species was quite abundant on the St. Mary's Lakes, and on the little prairie lakes about the heads of Milk River in October.

Colymbus nigricollis californicus—Horned Grebe.—Abundant with the last, and, like it, had lost its breeding dress.

Urinator imber—Great Northern Diver.—Several were seen, and they were frequently heard, on the Lower St. Mary's Lake.

Sterna— —.—A tern which was probably *S. hirundo* or *S. fosteri*, was abundant on the Lower St. Mary's Lake during September and October. They were feeding on the young whitefish, and were busy over the shallows near the Inlet, where a considerable number were windbound for several days. I was unable to secure a specimen for examination, and so cannot state the species.

Larus delawarensis, Ord.—Ring-billed Gull.—This species was seen on several occasions on the Lower Lake during the month of September, 1885, and October, 1887, in company with the terns mentioned above, resorting to the same sandbars to rest, and mingling with the smaller birds most harmoniously.

Phalacrocorax dilophus—Cormorant.—A single individual was observed in the Upper Lake below the Narrows, Oct. 15, 1887.

Pelecanus erythrorhynchos—White Pelican.—But one individual seen. This was at Pike Lake, a warm and muddy, though deep, prairie lake, near the foot of Chief Mountain. It came in from the north just before sunset on the evening of Oct. 11, and passed the night on the lake.

Lophodytes cucullatus—Hooded Merganser.—Two were killed on Cut Bank, near the crossing at Indian John's, by Mr. J. W. Schultz, Sept. 1, 1885.

Merganser serrator—Red-breasted Merganser.—This species was abundant, with many other species of waterfowl, on the Lower Lake late in October last.

Merganser americanus—Goosander.—Seen once or twice on the Lower Lake in October, 1887.

Anas boschas—Mallard.—Extremely abundant throughout the whole region traversed. Found feeding in open water late in November, and no doubt a few remain throughout the winter on mountain streams.

Anas discors—Blue-winged Teal.—Abundant on lower lake in September, but here as elsewhere one of the earliest among the migrants.

Anas carolinensis—Green-winged Teal.—Abundant everywhere in open water up to November. In August, 1875, I found this species breeding in considerable numbers on Smith's River, Montana, the young, probably a second brood, being then only a few days old. The southernmost point at which I have met with this bird breeding was on Michigan Creek, in North Park, Colorado, where in 1879 I saw a female with a brood of downy young.

Anas strepera—Gadwall.—Abundant on the shallow prairie lakes on Milk River Ridge and to the northward. Undoubtedly breeds here, as it certainly does further to the eastward in Montana, and to the south in Wyoming.

Anas americana—Widgeon.—Abundant through September and October, but departing for the south before the first of November.

Spatula clypeata—Shoveller.—Very abundant, associated with the teal, widgeons, mallards and gadwalls on the prairie lakes, and on the lower St. Mary's. Leaves for the south late in October.

Dafila acuta—Pintail.—Seen in small numbers on the prairie lakes on Milk River Ridge. Not nearly so abundant as the other fresh-water ducks.

Aythya americana—Redhead.—Abundant on the St. Mary's Lakes in October, and according to Mr. J. W. Schultz, always numerous on Duck, or Helen's Lake during the fall migration.

Aythya vallisneria—Canvasback.—I had heard from duck shooters of the occurrence of birds which they supposed were canvasbacks or redheads in this region, but had met with no one who could certainly distinguish between the two species. On the lower St. Mary's Lake during the bitter cold weather of October, 1887, I was able to identify both species in considerable numbers.

Aythya marila nearctica—Scaup Duck.—Abundant on the lower St. Mary's Lake late in October, 1887.

Aythya affinis—Lesser Scaup Duck.—Abundant in October on the prairie lakes, and when these froze up, collecting with the other fowl on the lower St. Mary's.

Glaucionetta——Goldeneye.—Whistlers were abundant on the lower St. Mary's Lake in October, and were among the last of the fowl to leave for the south, but as I was unable to secure a specimen for examination I cannot say whether they were the common goldeneye, or Barrow's, or both.

Charitonetta albeola—Bufflehead.—Very abundant on the St. Mary's Lakes in October, and like the last named species, remaining after most of the other fowl had departed. Coues reports it as nesting along Milk River and its tributaries, and in the summer of 1875 I found young unable to fly in Deep Creek or Smith's River, not far from old Camp Baker, Montana, about latitude 47°.

Erismatura rubida—Ruddy Duck.—Very abundant on all lakes of the St. Mary's region in October.

Chen hyperborea—Snow Goose.—Among the many thousands of white geese seen in this region during October, only three specimens were identified as belonging to this species. Though sometimes feeding with the Canada geese and roosting with them on the flats of the lower lakes, these three birds kept by themselves most of the time and fed with the ducks in the shallows where the Inlet enters the lake. They made their appearance October 25 and remained for three days thereafter.

Chen rossii—Ross's Goose.—This species was first seen October 1, migrating in flocks of from twenty to one hundred individuals. They were not at first recognized, but were taken for snow geese. During the march, however, a Blood Indian, who was traveling with us, took a long shot with a rifle at a flock which were feeding on the prairie, and killed one, which I saw toward evening and purchased. I myself saw none at rest, but up to the last of October these birds were constantly passing over the lakes and crossing the mountains on their way south. The direction of their flight was toward Flathead Lake, and it will probably be found that these birds make some stop there on their way south. I believe that there are but two previous Montana records for Ross's goose—Baird, Brewer and Ridgway, "Water Birds," I., p. 446, and *Auk*, III., p. 274. While at Bird's ranch on the South Fork of Milk River, I saw a flock of about thirty of these birds, one of which had a long streamer attached to one of its legs. This was much too thick for a line or rope, and seemed to be a rag or possibly a piece of twisted net, and fluttered in the bird's flight six or eight feet behind it. It looked thicker than the bird's neck, but did not appear to impede its flight at all, though it was last but one of the flock. The cry of the wavies is very musical, and heard on a still day falling from the sky above gives a very pleasing effect.

We roasted the goose killed by the Indian and found it fat and delicious eating.

Branta canadensis—Canada Goose.—Very abundant at the St. Mary's Lakes all through the month of October. They do not come until the last of September, and some remained into November, when we took our departure. No doubt *hutchinsii* occurs, but I recognized only the larger form.

Olor buccinator—Trumpeter Swan.—Abundant on the lower lakes. The first seen about the middle of October. A large proportion of those observed were evidently young of the year.

Gallinago delicata—Wilson's Snipe.—Two specimens were seen in early October on the Inlet, near the head of Lower Lake.

Dendragapus obscurus richardsonii—Richardson's Dusky Grouse.—Further investigation is needed to determine the relations of *richardsonii* and *obscurus* in this region. I am inclined to think that both occur here, or perhaps a better way to put it is that they intergrade in this region. Abundant.

Dendragapus franklinii—Franklin's Grouse.—Common in the timber throughout this region. This species, like its near relative, the spruce partridge of Canada, is singularly gentle and unsuspicious. It is the "fool hen" of Montana, though in other localities in the West this name is given to other grouse. When alarmed it flies into the branches of a tree and appears to pay little attention to the disturber of its rambles. No doubt it could often be captured by a noose at the end of a short pole, as I have seen *D. canadensis* taken. Its food consists largely of the needles of the pine and spruce.

Bonasa umbellus umbelloides—Gray Ruffed Grouse.—This seemed to be the commoner form about the St. Mary's Lakes. At the same time I saw there ruffed grouse which were as red as any that I have ever seen in the Eastern States. Abundant in the pines and among the quaking aspens down close to the lake shore. In autumn feeds largely on the leaves and berries of the "larbe."

Lagopus leucurus—White-tailed Ptarmigan.—Common high up on the mountains. They were usually seen either close beneath the wall rock above timber-line, or in the "basins" scooped out of the mountain side by the action of water, in which grew low junipers and stunted pines and spruces. Their tracks in the snow and their feathers were more often seen than the birds themselves. Usually they are gentle and unsuspicious, but on one occasion while I was hunting sheep, four of these birds came flying up a little valley and alighted near me; they were unusually wild, and flew, one by one, when I was still 30yds. distant. As I walked toward them one of them walked up and down on a flat rock, with his tail slightly elevated and cackled shrilly, the note being exactly that of a domestic hen when frightened, but without the final high note with which that species usually terminates its note of alarm. The tones in their manner of utterance reminded me somewhat of one of the calls of the sora rail, but the notes were fuller, broader and louder. When the birds flew they uttered the same sharp cackle. These birds were in full winter plumage November 11, and I learn that the white dress is here assumed in September, the change being completed by the last of that month. This, I believe, is the first record of this species in Montana, though of course it has been well known that it must occur there.

Pediocœtes phasianellus columbianus—Columbian Sharp-tailed Grouse.—Abundant on the plains and up at the edge of the timber.

It will be seen that no less than five species of grouse are found in this region. Of the species mentioned, the sharp-tail inhabits the prairie and the willowy ravines in the foothills and along streams; the ruffed grouse are found along timbered creeks and along the lake shore; Franklin's grouse lives in the thickest timber in damp cool situations, and in narrow cold valleys; the dusky grouse is found, after the broods have grown up, on the mountain sides, while the ptarmigan have their home among the rocks and snows, and in the brush-grown "basins" where the white goats are found.

Zenaidura macroura—Mourning Dove.—A single individual was noted at the lower end of Lower Lake, October, 30, 1887.

Cathartes aura—Turkey Vulture.—Common over the prairie in early autumn 1885.

Circus hudsonius—Marsh Hawk.—Common on the prairie in September 1885 and early October 1887.

Archibuteo ferrugineus—Ferruginous Roughleg.—Common on the prairie in 1885, and on high sandstone cliffs on Milk River where it had undoubtedly bred.

Buteo borealis calurus—Western Redtail.—Common among foothills and on plains in September, 1885, and in 1887.

Aquila chrysaëtos—Golden Eagle.—Abundant about the St. Mary's Lakes.

Haliœetus leucocephalus—White-headed Eagle.—Not as numerous as the preceding, but three or four full-plum

aged individuals were seen. One or two of these birds seemed to try every day to catch some of the geese which fed at the head of the Lower Lake, but without success so far as I could observe.

Falco mexicanus—Prairie Falcon.—A common species seen on the plains and on the Upper St. Mary's Lake.

Falco peregrinus anatum—Duck Hawk.—Seen but once on a bluff overlooking Red Eagle Creek in a blinding snowstorm. The bird was feeding on a female shoveller duck which it had beheaded, and did not fly until I was within 6 or 8ft. of it.

Pandion haliaëtus carolinensis—Fish Hawk.—Seen several times in September, 1885, on Lower St. Mary's Lake.

Asio accipitrinus—Short-eared Owl.—Seen several times on the heads of Milk River.

Ceryle alcyon—Kingfisher.—Taken on Cut Bank Creek near "John's" in September, 1885.

Dryobates villosus harrisii—Harris's Woodpecker.—Occurs in the mountains. How commonly I cannot say. Specimens were seen on Swift Current in November, 1887.

Dryobates pubescens gairdnerii (?)—Gairdner's Woodpecker.—I am not positive that it was this form that I saw at the foot of Lower Lake in November, 1887, but it was a downy woodpecker.

Picoides americanus dorsalis—Alpine Three-toed Woodpecker.—A specimen taken on Swift Current in November, 1887, where the species was abundant, is referred to this form.

Pica pica hudsonica—American Magpie.—Sufficiently common throughout this region.

Cyanocitta stelleri macrolopha—Steller's Crested Jay.—Common in the pine forests of the region up to the rocks.

Perisoreus canadensis capitalis—Rocky Mountain Jay.—Abundant throughout the timber. Every mountain man is familiar with this bird, and has been amazed by its remarkable familiarity. A writer in FOREST AND STREAM recently said of it:

"They are incomparably impudent, and their daring compels your admiration. If they happened to care for it they would have no hesitation in trying to steal the nose off your face. Perhaps they could succeed in doing it, who knows? At all events they would make a bold effort for it. To use an expressive Western phrase 'they would steal the cross off a mule'—if they took a fancy to it. A gray jay has no hesitation in alighting within three feet of your face and winking at you in a rakish rollicking way as much as to say, 'Don't you wish you could catch me?' He will stand on the legs of a deer which is hanging in a tree while you are skinning it, and will dart down to the ground after every little bit of meat or fat that drops from your knife. Sometimes two or three will stand about your feet, almost like hens about a person who is feeding them. You can entice them almost up to your hand by judiciously tossing bits of meat to them, making each one fall a little nearer you than the last.

"And yet they understand very well how to take care of themselves, do the gray jays. Talk about catching a weasel asleep, why a weasel is a fool to a gray jay! They watch you suspiciously with their keen black eyes, always on the alert, ever ready to take flight to avoid a snare. Treat them as generously as you please, they will not trust you. They have borrowed their motto from the Mantuan bard, and each one of them lives up to it most religiously, and thinks, if he does not say, *Timeo Danaos, et dona ferentes*. Still they plunge down on to your meat or close to your fire with an audacious flirt, which makes you feel that the camp really belongs to them and that you are only an intruder, and ought, if you have any modesty about you at all, to withdraw and take yourself off into the timber. Then there is a flirt of wings and tail, a sort of experimental trial of the limbs to see that they are in good working order in case they should be suddenly called on to use them. The next thing is to raise themselves to full height as if standing on tiptoe to get a good look on all sides. A couple of hops bring them to the coveted morsel. If it is not too large they carry it off bodily to a neighboring branch, and then holding it under one foot, hammer and tear it until it is so divided that it can be swallowed: but if it is a large piece of meat, they tear off bits and strips until they have a good beakful, and then fly to a safe distance to eat it, returning almost immediately for more. They sometimes cling and hang to a piece of meat like titmice, upside down. Usually only one will be present at a time, and the moment he leaves his position, another takes his place. If two should happen to alight together, the younger almost immediately retires, for the other holds himself very straight indeed, slightly erects the feathers of his head and utters a low flute-like whistle, which seems to be a note of warning, and is almost always respected. They are not satisfied with taking what they want to eat, not at all. After they have satisfied their appetites, they continue to come and plunder, carrying off their booty and laying up in secret storehouses that they have far above the earth, where it will be safe from the depredations of any but feathered thieves."

The great voracity exhibited by the gray jay has probably been noticed by many a traveler in the mountains, but I am not aware that it is known that they lay up secret stores of food, as is indicated in the paragraph just quoted During a November day, when I remained alone in the camp, I watched a family of these birds who were feeding on the meat of a sheep which I had killed the day before. Their visits were so continuous that it was evident they were not eating all that they took away. They would peck at the meat until throat and bill seemed full of meat and then would fly off into the forest. By following them I soon learned where they were storing their stolen goods. The branches of the tall firs and spruces were festooned near their extremities with tufts of white "moss," which hung down in bunches varying in size from that of an egg to as large as a man's fist. The jays would alight near one of these, and after cautiously looking about, as if to make sure that no one was watching, would hop out to the end of the branch, and seeming to work a hole in the bunch of "moss," would deposit the meat there, at once returning to the camp-fire for another load. I saw no bird visit the same bunch twice.

It may be questioned whether this food was hidden with the distinct idea that it might prove useful at a future time. It is perhaps quite as probable that the act was merely the exercise of the acquisitive tendency which is characteristic of many crows and jays.

Corvus corax principalis—Raven.—Seen and heard on more than one occasion on Lower St. Mary's Lake.

Picicorvus columbianus—Clarke's Nutcracker.—Not very abundant, but seen on the high mountains about Red Eagle Lake and in the valley of Cut Bank Creek in the mountains.

Sturnella magna neglecta—Western Meadowlark.—Abundant in the prairie country.

Scolecophagus cyanocephalus—Brewer's Blackbird.—A single young bird was seen in the bitter cold weather of late October, 1887. It was wading in the water in a sheltered place on the lake shore picking insects out of the water.

Pinicola enucleator canadensis—American Pine Grosbeak.—Quite abundant in the mountains about Red Eagle and Cut Bank, and no doubt elsewhere. Several very highly plumaged males were observed, and many of the birds were singing sweetly even during the snowstorms. This is the first record for Montana, I believe.

Loxia curvirostra minor (?)—American Crossbill.—Crossbills, believed to belong to this form, were rather abundant in the mountains, and their shrill whistle was often heard.

Leucosticte tephrocotis—Gray-crowned Finch.—Extremely abundant high up on the mountains, where they dwell among the bare rocks and snowdrifts. Only seen in the valleys during the worst storms. I have some reason to believe that two forms exist here.

Plectrophenax nivalis—Snowflake.—Abundant about the middle of November on Milk River Ridge, in the valley of Milk River and generally over the prairie.

Rhynchophanes mccownii—McCown's Longspur.—Abundant as a migrant on the prairie in September, 1885.

Zonotrichia leucophrys—White-crowned Sparrow.—Seen frequently in the underbrush along the shores of the Lower Lake during the month of October.

Spizella monticola ochracea—Western Tree Sparrow.—Quite abundant during the coldest weather of October, 1887, in the same situations as the last species.

Junco —.—At least one species of junco was common on the mountains, but I am unable to positively identify it.

Passerina amœna—Lazuli Finch.—I was surprised on the 18th October to see a male of this species in the brush on the lake shore.

Ampelis garrulus—Bohemian Waxwing.—This species was extremely abundant about the St. Mary's Lakes, and scarcely a day passed without one or more flocks being seen. They appeared to prefer the mountain side to the valley, though flocks were seen a number of times among the firs and spruces of the Inlet flat.

Coues, in "Birds of the Colorado Valley" (p. 463), says: "The impertinence of the English term 'chatterer,' as applied to birds of this genus, has been frequently criticised by writers, the species being notably silent, or only sibilant," and further on suggests that "we may readily suppose that the enormous multitudes which sometimes appear make a great deal of noise, about the quality of which people were not very particular when they came to call the birds 'chatterers'."

I first saw these birds at the head of the Lower Lake when a flock of perhaps twenty-five flew over me, and it seemed that each individual was uttering a rather loud sibilant whistle, the general effect being that of a continuous loud twittering, the volume of sound being large for the number of birds that produced it. Afterward I frequently heard this sound from flocks on the wing, and it gave me an entirely new notion of the vocal powers of the birds.

The waxwings are restless, uneasy birds, flying in close flocks of from twenty to one hundred individuals. On alighting they scatter out a little, but two or three are almost always close together. Sometimes they move sideways on a branch, after the manner of a parrot, to approach each other more closely; and I saw two, which after nestling up close to each other in very affectionate fashion, touched bills as if kissing. They do not seem to remain long at rest, and just after they have fairly settled themselves, a sudden impulse will seize them and they will whirl away for a short distance, and perhaps in a few moments return to the same or a neighboring tree.

When seen by me in October they were migrating; but there is no doubt that they breed in this region, for Dr. Coues took a bird just from the nest in 1874 near Chief Mountain Lake, about twenty miles to the northward of the St. Mary's.

Lanius ludovicianus excubitorides — White-rumped Shrike.—Seen on several occasions on the Upper Lake and in the valley of the St. Mary's River.

Anthus pensilvanicus—Titlark.—Seen frequently on Flat Top, Goat Mountain, Red Eagle Mountain, and in the valley of Cut Bank Creek.

Cinclus mexicanus—American Dipper.—Abundant on mountain streams throughout this region where it is resident. Young birds were heard singing their low, sweet song in November.

I quote from an observer in a recent number of FOREST AND STREAM: "Early in the morning a friendly little water ouzel came feeding along the shore, and after he had finished his breakfast, perched himself on a drift stick which ran out into the water, and sat there for hours practicing the thrush-like song with which next spring he was to charm his mate and lighten her labors all through the long summer days. He was a young bird, but his song, though low, was sweetly musical. And he tried it over and over again, stopping whenever he made a mistake and beginning anew, with a patience and a perseverance that was most admirable. He seemed a very humble bit of life as he stood there clad in Quaker gray, and hardly to be distinguished from the stones of the beach about him; but no one could help admiring the little fellow, or being delighted by his liquid notes, which the surrounding silence made only more sweet."

Sitta canadensis—Red-breasted Nuthatch.—Seen once on Lower Lake.

Parus gambeli—Mountain Chickadee.—Common in the mountains about the lakes and on Swift Current.

Regulus satrapa—Golden-Crowned Kinglet.—One individual seen on the south side of Red Eagle Mountain. It was feeding among the branches of a spruce tree and constantly uttered its chickadee-like song.

Merula migratoria—Robin.—Seen on one or two occasions among the timber on the mountains in loose flocks.

Sialia arctica—Mountain Bluebird.—Abundant on the plains and in the valleys in September, 1885.

SNAKE BITE AND ITS ANTIDOTE.—III.

Experiments With Crotalus Venom and Reputed Antidotes, with Notes on the Saliva of Heloderma ("Gila Monster").

BY H. C. YARROW, M.D.

Curator Department Reptiles, U. S. National Museum.

WERE it not for the fact that many persons still believe in the antidotal efficacy of ammonia in snake bite poisoning it would not have been thought worth while to experiment with this agent any further, and a number of observers from the time of Fontana to the present day have proved not only its absolute uselessness, but have also shown that under certain conditions of administration it is dangerous to life. Weir Mitchell says that in one case he thinks he actually destroyed a dog with the means which was meant to save him, and our experiments, it is thought, will show a similar condition of affairs. To Dr. Halford has been attributed the method of cure of venom poisoning by ammonia, but this is an error, as has already been shown in this paper, and if further proof is wanting it may be found in the *Medical Times and Gazette*, London, 1873, ii., p. 216, which gives the translation of a letter written by Felix Fontana to Mr. Gibelin dated Florence, July 1. 1782, in which he states he experimented upon lambs and rabbits, using from twenty to forty drops of ammonia injected into jugular vein, none recovered. He also states that twelve experiments may not be sufficient to show the absolute inability of ammonia as an antidote, but they show it is not a specific. In his work on poisons, p. 3, he says in reference to its use externally or internally, "It is then a fact proved that ammonia is entirely useless whether applied simply to the bitten part or whether taken internally, and there is even reason to suspect that it was hurtful."

Inasmuch as Dr. Halford revived an interest in the ammonia plan of treatment it seems only fair to give a resumé of his plan of treatment which well be found in his pamphlet entitled, "New Treatment of Snake Bite," by G. B. Halford, Melbourne, 1869, p. 16, in which he recommends the bite to be cut out, and when symptoms of drowsiness or sickness come, inject ammonia ten drops to twenty of water into vein (adult dose) with hypodermic syringe pointed toward heart (does not mention care to be taken to avoid air entering vein). Gives a number of examples. Speaks of injecting ammonia into right and left ventricles of heart, carotids and jugulars, the dog being under chloroform. Half dram liquor ammonia B. P. sp. grav. 0.959 every fifteen minutes or so for several hours. Dogs not injured but were finally killed as chest had been opened.

He again discusses the subject in the *Medical Times and Gazette*. London, ii., p.p., 90, 170, 224, 323, 461, 575, 712, and gives a number of apparently well authenticated cases.

Average length of time it takes to kill dogs with cobra bite according to Halford is 3h. 23m.; *Haplocephalus curtus* 2h. 15m.; fowls by cobra 18m. Some die in much shorter time.

Fayrer found that the injection of ammonia into the veins of healthy dogs was followed by grave consequences such as convulsions and marked muscular prostration, and no immunity was produced when the animals were bitten by cobras. He thought the ammonia treatment hastened death, and Healey (G. D.) and Rees (W. C.) report a case of snake bite in the Australian *Medical Journal*, 1874, XIX., p. 49, in which ammonia was injected into the veins and brandy given internally, which resulted in death.

In our own experiments, believing that the venom, or at least a part of it, remained in the vicinity of the wound and was gradually absorbed, instead of injecting ammonia into a vein it was thrown into the tissues contiguous to the part where the venom was injected, with the following result:

Nov. 4, 1887—12:53 P. M.—Injected a strong, healthy pigeon in the right side of the breast with 3 minims of glycerine venom, followed at once with 25 minims of ammonia solution.

12:55 P. M.—Bird died, having had tetanic spasms almost immediately after the last injection. The post mortem examination showed the heart to be empty, and much fluidity of the extravasated blood in vicinity of wound was noticed.

Inasmuch as it had been shown by previous experiments that a lethal dose of 3 minims of glycerine venom requires a much longer time to produce death in pigeons, the supposition naturally arose that perhaps the ammonia itself was the cause of death, and the following experiment was tried a few days after:

Nov. 8—12:11 P. M.—Injected 25 minims of ammonia solution in breast of healthy pigeon.

12:13¾ P. M.—The pigeon fell over backward from its perch, gave a convulsive struggle, and died in half a minute.

Five minims of glycerine venom were thrown into the leg of a rabbit, followed by 30 minims of ammonia solution, and the rabbit perished in five minutes.

The question may well be asked, if Halford's solution of ammonia has such a startling effect when injected into the tissues, what would be the result of throwing it directly into the veins? The evidence being so conclusive regarding the inefficacy of ammonia as an antidote, no further sacrifices of animals were made.

Among the many remedies that have been recommended in snake bite the different species of *Euphorbia* hold a prominent place, in fact in the Western States and Territories it is believed a specific not only for man but beast, as has been stated to the writer by his friend Capt. Chas. Bendire, U. S. A., and that this belief was held by our trans-Atlantic brethren is shown by the following statement of Dr. Hurant *Jour. de Chem. Med. Pharm. et Toxicol.*, Par., 1839, 2 s., v. 272:

While botanizing in the country a favorite dog was bitten by a viper; fortunately close at hand he found the *Euphorbia cyparissias*, and having expressed some of the juice he pressed it into the wound and applied the bruised leaves. The dog recovered.

Dr. B. J. D. Irwin, U. S. A., *A. J. M. S.*, Phila., 1861, n. s., p. 89, speaks of using *Euphorbia prostrata*—called Gollindrinera by Mexicans. Gave four fluid ounces of a watery solution of *E. p.*, and applied bruised plant to wound—repeated dose in one hour. Animals recovered. Other *Euphorbias* said to be useful: *Capitata, correliata, palustris*, and *villosa*.

In view of these statements it was determined to try the antidotal effect of *Euphorbia*, but unfortunately only one species could be obtained at this season—*Euphorbia maculata*, of which a strong tincture was made, and to ascertain if it possessed itself poisonous qualities at 12:45 P. M., Nov. 12, 1887, a healthy male rabbit received in right hindleg a hypodermic injection of 50 minims of the tincture, and no unpleasant symptoms were manifested, the animal having been carefully watched. Nov. 14 he was perfectly well. The next experiment was as follows:

Nov. 12—12:30 P. M.—Injected 5 minims of venom solution in hindleg of rabbit, followed at once by 50 minims of alcoholic tincture *Euphorbia maculata*, and 2 fluid drams given by stomach, and wet pad of tincture applied over wound.

12:35 P. M.—When released animal was very feeble, hardly able to stand.

1:15 P. M.—Gave rabbit 1 dram of tincture *Euphorbia* and 1 dram of water per mouth; animal very weak.

1:20 P. M.—Rabbit very nearly dead; respiration fast; has lost all motion.

2:15 P. M.—Rabbit quietly died; very little swelling or discoloration of the part injected.

This single experiment is given for what it is worth, and can hardly be considered as a fair test, but efforts will be made to obtain the species of *Euphorbia* mentioned as an antidote by Dr. Irwin, and its effects will be further investigated.

Dr. Robert Fletcher in his valuable paper entitled "A Study of some recent Experiments in Serpent Venom," in the *Am. Jour. of Med. Sci.*, 1883, n. sc., LXXXVI., 144, mentions a case reported by a French physician of a person bitten by a viper, in which the very grave symptoms developed had been cured by the administration of jaborandi, which produced copious salivation and perspiration, the dangerous effects of the venom gradually disappearing.

This case was looked up and was found in the *Gaz. Hebd. de Med. et Chir.*, Par., 1882, XIX. 835, the reporter being Dr. Josso. He states that the patient was bitten by a viper between the thumb and index finger, and that when called to see her all the characteristic dangerous symptoms of poisoning from snake venom were present, notwithstanding that phenic acid had been freely used as a supposed antidote. Having seen an account of the use of jaborandi by the South Americans in snake bite, he determined to give it a trial, and four grammes of the leaves were infused in a glass of water and given at 2 P. M. of the 13th inst., and on the 14th the patient was well with the exception of pains in the arms and some swelling, which lasted for three weeks after the accident. As already stated, copious salivation and perspiration were produced, but no mention is made of any action upon the kidneys. As no other cases had been reported, and the writer being aware that venom was supposed to be eliminated by the skin and kidneys, he determined to examine the subject thoroughly. The testimony, so far as could be ascertained, is as follows:

Dr. B. S. Barton in "An account of the most effective means of preventing the deleterious consequences of the bite of the *Crotalus horridus* or rattlesnake" (sm. 4to. Phila., 1792), speaks of the use of the common garden rue (*Ruta graveolens*) as used by the Indians of New Jersey to produce copious perspiration as a cure for rattler's bite, giving two tablespoonfuls of the juice every two hours until violent sweating was produced. The author thinks it may have been of service. In some cases after a bite a ligature was applied above the injured part, wound scarified, and salt and gunpowder laid in the wound, over the whole was bound a piece of white walnut bark (*Juglans alba*). Early settlers do this. The salt and gunpowder excite a discharge of blood from the scarified part, especially of serum, and the white walnut bark possesses the evacuant power of cantharides and contributes to the further discharge of the serum and with it the snake poison. He gives quite a long list of plants which have been used and recommended.

Dr. A. Coutance, in his work entitled "Venins et Poisons," 8, Paris, 1888, p. 178-179, speaking of a dog bitten to death by a *fer de lance* says: "A cubic centimeter of urine from a dog, dead from the bite of a *Trigonocephalus* was injected beneath the skin of a rat, which died the next morning. The kidneys are therefore, as believed by Lauder Brunton and Fayrer, a means by which serpent venom is eliminated. Richard Balsamos killed pigeons by inoculating them with the urine of dogs which had been bitten in India by venomous sea snakes, but it is a question if normal urine might not produce the same effect by reason of the ptomaines contained therein."

As some non-professional readers may care to know what jaborandi is, and what effect is produced by it, the following short summary is given:

Jaborandi is an extract made from dry leaves of *Pilocarpus pennatifolius*, a South American plant, its properties being due to a volatile oil and two alkaloids, pilocarpine and jaborine.

Dose: Extract, gr. ii–x.
Dose: Infusion, f. oz. ss.
Dose: Pilocarpine nit., gr. ¼–ss.
Dose: Tincture of jaborandi, U. S. Ph., f. oz. ½–1.
Dose: Ext. pilocarpi fl., M. 5–60.

"Pilocarpine stimulates the peripheral terminations of efferent nerves going to glands, and first stimulates and then paralyzes the efferent nerves going to structures composed of involuntary muscular fiber. In large doses it lessens, but does not quite destroy, the irritability of voluntary muscles and motive nerves." (Lauder Brunton.) It increases flow of saliva enormously, the secretion of sweat and excites the secretion of tears, cerumen in ears, mucus from nose and from bronchial mucous membrane, of gastric juice, intestinal juice and urine from the kidneys. Upon the circulation: Vessels become dilated at first, pulse rapid, feeling of heat over the body. Blood pressure falls a little at first with quicker pulse and rises with a slower pulse. Respiration is increased, with dyspnœa. Is used as a cardiac stimulant when digitalis fails."

Now as will be seen from these statements, this South American plant really seems to possess all those properties which might be supposed necessary to constitute a true physiological antidote to serpent venom, and so far as our limited experiments go, there appears to be good warrant for such a belief, as in all of our experiments the so-called antidote was first tried on healthy animals without producing any ill effects. The first experiment was as follows:

Nov. 28—12:20 A. M.—Injected 5 minims of solution rattlesnake venom into left leg of strong rabbit, followed immediately by 10 drops of fluid ext. jaborandi, in 10 drops of water; and 10 drops jaborandi and ½oz. water was forced into the animal's stomach with a syringe.

2:30 P. M.—Animal slightly lame in the injected leg, holds it up when walking; but eats well.

Nov. 29—11 A. M.—Animal still a little lame, slight swelling and tenderness of the injected leg—otherwise seems to be in good condition.

Nov. 30—11 A. M.—Animal in about the same condition as yesterday—but improving.

Dec. 1—11 A. M.—Animal still slightly lame; a hard tumor formed at the seat of injection.

Dec. 2—11 A. M.—Animal in same condition as yesterday; appetite normal.

Dec. 5—Swelling entirely gone, animal perfectly well.

It was noticed in this case that the animal urinated freely and very frequently, and that the mouth and nostrils were very moist. Chickens and pigeons being peculiarly susceptible to venom it was determined to try the effect of the jaborandi upon them, and on

Dec. 3—12:30 P.M.—Injected 5 minims of *Crotalus* venom into leg of chicken, followed by 10 minims of fl. ext. jaborandi, in water, by the stomach.

1 P.M.—Chicken appeared not so well, lying down. Gave 10 minims more of jaborandi in stomach.

3 P.M.—Chicken standing up, and feathers drooping. Does not seems very sick.

Dec. 5—10 A.M.—Chicken found dead, probably died during the night as it was alive yesterday (Sunday) at 1 P.M.

In this case it may have been that not enough of the jaborandi was given to overcome the double lethal dose of the venom, but the experiment shows that life was prolonged after a dose of venom which if allowed to act without hindrance would have destroyed life in about two hours. Another experiment was tried upon another fowl, a smaller dose of venom and a larger amount of jaborandi being given, but the chicken only lived two days. These two experiments would seem to show that in the case of fowls poisoned by serpent venom jaborandi has only the effect of prolonging life. To verify the former experiment upon a rabbit it was resolved to again try the antidotal effect of the drug with the following result.

Dec. 5—12:05 P. M.—Injected 10 minims of rattlesnake venom solution into right leg of rabbit, followed by 15 minims of fl. ext. jaborandi; also gave 15 drops jaborandi, in water, in stomach.

12:15 P. M.—Rabbit sluggish and indisposed to move. Respiration hurried, and animal seems very sick.

12:30 P. M.—Gave 15 minims more of jaborandi hypodermically.

Dec. 6—Rabbit appears perfectly well and is eating. Copious discharge of serum from wounds made by syringe, and a good deal of urination.

Dec. 8.—Rabbit appears perfectly well, but has a healthy looking raw surface near point of injection on leg which is healing.

Dec. 10—Rabbit well, excepting ulcer, which is healing.

Dec. 12—Perfectly well.

One more experiment was tried upon another rabbit, in which a fourfold lethal dose of the venom was injected, viz., 20 minims followed by 60 minims at intervals of jaborandi, with 60 by stomach, the animal recovering perfectly. From the foregoing experiments with the fluid extract of jaborandi it will be seen that while this substance appears to have antidotal effects upon rabbits, in fowls it fails, as has already been stated, but it is intended to pursue this line of experimentation still further, especially with the active principle known as pilocarpine. It may be mentioned that a medical man of Washington city is so convinced of the efficacy of the jaborandi that he has offered himself for the purpose of an experiment with venom, and in addition to this offer the writer has received a communication from a person in Ohio also proposing to submit to the test. Until we have experimented further, however, the scientific devotion of these gentlemen will not be tried.

Game Bag and Gun.

HUNTING WITH A CAMERA.

YELLOWSTONE NATIONAL PARK, April 30, 1888. —*Editor Forest and Stream:* I had long desired to possess a photograph camera with which to take pictures of game on their summer and winter feeding grounds, and to preserve some of the many moving panoramas of wild life in the mountains. The expense and difficulty of procuring the instrument I wanted prevented my attempting the feat until last spring, when I was surprised and delighted to receive as a present from the Forest and Stream Publishing Company a complete photographic outfit.

Up to this winter I have been too busy to do much with it, except to practice on different moving objects, just to get the hang of the thing and learn how to shoot it at the proper moment, and to overcome any tendency to "buck fever" that I might show in the presence of large game. In my hands a rifle has been a more familiar tool than a camera. I find that one can get more excited over taking a picture of an elk or buffalo than he would be if killing was the object. Often while hunting to kill I would have preferred a picture of the game I have seen to the meat. Many a hunter of large game would rather have a photograph of groups of elk, deer, antelope, sheep, buffalo and bear, and of the mountain scenes that are familiar to him, than have the pleasure of killing. On several recent hunts, therefore, I left my rifle at home and took in its place the camera, and I think I have been quite successful, having brought in some large bags of game on glass, and that, too, in the National Park, where killing game is not allowed, any one found with game in their possession being promptly arrested. But there is no objection to parties bringing in as many elk, buffalo or deer on plates as they can obtain.

Until I tried to get a photograph of game, I did not realize the difficulties which one must overcome to get a picture. To get a shot to kill is not difficult, as one familiar with game can readily do it, so long as he can get the range or as there is light enough to see the sights of his rifle. It makes little difference where the sun is, whether in your face, to one side, or at your back; or whether it is cloudy or fair, snowing or raining, hot or cold. It's all one to the killer whether the game is in the timber or an opening. Give a good killer the distance and a fair show at game, and he will get the meat; but to the photographer it is different, especially to an amateur.

I first learned that while hunting I must carry the camera set up, must have my object well lighted, and that to obtain good pictures many other favorable conditions must prevail. The thing I found most difficult about it was to get the camera into position while close to game without frightening it before I could focus on the object and then put in plates and fire. Many times after a hard bit of work getting to a favorable position, I would have everything all ready, but the act of drawing the slide or cocking the drop shutter for a shot would alarm the animals, and before I could pull the trigger the game would skip out, leaving me with a camera ready to take a picture of the place where the game had been but a second before; a picture about as satisfactory to a photographer as fine scenery and game sign is filling to a hungry man. Or the game would be standing under the sun with their dark side toward one, the wind blowing from the hunter nearly toward the game, and when everything was about ready the wind would whip around, giving the animals warning of the presence of supposed danger, changing a scene of still life to one of very active life, with buffalo, elk or deer running off in the background, and in the foreground an amateur photographer with an instrument set up ready to make an exposure, a disappointed expression on his face and a few blue streaks in the air.

To hunt game successfully requires the exercise of a great amount of patience; to get photographs of it requires still more, as there is more to contend with. It requires but a second to bring a rifle in position and fire; if you kill that is enough, but often the picture will show up poorly on the plate even when one has done everything possible. I have pictures of which my friends would say, "Now, if you could only have had them (the game) in the opening." Yes! but they were not there, so I took them where I found them, and was glad to have the opportunity to get a picture at all.

My first game picture was of elk. After tramping most of the day over high and rough mountains, we came on to a band of nine, seven of which were in the opening, one in the edge of the timber and one in the willows on the creek (Black Tail Deer Creek). They were 150yds. off, and down hill at an angle of 45°. If I had the camera level I could not get them on the ground glass, so I tipped it up until I could see the elk. They showed up about as large as fleas in the picture. The angle at which I set the camera made the background look level. I wanted to get into a point of timber below the elk, but the wind was wrong, and, when I was on the high ridge, was blowing a gale. So I decided to make an exposure from where I was, trusting that the objects would look a little larger when developed; they did grow a little, I think, but smaller, showing up less in size than good healthy fleas. I found other elk, but none to get a picture of. My next picture was of a blacktail buck. I came on him as he was trotting across a ridge, making for timber to my right. There were two inches of new snow on the ground. Working as fast as possible, I saw that I would not get my camera ready before he got out of sight. As he had not seen me, I bleated to stop him, a thing we often do to get a standing shot. He stopped and turned, and just as he was about to bound off I fired, securing his picture. We ran on to him several times, too far off to make him useful, but near enough to have given us good shots with a rifle. He would watch us for a long time, debating, I think, in his mind what new kind of hunters we were that made no noise, and went through such queer antics around a three-legged gun. He would trot off to a high point, and watch again, until we would get within two hundred yards, then off he would go again to keep watch of us. This he did for over an hour.

My next view was of an antelope. For fear I would not get them I guessed at the distance, loaded and cocked the camera for a shot, slowly brought it up and fired when I had the range. I had come to the conclusion that I could not select locations, but would fire at all the game I saw, getting my focus by guess. In this way I bagged a young cow elk. I got the elk, but fell a little short on distance. I also took a picture of a young elk in its spotted coat. This I tied to a sage brush, but fogged the plate by not having the cloth over the breach of the camera. I even attacked some trout in a pool of clear water. They showed up well on the ground glass, but I got nothing on the plate but shadows of trout, a very unsatisfactory dish.

In March I started out to secure a few pictures of the buffalo I had seen in the Park the year before, a few having been seen this year by the scout, Wilson. I had with me one companion, Peter Henderson, an old mountaineer, who consented to go with me for the pleasure of the trip. We were unable to pack a camp outfit in addition to the camera, plates, etc., and were therefore obliged to confine our explorations to within a few miles of the hotels in the Park. We were out sixteen days. On thirteen of them it stormed, three were clear. We visited the Lower Geyser Basin and vicinity, saw a great deal of animal and bird life, but no bison, and only one fresh track—that near the Perpetual Geyser. Elk were in the Basin, the first I have ever known to winter there. The Fire Hole, Gibbon, Nez Percé Creek and other streams were full of geese and ducks. At Norris Geyser Basin I exposed some plates on a "warm corner" of the Basin, where the heat of the ground melts the snow as fast as it falls. The snow accumulates on all the detached rocks, logs, trees and stumps, and as it gets deep it settles down and often hangs over the object that supports it like a hood. The snow on the rocks here was some 3½ft. deep. On the ground there were many green plants growing through the coldest weather, and when the picture was taken one plant was in bloom, showing small yellow flowers. None of the plants were high, all hugged the warm ground. Where a few grasses had ventured up into the cold air they had their blades nipped by the frost. Throughout the Park there are many such warm places, where no snow ever lies, where green plants can be found growing all winter. In and around all the Geyser basins, where there are streams of hot water, one can see two ribbons of green along the stream, then on each side a ribbon of dead grass, with the snow close up

to it formed a contrast of winter and summer in one picture. We had started out on our trip with web snowshoes, but left them at Norris, preferring the long Norway shoes.

I had a few plates exposed on men snowshoeing in the Park with their packs *en route* to the Lower Basin. They used both long and web shoes.

Returning to the Springs we saw a great many elk in Swan Lake Basin and on the mountains, but did not attempt to get a picture.

A few days after our return to the Mammoth Hot Springs I learned that Peter Nelson, the mail carrier in the Park, had seen a band of forty-five buffalo on Alum Creek, while on a trip from the Grand Cañon to the Lower Basin via the old Howard road. Although I had promised myself not to go out again until I could go with horses to do my packing, the hope of obtaining a picture of the bison made me break my promise. The weather had improved very much, the days were hot and the nights, though cold, were clear; in fact the weather was so pleasant that one could scarcely realize that it could storm in this country. Making the outfit up into two packs I was again ready for a trip. Captain Harris, the officer in command of the troops in the Park, induced the scout Ed. Wilson to go with me.

Taking the packs we started out on the morning of the 17th by 5 o'clock. It was daylight when we passed Golden Gate. This time we had only long snowshoes and the crust was so hard we could walk on it without the aid of the shoes. These we carried until the sun had softened the snow so that we were obliged to use them. We saw the usual number of elk, and where they had attempted to go back over the road to their summer range. On Beaver Lake we saw swans, geese and ducks. The geese were mating; the ducks had been pairing off for some time. We found that the snow had settled wonderfully during the past few days. Where it had been 4½ to 5ft. deep, it was now but 2 to 3ft. deep, and in many places there was little or none for long distances.

At Norris we learned that Peter Nelson was at the Lower Basin, and would meet us in the Alum Creek country. From Norris to the Yellowstone Falls we found the most snow. Here too, we saw the first bear trail, where the "bare-footed gentleman" had crossed the road. From the man in charge of the hotel we learned that the elk had wintered all around that place, but he had seen no bison. Foxes were very plenty, and so bold that they even ran over the roof of the hotel, once lying down on the roof in the daytime in sight of a dog which they were in the habit of playing with. On the 19th we took a little extra lunch, intending to pack our outfit out a few miles, and leave it to return the next day with more provisions and then try for the buffalo. While going up the river we started up a great many swans, geese and ducks, these flying on a little way up, to be again started with others. The number increased to hundreds, making a great noise with their calls and wings, splashing the water in starting and alighting.

We turned away from the Yellowstone, when we came to Alum Creek, and before we had gone a half a mile, saw winter sign of buffalo and elk. Foxes and coyotes were seen often, and soon elk were in sight. About noon we saw a band of elk running. This we were sure was caused by Pete. In a short time we saw him, and he came up, reporting that he had seen forty-seven bison in one band, consisting of cows, yearlings, bulls and young stock. They were some ten miles from where we were. Pushing on, we often saw elk on the road, but at too great a distance for a picture. Besides we were after rarer game.

In due time we came to where Pete had seen the buffalo in the morning. The whole country was tracked up with them, for throughout this section is where they had wintered. On many dry places we could see where they had rolled and wallowed. As the sign was all fresh, Wilson followed up their trail to locate them, while Pete and I hunted up a camp, it being too late in the day to take views. In about an hour Wilson returned, having got within 40ft. of one buffalo before discovering him, lying down behind a tree. As the animal had his head turned from Wilson, he did not see the latter. Using field glasses, Wilson saw several more among the timber; he retreated at once to us. We held a council, and decided to remain where we were until morning. Eating very sparingly of our lunch, we gathered a good pile of pitch stumps for an all-night fire. We dried our foot covering, overshoes, leggings, etc., for we were wet almost to our knees; in fact, we were wet from morning until night while we were out, wading swamps, creeks, and through the soft melting snow. We talked and spun yarns until we began to get sleepy, and then lay down on the ground by the fire. When one side got hot we would turn over, giving the cold side a chance at the heat. The colder the night became, the oftener we would turn. Sometimes one of us would build an extra large fire, when those who had been getting almost into the ashes would begin to roll away as the fat stumps got in their work. I was the only "dude" in the party. The ground was not soft enough for me, and I had to gather a lot of spruce boughs. No sarcastic remark about being a dude would make me exchange my luxurious feather bed for the ground. Once during the night we thought the bison were coming, but it turned out to be only a porcupine getting out of a tree within 20ft. of our fire. Looking from our camp in the night one could see that the country was white with frost, all except a dry ring around the fire. By daylight we were rested and ready for business. Making some coffee in an old tomato can we indulged in a very light breakfast. By this time the sun was high enough to light up the country well, and shouldering the camera, I was ready for work. Pete and Wilson carried the plate holders.

As Wilson was the best hunter and quick-sighted, he went ahead a little way to look up the game. I had plenty to do to get the camera and myself through the timber without making a noise. Just before coming to the place where Wilson had seen the buffalo the evening before, we saw a fresh trail leading off toward Mary's Lake, where some ten or twelve had gone down that morning. Moving very carefully, we pushed on, and while looking at trails and listening, we heard the low bellow or roar of a buffalo bull. In a moment more Wilson called my attention to one coming toward us. I set up the camera in what appeared the most favorable place for a picture, and awaited the animals. Soon we could see them feeding among the trees and coming directly toward us; then a lot more appeared (the main band), scattered out and moving in a direction which would lead them just below us on the mountainside. Here the timber was not very thick, but thick enough to hide most of the buffalo. We were directly in the trail of one fine bull, who came up within 40ft. of us. He was black and glossy. As a small bushy tree hid us I did not pay much attention to him, except to admire his dark color and great size. His hide would have made what is known as a "silk robe." As the other buffalo came on slowly we had a good opportunity to see them by standing on our toes and parting the limbs of the tree behind which we were hid. The band was quite large, consisting of young bulls, cows and yearlings. Most of them showed they had passed an easy winter, for they were fat and all looking well, though their robes were bleached out to a dead grass color. The shaded parts were very dark, much more so than in the plains buffalo. All the time I was admiring them I was anxious to have them get where I could get the camera to bear on them. Seeing by their movements that they would soon discover us by the wind, I moved out a little to get the camera in position. They saw me the moment I was out of the brush. I worked as fast as possible and fired. They had started before I was ready, but I got a few of them as they went through the timber. Replacing the slide, I watched them as they came in sight among the trees about 150yds. away, all hastening off. At no time did we see the whole band, but only thirty-five of them. We could hear them running in the timber breaking limbs and twigs.

We thought this was the band Pete saw the morning before, in which there were forty-seven head. They did not run far, but soon came to a walk and passed on around a butte to the head of one of the branches of Alum Creek. We followed the trail for a half mile and then went up on the butte, which is covered with heavy timber. When we came to the summit we saw where we had started a single buffalo which had been lying on the edge, and could see us coming. Following along the edge as carefully as possible, we turned a point of the bluff where we had to turn north. Wilson was in the lead, and soon signaled me that he saw something. Crawling up we could see buffalo coming through the edge of the timber, following the rim of the butte. As they passed within 25yds. of us I counted them—seventeen. They were moving at a walk, stepping in each others tracks as they made their way through the snow, which in the timber on the butte was about 3ft. deep. The last one, a large bull, walked faster than the young stock just ahead of him. He would give the nearest one a hook with his horns which would start that one out of the way on the jump. We could not get a picture as they passed us, although it would have been an easy matter to have killed one or hit him with a snowball.

We waited a few moments for them to get out of sight. As soon as possible we looked for them, and found they had stopped on the south edge of the butte where we had come up, but back in the timber. We could see some down, others standing, most of them asleep. The hot sun, reflecting on the snow, appeared to hurt their eyes and those standing would have their eyes closed most of the time. They were scattered about in twos and threes, and were where they had us cornered. We could not get a picture neither could we get into a position for one, so we sat down and waited their movements. From where we were we could see most of the Alum Creek country and the buffalo range. The altitude of the butte was 8,500, as shown by the Geological Survey Map of the Park, and only a mile southeast of Mary's Lake. We could see the Howard road, where the buffalo had rolled the day before, could see all the high mountains in the Park, except those to the northwest, which the timber hid. To the south the Grand Tetons loomed up clear and sharp. Mt. Sheridan and the mountains at the head of Yellowstone looked but a few miles off. Of these mountains I could have taken a photograph without any trouble, and yet 200yds. off there were seventeen buffalo, of which I could not get one picture. By standing up I could see three of the animals which I thought would never move. Finally two of them went out of sight, but one hung on for half an hour longer, then got up and slowly walked away. We lost no time in getting away from that place. Going along to the edge of the bluff, we found a place where we could get down and thence around to where we could crawl up in sight again. Wilson worked up to a big snowdrift, which hid him from the buffalo, and standing up he could see most of them. Getting the camera ready we took hold of the legs and pushed it slowly up. I made two exposures on two old bulls, one standing the other lying down. The standing one is the only one that showed up on the plate. I exposed other plates on the buffalo which were in the edge of the timber. On one of the plates one can count ten head. Getting all the plates I wanted of the buffalo in that posttion, we tried to get them to move out by making a noise, but this they would not do. Then in the hope of getting a better position, we attempted to move across the snowdrift in front of us. This movement attracted their attention, and in a second they were off. We followed slowly, but the band did not stop.

We struck the trail of other bands, but did not follow them. We returned to camp and ate what we had left over from breakfast—a little coffee and a bit of biscuit. We had now to go either to the Falls Hotel or to the Lower Basin. We were in hopes of finding a band of buffalo on the head of Nez Percé Creek, and determined to go that way. Making up the outfit into three packs we struck out. The snowshoeing was very hard. Where the crust was softened, Wilson, who is very heavy, would sink down from one foot to eighteen inches. Even a lightweight would sink at times. We crossed Mary's Lake on a thin scum of snow-ice over the thick winter ice. The thin ice bent under under us so that we were snowshoeing in two inches of water. Striking the road at the top of the long hill leading down on to Nez Percé Creek, we soon came to a buffalo trail, more like a wagon road than a trail. This crossed the road twice, and followed down one of the forks of the main creek. We shouldered our snowshoes and followed the buffalo trail. This showed very much use. It led directly down the creek, over logs, rocks, through mudholes and everything, nothing appearing to hinder the animals' movements. Along this creek we saw where bison had wintered. We followed the trail to the open country on Spruce and Aspen creeks and saw sign where buffalo had wintered here. There was no snow at all in the open country. The high ground was dry, the grass well started, several early flowers—among which I noticed violets—in bloom. Wilson followed the main trail for a mile to a branch trail, and counted where twenty-one bison had crossed a spring creek the day before. He returned without seeing buffalo, and as they had gone into the heavy timber at the head of Aspen Creek, we gave up finding them. Having no provisions, we did not want to camp out another night without something to eat. We saw elk sign where a very large band had crossed the buffalo trail going toward Yellowstone Lake. There were ducks, geese, sandhill cranes, porcupines, skunks and foxes. The former we would have liked the privilege of killing for food. Then we could have followed the buffalo anywhere.

After deciding to go to the Lower Basin we struck directly for the road, on Nez Percé Creek. Swamps, ponds, streams, mud or dry ground were all the same to us. We could not get any wetter than we were, unless we went in all over. Reaching the main creek, we followed it down until we found a ford not more than knee deep, and crossed to the wagon road. We reached the hotel a little after dark.

The next day we rested and filled up. The evening was spent watching the beaver in the Fire Hole River, where they have houses in the banks less than half a mile from the hotel. At the first house we saw three beaver, and watched them for an hour feeding, sometimes on grass and water plants at the bottom of the stream, then out on the banks eating the fresh green grass. By alarming them, Wilson got them to slap their broad tails on the water, a very comical proceeding, as they must dive to do it. The beaver here are quite tame, and any one can see them out feeding of an evening by keeping quiet and watching the shore and water. A field-glass is a great help, for then you can bring them up close.

The 21st, Pete was called away to repair the telephone wire which was down, he having the care of the line in the Park.

Wilson and I put in the day going over a considerable part of the country between the two basins, to see if any buffalo had crossed, but we saw no sign. All the bison that have been in or around the Geyser Basins have gone up Nez Percé Creek. We who have been out among the buffalo are sure, from the sign and the number we saw, that over one hundred wintered on Alum Creek. Those that had gone down on to Spruce and Aspen creeks were not the fifty-two we saw and photographed. I regret very much we were unable to get them in an open country where they could have all been shown in the picture. I trust to have better luck next time.

I do not regret being wet every day while out, as I feel no bad effects from it. I would be willing to lie out many nights if I could get pictures that would satisfy people East that there are buffalo in the Park, and good big bands; that with what protection they have had for the past four or five years they have increased, and will continue to do so if properly cared for. Our return to the Mammoth Hot Springs was as interesting as such a tramp always is in the mountains. We saw the trails of quite a number of bears, wolverines, lynx, and other animals. Soon after leaving Norris Geyser Basin we found the fresh trail of a dozen elk in the road. They had come up from the Swan Lake country, where they had wintered. We found bare ground almost to the Twin Lakes, and but few places that one could not take a horse through from there to the Hot Springs. As we approached Obsidian Cliffs we saw a large band of elk going up over the rocks. They had come down on to the road, saw us coming, and had gone back up. They were following up the first band that had gone toward Norris. The heavy snow in the road from Willow Park to Beaver Lake compelled them to follow the edge of the bluffs to where they could get on the road again. The snow melts out of the 30ft. road much faster than in the timber, and is opening up the Park to travel at least thirty days earlier than in the days of narrow tracks. When we came down one could ride a horse all the way from the Upper Geyser Basin to Norris by following the elk to the Mammoth Hot Springs.

The bands of buffalo seen by us are not those that have wintered around the Yellowstone Lake or the south side of the Park. A buffalo cow and calf was seen this winter on Hellroaring Creek. It would be a very hard task to find all the buffalo in the Park, but it could be done in winter, and would show up a total of over 200.

E. HOFER.

[We have received the negatives made by Mr. Hofer, and have had prints made from them. There are twenty different prints. The game includes buffalo, elk and antelope. Some of the buffalo are indistinct in the timber, but they can be distinguished nevertheless. We have Mr. Hofer's permission to supply the prints to any of our readers who may wish for them. They will be sent postpaid for the nominal price of twenty-five cents each.]

ALTOONA, Pa., May 16.—Some of the leading sportsmen of this city convened this evening in the hall of Zeth's Commercial College and organized a rod and gun club, which will be known as the "Alta Forest and Stream Club." The object of the organization will be to protect game and fish, and the enforcement of the laws governing the same, also practice in shooting at the trap as well as other objects of clubs of this nature. Application for a charter will be made at the June term of court. F. G. Patterson, Esq., was elected president, and G. G. Zeth secretary and treasurer. G. G. Zeth, G. B. Bennett and W. D. McDowell were appointed committee on constitution and by-laws. This club meets a long felt want in this section of the State, and we predict for it the hearty support of farmers and all who are interested in the welfare of this healthy sport.—HUNTER.

WHERE ARE THE WILD PIGEONS.—*Editor Forest and Stream:* A question I would like to ask and have answered by some of your correspondents is, what has become of the pigeons? Twenty to twenty-five years ago, as many of your readers know, they were in countless thousands over the Eastern States and Canada, where they are known no more. I am sure it would be interesting to hear through FOREST AND STREAM where there are any now and in what numbers. Is it possible that the beautiful passenger pigeon is becoming extinct? He has left the East for good. I hope some of our friends who take an interest in bird life will let us hear from them. Let us hear from Michigan, Wisconsin, Arkansas, the Indian Territory and from anywhere this fine bird may still be staying.—L. H. SMITH (Strathroy, Ontario).

A DEER DRIVE ON FLAT RIVER, LA.

IT was a very pleasant morning in last August when Mr. James W. Atkins, a member of the Knox Point Gun Club, accepted my invitation to take a deer hunt on Flat River of Bossier Parish, La. The week previous I had killed a fine deer in this same drive that I proposed making at this time. At the various club matches, or tournaments, Mr. Atkins has been the successful shot, winning the medals and various prizes. He had shot at but one deer previous to this hunt, and that he killed. I had recently become the happy owner of two most remarkable deerhounds, and I was now very anxious to exhibit their splendid qualities to my young friend. It was with the true pride of the hunter that I praised my hounds to him as he rode to our front gate on this memorable morn.

I knew where some deer were in the habit of lying near the plantation, and though I could drive them more certainly to the "Bee Tree Stand" than any one else. I requested Mr. Hodges to put Mr. Atkins at that stand and go himself to the "Hog Pen Stand," while I would take old Buck and Stonewall, go up Flat River to the pole bridge, cross and drive down to the mussel shell road. This drive is a long one, embracing several thousand acres of land, which are intersected by several small bayous and cypress brakes, affording most excellent situations for deer to hide and conceal themselves from their annoying pests, the mosquitoes and small horse flies. It usually requires a full hour before the driver can get through, unless the hounds jump the deer, when but a few minutes suffice to take it either across the mussel shell road, or if it runs up Flat River, to carry it to Honey Lake, several miles above.

Before separating to go to his stand, I requested Mr. Atkins not to get impatient, but remain still at his position, until I should come out, because, were the hounds to run above, I would get them back, and some time during the day most assuredly would a deer run through that stand. All that was necessary was patience, and to keep a sharp lookout. With these parting injunctions, I mounted the Hon. Sir Patrick O'Hara, my coal black hunting pony, blew my horn, and galloped to the pole bridge.

I had never crossed this bridge at any time for the last two months that my hounds did not strike the track of a wildcat, or a catamount, several times they jumped it, but invariably it ran to Moor Lake, a wide lake across which I could not get, and there the hounds either caught or treed, I never knew which. On one occasion I saw the cat swimming for a quarter of a mile to the opposite bank.

With some difficulty I got my hounds away from the cat track, and after going down the river some half a mile, they struck a very cold trail, which I knew to be of a deer, by their smelling high upon the bushes, though I could not find its tracks. Over half an hour passed, when I heard the faint booming of two guns in rapid succession, about where I had directed Mr. Atkins to be placed.

The hounds continued trailing slowly along, until I got within a mile of the "Bee Tree Stand," when the three long blasts of several horns called me to the stand. How my old eyes glistened as I beheld a beautiful doe and fawn stretched dead right on the usual run of the deer through the stand!

"Who killed them?" I shouted.

"I murdered them," replied Mr. Atkins.

"Come, tell me all about it, how it took place."

Lighting my pipe, I dismounted, turned Pat loose, and took a seat on the ground to listen to Mr. Atkins, as also to wait for the old hounds, that were still on a cold trail. As Mr. Atkins does not drink, smoke nor chew, I had to enjoy my pipe alone, and listen to his recital, as he told it thus:

"I had seated myself by the side of that little tree on a chunk that I placed there, and had been listening to the hounds trailing so slow and so distant, that I scarcely could hear them, and I had become wearied and worn out. I had pictured in my mind how the deer would come to me, and the precise spot I should shoot, over and over again, and I had got into that dreamy state that I did not believe any were coming, and had given it up as a hopeless case, when something red darkened the space between those two trees, just where the doe is lying. I looked up, bringing my gun to position, for I did not have time to rise from my seat, and fired the moment it came to the shoulder. I saw her go down as if struck by lightning, and as she sunk I saw the beautiful spotted fawn spring behind the big tree on her right. A second leap it made, clearing the tree, and the left barrel fired, and the fawn turned a sommersault, and died without a struggle. I never made two quicker shots, and none that gave me such intense delight. I have now had three shots at deer, and killed at each shot. For a long time, I have been desiring to have two deer run to me at the same moment, to see whether I could kill both. I have done it; gratified my desires, and now only want to have a huge monster of a buck run to me, and test my nerves."

It was some time before my hounds could be induced to come to my horn. They did not want to give up the trail, and I think never once struck the trail of the doe and fawn. From the direction that Mr. Atkins told me they came, I think they were frightened perhaps by some freedman hunting squirrels in another drive and came across to this stand to go to water at Stumpy Lake. It was about the watering time of deer, when they came through the stand, and Stumpy Lake was not a quarter of a mile the other side of it.

I was as much gratified with our success as if I had made the shots myself. Mr. Atkins tied the fawn on behind his saddle and went home. I had the pleasure of eating some of it the next day, cooked under the inspection of his charming wife, who is one of the nicest housekeepers on Red River, and can herself cook a piece of venison to suit the taste of the most fastidious hunter.

Clarence, a freedman, who usually accompanies me hunting, took the doe behind him and carried it to the residence of Mr. Hodges. That night his wife, my eldest daughter, had some splendid steak made of the doe, and as she knows how to suit the palate of her old father, I enjoyed it hugely. Venison, if properly cooked, is delicious meat, but if done up in the usual manner of our negro cooks I know no poorer flesh.

A week after this hunt Clarence killed a fat doe at the "Hog Pen Stand." It was coming direct to me at the "Bee Tree," when a freedman, who was in the drive, shot at it and turned it across to Clarence.

Did any sportsman familiar with deer driving ever know of a hog pen in a drive that was not noted for being a good stand? I have never known it otherwise in an experience of over fifty years, and that brings to mind the year of 1843, when on Porter's Creek, above the town of Bolivar, in Hardiman county, Tennessee, I murdered a poor old pike-nose, razor-back sow, near a hog pen stand, that in my unsophisticated youth and greenness I took to be a wild animal that was thirsting for my meat, and I shot her dead almost at my feet, and immediately had that satisfaction experienced only by a hunter, to see a big buck turn away that would have run right over him but for the unfortunate shot. From that day to this I never see a hog coming to me in the woods that I do not recall the unpleasant incident and regret my blunder. That poor old gentle sow mistook me for her owner, and was running for her accustomed ear of corn, when she received a charge of buckshot through the brain. Several weeks after this hunt, in a drive along Swan Lake, Mr. Atkins, who was riding along the path to get to a stand in advance of mine, had the opportunity of gratifying his ardent desire to shoot a big buck.

A short distance before getting to his stand, while the hounds were trailing, he discovered a tremendous deer lying in rather open ground, by the horns sticking above the grass and small bushes. Hastily dismounting from his horse, he took a deliberate broadside shot at the deer as he laid there, about 60yds. distant, and another quartering shot as the deer jumped up and bounded off. The deer was badly wounded. My old hounds soon came out and ran it across Flat River, which we could not cross except by going several miles to a bridge. The sun was nearly down when the buck was shot. The hounds ran it for over half an hour and then stopped suddenly within hearing, either catching or coming upon it dead. At any rate, we never got the deer, and it was after midnight before the hounds returned home. Mr. Atkins regretted exceedingly not getting the deer, since he was anxious to have the big horns as a trophy of his shooting. I saw a good deal of blood in the place the deer was lying when he shot, and also on the bushes where it ran. It is strange how often deer are lost after receiving a whole charge of buckshot, and perhaps some may have passed through the heart. Then, again, one small shot, when least expected, produces instant death.

Some forty years ago I was "branching" near Mt. Lebanon, in Bienville Parish, when a hunter by the name of Covington Hardy shot one afternoon at a large deer. He told me he thought he hit it, though we did not get the deer then. Branching in those days, when deer abounded everywhere in Louisiana, was having a cur with a bell suspended to his neck, and trained to follow the bed of branches, usually thick covered with switch cane. In the early spring, when flies, mosquitoes and buffalo gnats were very bad, the deer would lie in the water with only their heads out, and often the heads concealed under the projection of the banks. To get good shots, the hunter trained his cur dog to follow the bed of the branch and roust the deer. By having a hunter on each side of the branch, the chances of getting good shots were very certain, and the tinkling of the bell enabled them to either keep abreast or a little in advance of the dog.

On the occasion alluded to Mr. Hardy owned the cur which started two deer at the same time, one running out on the side of Hardy and the other by me. Both shot, but the cur followed the one I shot at and did not catch it under a mile off. I proposed to Mr. Hardy to return the next morning and look for his deer, as he was one of those rare shots we sometimes read about but seldom see, who never missed his deer. We did so, and about a quarter of a mile on the same branch, above where Hardy shot, his cur started a deer, and caught it before getting through the cane. Strange to say, it was the same deer at which he shot the evening before, and twelve 00 shot had passed entirely through its side, several through the lungs, but none through the heart. Yet it had survived some sixteen hours and lived a few minutes after we drove off the dog. I have no doubt Mr. Atkins put every buckshot that was in his No. 10 shell into that big buck, and still it was enabled not only to survive the shock, but run several miles.

When I was a student at college, I often looked with great curiosity at a specimen in the Museum of the University of Virginia of a buck's heart pierced with a stick, that was broken off on each of the deer's sides, and had healed without inflicting death. Subsequently, no knowing how many years thereafter, the buck was shot, and the hunter finding the heart with a big stick through it, sent it as a great curiosity to the museum.

This reminds me of a saying often used by an old negro stock-minder before the war, "De deers, marster, is oncommonly 'nacious ob life, dey hab more lives than ar tom cat." GAD.

KNOX POINT, La.

A MOOSE STRUCK BY LIGHTNING.—New Glasgow, Nova Scotia, May 21. Brant and geese have been plentiful this spring and continued until the middle of May owing to the lateness of the season. The books at the club house, Kings Head, show that a goodly number fell to the guns of the members. A singular incident happened in Lunenburg county a few days ago. Near the road leading from Albany to Lake Alma, during a heavy thunder storm a large moose was found dead under a tree. The tree was completely shattered by lightning and there is no doubt that the moose was killed by the electric fluid. Fishing season here very late this year, and no trout have been taken from the lakes as yet.—GLOBE SIGHT.

WISCONSIN.—Ft. Atkinson, Wis., May 21.—Ducks and fish have been disturbed but little on Lake Koshkonong this spring, and game and fish laws have been lived up to in good shape. Many ducks, redheads, bluebills, etc., are paired and will nest.—OCCASIONAL.

CALGARY, N. W. T., May 18.—The prairies east of here are covered with the wavy or snowy geese. A few antelope are also to be seen there on their way northward. Weather snowy, wet and disagreeable.—STANSTEAD.

QUAIL FOR BREEDING.—*Editor Forest and Stream:* A correspondent in your issue of May 10 complains of the heavy mortality among quail shipped to him for breeding purposes. My own experience has been similar to his in one case, but not in others. Some two years ago I sent money in advance to E. B. Woodward, of New York city, for some live quail. The birds should have reached Toledo in 24 hours by express, and strong healthy birds could go so long without either food or water, if necessary, and not suffer seriously. But these birds were sent by the only express line which has no direct run to Toledo; they were poorly provided for in the way of food and water, and were two full days on the road. When they reached me two-thirds were already dead, and the remainder died within 24 hours. An examination showed that all had been in poor condition before starting. A complaint to the shipper, backed by the statement of the express company's agent, failed to bring me any satisfaction whatever. The firm had my money and I had the experience. In the case of birds from Tennessee, I was much more fortunate. For three or four seasons I ordered birds from Shelbyville, and they always came through bright and strong and in good condition. My last order of Tennessee birds (a year ago last winter) was for a crate of four dozen, and only one or two died in transit and none after their arrival. The entire lot were kept in confinement together from December till April, and the per cent of loss was very small. The earlier one can get quail in the winter, if he has any suitable means for their care, the better the birds will thrive and the stronger they will be in the spring. The longer they remain in the dealers' hands the more likely they are to turn out badly.—JAY BEEBE (Toledo, O., May 18).

Sea and River Fishing.

THE ANGLING TOURNAMENT.

THE sixth annual tournament of the National Rod and Reel Association took place on Harlem Mere, Central Park, New York city, on Wednesday and Thursday, May 23 and 24. When it was first proposed to hold spring meetings, instead of in October, the principal argument was that the weather was sure to be good, but a cold drizzling rain on the first day and a steady downpour on the second made it dismal enough to seem November instead of May. The attendance was good on the first day, and the familiar faces of many out of town anglers were visible along the Mere and the scene was an enjoyable one, until the rain began. Our English friends find that it usually rains while they are holding their tournaments, and there is a possibility that Jupiter Pluvius has taken the anglers under his care and reigns over their tournaments, wherever held.

In spite of the weather the tournament just held was one of the most enjoyable in the history of the association. There was not a jar anywhere, that we noticed, and good fellowship was seen in all the contests, and there was a goodly lot of entries in all the classes, which seems to show that an increased interest is being taken in the sport by gentlemen anglers. The baffling winds seemed to conspire against the breaking of any of the wonderful records for distant casting, but some were broken, as will be seen by the scores. The platform was in the usual place, one foot above the water and twenty-five feet from the shore, but the buoy line, with its marking floats, was stretched to the south this year, and remained unaltered throughout the contests.

FIRST DAY.

Single-handed Fly-casting, Class A (Amateur), open to amateurs under Rule 2.—Scale of points—Distance, actual cast and accuracy, 40 points; if a contestant casts 60ft. and is awarded 15 for accuracy, his score will be 75. The scores are given in the order of their winning, and not in the order of casting. All in this class used split-bamboo rods except Mr. Johnston, who cast with a greenheart. Judges: Gen. Rodney C. Ward, Capt. Wm. Dunning; referee, C. H. Mowry.

	Length of rod. Ft. In.	Weight of rod. Oz.	Distance cast, ft.	Accuracy.	Total
Robt. B. Lawrence	11 00	10	85	40	125
Dr. Geo. Trowbridge	11 06	8¼	83	30	113
Wallace E. Blackford	11 06	10¼	76	35	111
A. F. Dresel	11 04	10¼	70	34	104
Graydon Johnston	11 06	12⅜	65	33	98

"Switch" Fly-Casting.—Judges: J. A. Roosevelt, Dr. A. Ferber, Fred Mather; referee, James L. Vallotton. Open to all. Single-handed rods not to exceed 11½ft. in length; distance only to count. No cast to be counted in which the flies go behind the caster.

	Length of Rod. Ft. In.	Weight of Rod, Oz.	Distance Cast. Ft. In.
Hiram W. Hawes	11 4	8¼	94
Reuben C. Leonard	11 3	10¾	85.6
Ed. Eggert	11 6	10½	79
Graydon Johnston	11 5	12⅜	63
C. G. Levison	11 1	9¾	62.6

Salmon Fly-Casting.—Judges: Dr. A. Ferber, James L. Vallotton; referee, Prof. P. J. Silvernail. Open to all. See Rule No. 14. No limit as to rods. Distance only to count. In this contest Mr. Hawes broke the record by six feet, the longest previous cast being that of Reuben Leonard, last year, of 132ft.

	Length of Rod. Ft.	Weight of Rod. Oz.	Distance Cast. Ft.
H. W. Hawes	18	37	138
R. C. Leonard	18	37	129
Thos. B. Mills	18	37	113
Ed Eggert	16	34	97

Single-handed Fly-casting (Expert).—Judges: Hon. D. O'Reilly, James L. Breeze; referee, Francis Endicott. Open to all. Distance only to count. Rods not to exceed 11½ft. in length. Here the record was broken by Mr. Leonard with the remarkable cast of 102ft. 6in.:

	Length of Rod. Ft.In.	Weight of Rod. Oz.	Distance Cast. Ft.
R. C. Leonard	11 03	10¾	102½
H. W. Hawes	11 04	8½	92
T. B. Mills	11 00	9¾	89
C. G. Levison	11 01	9¾	84
Ed Eggert	11 06	10½	75
G. Poey	11 00	8	75

Owing to the rain the two last did not cast off the tie.

SECOND DAY.

Single-handed Fly-casting, Class B (Amateur).—Judges: Louis B. Wright, W. J. Cassard; referee, Louis Reynal. Open to amateurs only, under Rule 2, who have never made a score of over 70ft. in any tournament of this Association. Rods not to exceed 11½ft. in length. By

an oversight the length and weight of rods was not taken in this contest. Any person who may have them will confer a favor by giving them to Mr. Gonzalo Poey, Secretary, 114 Wall street.

	Distance.	Accuracy.	Score.
Prof. P. J. Silvernail	80	40	120
James L. Breeze	80	31	111
James Rice, Jr.	75	35	110
Col. F. S. Pinkney	74	32	106
Fred Mather	66	29	95
C. H. Mowry	68	25	93
James L. Cornell	65	26	91

Minnow-Casting for Black Bass.—This class was on the programme for the first day; but the contest was to take place on land and the Polo Ground was occupied then and it was postponed. Judges: John A. Roosevelt, W. H. Wood; referee, Dr. Geo. Trowbridge. Open to all. Score—Average distance cast in feet. Accuracy, 40 points. Casts for accuracy to be made at a stake or mark distant 60 feet. A stand 12 inches high in front, 9 inches in rear, and of suitable size, was provided, to be used at the option of the caster. The casts were added and divided by five.

	Length of rod. Ft. In.	Weight of rod. Oz.	W'ght of sinker. Oz.	Distance in Ft. & In.	Accuracy.	Total score.

Single-Handed Fly-Casting.—Light Rod Contest.—Judges: James Benkard, J. L. Vallotton; referee, Dr. A. Ferber. Open to all. Rods not to exceed 5 oz. in weight, nor 11½ft. in length. All rods with solid reel seats will be allowed ¼oz. Distance only to count. Here again the record was broken, Mr. Leonard beating his own score of 88ft. made last year, which was the highest overhead cast on record, made with a 5oz. rod.

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Ft. In.
R. C. Leonard	10 00	5½	95 00
H. W. Hawes	10 00	5	87 00
T. B. Mills	10 00	5½	80 00
R. B. Lawrence	10 00	5½	76 06
J. L. Breeze	10 00	5½	74 06
Sames Rice, Jr.	10 09	5½	69 00

Heavy Bass Casting.—Judges: J. A. Roosevelt, W. H. Wood; referee, G. Poey. Open to all, as per Rule 16. A stand 12in. high in front and 9in. in rear, and of suitable size, was provided, to be used at the option of the contestant. This cast took place on the land, inside of the Polo Grounds, by courtesy of Mr. Arthur Bell, manager, to whom the association is indebted for many favors. The length and weight of the rods is not recorded on the official book, but they were such as are used in that style of fishing:

	1st. Ft. In.	2d. Ft. In.	3d. Ft. In.	4th. Ft. In.	5th. Ft. In.	Average Cast. Ft. In.
A. F. Dresel	176 00	184 09	193 08	178 03	175 11	181 08
Sydney Fry	167 04	166 09	173 02	177 03	159 08	168 10
W. F. Shackleford	63 01	136 01	138 06	132 01	121 06	119 03
David Harris	159 01	111 02	108 07	61 10	35 10	96 06
Ed. Eggert	143 04	77 05	67 04	40 10	43 07	74 06

Fly-Casting for Black Bass.—Judges: James Rice, Jr., A. P. Vredenburgh; referee, Col. F. S. Pinckney. Open to amateurs under Rule 2. Single-handed rod, not to exceed 11½ft. in length. Only one fly required, to be furnished by the committee, and to be tied on No. 2 sproat hooks; distance only to count. There was considerable fun in this contest, partly on account of the pouring rain, which was the heaviest of the day, and partly on account of the ties to be cast off in the wet. In the tie between Messrs. Lawrence and Eggert, they cast over and the former won with 79ft., against 71ft. 6in. by Eggert. The two other ties were not cast off on account of the storm:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Ft.
J. L. Breeze	11 00	10¼	79
C. G. Levison	11 00	9¾	76
Ed Eggert	11 06	10½	75
Robt. B. Lawrence	11 00	10	75
Gonzalo Poey	11 00	8	72.6
A. F. Dresel	11 02	10½	71
Prof. J. P. Silvernail	10 06	8¼	70
Dr. Geo. Trowbridge	11 06	8½	70
Fred Mather	11 06	10	57
Francis Endicott	11 06	10	57

Each year it has seemed that the limit to which a fly can be cast has been reached, and each year sees the record broken in some class. When these tournaments began it was thought that 70ft. was an enormous distance to drop a fly with a single-handed rod, and it was and is yet, but at that time it was not exceeded in a public contest, where the scores can be depended upon, and now we record the marvelous cast of 102ft., made with a single hand and a cleanly retrieved line. There are always reports of guides and others in the woods who can cast 100ft., but this is mere guess and is not done alongside of a measuring line with watchful judges in a boat a few feet from where the flies drop, and rival contestants on the bank to see what is being done. The tournaments at Harlam Mere have done much to stimulate the use of the rod and to bring fly-fishing into favor.

NEW ENGLAND WATERS.

THE desire to boom the hotels and camps, the railroads and the stage routes, through stories of big catches and big fish caught, is still strong in the mind of the average writer in the daily papers, and special dispatches bristle with big lies as usual this year. But in spite of all this, up to the present writing (May 28) the fishing in the Maine trout lakes has been poor. The water is unusually high, and chiefly snow and ice water at that. There is a record of one 5lb. trout caught at Rangeley, otherwise the fish have generally been small. This trout was taken by a gentleman entirely unaccustomed to trout fishing. Curious to note, it was remarked at Litchfield's, when he was buying his outfit, that possibly his success would be better than that of an old hand. Considerable success is noted this spring in taking landlocked salmon in Rangeley Lake. Mr. W. G. Clark, of Attleboro, is reported as taking one last week weighing 5lbs., and one of 6½lbs. is mentioned later. A large number of others of smaller size are noted. These salmon are the result of planting by the Maine Fish Commissioners, and naturally they are pleased with the results. It is worthy of note, however, that although these landlocked salmon have been planted in the other lakes of the Androscoggin chain, and that these lakes are all connected by quite respectable rivers in point of size, yet but very few salmon have ever been taken other than in Rangeley Lake, the upper one of any considerable size. The theory is that they work up over the dams of the Union Water Power Company, but that they never come down. In Weld Pond the catch of landlocked salmon is turning out well this year, and many of the notables of the State have been there. Commissioner Stanley always goes, Judge Whitehouse of Augusta has been there. Dr. J. H. Rollin of Philadelphia has taken a 4lb. salmon. Dr. F. C. Dolly and S. H. Dolly have had excellent luck taking eight salmon.

Among the notable sportsmen of Boston, now at the Androscoggin Lakes, may be mentioned E. B. Haskell, of the Boston *Herald*, Col. H. T. Rockwell, J. F. Priest, D. H. Phillips, W. B. Phillips, Weston Lewis, H. A. Priest, A. N. Parlin, F. E. Parlin, F. A. Magee, H. S. Hall, Horace Haskins, J. F. Rogers, H. G. Hartshorn, E. R. Hunnewell, J. W. Cummings, Thos. Cunningham, L. W. Bradstreet and others. The movement of sportsmen toward the Nova Scotia and New Brunswick waters promises to be large, but the cold weather and the backwardness of the season is keeping them at home longer than usual. Sometimes it will be more thoroughly believed that the best fishing, especially for trout, does not immediately follow the departure of the ice. It has long been well understood that the trout does not rise to the fly till the temperature of the water is changed from ice-water to something like the mildness of spring, and the sportsmen who are getting a little sick of the fresh fish business, trolling, and the anything-to-get-them plan, are coming around to the idea of going a little later, when the trees have begun to leave and the snow is out of the woods. I met a gentleman on the street the other day, and I was a little surprised to meet him, for he had fled the city with the news of the going out of the ice from the Maine lakes for several years in succession, and it was very natural to suppose that he was enjoying the cold weather and the icewater in the stern of a canoe with a trolling rod in his hand at the very time I met him. On my expressing surprise that he was not with the early trollers, he remarked that he had got sick of trolling. "After all it suits me about as well as still-fishing for cod," he said, "and I am about done with it. I made up my mind last year, though I was one of the first to start, and was at our camp as soon as the ice went out, that the next time I went it would be when the weather was some warmer and a chance for fly-fishing. This year I am going about the middle of June, and am going to try Kennebago as well as our lake, black flies or no black flies."

At Bangor there have been some wonderful days with the salmon. Wednesday and Thursday were the most exciting days ever known there in the line of catching salmon. Nine were taken in the evening and nine the next morning. Half an hour after the salmon began to rise the news was in Boston. Since then the fishing has been fitful, and only a few fish have been taken. But at that time the pool seemed to be alive with salmon. They rose to the rudest of fishing gear, as well as to the best, but the number of fish taken was far less than the number hooked, owing to the crudeness of the outfits and the want of experience in handling. The rule is to work up through the rapid water as near the dam as the strength of the oarsman will admit, and then when the fish is struck to let go the anchor and down stream, fish and all, at lightning speed, and play and land the fish in the smoother waters a mile below. But so great was the crowd of boats and the choice of position so valuable that some of the more covetous tried the experiment of ungainly tackle and the landing of the fish in the rapid water by sheer main strength and strength of tackle. But almost invariably such fish were lost. Think of attempting to land a great salmon, with the water running feather white, by full strength of tackle, held in a boat above; something must give away, and generally it has proved to be the mouth of the fish. Fortunate it is that the mouth of the salmon has not the strength of that of the bluefish, else the fresh fish business at Bangor would flourish for a season, and then the salmon pool would be worthless again. Bangor is quite a large city. Suppose for a moment, good reader of the FOREST AND STREAM, that it should suddenly turn out that great salmon, worth nearly a dollar a pound, could be taken in the East River or off some of the wharves in Boston. What a crowd there would be of both the lame and the lazy! Wouldn't everybody be there? Muckers, Dagos, Coons and Pigtails would all be there. Such is something of the state of affairs at Bangor when it is announced that the salmon are rising. That salmon pool below the dam is certainly one of the most remarkable in the world for the number and size of the fish caught. At the same time it is one of the most accessible, and hence one of the worst overdone.

SPECIAL.

AN ARBOREAL FLY DISENTANGLER.—Exeter, Ontario.—I have done a considerable amount of fly-fishing with the artificial fly and like many others have often met with an accident in not looking out for trees and branches overhead, and getting the leader and flies caught in a branch, in some cases a rather queer place to get at to free them again, particularly where a tree or bush overhangs the river; and I see some of your correspondents get in the same fix, besides doing a tall amount of swearing, should they lose a fly that the fish are taking to. Now I have got up a little tool that acts like a charm that will take down the leader, fly and all, and not hurt a feather, either from over your head, sidewise and in any position, at a distance of 5 to 15 feet away from you. Can be made by the quantity and sold for about 75 cents; and can be carried in the vest pocket and is very simple. I am not in a position to get it patented myself, but would like to be remunerated for the idea in some shape, so I thought by writing you, you would put me in the way of making something out of it, that is after it has been approved of. Perhaps you would give an opinion.—G. F. D. [We are decidedly in favor of anything to save the wear and tear of spirit of a man whose fly is up a tree. Any enterprisnig manufacturer who wishes it will be furnished with the address of the writer of the above.]

A TOURNAMENT AT INDIANAPOLIS.—Indianapolis, Ind., May 25.—*Editor Forest and Stream:* The Indianapolis Fly-Fisher's Club held their first annual tournament at Broad Cut, yesterday. A high wind prevailed and no great casts were made. Messrs. H. S. New and M. D. Butler tied at 63ft., the judges being Gen. Lew Wallace, Hon. Byron R. Elliott, and Dr. George Hunt. In casting the minnow for black bass Mr. Gus Behmer made 127ft. twice and 113ft. once. He was allowed five casts but fouled his line in the other two. The attendance was good and the contests were witnessed by many people who were greatly interested in this, the first angling tournament ever held west of New York. The cast of Mr. Behmer, in the minnow class, equaled the famous one made by Mr. Dresel, at Harlem Mere, in 1885.

A PLUNGE IN THE FOUNTAIN OF YOUTH.—I have just returned from my old stamping ground among the rocks and hills of Haddam, Connecticut, very glad to be able to report that a fair number of quail were left over from last fall, and have survived the winter, blizzard and all; and are as happy as quails can be, giving promise of good shooting next fall, which your humble servant hopes once more to enjoy. Wet a line and caught trout enough for a breakfast for four persons in about three hours. Had a splendid tramp over the old hill among the apple blossoms, and feel younger by at least five years.—A.

LAKE MINNETONKA.—New York, May 25. I have just received a letter from my friend Mr. F. B. Mathews of Minneapolis, in which he says: "Have just got in from the upper lake (Minnetonka), first trip of the season. Bass fishing poor, one 3¾lbs., one 2¼lbs., one 2lbs. Weather cold, water ditto. Killed one pickerel, weight 19¾lbs., length 42in., girth 18in. This fish was caught in Cook's bay, and breaks the record in this locality with rod and reel. Tackle used, split bamboo minnow casting rod (similar to Henshall pattern), weight about 8oz., and a No. 7 Skinner spoon."—JUDGE.

IONIA, Mich., May 18.—I left Ionia May 14 at 4 o'clock A. M., and arrived at Hart, Mich., at 12 o'clock with a party of three gentlemen, Messrs. F. A. Bailey of Port Huron, and Russell Ward and F. A. Sessions of Ionia. We fished the 15th and 16th, and arrived at Ionia again on the 17th, with 170 brook trout, the largest weighing 2½lbs. dressed; and we had several weighing 1lb. and 1½lbs. This we considered a large catch for the time we were doing it, and the weather. I will write you again after my next trip for black bass.—H. L. BAILEY.

INDIAN ROCK, Me., May 25.—The ice is all out of Rangeley Lake, and but little is in the big lake, except Bemis Bay, which is jammed full and will probably stay so until there is a heavy wind. Fishing better than usual, so soon after the ice leaves. Quite a quantity of snow in the woods. Water high. Parties are catching more landlocked salmon than ever before. Sportsmen at all the resorts, except those which cannot be reached on account of ice.—C. J. RICHARDSON.

A DELAWARE BAY WEAKFISH.—On May 14 a trout weighing 14½lbs. and measuring 34in. in length was caught in a seine in Delaware Bay, off Bower's Beach. This is the largest trout caught in this section for fifty years. In the spring of 1838 a trout weighing 17lbs. and measuring 38in. in length, was caught at the mouth of the Mispillion Creek.—DEL. A. WARE.

THE SOUTH SIDE SPORTSMAN'S CLUB HANDBOOK comes to us from the secretary, Mr. F. O. de Luze, handsomely illustrated with artotype views of the house old and new, hatchery, and old mill.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

NEW YORK, May 17, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—It affords us much pleasure to report upon your latest Climax shells with strong primers received this morning. We have tested them with Schultze powder, and find them simply excellent in every particular and practically equal to the best adapted English primer. Two and a half drams to 3¼drs. of Schultze powder in 12-bores and 3¼ to 4drs. in 10-gauge worked to perfection in your shells, loaded simply like black powder and without ramming. Very truly yours (Signed), VON LENGERKE & DETMOLD.—*Adv.*

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

SECOND DAY'S PROCEEDINGS.

THE meeting was called to order at 10 A. M., and Prof. S. A. Forbes, Director of the Illinois State Laboratory of Natural History, read "Notes on the Food of Fishes of the Mississippi Valley," which elicited some discussion on the peculiar manner in which some fishes take their food, and on the finding of fresh water mussel shells which had a hole the size of a half dollar on each side, and on the crunching of shells by some fishes.

Dr. J. C. Parker read "Observations on the Grayling," in which he showed that this fish was in no immediate danger of extinction, and that it has a wider range in Michigan than is generally known. An inquiry was made for Mr. Daniel H. Fitzhugh, the veteran grayling fisher, who had attended the first day's session, but he had not arrived.

Mr. Walter D. Marks stated that there were many grayling in Michigan yet, that the extermination had gone on in the Au Sable, made famous by the writings of Norris, Milner, Hallock, Mather, and others who fished there in an early day, because of the driving of logs in that river. These logs are driven in the spring, when the fish are spawning, or after that event, and they plow up the gravel beds and destroy millions of eggs which are there developing. In his labors as Superintendent of the Michigan Fish Commission he could bear witness that while the grayling may be going from some streams on account of the operations of man it was not true that the fish was in danger of immediate extinction, as has been the case with the buffalo and some land animals, but the destruction has been only on certain rivers, and has not been caused there by fishing but by logging.

Dr. Robert Ormsby Sweeny was down on the programme for a paper on "Stocking Western Lakes and Streams," but he claimed that he was ignorant that such information had been required of him and he was not prepared to present it in a formal manner. He had no objection to talking on the subject, and said that the work of the Minnesota Fish Commission, of which he was a member, had been very successful, the failures, if there had been any, were small and of no account, but the successes were so much in excess of any failure that his memory refused to get down to so small a matter. There had been great success in the hatching and planting of brook trout, black bass, and wall-eyed pike; the returns from the fisheries showed that the continuous plantings had borne fruit and that these fishes have increased through artificial propagation. In Lake Superior the plantings of whitefish have borne fruit and the fishermen who opposed the work at first were now strongly in favor of it. The increased catches have convinced the fishermen that the work of hatching whitefish should be continued. Dr. Sweeny had a theory that it would be well to stock certain points with whitefish and then have no fishing done there for five years, next year take other points and stock them, and so on in a circle. It seemed to him that this would be worth a trial.

Mr. F. N. Clark asked how the fishermen could be managed. Would they abstain from fishing at certain points at the request of the Commission, or would laws have to be passed to regulate this? Again, would not the fishermen oppose such legislation and render it difficult, if not impossible, to procure it? Take the pound-net men, for instance; at Bass Island there are four or five pounds and the owners would probably object to be deprived of their fishing grounds for a term of years, and in practice it will be found difficult to control the fishermen.

Dr. Sweeny thought that now, since the fishermen are convinced that fishculture is of value to them, from a business point, they might be further educated so as to be sensible of their own interests.

Mr. John H. Bissell inquired how large such reservations should be.

Dr. Sweeny suggested that reservations of three miles in length by a mile in width would be about the proper size.

Mr. James Nevin called attention to the fact that whitefish do not always feed where they spawn, and that a good place to plant the young fish was not necessarily a good fishing place.

Mr. Bissell then read a paper entitled "Co-operation in Fishculture," a portion of which, or rather the gist of it, was given in his remarks at the conference of Fish Commission, reported in FOREST AND STREAM last week.

Mr. James Nevin, Supt. of the Wisconsin Fish Commission, read a paper on the work done by that Commission, giving the number of fry hatched and distributed. He advocated the gathering of lake trout eggs and carefully spreading them on the shoal reefs of the lakes intended to be stocked and let them hatch and care for themselves. He gave some statistics of the value of the lake fisheries, as reported by the State fish wardens, showing that 12,750 nets valued at $161,860, employed 1,300 men and took nearly four and a half millions of pounds of fish, worth over $271,000, in a season. The evidences of success in stocking the waters were accumulating daily.

The secretary read by title a paper on "The Digestibility of Fish," by Prof. W. O. Atwater, Professor of Chemistry in the Wesleyan University at Middletown, Conn., the paper had not arrived but was hourly expected. The paper would be a continuation of the valuable work of Prof. Atwater on the digestibility of foods which had been in progress for a number of years, under the auspices of the United States Fish Commission, and which no doubt would be continued by the new Commissioner, who is interested in all that pertains to the fisheries. The secretary stated that the object of the coming paper was to give a brief outline of the main results of experiments upon the comparative digestibility of the flesh of fishes and lean meat. He hoped to receive the paper in time for a reading, for, as we breed fish for food, we want to know just what value it has, and the only man in America who can tell us that is Prof. Atwater.

Mr. Fred Mather, a Supt. of the New York Fish Commission, had been put down for a paper on "Work at Cold Spring Harbor," the station under his charge, but pleaded, with Dr. Sweeny, that he had not been notified that this was to be expected of him. He detailed the work with the different fishes and said that he had hatched the tomcods in fresh water and had kept them there until the sac was absorbed, and then planted them in brackish water. The experiments with smelt had not brought out any new facts and the limited allowance for his station had not permitted further experiments with salt water fishes. The work of stocking the Hudson with salmon had been continued by the U. S. Commission, of which he was still one of the assistants, as well as one of the State Superintendents, and that the results had been satisfactory. He had built a new hatchery which he would be pleased to have any of the members visit.

Mr. S. P. Bartlett, of the Illinois Fish Commission, read a paper on the carp. It had increased and multiplied in his State, and it had produced tons of food from waters which had produced nothing of value heretofore, and the carp was a great boon to the people in Illinois and other States which had no ocean on their borders from which to draw food.

The question of the time and place of the next annual meeting then came up and after some discussion it was decided to accept the motion of Mr. Henry C. Ford to meet in Philadelphia, where he promised that the Anglers' Association of Eastern Pennsylvania would see that the necessary arrangements for entertaining the Society would be attended to. Mr. Bissell moved that the next annual meeting of the Society be held at Philadelphia on the third Wednesday and Thursday of May, 1889, and it was carried.

The election of officers for the following year then came up. Mr. Bissell moved that a nominating committee be appointed, as heretofore. Mr. Mather favored nominations in open meetings, because the committee system had not always worked well, as some of the older members knew. On a vote it was decided to appoint a committee and Mr. Bissell moved that Dr. Hudson, Mr. Butler and Mr. Clark be that committee. President May rose above parliamentary usage and accepted the motion, with thanks that he had been relieved from naming the committee, and they went into private session. The committee recommended the following gentlemen and they were unanimously elected: President, John H. Bissell, Michigan. Vice-President, S. G. Worth, North Carolina. Recording Secretary, Fred Mather, New York. Corresponding Secretary, Henry C. Ford, Pennsylvania. Treasurer, Eugene G. Blackford, New York. Executive Committee, Philo Dunning, Chairman, Wisconsin; S. P. Bartlett, Illinois; Dr. R. O. Sweeny, Minnesota; Dr. W. M. Hudson, Connecticut; C. V. Osborn, Ohio; Col. M. McDonald, Washington, D. C.; and James Y. Long, Pennsylvania.

The Society then voted thanks as follows: To the Detroit Lodge of Elks, No. 34, for the use of their room. To the Michigan Fish Commission for their efforts in making the meeting a success. To Professors Jordan, Forbes, Atwater, and others for valuable papers from persons not members of the Society.

The meeting then adjourned until 2 P. M. on the boat which was to take them to the St. Clair Fishing and Shooting Club. A pleasant trip of some twenty-five miles brought the party to the club house, which is on made ground on the St. Clair Flats, and a dinner which was noted for the excellence of its fish was in readiness. The members of the club showed their guests over the extensive house and on the return trip it was voted that the club be an honorary member of the American Fisheries Society and receive its annual reports.

THE MEETING ON THE BOAT.

On calling the meeting to order the report of the treasurer was read and accepted. Dr. Sweeny moved that the treasurer be authorized to sell the reports but it was argued that as this was all that absent members got for their dues such a course would tend to decrease membership. The motion was lost.

Dr. Hudson complained that the last report had been delayed and had only appeared a month before this meeting. Mr. Mather explained that everything was in the printer's hands last August but that there had been no money in the treasury to pay for it. In view of this fact he had asked Mr. Blackford if it would not be well to increase the annual dues from $3 to $5, but the treasurer had said that the present sum was ample, if the members would pay their dues promptly.

A long argument was held on the propriety of allowing papers to be printed before they appear in the report, because some editors who never sent a reporter to the meetings, even when held in their own cities, had objected to their publication in FOREST AND STREAM. Finally, on motion of Mr. Bissell, Messrs. Mather, Hudson and Ford were appointed a committee to attend to the publication and to use their judgment about selecting a printer and getting the report out at as early a day as possible. They were also to allow such papers to be copied for simultaneous publication in other journals, if it be requested, the expense of copying to be borne by those wishing copies. This committee is to meet at Mr. Blackford's, in Fulton Market, on Saturday June 2, at 12 M.

It was also voted that the printing should be begun by June 1, and that those which are not then on hand shall be omitted, and the meeting adjourned until next year.

THE OHIO COMMISSION.—A branch hatchery is located at Chagrin Falls, and work on it is to begin at once. Through the efforts of State Fish Commissioner A. C. Williams, assisted by the Hon. J. J. Stranahan, a tract of land has been leased, a mile south of the town, for a period of ten years. The water facilities are excellent, and ponds for black bass and other valuable species will be made.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alma M. Ide, Secretary.

FIELD TRIALS.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6291.**

THE SIR COLIN SUBSTITUTION.

Editor Forest and Stream:

The above case certainly is the most shocking one that has so far been made public, the most shocking—not that it was worse than one other I remember, but because it was done in the face of the enlightened public sentiment of the last few years, and was not done at a show notoriously indifferent to any and every propriety of common decency or honesty, but at one of the crack shows of the country; nor was it done by a coper, so notorious, that hands were kept off of him far longer than he deserved, simply from the reluctance to tackle so unclean an animal. I have no knowledge of Mr. Campbell, but I keep a tolerable run of the dirty dozen in dog affairs, and Mr. Campbell was never mentioned as a member of the distinguished body. So here we have it, an exhibitor of good repute exhibits and wins with a dog that had no more business in the class than my mastiff Lion.

The previous cases of this sort that have become public have been, first, Mr. Edward Kelly's (now don't go off at half cock at the name) Clover Belle at Cincinnati, in 1884; he entered the bitch, but his kennelman took another and won with it; if my memory is correct Mr. Kelly himself made the matter public, at all events he promptly refunded the prize money without any compulsion. Here the actor in the case was as absolutely innocent of all wrong intent or act as the man in the moon, yet he recognized that there was but one course open to him to act on.

The second was the case of Mr. W. H. Pierce, at Philadelphia, in 1884. The Irish setter bitch Reeta was an occupant of his kennel, although owned by another party, Mr. Pierce entered her for a kennel prize. I suppose the rules of the Philadelphia Kennel Club were the average ones then in use, which simply provided that dogs must be entered in the name of their *bona fide* owner, but great latitude had always been allowed in this matter, and although Reeta was entered in her class as Mr. Pierce's property, he seems to have thought it wise to consult with Charley Lincoln as to her eligibility for a kennel prize. Mark the difference between this and the Sir Colin case: Mr. Pierce had had complete control of this bitch, he seems to have done with her just what he chose, and practically the owner had nothing to do with here movements. Mr. Pierce did not ask the superintendent to allow him to substitute or deceive, but he asked for a construction from the superintendent on certain conditions. Mr. Pierce was disqualified by the Philadelphia K. C., but the general consensus of dog show authorities was that the case was excusable under the doubtful applications of rules at the time, and the disqualification was not sustained.

The next case was that of Mr. H. M. Perry, who was charged with competing at Philadelphia in 1886 for a kennel prize, with another bitch than the one entered. Although a tolerably recent occurrence, I do not remember the evidence clearly enough to state anything about it, except that the A. K. C. most cruelly kept the question of Mr. Perry's disqualification hanging between their heaven and the common earth for an unreasonably long time.

The last case (previous to that of Sir Colin) was that of Dan O'Shea, who showed a beagle at Pittsburgh in 1887, which was not the one entered, and to make it worse, it was one perfectly well known to the judge. There was no prospect that any action would be taken in this case, and the subsequent action of the St. Paul club rendered it needless. Here again the "most lame and impotent conclusion" of the A. K. C. was shown. It was proposed to disqualify the offender for six months! and but for the prompt action of Mr. Cugle in moving that all reference to time be stricken out of the sentence, this most ridiculous punishment would have been all there was of it.

In the Sir Colin case there is but one mitigating circumstance; it was simply a deliberate substitution of one dog for another. If Mr. Mortimer and the whole Westminster Kennel Club allow it, what difference would that make? What business have they in the matter? It was not a question between Mr. Campbell and the W. K. C., but between Mr. C. and the other exhibitors, and the W. K. C. and its officers had no part in it except simply to protect all honest exhibitors. If it is proved that Mr. Mortimer took the part it is said he did, he should be disqualified from all further connection with dog shows; if the W. K. C. authorized it, they should be expelled from the pure and holy A. K. C. However, I for one do not and cannot believe that Mr. Mortimer agreed to this substitution, as Mr. Campbell describes it. I have known him too long for that; he is above such trickery and is too old a hand at shows not to know the wrong of such a proceeding; and while he is a "good fellow" himself, I do not think there is anybody else connected with the W. K. C. show who steers so clear of allowing "good fellows" immunity as such.

In view of Mr. Campbell's previous good character, it seems probable that he did not realize the enormity of the offense he perpetrated, and the innocent way in which he "gives it dead away" makes this view of the case the more likely, but for all of that, I see nothing that the A. K. C. can do, if it wishes to die away decently, but to promptly disqualify Mr. Campbell for an undetermined period. Justice to exhibitors demands that such offenses shall be promptly and relentlessly punished, and no amount of extenuation can relieve a body—supposed to keep a watchful eye on American kennel interests—from this stern necessity.

Your laying all the blame to the loose and easy ways of doing in kennel matters, will not do. That lazy, nerveless, cowardly course of action is wholly an A.K.C. idea and practice, the kennel public have passed that long since, and they demand as cleanly and honest dealings in dog show administration as they do in selling sugar without sand. Just now the English kennel world is torn up over just the same case in a substitution by a certain well known exhibitor, fully detailed in *The Stock-Keeper*. As near as I can understand it, the English Kennel Club hold off from action on this case, owing to some informality in the way it is brought before them.

All I know of this scandal in any way is from Mr. Campbell's letter in FOREST AND STREAM, and I simply take the case as he states it himself. There may be some mitigating circumstance that has not yet appeared, and if so, it should be brought forward at once, but as the case stands now, it was simply a deliberate wrong perpetrated on every other exhibitor in the class. The fact that the premium won did not repay expenses incurred is so utterly irrelevant that it seems incomprehensible why it was brought forward.

W. WADE.

HULTON, Pa., May 12.

[It will be observed from the date that the letter was written previously to Mr. Mortimer's letter in FOREST AND STREAM, denying the allegations of Mr. Campbell.]

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the May number of the *American Kennel Register:*

BEAGLES.

6203. Spotty, H. A. Merrill. 6204. Turk, A. Vass.

CHESAPEAKE BAY DOGS.

6205. Foam, H. N. Munn.

COLLIES.

6206. Captain Kid, S. Salisbury.
6207. Donald VIII., S. W. Blue.
6208. Flora V., L. O. Lemieuse.
6209. Hayo, Mr. Williams.
6210. Kelpie Rippon, J. Wilson.
6211. Laird O'Rippon, J. Wilson.
6212. Lassie Rippon, J. Wilson.
6213. Lockie, S. W. Blue.
6214. Maud, T. G. Houston.
6215. Pansy, F. W. Waller & Co.

FOXHOUNDS.

6216. Joe II., C. W. Forbes. 6217. Ned, C. W. Forbes.

MASTIFFS.

6218. Danta, C. B. Duncan.
6219. Greenwood King, Greenwood Mastiff Kennels.
6220. Hector IV., O. C. Zell.
6221. Hector V., A. Netter.
6222. Jess II., Greenwood Mastiff Kennels.
6223. Lion IV., O. Schultz.
6224. Maida, J. Thompson.
6225. Molly Stark, S. Van Santvoord.
6226. Mortimer, W. G. Davis.
6227. Sohrab, H. H. Burden.
6228. The Moor, W. P. Riggs.
6229. Trooper, Miss M. Walmsley

POINTERS.

6230. Carrie Fitz P., T. Fitzpatrick.
6231. Cato, W. S. Shuler.
6232. Dash III., W. S. Shuler.
6233. Don VI., H. A. Wilson.
6234. Juno II., W. S. Shuler.
6235. Rory, W. S. Shuler.

PUGS.

6236. Chequasset Thorn, J. H. Reed.
6237. Chequasset Tzar, J. H. Reed.
6238. Pug, A. D. Learoyd.
6239. Topsy, J. Banghart.

ST. BERNARDS—ROUGH-COATED.

6240. Amigo, Miss M. E. Walker.
6241. Chequasset Navarre, Mrs. M. C. Taylor.
6242. Chequasset Nike, Mrs. M. C. Taylor.
6243. Cora B., A. H. Scott.
6244. Duke of Hampden, T. H. Pratt.
6245. Earl C., W. P. Perkins.
6246. Lady Star, E. E. Starr.
6247. Miss Barney, I. P. Wiser.
6248. Neumond, C. F. Kelly.
6249. Rex S., P. Smith.
6250. Rollo II., M. W. S. Dingman.
6251. Trusty, W. Baldwin.

SMOOTH-COATED.

6252. Aggie, J. B. Clarke.
6253. Apollo II., Grasmere Kennels.
6254. Friar Tuck, T. B. Brooks.
6255. Katrina, C. F. Cluett.
6256. Queen Buff, S. Van Santvoord.

SETTERS—ENGLISH SETTERS.

6257. Belle Sparks, T. Fitzpatrick.
6258. Bruno, J. L. Ayers, Jr.
6259. Countess Peg, Rosecroft Kennels.
6260. Gladis Noble, W. D. Reynolds.
6261. Grouse D., A. E. Davis.
6262. Jolly Gipsey, Rosecroft Kennels.
6263. Maud Wind'em, C. F. Tretbar.
6264. Narka-Noble-Gladstone, E. F. & J. W. Weiss.
6265. Prince Napoleon II., T. H. Adams.

GORDON SETTERS.

6266. Flora, P. B. Garland.
6267. Floss II., J. D. Sperry.
6268. Gem II., H. S. Brunot.
6269. Nell II., H. S. Brunot.

IRISH SETTERS.

6270. Daisy, Onota Kennels.
6271. Dolly Pruyn, Geo. Talcott.
6272. Duke Plunket, Onota Kennels.
6273. Finn McCoole, H. J. Knapp.
6274. Miriam, H. Brooks Young.
6275. Polly, W. Burd Patterson.
6276. Red Richard, W. H. Campbell.
6277. Sport, J. D. Sperry.
6278. Trojan Rory O'More, Wm. Henry Warren.

SPANIELS—FIELD AND COCKER SPANIELS.

6279. Bonny Vic, John J. Dixon.
6280. Cubo, Wm. F. Murphy.
6281. Frantic, O. B. Gilman.
6282. Novel, C. A. Hinckley.
6283. Tim, P. Moller.
6284. Wig, J. McNivens.

TERRIERS—FOX-TERRIERS.

6285. Dandy, J. Jansen.
6286. Florence Belle, E. Wilson.
6287. Patch Eye, W. Cornwell.

IRISH TERRIERS.

6288. Dennis, Joseph O. Horne.
6289. Eileen, Joseph O. Horne.

SCOTCH TERRIERS.

6290. Frisk, E. A. Buck.

WIRE-HAIRED FOX-TERRIERS.

6291. Dido, Geo. G. Cook.

BOGUS PEDIGREES IN "THE OFFICIAL, SIR!"—*Editor Forest and Stream:* Some months since, I charged the American Kennel Club Stud Book with admitting pedigrees from a party known to manufacture them, and whose advertisement had been fired out of every kennel paper in the country as well as of out *The Country Gentleman.* Subsequently, I discovered I was mistaken in charging it on "The Official" and retracted my charge. I now renew it in every word and particular, with added disgrace to the American Kennel Club that they have admitted these pedigrees in their last issue of the Stud Book, with all the public notice of their character existing when I first made the charge, and the additional notice of the charge I was then premature in. In support of my charge of the prostitution of the official organ of purity and exactness itself, to venal ends, I point to numbers 8811 and 8852 in the last number.—W. WADE (Hulton, Pa., May 21).

CAPITOL CITY KENNELS.—Hartford, Conn., May 23.—*Editor Forest and Stream:* I see by your issue of May 10 that the Essex Kennel have sold the St. Bernard Victor to the Capital City Kennels of Washington, D. C. Capitol City Kennels was claimed by me in the February 1887 issue of the *American Kennel Register*, also under head of Kennel Names the first publication was in the December 1887 issue and the second in the April 1888 issue. Would it not be a good idea for our friend in Washington to use another name?—CHAS. D. CUGLE.

THE A. K. C. AND DOG SHOWS.—New York, May 28.—*Editor Forest and Stream:* The shows given as by the Washington Kennel Club, the Baltimore Kennel Club, and other private speculations are not given under the auspices of the American Kennel Club. These clubs, if they exist, are not members of the American Kennel Club, and their awards are not recognized by this Association. The use of our rules is not with our authority.—A. P. VREDENBRUGH, Secretary.

ALBANY DOG SHOW.—Albany, N. Y., May 23.—*Editor Forest and Stream:* It is the opinion of many of the sportsmen and breeders of this vicinity that the Albany Kennel Club make a great mistake in selecting the second week in June, one of the hottest of the year, for their projected bench show. Between the oppressive heat, ventilation and poor means of transportation, the sufferings of the dogs and liability of disease can not be lightly estimated.—BREEDER.

BEAGLES AT NEW HAVEN.—*Editor Forest and Stream:* I am sorry that I hit my friend Diffenderffer on the raw, and I am very glad to learn that his beagle bitch Lou did not have the mange. From his communication it appears that Lacy had something to do about the veterinary's decision at New Haven. For the significance of the expression "skinned vets," see Mr. Mason's report of New Haven show.—FRANK D. HALLETT (Winsted, Conn.).

ELCHO, JR.—Claremont, N. H., May 21.—*Editor Forest and Stream:* I see by your issue of last week that some one has been exhibiting a dog at Baltimore under the name of Elcho, Jr., in the Irish setter class. Will the owner hereafter kindly show his dog under some other name, as there is only one dog with a right to that name, and that dog is owned by me? The red bitch entered in Eastern Field Trials Derby by Maj. Jones of Blacks, S. C., is by Elcho, Jr., and not by Elcho as stated in list of entries.—WM. JARVIS.

THE AMERICAN PET DOG CLUB was incorporated last week. This organization, according to its charter, has been called into existence in order "to protect and to ameliorate the condition of pet dogs." The names of the incorporators are Sarah I. Wheatleigh, Charles P. Holmes, Crump Ormsby, Wm. I. Fryer, Jr., and Mary E. Randolph.

EASTERN FIELD TRIALS DERBY.—Charlottesville, Va., May 25.—I notice that in the Derby entries the setter puppy Terry is described as the property of Mr. Stockton Terry; he is the breeder and Mr. Edward Dexter is the owner.—C. MCMURDO.

MR. WILLIAM TALLMAN has accepted a position with Spratts Patent and will go on duty June 1.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rake. By W. C. McMahon, Ottawa, Can., for lemon and white Clumber dog, whelped Feb. 25, 1888, by Drake (A.K.R. 5560) out of Madge (A.K.R. 6084).

Sport. By John Lucas, Alexandria, Va., for liver and white ticked pointer dog, whelped Sept. 7, 1887, by Bob White (Jokerge—Fussie) out of Dollie (Doctor H.—Fannie Turner).

Royal Albert, Jr. By Chas. F. Murphy, Boston, Mass., for English setter dog, whelped June 5, 1887, by Royal Albert out of Maida (Tempest—Lilly).

Cyclone in Norwalk. By Elm Grove Kennels, South Norwalk, Conn., for black and white English setter dog, whelped July 11, 1887, by Buckeye II. (A.K.R. 2558) out of Little Eva (A.K.R. 2662).

Fleet View Pointer Kennels. By Robt. Leslie, Lynn, Mass., for his kennels of pointers.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Ruby III.—Rake II. L. K. Mason's (Hastings, Ia.) Chesapeake Bay bitch Ruby III. (A.K.R. 1913) to A. M. Johnson's Rake II. (A. K.R. 6208), April 20.

Phyllis—Fergus. Dr. A. G. Stoddard's (Beaver Falls, Minn.) deerhound bitch Phyllis (A.K.R. 4727) to his Fergus (A.R.R. 4725), May 5.

Fanny—Drive. A. M. Gerry's (South Paris, Me.) foxhound bitch Fanny to his Drive (Roderick—Nellie), May 9.

Music—Drive. A. M. Gerry's (South Paris, Me.) foxhound bitch Music (Brave—Fly) to his Drive (Roderick—Nellie), May 19.

Dill—Drive. M. A. Dunham's (Norway, Me.) foxhound bitch Dill (Jack—Gipsey) to A. M. Gerry's Drive (Roderick—Nellie), May 27.

Andrea—McCormick. Richland Kennels' (Wahpeton, Dak.) mastiff bitch Andrea (A.K.R. 6025) to Mr. Paulson's McCormick (imported dog—Laughter), May 14.

Queen Beaufort—Tim. Elm Grove Kennels' (South Norwalk, Conn.) pointer bitch Queen Beaufort (Duke Royal, A.K.R. 2472—Lizzie Grace, A.K.R. 2476) to L. Gifford's Tim (Vic—Flirt Pitzer), May 10.

Sussie Beaufort—Tim. Elm Grove Kennels' (South Norwalk, Conn.) pointer bitch Sussie Beaufort (Duke Royal, A.K.R. 2472—Lizzie Grace, A.K.R. 2476) to L. Gifford's Tim (Vic—Flirt Pitzer), May 8.

Sallie Walker—Spot Dash. A. McDonald's (Rockland, Me.) pointer bitch Sallie Walker (Gem Beaufort—Minnie T.) to Fleet View Pointer Kennels' Spot Dash (Sir Philip Sydney—Topsy), May 24.

Belle Randolph—Spot Dash. H. L. Rice's (Boston, Mass.) pointer bitch Belle Randolph (Duke of Westminster's Sam—Juno III.) to Fleet View Pointer Kennels' Spot Dash (Sir Philip Sydney—Topsy), May 25.

Venus—Chequasset Diamond. L. W. Dunham's (Birmingham, Conn.) pug bitch Venus (A.K.R. 4395) to River View Kennels' Chequasset Diamond (Bradford Ruby—Tantrums), May 13.

Linda—Hector. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Linda (A.K.R. 2552) to J. H. Long's Hector (A.K.R. 3249), April 6.

Kleine—Prince Bang. H. S. Pitkin's (Hartford, Conn.) St. Bernard bitch Kleine (A.K.R. 2644) to his Prince Bang (A.K.R. 4415), May 4.

Mica—Prince Bang. C. Holcomb's St. Bernard bitch Mica to H. S. Pitkin's Prince Bang (A.K.R. 4413), May 17.

Lassie Bondhu—Royal Kent. E. A. Colman's (Charlestown, Mass.) English setter bitch Lassie Bondhu (Count Bondhu—Drucy) to Cohannet Kennels' Royal Kent (Royal Gem—Lady Westmoreland), May 8.

Ruby Glencho—Bronx. L. A. Van Zandt's (Yonkers, N. Y.) Irish setter bitch Ruby Glencho (Glencho—Tara, A.K.R. 2583) to Jas. B. Blossom's Bronx (Chief—Lassie, A.K.R. 623), May —.

Belle Ida—Kelso. A. W. Pearsall's (Huntington, L. I.) Irish setter bitch Belle Ida (Nimrod—Lyda Belle) to Jas. B. Blossom's Kelso (Glencho—Sweetheart), April 22.

Rideau Lou—Obo, Jr. Rideau Kennels' (Ottawa, Can.) cocker spaniel bitch Rideau Lou (Bob IV.—Raveness) to their Obo, Jr. (A.K.R. 1481), May 8.

Royal Rose—Jubilee. C. A. Stevens's (Hoboken, N. J.) bull-terrier bitch Royal Rose (Randolph—Nell) to F. F. Dole's Jubilee (Bendigo—Queen), April 22.

Sheila—Jubilee. A. R. Wirz's (Philadelphia, Pa.) bull-terrier bitch Sheila to F. F. Dole's Jubilee (Bendigo—Queen), May 3.

Nellie—Jubilee. W. G. Cochran's (Philadelphia, Pa.) bull-terrier bitch Nellie to F. F. Dole's Jubilee (Bendigo—Queen), April 13.

White Violet—Jubilee. Thos. Harris's (Philadelphia, Pa.) bull-terrier bitch White Violet (Dutch—White Rose) to F. F. Dole's Jubilee (Bendigo—Queen), March 15.

Modjeska—Jubilee. G. Woodhill's (Philadelphia, Pa.) bull-terrier bitch Modjeska (Dutch, Jr.—Young Venom) to F. F. Dole's Jubilee (Bendigo—Queen), April 30.

Miss Norah—Jubilee. F. F. Dole's (West Philadelphia, Pa.) bull-terrier bitch Miss Norah (Dutch—Norah) to his Jubilee (Bendigo—Queen), May 11.

Marguerite—Jubilee. H. W. Holmes's (New York) bull-terrier bitch Marguerite (Count—Young Venom) to F. F. Dole's Jubilee (Bendigo—Queen), March 14.

Julip—Bacchanal. P. Lorillard, Jr.'s (Jersey City, N. J.) fox-terrier bitch Julip (Stableford Joe—Nellie) to Blemton Kennels' Bacchanal (The Belgravian—Bedlamite), May 26.

Clytie—Jack. Rideau Kennels' (Ottawa, Can.) fox-terrier bitch Clytie (Grit—Fury) to J. Lowe's imported Jack, May 13.

Damietta—Lucifer. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Damietta to their Lucifer (Splinter—Kohinoor), May 21.

Mabel Belmont—Blemton Coronet. J. R. Trissler's (Lancaster, Pa.) fox-terrier bitch Mabel Belmont (Earl Leycester—Coquette) to Blemton Kennels' Blemton Coronet (Result—Diadem), May 17.

Blemton Consequence—Bacchanal. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Blemton Consequence to their Bacchanal (A.K.R. 3686), May 21.

Oxford Belle—Bacchanal. R. S. Ryan's fox-terrier bitch Oxford Belle (Oxford Joe—Norma) to Blemton Kennels' Bacchanal (A.K. R. 3686), May 23.

Coquette—Dusky Trap. J. R. Trissler's (Lancaster, Pa.) fox-terrier bitch Coquette (Bacchanal—Trifle) to Blemton Kennels' Dusky Trap (Dusky Splinter—Spider), May 19.

Village Belle—Lucifer. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Village Belle (Volo—Beauty) to their Lucifer (Splinter—Kohinoor), May 11.

Belva—Bradford Harry. M. H. Dailey's Yorkshire terrier bitch Belva to P. H. Coombs's Bradford Harry (Bruce—Lady), May 9.

Flirt—Bradford Harry. John L. Lincoln's (Chicago, Ill.) Yorkshire terrier bitch Flirt (Jingo—Fannie) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), May 22.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Gowrie's Bell. E. A. Buck's (Chattanooga, Tenn.) Chesapeake Bay bitch Gowrie's Bell (A.K.R. 5594). May 15, nine (four dogs), by A. C. Treadwell's Dorabello (Drake—Queen); all light sedge with small white mark on chest.

Good Luck. L. J. Sturtevant's (Somerville, Mass.), mastiff bitch Good Luck, May 6, fourteen (nine dogs), by Wyoming Kennels' Sears' Monarch (A.K.R. 6037).

Maud. W. Montgomery's (Waverly, Md.) St. Bernard bitch Maud (Dirk—Abra), May 10, twelve (seven dogs), by L. Daniels's champion Apollo (Medor—Blass); six since dead.

Bertha. W. Montgomery's (Waverly, Md.) St. Bernard bitch Bertha (Bruno—McDonna's Esa), May 20, six (two dogs), by Hospice Kennels' champion Hector (champion Apollo—Thyras).

Midget. J. L. Breese's (Tuxedo Park, N. Y.) pointer bitch Midget (Match—Belle), May 10, eight (five dogs), by his Bang Grace (Bang Bang—Grace).

Mavis. J. L. Breese's (Tuxedo Park, N. Y.) English setter bitch Mavis (Gladstone—Lavalette), May 19, three (one dog), by his Gloster (Dashing Rover—Trinket).

Little Eva. Elm Grove Kennels' (South Norwalk, Conn.) English setter bitch Little Eva (A.K.R. 2662), March 12, eight (all dogs), by their Buckeye II. (A.K.R. 2558).

Mena II. C. A. Ives's (Bridgeport, Conn.) English setter bitch Mena II. (Brethus—Daisy), May 21, ten (eight dogs), by J. E. Hair's Rock Belton (Yale Belton—Princess Lillie).

Lassie. J. B. Blossom's (New York) Irish setter bitch Lassie (champion Glencho—Sweetheart), May 21, thirteen (six dogs), by Dr. Jarvis's Elcho Jr. (A.K.R. 508).

Althea. W. H. Walker's (Portland, Oregon) cocker spaniel bitch Althea (A.K.R. 842), May 17, seven (three dogs), by H. D. Brown's Dixie (A.K.R. 4465); all black.

Diadem. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Diadem (Dugdale Joe—Diamond Dust), May 10, four (two dogs), by their Lucifer (Splinter—Kohinoor).

Blemton Cracovienne. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Blemton Cracovienne, May 19, four (two dogs), by their Dusky Trap (Dusky Splinter—Spider).

Maizeland Lively. L. Timpson's (Red Hook, N. Y.) fox-terrier bitch Maizeland Lively (Venetian—Zulette), May 22, four (one dog), by Blemton Kennels' Sentinel (Bacchanal—Safety).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Dash's Trump. Chesapeake Bay dog (A.K.R. 5593), by E. A. Buck, Chattenooga, Tenn., to H. Douglass, New Castle, Ala.

Driver. Black, white and tan beagle dog, age not given, by Warrior out of Fanny (A.K.R. 1718), by Associated Fanciers, Philadelphia, Pa., to J. D. Lucas, St. Louis, Mo.

Blue Cap II. Black, white and tan and ticked beagle dog (A.K.R. 4608), by A. Vass, Goshen, N. Y., to Associated Fanciers, Philadelphia, Pa.

Blue Cap II. (A.K.R. 4008)—Lillie (A.K.R. 5715) whelps. Beagles, four dogs and one bitch, whelped Feb. 1, 1888, by A. Vass, Goshen, N. Y., to Associated Fanciers, Philadelphia, Pa.

Rogue. Black, tan and white ticked beagle dog, whelped March 18, 1887, by Blue Boy out of Mystic, by South Paris Beagle Club, South Paris, Me., to E. C. Tarr, Lynn, Mass.

Banker—Lucy whelp. Black, tan and white beagle bitch, whelped March 16, 1888, by F. C. Rochester, Logan, Ohio, to R. W. Paddock, Lancaster, Ohio.

Banker—Lucy whelps. Beagles, two bitches, whelped March 16, 1884, by F. C. Rochester, Logan, Ohio, to W. C. Greene, Milford, Ohio,

Carrie. White and liver pointer bitch, whelped May 14, 1884, by Lort out of Lady Croxteth, by D. H. Moore, Athens, Ohio, to F. C. Rochester, Logan, Ohio.

Saiva. Fawn mastiff bitch, whelped May 5, 1886, by Ilford Caution out of Bess, by Wyoming Kennels. Melrose, Mass., to W. A. Power, Greenwood, Mass.

Andrea. Fawn mastiff bitch (A.K.R. 6025), by R. Barber, Wahpeton, Dak., to Richland Kennels, same place.

Floss I. Fawn mastiff bitch, whelped Oct. 17, 1885, by Dread out of Diamond, by Associated Fanciers, Philadelphia, Pa., to M. Gibbs, Wilkesbarre, Pa.

Pet. Pug bitch, whelped July 6, 1886, by Ress out of Vic, by Wyoming Kennels, Melrose, Mass., to F. E. Underwood, Keene, N. H.

Maple Grove Kennels. Brindle with white markings St. Bernard bitch (A.K.R. 2802), by Associated Fanciers, Philadelphia, Pa., to F. W. Fraser, Detroit, Mich.

Princess Beatrice II. Orange and white St. Bernard bitch, whelped May 24, 1887, by Plinlimmon out of Princess Beatrice, by Wyoming Kennels, Melrose, Mass., to C. H. Spring, Newton Lower Falls, Mass.

Drake. Liver and white ticked pointer dog, whelped March 4, 1886, by Duke Royal (A.K.R. 2475) out of Lizzie Grace (A.K.R. 2476), by Elm Grove Kennels, South Norwalk, Conn., to D. L. Durand, Birmingham, Conn.

Dan. Liver and white setter dog, whelped April, 1887, pedigree unknown, by Elm Grove Kennels, South Norwalk, Conn., to G. Ferice, Weston, Conn.

Bow Bondhu. Blue belton English setter dog, whelped April 7, 1887, by Gus Bondhu out of Bo Peep, by G. A. Colman, Charlestown, Mass., to J. L. Wells, Attleboro, Mass.

Gipsey. Black and tan Gordon setter bitch, whelped April, 1886, by Ned out of Vixen, by Mrs. A. M. Stiles, Huntington, Mass., to Associated Fanciers, Philadelphia, Pa.

Dinah II. Black cocker spaniel bitch, whelped Nov. 16, 1886, by Jacob out of Floss, by T. H. Kingston, Washington, D. C., to Associated Fanciers, Philadelphia, Pa.

Ludo. Black cocker spaniel dog, whelped Jan. 15, 1888, by Obo, Jr. (A.K.R. 1481) out of Rideau Lou, by Rideau Kennels, Ottawa, Can., to C. E. Living, same place.

Obo, Jr.—Rideau Lou whelp. Black cocker spaniel dog, whelped Jan. 15, 1888, by Rideau Kennels, Ottawa, Can., to Capt. Gordeau, same place.

Obo, Jr.—Rideau Lou whelp. Black cocker spaniel dog, whelped Jan. 15, 1888, by Rideau Kennels, Ottawa, Can., to J. J. Gormully, same place.

Richmond Tyrant. Black and tan head, white body, fox-terrier dog, whelped September, 1885 (A.K.R. 4114), by Associated Fanciers, Philadelphia, Pa., to Wm. Meyer, Milwaukee, Wis.

Jack—Nettle whelp. White, black and tan markings, fox-terrier dog, whelped March 17, 1888, by Rideau Kennels, Ottawa, Can., to G. L. Jackes, Merrickville, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. C., Willow Lakes.—How can I cure distemper in my dog? Ans. Quarantine dog. Give 5 grains quinine night and morning, give 3 drops of aconite tincture every four hours if fever is present, and whisky for stimulation if there is great weakness.

T. B. G., Dover, N. H.—I have a fox-terrier puppy, about four months old, which is afflicted with two or three sore places on his back and belly. The sores commenced by the hair coming out and gradually increasing till one is now as large as a quarter-dollar piece, feels thick, or puffed up, with some little discharge of a watery kind. I have applied lard and sulphur, but it does apparently no good. Ans. Give the puppy a teaspoonful of syrup of buckthorn every other day in the morning. Get two ounces of zinc oxide ointment and, after sponging and cleansing the skin, rub it gently in, morning and evening.

F. V. R., Thibodaux.—Irish setter has no appetite; he is poor and bony, what little he eats he will thrown up a while after. His eyes are always full of wax and his mouth discharges spittle all the time; have been giving him tincture of belladonna for four days. Ans. Give the dog 5 grains of quinine night and morning. Give teaspoonful of syrup of buckthorn every morning. Dog has distemper or worms, or both.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, May 26.—A large number gathered at the Massachusetts rifle range to-day to shoot in the regular matches, and some very fine scores were made both at rest and off-hand. The scores were as follows:

Victory Medal Match—200yds.

O M Jewell	9	9	9	9	7	10	10	10	9	10—92

SYRACUSE, May 23.—At the regular shoot held by the Onondaga Rifle Club at their range to-day these scores at 200yds. were made, off hand, out of a possible 100: Koehler 81, Knapp 71, Fairchild 66, D. Eggleston 64, Stillman 62, Lathrop 38. In the rest match, out of a possible 120 in ten shots, this was the record: Koehler 102, Fairchilds 93, D. Eggleston 92, Malcolm 85, Stillman 84, Knapp 76, Leighton 83. Koehler won both matches.

THE TOPEKA TROUBLE.—The Topeka Rifle Club has been busy explaining its position on the charges of fraud, and recently President J. T. Williams and Secretary J. L. Paine have sent out a statement explaining that the charges grew from the assertion of F. G. Minkler, who had been expelled from the club, and the whole matter would seem to be an unfortunate wrangle into which the club became involved with a litigiously inclined member. J. R. McCarter, of the club, who had made a previous statement, says: "Regarding the affidavit made by me, I desire to say I was mistaken in supposing that I had made two misses in the score of Sept. 25, and that two shots had been filled in by another member of the club. The score made by me on Oct. 7 was as follows, viz.: 0, 3, etc., and was correctly reported by the club, as were also the other scores. I make this correction in justice to the members of the club."

MILFORD, Mass., May 26.—In Co. M, 6th Regiment, M.V.M., which is located in this town, there is much interest in shooting, the company has a number of good shots. The company not only have received encouragement from the State to be more perfect in rifle practice, but they have recently received material aid from the town, and in consequence of this latter aid they are to at once put their range into good order. They will build at once a new target; it is to be 12ft.×12ft. with a back ground of dirt 2ft. thick and a substantial roof over head,

NEWARK, N. J.—The committees having in charge the arrangements for the big July shooting festival of the International Sharpshooters' Union have about completed their labors as far as preliminary work goes. A design for the new buildings has been adopted and contracts for these as well as for the thirty extra targets and shooting stands have been awarded. A contract for the medals has also been given out. Hayes Brothers, of this city, securing it. The shooting will begin at 1 P. M. on Monday, July 9, and 8 A. M. on the next four days, and will end at 6 P. M. On Saturday the team shooting will begin at 10 A. M., and in the afternoon the prizes will be distributed. Forty targets in all will be used, and the distance for all shooting will be 200yds. Even with this large number the prospects are that the shooters will have to move along lively to prevent crowding. Following is the corrected list of clubs which have joined the Union, the entry list being closed for club entries: Newark Shooting Society, Independent New York Schuetzen Corps, New York Schuetzen Corps, Jersey Schuetzen Corps, Jersey City; Miller Rifle Club, Hoboken; Williamsburg Schuetzen Gesellschaft, Brooklyn; Hoboken Independent Schuetzen Corps, Elizabeth Independent Schuetzen Corps, Williamsport (Pa.) Rifle Club, Pittsburgh, (Pa.) Rifle Club, Bridgeport (Conn.) Rifle Club, North Chicago (Ill.) Rifle Club, Norwalk (Ohio) Rifle Club, Barry (N. Y.) Rifle Club, Rochester (N. Y.) Rifle Club, Excelsior Rifle Club, Davenport, Iowa; Greenville (N. J.) Schuetzen Corps, Buffalo (N. Y.) Central Schuetzen Verein, Massachusetts Rifle Association, Boston; Independent Germania Schuetzen Bund, Newark, N. J.; Cincinnati (Ohio) Rifle Association, San Francisco (Cal.) Schuetzen Club, Morrisania (N. Y.) Schuetzen Verein, Independent Germania Schuetzen Bund, New York; German-American Schuetzen Gesellchaft, New York; Zettler Rifle Club, N. Y.; Alling (N. Y.) Rifle Team, Helvetia Rifle Club, N. Y.; Bullshead Rifle Club, N. Y.; Rod, Gun and Rifle Club, Springfield, Mass.; Onondaga Rifle Club, Syracuse, N. Y.; Hartford (Conn.) Rifle Club, Monroe (Wis.) Rifle Club, Joliet (Ilwa) Rifle Club, Marion (N. J.) Rifle Club, Ball-Rifle Target Shooting Company, Baltimore, Md.; Elizabeth (N. J.) Sharpshooters' Association, Bridgeport (Conn.) Schuetzen Verein, Buffalo (N. Y.) Schuetzen Gesellschaft, New York Rifle Club, Milwaukee (Wis.) Sharpshooters' Society; Vasser (Mich.) Rifle Club; Franklin Rifle Club, Hartford, Conn.; Dubuque (Iowa) Schuetzen Verein. The date upon which the list of entries from individual will close is June 20. All union members who wait later than that date to enter will be required to pay an entry fee of $4 instead of $2.

BRIDGEPORT, Conn., May 23.—Regular shoot of the Bridgeport Rifle Club:

W B Wheeler	9	10	7	10	5	10	8	9	9	8—85
W H Beardsley	9	10	10	8	8	8	5	8	8	9—83
E Nothnagle	8	9	7	8	8	7	10	7	7	9—80
J W Brown	8	6	5	9	8	8	6	6	9	8—73
Geo E Betts	8	9	6	8	3	6	6	8	5	3—62
C H Barber	6	10	5	3	4	7	4	6	6	9—60

W. B. Wheeler wins the badge for the best average, his average being 80¾ for four consecutive scores of 10 shots each, Mr. Beardsley following close with 80 for three scores.

SYRACUSE, N. Y., May 23.—Onondaga Rifle Club. The weather was cloudy with a slight wind. Standard American target, 200yds. Offhand: Koehler 81, Knapp 71, Fairchilds 66, D. Eggleston 64, Stillman 62, Lathrop 38. Rest, possible 120: Koehler 102, Fairchilds 93, D. Eggleston 92, Malcomb 85, Stillman 84, Knapp 70, Leighton 89.

HAMILTON, Ont., May 21.—The annual meeting of the Victoria Rifle Club was held to-night. The various reports presented showed the club to be in a flourishing condition. The following officers were elected: Major J. Mason, Pres.; Major Henry McLaren, first Vice-Pres.; Capt. E. G. Zealand, second Vice-Pres.; Ald. A. Pain, Sec'y-Treas.; Managing Committee, Albert Crawford, Oliver Hancock, P. T. Robertson, W. H. Clarke and Jas. Adam; Marker, Henry Bowering. Lieut.-Col. J. M. Gibson, M.P.P., ex-president, was presented with an illuminated address accompanied by a handsome silver salver.

May 24.—A rifle match between two teams captained by the president and ex-president of the Victoria Rifle Club was shot today. There were five men on each team, and the ranges were 200, 500 and 600yds.:

Ex-President's Team.

	200	500	600	Total
Lieut-Col Gibson	26	28	28	82
Henry Morris	28	28	29	85
O Hancock	26	25	19	70
D Mitchell	28	19	21	68
Jas Adam	26	18	21	65
	134	118	118	370

President's Team.

	200	500	600	Total
Malor Mason	29	21	16	66
Andrew Murdoch	29	31	28	88
Dr Ross (Dundas)	28	19	19	66
Jas R Adam	29	29	20	78
Dugald Henderson	24	25	20	69
	139	125	103	367

GARDNER, Mass., May 23.—The Gardner Rifle Club has been making extensive improvements at the Hackmatack Range. They have expended about $150, and have the best range in this vicinity; there is a good interest in the club, and as a result they are making a very creditable record. Last regular meet, off-hand, 200yds.:

G F Ellsworth	83	86	78—247
F E Nichols	74	83	80—237
C N Edgell	77	73	82—232

To-day the members of the club shot in the contest for the Bullard gold medal, all but Goodale using a sporting rifle; Goodale used a military rifle.

G F Ellsworth	86	87	75 89 83—420
C N Edgell	79	77	67 83 79—383
A E Knowlton	67	81	71 76 85—380
F B Edgell	70	74	81 66 75—366

A E Knowlton	68	76	81—225
C L Leland	55	75	68—198
Ben Ten	55	57	68—175

C J Crabtree	73	70	63 80 68—364
S L Walker	72	74	65 72 78—361
J H Jenkins	61	69	68 64 48—310
G C Goodale	58	56	60 65 53—292

GALLERY SHOOTING.—New York, May 27.—The standard decimal target match, which has been contested with a great deal of spirit for the past two weeks at the rifle range of the White Elephant, of which the veteran Conlin is the manager, came to a very pleasant close last Saturday night. The match was a go-as-you-please, the shooter being allowed to take any position with any .22-cal. rifle, any kind of sights, and as many targets as he chose, each target consisting of 7 shots, and the best three targets of the same marksman during the match to be counted; 210 points were possible, the bullseye measuring 1in., the 9 ring 11-16in. and the 10 ring 11-28in., distance 100ft. Below are some of the best scores made:

S P Lazarus	70	69	68—207
Chas Mehlig	69	69	69—207
H G Starkweather	69	69	69—207
E Castle Bert	70	69	68—207
Dr J N Henry	69	69	68—206
A G Paul	68	68	67—203

W H Lent	67	66	65—198
D Bacon	69	64	63—196
A M Smith	66	64	63—193
R Marzo	64	64	64—192
J H Rodman	63	62	60—185
de Agreda	59	58	58—175

Result of the shoot-off, best 3 in 5 targets, same conditions: Lazarus 190, Mehlig 185, Starkweather 178, Best 174.

THOMASTON, Conn., May 26.—At our weekly shoot this afternoon the light was rather bad but scarcely any wind; 200yds., off-hand, standard target:

G A Lemmon	8	9	7	9	4	5	9	6	10	10—77
G P North	5	7	7	5	9	6	10	7	7	4—67
Fred A Perkins	5	7	4	9	8	8	5	7	8	4—65
C F Williams	3	5	5	6	4	6	5	4	3	9—50

HARTFORD, Conn., May 26.—A public prize shoot was held to-day by the Franklin Rifle Club at Union Grove; $150 in 21 prizes, first $25, last $1. All ties divided. German ring target, 160yds. Winning scores:

E T Stephens	24	23	24—71	W M Farrow	25	20	21—66
S J Lyon	22	24	24—70	T T Cartwright	23	24	19—66
W W Tucker	22	23	25—70	E H Williams	22	21	22—65
H M Pope	23	23	23—69	H Leroy	21	20	23—64
F K Rand	23	24	22—69	L S Allen	17	22	24—63
Z C Talbot	23	24	21—68	A K Cooley	21	22	20—63
H Engle	22	25	21—68	T H Britteu	18	20	24—62

E C Henn	14	24	20—68	F Reutchler	20	18	20—58
D Stuart	23	21	23—67	John Russell	16	15	24—55
D J Jordan	24	19	24—67	J Heubler	18	22	20—55

Bullseye target, 2½in. bull: First bull, H. Engle; last bull, W. M. Farrow; most bulls, H. M. Pope 2 and W. M. Farrow 2.—H. M. POPE.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.—Messrs. T. C. Patrick and M. E. Harrison are requested to send us duplicate lists of the members of their teams entered for the Decoration Day Trophy.

CANADIAN TRAP NOTES.

TORONTO, May 21.—The following are the scores made by the members of the Owl Gun Club at their fourth shoot for the gun presented by C. Stark & Co., the shoot being at 10 Canadian blackbirds:

C Kemp..1111111111011111011—18	W Smith..1101011011111001111—15
Alexander1111101010111111111—17	Douglass..0011101011101111110—14
Roberts..0110111111101111011—16	

The following shot their second string and scored as follows:

C Kemp..1110111011101111111—17	H George.1001111100100110111—12
Douglass..1110100101111101011—14	W Smith..1001001010011011101—11

May 23.—The sixth and last shoot for the Enos James gun, presented to the West Toronto Junction Gun Club by Mr. Charles Stark, was held to-day, with the following result: D. Blea 17, H. George 17, W. A. Clarke 17, P. Wakefield 13, J. Bailey 13, E. Dollery 11. D. Blea won the gun with a total of 106 out of 120, W. A. Clarke coming second with 95, H. George third with 94, P. Wakefield fourth with 91. There were three prizes given by the club for second, third and fourth. The president's medal was shot for the same day. H. George winning the trophy for the third time, it becomes his property.

The telegraph match shoot, West Toronto Junction vs. Port Colborne, resulted in a tie, each team scoring 78 birds out of 100. Following is the score, teams of 5 men each, 20 Canada blackbirds each, 3 screened traps, 18yds. rise:

West Toronto Junction.		Port Colborne.	
D Blea	18	Mr Neff	18
P Wakefield	18	Mr Smith	17
W A Clarke	16	Mr White	16
J Bailey	15	Mr Herckaden	14
E Dollery	11—78	Mr Smith	13—78

OTTAWA, May 23.—The Ottawa Gun Clubs held their last practice shoot to-day, previous to the tournament. It was two sweepstakes at 15 birds each, 18yds. rise: G. White 13, T. McLelan 12, P. Trudeau 10, J. Stewart 8, R. Lucas 7, E. Smith 6, J. Manual 6, H. Street 5 and P. Tache 5.

Sweepstakes at 10 birds each—G. White 9, P. Thompson 8, T. McLelan 8, P. Trudeau 8, A. Throop 7, J. Manuel 7, R. Dalton 5, E. Smith 5, H. Street 3 and Tache 3.

Following are the team entries for the Governor-General's trophy: Dominion, Montreal and Lachine gun clubs, of Montreal; Hit or Miss, Thistle, Torontos, Toronto (two teams); Ottawas and St. Hubert's, Ottawa (two teams). Over forty will shoot for the individual championship.

THE MINNEAPOLIS TOURNAMENT.

MINNEAPOLIS, May 23.—The weather was not propitious today for any kind of outside sport, but that fact did not hinder the lovers of gun shooting from assembling on the Bloomingdale avenue grounds to attend the fifth annual tournament of the Minneapolis Gun Club. Everything on the grounds had been fitted up in the best possible manner, with a grand stand, booth, judges' and scorers' stand. The first shoot was to have occurred at 9 o'clock, but the rain was pouring down at that hour, so that it had to be postponed until an hour later. By that time nearly 100 marksmen, representing cities in this State, Iowa, Dakota and Wisconsin, were on hand. About 50 were present from different places outside the city. Four traps were constantly in motion throwing out Peoria blackbirds, the rise for singles 18yds., and 15 for doubles. Following are the total individual scores of each shoot, also the prizes won:

First shoot at 10 singles: Blakely 7, Skinner 8, Forbes 7, Kruger 8, Catamaran 7, Chantler 9, Burke 5, Dalton 8, Tabor 6, Daly 9, Bennett 9, M. F. Kennedy 7, Turner 7, Tuttle 7, Blodgett 6, Smith 8, Vallie 10, Lat 5, G. Morse 7, Cooper 10, Ahlstrom 7, Cutler 9, Johnston 7, Menkey 7, Hann 9, Anderson 8, Jewell 7, Andrews 7, Hanna 7, Cook 7, Hadfield 7, Pyle 7, Whitcomb 9, Lawrence 7, E. Morse 8, Marshall 9, Pye 8, Panison 7, Shuler 6, Boardman 5, Osmer 8, Westerson 7, Noreen 9, Ensign 9, Balsam 8, Van Sann 7, Durant 8, Ruble 8, Wallace 5, Shott 8, Kunseh 7, Holt 8, Dyer 7, Gordon 6, Williams 7, Hanson 9, Larson 6, Goosman 6, Eli 6, Legg 7. Vallie and Cooper won first; Chantler, Marshall, Ensign and Hanson second; Durant, Shott and Holt third; Catamaran and Menkey fourth; Tabor fifth.

Second shoot at 10 singles: Gordon 9, Eli 5, Menkey 5, Dyer 8, Grant 5, Ruble 10, Durant 8, Balsam 9, Pye 7, Hannah 8, Newton 10, Catamaran 8, Osmer 8, Wallace 10, Chantler 7, Hanson 6, Ensign 8, Marshall 6, Cooper 9, Skinner 9, Daly 7, Bennett 6, Dalton 8, Kreuger 7, Tuttle 9, Burke 7, Turner 6, Dunn 10, Cuttler 9, Hilstrom 9, Byland 6, Latz 4, Noreen 9, Max 9, Blakely 9, Blodgett 8, Boardman 7, Parker 5, Morse 5, Anderson 6, Forbes 8, Shott 6, Lawrence 8, Whitcomb 6, Holt 8, Beck 9, M. F. Kennedy 6, Tabor 9, Goosman 9, E. Morse 7, L. F. Kennedy 6, Badger 8, Van Sann 9, Westerson 6, Pyle 5, Cook 9, Wallace 5, Legg 6, Williams 8. Vallie, Duun, Jewell, Ruble and Newton won first money, Ahlstrom, Smith, Balsam, Paulson and Gordon second, Hanna third, Burke, Marshall and Pye fourth, Kennedy and Marshall fifth.

Third shoot at 4 singles and 3 pairs: Vallie 7, Cooper 8, Jewell 6, Dunn 6, Newton 9, Ruble 6, Balsam 7, Chantler 8, Smith 5, Marshall 5, Ensign 6. Gordon 7, Hanson 9, Ahlstrom 6, Krueger 5, Max 5, Forbes 7, Bennett 6, Dalton 8, Van Sann 8, Daly 8, Tabor 8, Burke 9, Skinner 9, Cook 7, Hadfield 7, Blodgett 6, Westerson 10, Tuttle 5, Legg 6, Eli 7, Johnston 7, Whitcomb 8, Lawrence 5, Cutler 5, M. F. Kennedy 6, Pye 8, Mason 6, Badger 8, Beck 9, Anderson 8, Dyer 7, Durant 8, Noreen 6, L. F. Kennedy 5, Byland 8, Menkey 8, Turner 8, Andrews 6, E. Morse 5, G. Morse 6 Catamaran 10, Williams 7, Holt 6, Blakely 9, Gooseman 5, Hanna 9, G. S. Smith 6. Westerson and Catamaran won first money, Newton, Hanson, Burke, Skinner, Beck, Blakely and Hanna second, Dalton, Van Sann, Pye and Turner third, Forbes and Eli fourth, Jewell and Bennett fifth.

Fourth shoot, six singles and two pairs. Westerson 8, Wallace 7, Catamaran 7, Cutler 5, Vallie 8, Larson 5, Dunn 8, Latz 7, Ruble 7, Nicholson 5, Newton 9, L. F. Kennedy 6. Cooper 9, Schuler 5, Chantler 9, Hadfield 7, Skinner 9, Marshall 9, Blodgett 6, Burke 8, Eli 9, Balsam 7, Holt 8, Ensign 8, Johnson 6, Blakely 5, Hanna 8, Turner 7, Gordon 8, Paulson 8, Pye 9, Whitcomb 7, J. G. Smith 6, Goosman 7, Forbes 8, Beck 6, Dalton 7, Ahlstrom 7, Max 8, Williams 6, Legg 6, Nason 6, Tabor 8, E. Morse 9, Daly 9, Kreuger 7, Van Sann 7, Hanson 7, Steele 6, Shott 6, Menkey 5, Bennett 8, Tuttle 8, M. F. Kennedy 8, Dyer 8, Noreen 8, Durant 8, Boardman 9, Badger 7, Anderson 9, Ingalls 8. Newton, Cooper, Jewell, Chantler, Skinner, Marshall, Daly, Anderson, Eli, Pye and E. Norse won first money; Vallie, Ensign, Hanna, Forbes, Noren and Dyer, second; Hanson, third; J. G. Smith, Legg, Shott, L. F. Kennedy, Blodgett, Johnson, Beck, Williams, Nason, Steele, fourth; Menkey, fifth.

May 24.—The second day of the Gun club tournament opened under auspicious circumstances yesterday morning, inasmuch as Old Sol deigned to smile at intervals through the overhanging clouds and mist. There was a large attendance also, and the grounds resembled somewhat those of a fair. The field outside the traps and near the marksmen's stand was literally covered with exploded shells and broken birds. The distance flags, which were at first of a crimson color, seemed dyed a darkened gorier hue on the second day, which proved a regular Waterloo for Peoria blackbirds. All of the marksmen present were in excellent spirits over the result of their performances the day before, and the way the scores of the two first shoots in the forenoon loomed up showed that they could even excel in what they had accomplished. There was nothing stronger than coffee and river water to drink on the grounds, and one gentleman remarked that he had never seen such a crowd of temperance folks before, as there was not even a bottle of any kind of conversation liquid to be found anywhere. The scores of the two morning shoots were as follows:

Ten singles: Vallie 9, Skinner 10, J. G. Smith 7, Hanson 10, Ensign 9, Marshall 5, Rain 6, Turner 6, Blodgett 3, Cooper 7, Cutler 9, Balsam 9, Whitcomb 7, Lawrence 7, Haywood 8, Smith 8, Hadfield 6, Van Sann 9, Ruble 10, Jewell 9, Boardman 8, Kruger 8, Norse 9, Shott 5, Grant 7, Anderson 7, Ed. Morse 10, M. F. Kennedy 10, Gordon 8, Goosman 6, Ahstrom 8, Byland 5, Williams 8, Wallace 8, Chantler 9, Paulson 4, Hanna 10, Burke 9, Blakely 9, Pye 8, Schuler 5, Beck 0, Dunn 8, Daily 10, Steele 5, Forbes 9, Tabor 10, Westerson 8, Dodge 6, Nicholson 4, L. F. Kennedy 8, Latz 6, Noreen 7, Cook 8, Holt 9, Durant 9, Dyer 9, Tuttle 9, Dalton 8, Elliott 7. Skinner, Hanson, Ed. Morse, M. F. Kennedy, Daily, Tabor, Ruble and Hanna won first, Vaillie and Ensign second, Lawrence third and Raines fourth.

Four singles and 3 pairs: Skinner 9, Harrison 8, Ed. Morse 5, M. F. Kennedy 9, Daly 8, Tabor 8, Ruble 8, Hanna 5, Vallie 8, Ensign 8, Van Sann 9, Dyer 7, Chantler 6, Anderson 7, Burke 8, Holt 9, Durant 8, Ahlstrom 7, Tuttle 7, Balsam 9, Forbes 7, Turner 5, Marshall 5, Goosman 6, Dalton 7, Latz 6, Jewell 8, Cooper 5, Krueger 6, Pye 9, Cutler 6, Lawrence 6, Whitcomb 8, Cook 4, Dodge 8, Schuler 6, Wallace 5, Paulson 9, Byland 5, Nicholson 6, L. F. Kennedy 7, Newton 10, Steele 5, Schott 6, Dunn 8, Westerson 8, Blakely 5, Eli 5, Noreen 6, Smith 8, Gordon 7, Williams 4, J. G. Smith 7. Newton won first, Skinner, M. F. Kennedy, Van Sann, Holt, Balsam and Paulson second, Ruble, Dodge, Dunn and Westerson third, Ahlstrom and Dalton fourth, Nicholson fifth.

The event of the afternoon was the championship team shoot, which consisted of two teams from the St. Paul Club, four from Minneapolis and one from Hastings, in which St. Paul carried off both first and second honors. Following are the scores of each team:

St. Paul No. 1.		St. Paul No. 2.	
Daily	14	Chantler	11
Burke	13	Holt	15—53
St. Paul No. 2.			
Anderson	13	Kennedy	12
Blakely	11	Paul	13—49
Hastings.			
Hanna	12	Tuttle	10
Newton	11	Westerson	13—46
Minneapolis No. 1.			
Skinner	13	Dunn	10
Balsam	14	Ensign	12—49
Minneapolis No. 2.			
E Morse	9	Marshall	7
Shott	9	Ruby	7—32
Minneapolis No. 3.			
Ruble	13	Dalton	12
Cutler	11	Pye	8—44
Minneapolis No. 4.			
Elliott	12	Whitcomb	11
Osmer	10	Lawrence	7—40

St. Paul's No. 1 team took first money by a score of 53, and No. 1 of Minneapolis and No. 2 of St. Paul tied for second money by scores of 49. This was shot off with 24 single birds and won by St. Paul by a score of 19 to 16. Hastings took third money by a score of 46. No. 3 of Minneapolis took fourth prize by a score of 44. The third moneys consisted of 50, 30 and 20 per cent. of the entrance fee, which was $12 for each team. Fourth prize was a box of plug tobacco, presented by John Finzer & Bros., of Louisville, Ky. Holt made the best individual score and received a split bamboo cane from F. W. Leland.

Fifteen singles: Skinner 10, Tabor 11, Hanson 13, Hanna 12, E. Morse 9, M. F. Kennedy 14, Daly 11, Newton 12, Ruble 13, Ensign 12, Vallie 11, Van Sann 15, Holt 13, Balsam 13, Paulson 13, Ruby 8, Pye 8, Wallace 13, Grant 7, Ahlstron 11, Whitcomb 13, Cook 9, Schuler 10, Eli 10, Scriver 9, Jewell 13, Chantler 14, Burke 12, Williams 9, Durant 11, Richardson 12, Turner 11, Rand 8, Marshall 12, Raines 11, Latz 8, Goosman 10, Lawrence 10, Ramrod 9, Kunsch 8, Byland 8, Schott 12, Dunn 13, Westerson 12, Tuttle 12, Noreen 10, Rox 9, Beck 11, Pyle 13, Dalton 13, Dyer 12, Boardman 9, Cutler 13, Bader 11, Hadfield 6, Cooper 15, Paul 12, Anderson 11, Blakely 15, Smith 13, Kreuger 10, Blodgett 7, L. F. Kennedy 11, Gordan 10. Cooper, Blakely and Van Sann won first money; M. F. Kennedy, Chantler and Dalton second; Hanson, Ruble, Holt, Balsam and Cutler third; Newton and Tuttle fourth.

NEW DORP, S. I., May 23.—Emerald Gun Club, of New York city; 8 live pigeons, 5 ground traps, 21, 25 and 30yds. rise, 80yds. boundary, Emerald Gun Club rules, 3 prizes:

L Schermerhorn (30)	..01111000—4	J Sidley (25)	..11011111—7
G Remson (50)	..01011100—4	J H Voss (30)	..11111111—8
Dr Hudson (30)	..10111100—5	R Regan (25)	..01000010—2
H Rubino (25)	..11100111—6	J Bade (25)	..01101101—5
J Measel, Jr (30)	..11101011—7	T P MacKenna (25)	..11110011—6
M Cherry (21)	..10100100—3	Dr Vandegrift (21)	..00010001—2
M McMunn (30)	..01101011—5	T J Oseicki (21)	..00011001—3
W Glaccum (30)	..11110111—7	John Klein (25)	..11111111—8
J J Ryan (21)	..00100111—4	A McHale (21)	..01001000—2
N Measel (50)	..11100000—3	P J Murphy (21)	..00100000—1
L C Gehering (30)	..11111101—7	John Howard (21)	..00101000—2
P Butz (30)	..10111111—7		

Voss wins first prize second time, Klein wins second prize first time, Ryan wins third prize first time. The three medals shot for are gold. John H. Voss, scorer; Dr. Geo. V. Hudson, referee.—T. P. MACKENNA, Rec. Sec.

UNION VS. WEST END.—Springfield, N. J., May 23.—To-day has been a great day for the Union Gun Club, as they shot their long-talked-of team match with the West End Gun Club of Long Branch and defeated them. The Union Gun Club had a stage at Crawford to meet the Long Branchers on their arrival there, and it was not very long before the little club house under the Orange Mountains was reached, where Captain Roll and his men welcomed the visitors. Sweepstake shooting was commenced and kept up until half-past twelve, when something for the inner man was served. After disposing of this more sweepstakes were shot until two o'clock, when the great event of the day came off. Quite a large number of people were present, and all said that the West End Club team was composed of a fine set of men, and with their light hats looked tip-top and fit to lay out any team. After the whole thing was over three cheers were given by each team for the other, and the visitors drove off to catch their train, vowing that when the Union Gun Club go to Long Branch to shoot the return match they are going to lay us out bad. Following are the scores: First event, 8 single bats: Miller 10, Hobart 10, Reed 10, Brientnell 9, Conover 8, Lindsley 8. Ties divided.

Second event, 10 single bats: Sapher 10, Miller 9, Brientnell 8, Herstage 8, Campbell 7, Sundermann 7, Tabor 6, Reed 6, Cubberly 6, Van Dyke 5, Lawrence 5, Lindley 5, Roll 4, Daly 1. Ties divided.

Third event, 10 blue rocks: Brientnall 9, VanDyke 8, Sapher 7, Roll 7, Miller 6, Pardine 5, Lindley 5, J. L. Price 5, Sunderman 4, Campbell 4, Lawrence 4, Cubberly 3, Daly 3, Dunican 3. Ties divided.

Fourth event, 5 pairs bats: Miller 9, Brientnall 8, Lindley 8, Conover 7, Reed 7, Wolf 7, Hobart 7, Heritage 6, Morris 5, Daly 5, VanDyke 4. Miller first; ties on 8 divided: ties on 7. Conover 4, Hobart 4, Reed 1, Wolf 1, Conover and Hobart divided third.

Fifth event, 10 blue rocks: Miller 10, Conover 10, Lindley 9, Pardine 9, Brientnall 8, Sapher 8, Sunderman 8, Wolf 7, Lawrence 7, Heritage 7, Reed 6, Roll 5, Eames withdrew. Ties divided.

Sixth event, 10 blue rocks: Miller 10, Brientnall 10, Pardine 8, Conover 8, Roll 8, Lindley 7, Sunderman 6, Eames 5. Ties divided.

Seventh event, 10 bats: Conover 10, Lindley 9, Miller 9, Roll 9, Lawrence 10, Wolf 8, Pardine 8, Eames 8, Brientnall 8, Sunderman 6. Ties divided.

Eighth event, 10 blue rocks: Miller 10, Hobart 8, Brientnall 8, Lindley 8, Sopher 8, Conover 7, Roll 7, Sickley 7, Heritage 6. Ties divided.

Team shoot, 12 men to a team, each man 23 blue rocks, 3 screened traps, 18yds. rise, National Gun Association rules to govern:

Union Club.		West End Gun Club.	
Brientnall	20	Chas Morris	13
Dunican	15	J Van Dyke	11
Sopher	19	Ed Reed	16
Heritage	17	C Burt	7
Conover	18	J Price	19

Eames	20	E Tabor	17
Roll	13	W C Price	19
Miller	24	Geo Cubberly	10
Lawrence	16	E Price	19
Pardine	20	D B Barmore	17
Sunderman	14—210	W D Campbell	19—176

12-BORE.

STATE SHOOT.—Auburn, N Y., May 28.—The annual convention of the New York State Association for the Protection of Fish and Game was held at the Osborne House to-night, with nearly 60 delegates in attendance. The session was occupied with a long and spirited discussion over the adoption of the kingbird and the classification of shooters. The kingbird was finally adopted as a target by a vote of 61 to 21. The classification was maintained as established at last year's convention in Utica. New clubs were admitted from Albany, Auburn, Port Byron, Cortland, Homer, Rome and East Aurora.

FITCHBURG, Mass., May 24.—The Fitchburg Gun Club have put in two rifle pits and targets at their range. They have also arranged to have a series of prize shoots offering ten good prizes. The conditions for the match for riflemen is one string of ten shots off-hand and one at rest once a week for one month. At the end the total scores will be averaged and each man will receive a percentage of the entrance fees agreeing with his percentage of points scored. The match for shotguns is a possible 20 birds, 10 clay-pigeons and 10 blue rocks, to be shot once a week; if a contestant is absent then he may shoot 2 strings of 20 the following week; the birds are to be thrown 21yds. away. Match at 20 birds: Weymouth 19, Putnam 18, Cumings 17, Colony 14, Stratton 13, Burbank 13, Houghton 12, Haines 11, Baker 11, Sheldon 8.

WINCHENDON, Mass., May 24.—The members of the Winchendon Gun Club are now having a weekly meet, and are contesting for a prize badge. Scores yesterday:

F F Hapgood	1111111111—10	A D Lawrence	0011110000—4
A H Felch	1110111011— 8	E M Whitney	0101030001—3
P S Davis	1111111001— 8	Chas Bailey	0001000000—1
F E Mann	1011111001— 7		

THE WALKING MATCH.—The Philadelphia *Item* says of our crediting Mr. J. E. Bloom with originating the walking match: "Our esteemed contemporary is in error. The idea of a walking match was first introduced by Mr. Chas. A. Bragg, formerly manager of the Globe Shot Co., at a tournament given under his management. Mr. Bragg submitted this idea originally to the gun editor of the *Item*, who approved of it."

MIDDLESEX GUN CLUB.—The champions of New Jersey, the Middlesex Gun Club, of Dunellen, N. J., shot an interesting team race with nine members of the Mercer Gun Club, of Trenton, N. J., on the grounds of the former last Thursday. The conditions were 10 men a side, 10 live birds each, loser to pay for birds. But nine men from Trenton came, however, and therefore both teams consisted only of nine persons each. The Trentonites were handsomely entertained on the grounds with chowder, sandwiches and "soft stuff," and after the match taken in stages to Force's Hotel, Plainfield, where a fine supper was served. The visiting team were highly pleased with their visit, and will invite a team from the Middlesex to Trenton shortly to have revenge. The Middlesex proudly claim the honor of champions of New Jersey, having defeated the heretofore champions, the Jersey City Heights, and all other comers. They have yet to suffer defeat. Below is the score:

Middlesex Gun Club.

First Squad.		Second Squad.	
Williams	2121102121—9	J Frost	0021102101—6
S G Smith	1221111020—8	Quinlan	2112121121—10
Chas Smith	1101112011—8	W Siegler	1111111111—10
Forrest	2020122122—8	G Manitz	1101111011—8
J D Voorhees	2111011100—7		—
	—		34
	40		

Mercer Gun Club.

First Squad.		Second Squad.	
Shrieves	2011001011—6	Zwerlein	1120112210—8
Van Camp	0220022001—4	Williams	1222212020—8
Fox	0002020000—2	Leigh	2111111000—7
E Updegrove	2000000210—4	De Mont	1100221021—7
Geiser	0110112021—7		—
	—		30
	30		

Tee Kay, scorer; G. Huff, referee.

After the team race came the following sweepstake, $10 entrance, three moneys:

Quinlan	02211—4	J L Voorhees	01210—3
C Smith	10111—4	E Updegrove	12210—4
Forrest	11102—4	Zwerlein	01111—4
W Cannon	11211—5	Fox	00200—1
G Manitz	11202—4	W Seigler	11112—5
Williams	11112—5	S G Smith	21112—5
M Williams	11212—5	L Terry	02102—3

Cannon, Shrieves, Williams, Smith and Seigler divided; in the shoot off for second Forrest, Manitz and Zwerlein divided; L. Terry third. Then came a match between a representative of the Middlesex and a representative of the Trenton clubs, for $5a side, 5 birds each. T. K. killed 1 and E. Updegrove 4. Great disappointment to T. K. There were interesting sweeps before the team race. A return match will shortly be shot.—THE CRANK.

SYRACUSE, May 23.—The sweepstakes contests at Onondaga Valley to-day were participated in by an unusually large representation of marksmen. In the shoot at 12 kingbirds Hookway killed 11, Mosher 10, Elliott 10, Gavitt 11, Luther 9, Montgomery 10, Richmond 9, Felton 11, Ayres 8, Prettie 11, Parshall 9, Forsyth 10, Walters 10, Lefever 11, Spangler 6, Schermerhorn 6, Steele 9, Strange 9, Whitney 10, Smith 9, E. Hudson 11, E. Hudson, Jr., 8. The results were classified and shot off. Hudson won in the first, Forsyth in the second, Luther in the third and Schermerhorn in the fourth. In the first contest of the nine-bird shoot the record was: Hookway 8, Gavitt 6, Steele 9, Ayres 5, Whitney 9, Spangler 9, Forsyth 6, Luther 7, Strange 5, Hudson 6, Hudson, Jr., 7, Lefever 8, Prettie 7. The ties were shot off, Whitney winning first, the second was divided, Hudson, Jr., took the third and Hudson, Sr., the fourth. The second bout at 9 birds resulted, Smith 8, Hookway 9, Mosher 5, Elliott 9, Gavitt 7, Luther 7, Montgomery 8, Richmond 7, Felton 5, Schermerhorn 5, Prettie 8, Parshall 5, Putnam 5, Forsyth 6, Walters 9, Lefever 6, Spangle 6, Ayres 8, Steele 5, Staulbaum 5, Strange 5, Whitney 7. Walters and Hookway divided first, Prettie, Ayres and Montgomery second, and Whitney won third and Forsyth fourth in shooting off the ties. The final shoot, at nine birds, resulted: Hookway 7, Mosher 5, Elliott 7, Gavitt 7, Luther 9, Montgomery 8, Richmond 5, Felton 7, Prettie 8, Parshall 7, Walters 7, Forsyth 6, Tomlinson 5, Lefever 6, Spangler, 7. The first money was awarded to Luther, the second was divided between Montgomery and Prettie, Hookway won the third, and the fourth was divided between Forsyth and Lefever.

PHILADELPHIA, May 26.—Match at 100 blue rocks per man, between J. H. Sivad (Davis) and A. Lawrence:

J H Sivad....0000011101011000101011111111101011111101101011—33
0111111111111001010000111111001011110111001001—33—66
A Lawrence.1110011001001110011010111111101101011001011111—33
0110111101111101101111100111101111111101111110—40—73

Match at 15 blue rocks per man, between W. H. Wolstencroft, of N. E. G. C., using one hand only, and H. Jacobs, of Frankford Gun Club, using both hands:

Wolstencroft..0101111111101111—12 Jacobs.....0011011111111010—10

Blue rock sweep:

Geo E Elmer	111011—5	Dr R Howe	111011—5
Wm M Pack	111 01—5	J H Davis	111101—5
J Wolstencroft	111111—6	J Gibb	110101—4
Wm H Pack	111111—6	H Jacobs	101110—4
S Richards	011101—4	A Lawrence	111011—5
Wm Wolstencroft	111111—6	J Shoch	001011—3

J. Wolstencroft, Wm. H. Pack, Wm. Wolstencroft tieing for first, money divided. Ties for second money shot off was won by Dr. Rowe. Ties for third money shot off and was won by S. C. Richards.

CINCINNATI, May 18.—Joe H. and Wick met to-day in a match for $25 a side at fifty pairs American clay birds. The day was bad, a drizzling rain falling during the entire shoot, seriously affecting the score as well as the tempers of the shooters. Wick shot a winning race clear through, and though somewhat rattled at times by his opponent's kicks at judgments, etc., held his head sufficiently to maintain the lead obtained early in the race. Mr. Parnell of Toledo, Ohio, a well-known double-riser, was referee and made every effort to keep good feeling between the participants. The birds were thrown poorly, many darting into the dark background, making it very difficult to judge, much less break the targets. The scores:

Joe H.	Wick.
00 00 11 11 00 01 10 01 10 10- 9	11 10 11 11 10 00 10 11 11 11-15
11 10 11 10 10 00 10 01 10 10-12	11 11 11 11 01 11 11 11 10 10-17

10 10 11 00 11 10 01 11 01 11-13	10 10 11 11 10 00 11 00 10 11-12
01 10 11 10 01 11 11 01 11 10-14-58	11 00 10 00 10 01 11 10 10 11-11-63

Time of match—One hour and forty minutes. Judges—P. Kessler and "Blue Dick." Referee—A. S. Purnell, Toledo, Ohio.

Canoeing.

"TARPON" AND HIS RAG CANOE.

FORT LAUDERDALE, Fla., May 8.—*Editor Forest and Stream:* We left Miami on May 2 and expected to be at Lake Worth in two days, but we are not there yet. Struck this place about noon on the 3d, and as it was blowing strong, with heavy sea, we ran on the beach to wait for better weather. We are still waiting. Nothing to shoot here but horse flies. No settlement within thirty miles to go to save an Indian town in the everglades some twelve miles from here. We visited that yesterday, and as some of your readers may like to hear about it I will try and tell you the story.

Mr. Coman (keeper of the house of refuge at this place), my companion and myself made up the party. We left the station early, walked across to New River, and taking a small skiff, struck out for the "glades." New River is narrow but of good depth, and is in places quite rapid. Fish are not very plenty. A few tarpon, scattering mullet, gar, bream, black bass and mud-fish were all we saw, now an then and alligator, but they have been shot at so much they are very wary. Birds were wanting, as beyond a kingfisher or a crow or so we saw none, or, at least, none on the river.

Some two miles from the landing we came to the "Cooly" Hammock, where the Cooly family were killed by the Indians during the war with the Seminoles. Later on we passed a large camp of Indians engaged in starch making. I am told that these Indians are quite industrious, making large quantities of starch from the compty root, and raising many vegetables, etc.

We were soon above the cypress swamps, and here we came to the rapids, where the water forces its way through the limerock formation found everywhere around the everglades, and here the real work began. The river is very narrow and crooked, the current strong, and obstructions of every kind abound. I am told that during the rainy season there is no trouble, but now the water being very low we had to work all ways to get along. Rowing, poling, paddling, pushing and wading we worked our way through the rapids and out on the level of the glades.

Some idea may be formed of our difficulties when I tell you that sometimes we had to wade twenty or thirty feet in just water enough to float the boat, and then without any warning the depth would increase to twenty feet and over. Once we were tugging away to get the boat over a flat, H. was near the bow and took one step to get a better hold, when there was a plunge and in went poor H. over his head.

We worked along bravely, however, and when we were once above the rock thought we were out of it all; but no, the channel was narrow and more crooked, besides almost closed with the pack of the cow lily, or "bonnet" as it is called. Some two miles of this work and we came to the end, or at least to the end of our boat journey. At this point the water so thoroughly mixed with mud that we found it impossible to force the boat any further; so taking off our trousers we started in single file to wade two miles through mud and water to the Indian camp.

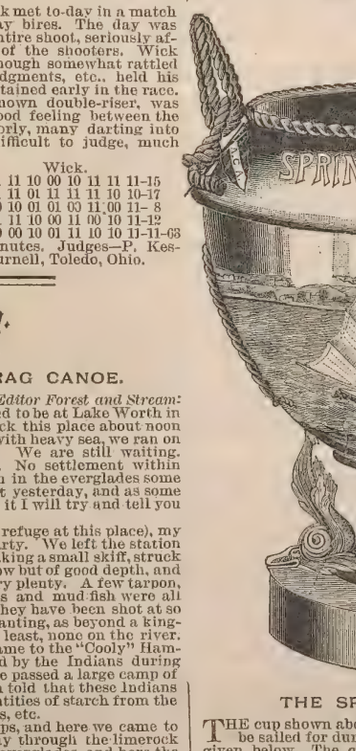
Coman went ahead, H. next, and your humble servant in the rear, a post, if not of honor, at least of greater safety, and there was heaps of fun in it, too. The most of the way was in mud and water a little over our knees, but now and then there would be a lunge, and a gasp, and down would go one of us up to the neck perhaps, to flounder around, spit out the water, and go on.

But all things have an end, and after two hours' hard work we came in sight of some canoes, then a hog or two ran grunting away. Next the tops of the palmetto houses, when the dogs spied us and the din began.

We advanced cautiously and soon caught sight of some squaws, one of whom was driving away the dogs. Coman, who was acquainted, took the lead and we marched in. We found no one but squaws and babies at home, and as they seemed very pleasant and good-natured we ventured to talk a little and look about us a bit. There was a compact collection of houses, perhaps twenty in all, surrounded with little fenced-in patches for gardens. The houses were merely palmetto roofs, supported by forked stakes, with a platform built underneath, on which the occupants eat, sleep and pile their plunder. Hogs roamed around under the platforms, the children climbed over them, the squaw stood around laughing good-naturedly, and we in our undress uniforms made up the picture, the background of which consisted of banana plants, canes, deer skins drying on stakes or smoking over a slow fire, strings of gourd shells, rattles made of the small box turtle shells, brass kettles, etc., etc.

The squaws were not very talkative, but they meant business all the same; one turned and spoke to a boy. In a moment he had cut and brought a bunch of bananas. "Half dollar," said the squaw, and we paid it. Another threws down a deer skin. "One dollar." We bought that also; and for fear they would next offer to sell us a baby or two we gracefully took our leave. We noticed one thing which looked like carrying the love of finery to extremes. Two of the squaws had beads round their necks, piled on, string upon string, quite up to their ears, making a roll that certainly was 6in. through. How they can manage to carry that weight is past my comprehension.

Away we go for our tramp back to the boat, Coman ahead with the bananas on his shoulder; H. with his gun (he said it weighed 8lbs. when he started, and a ton before he got back), and the scribe with a bundle of deer skins and breeches, bringing up the rear. Coman took the wrong track and led us into the sawgrass, from which we got out with some thousand scratches, more or less. Next, H. sights a moccasin, shoots it and on we go again. Then Coman stops; "Hold on," says he, "there's a big snake." "Where?" we ask; but the water is so dirty that nothing can be seen, and we finally plunge along, expecting every moment to step on a moccasin or feel h's fangs. But no such thing happens, and when nearly to the boat we sight the first edible bird we have seen—a "limpkin," or crying bird. H. bangs away and down goes the bird just beyond a thicket of sawgrass. H. starts to go through the grass, paying due attention to his bare legs, and after five minutes of crawling and scratching, sights the bird on the edge of a slew just in time to see an immense alligator gobble it and disappear.



But here we are at the boat. Now we'll slip on our inexpressibles and down river. While working through the tortuous windings at the head of the cypress, we sight a canoe with three Indians—Cypress Tiger, Tom Clarke and one stranger. They were in full dress, that is, calico shirt and an immense turban composed of red and yellow handkerchiefs. They appeared to be very good natured and as social as their limited knowledge of English would admit. It was hard to realize that these Indians were of the same tribe who showed so much cruelty in their wars with the whites; but perhaps they were partially justified; let us hope they believed so, at all events.

Their canoes are made from cypress logs, and are some of them very good models; they are narrow, however, and cranky to a degree. Mr. Coman tells me that the Indians as a rule are honest and law-abiding, that they are fairly industrious and support themselves without any aid from the Government, something to their credit when we consider their Western brethren.

Our trip down the river was void of any incident. We arrived at the station quite late, and our supper, our talk of the day's trip and our smoke and sound sleep afterward are matters of course.

May 9.—The bad weather still continues. We are hoping for a change, but the prospect is far from good. Still, we bear it bravely, and as turtles and turtle eggs are plenty we have no immediate fear of starvation. TARPON.

[The paper alluded to in "Tarpon's" letter last week is a stained and torn copy of a Signal Service blank for meteorological observations at sea. On it is written: "This bottle was thrown overboard from the British steamer Mozart on Dec. 25, 1884, at 8 P. M.; latitude 3° 51′ N., longitude 29° 33′ W.—W. SPRATLY." Captain Kendall picked up the bottle on Sands Key, Fla., on April 29, 1888.]

THE SPRINGFIELD C. A. CUP.

THE cup shown above was presented by Mr. Geo. M. Barney, to be sailed for during the present season, under the conditions given below. The cup, made by D. W. Granberry & Co., New York, is of oxidized copper and is 15½in. high, 15in. wide and 12in. handle to handle. On one side is shown the Pecowsic and on the other a canoe rigged in the old manner. The handles are imitations of canoe cordage, with similar work around the top and surrounding a panel beneath each handle for the names of winners. The A. C. A. and Springfield C. A. flags are introduced in the handles. Altogether the cup is a very artistic piece of work and will make a trophy well worth winning. Programme of races for the Springfield cup: June 16, July 4 and Aug. 4, Calla Shasta course, Springfield; A. C. A. meet, Lake George, date will be fixed at the meet; Sept. 15, Calla Shasta course; final race, Oct. 6, Calla Shasta course. Races called at 1 P. M. Course six miles, three miles to leeward or windward and return. Time limit three hours.

In case of there being no race on any of the fixed dates, either through lack of wind or expiration of time limit, the race will be postponed to the following Saturday. The first five races are trial races, each winner barred from further contesting in a trial race. The sixth and last race will be for the possession of the cup, and be competed for by the five winners of the trial races. Open to members of the A. C. A. Canoes, sailing classes A and B, no limit as to rig or ballast. Races governed by the A. C. A. sailing rules. Entries to be made one week previous to above dates to G. M. Barney, chairman of the Springfield Regatta Committee, Springfield, Mass.

Yachting.

FIXTURES.

JUNE.

2. Savin Hill, Club.
5. Southern Annual, N. Orleans.
7. Miramichi, Cup.
9. Larchmont Spring Pen.
9. Buffalo Club.
9. Great Head Open.
11. Shackamaxon, Spring.
12. Atlantic Annual.
13. Columbia, Annual N. Y.
13. Jersey City, Annual.
14. Rhode Island Opening.
16. Quincy, Pen.
16. Monatiquot, First Pen.
16. South Boston Club.
16. Cor. Marblehead Penuant.
16. Portland Annual Challenge.
16. Savin Hill, Open.
16. Brooklyn Annual, N. Y. Bay.
16. Cape Ann, Gloucester Pen.
17. Chelsea, Dorchester Bay.
18. Bay View, Club.
18. Quaker City Annual.
18. Dorchester, Open.
18. West Lynn, Annual.
19. New Jersey Annual.
21. New York, N. Y. Annual.
21. Oswego, Ladies' Day.
22. Great Head Moonlight Sail.
22. Bay View Moonlight Sail.
22. Savin Hill.
22. Rhode Island, Ladies' Day.
23. Seawanhaka Annual.
23. Hull, Hull Pennant.
27. Pleon, Club.
27. Cape Ann, Gloucester Cup.
27. Yorkville.
28. Eastern Annual.
28. Eastern Annual, Marblehead.
29. Quincy, 1st Cham.
30. Cor. Marblehead, 1st Cham.
30. Great Head Pennant.
30. Monatiquot, Club, Fort Pt.
30. Dorchester Club.
30. Savin Hill, Club.

30-July 2. Quaker City, Cruise Up River.

30-July 4. Portland Cruise.
30. Hull, Club Cruise.

THE COMING YACHTING SEASON.

II.—YACHT CLUBS AND YACHT RACING.

WE spoke last week of the national aspects of yachting and its organization as a compact and coherent body; we propose now to consider the yacht clubs which must be the prime elements of such a body, and the racing which is the essence and soul of yachting. The following list includes all the regularly organized yacht clubs of the United States and Canada, that is, all clubs with a board of officers, a fleet and races during the season. There are some so-called yacht clubs, small social organizations owning a sailing or steam yacht in which a weekly excursion is made, but which do not hold races, and these we have not included, as they are not really yacht clubs.

YACHT CLUBS OF THE UNITED STATES.

Albany, Albany, N. Y.	Milwaukee, Milwaukee, Wis.
American (steam), New York.	Mobile, Mobile, Ala.
American, Newburyport, Mass.	Monatiquot, Weymouth, Mass.
Americus, New York.	Montgomery, Norristown, Pa.
Atlantic, Brooklyn, N. Y.	Narragansett, Newport, R. I.
Bar Harbor, Bar Harbor, Me.	Newark, Newark, N. J.
Bay View, Boston, Mass.	New Bedford, New Bedford, Mass
Beverly, Beverly, Mass.	New Haven, New Haven, Conn.
Bijou Biscayne Bay, Biscayne Bay, Fla	New Jersey, Hoboken, N. J.
Boston, Boston, Mass.	New Rochelle, New Rochelle, N. Y.
Brooklyn, Brooklyn, N. Y.	New York, New York.
Buffalo, Buffalo, N. Y.	Oconomowoc, Oconomowoc, Wis.
Bunker Hill, Boston, Mass.	Ohio, Toledo, Ohio.
Canarsie, Canarsie, N. Y.	Onondago, Syracuse, N. Y.
Cape Ann, Gloucester, Mass.	Oswego, Oswego, N. Y.
Cape Cod, Dennis and Orleans, Mass.	Oyster Bay, Oyster Bay, N. Y.
Carolina, Wilmington, N. C.	Pacific, San Francisco, Cal.
Carolina, Charleston, S. C.	Palatka (colored), Palatka, Fla.
Cedar Point, Saugatuck, Conn.	Pavonia, Jersey City, N. J.
Chesapeake, Easton, Md.	Pentucket, Haverhill, Mass.
Chicago, Chicago, Ill.	Phœnix, Chicago, Ill.
Cleveland, Cleveland, Ohio.	Pleon, Marblehead, Mass.
Clinton, Clinton, Conn.	Portland, Portland, Me.
Cohasset, Cohasset, Mass.	Providence, Providence, R. I.
Columbia, New York.	Provincetown, Provincetown, Mass.
Corinthian, Cooper's Point, Camden, N. J.	Put-in-Bay, Put-in-Bay, Mich.
Corinthian, Chicago, Ill.	Quaker City, Philadelphia, Pa.
Corinthian, Marblehead, Mass.	Quincy, Quincy, Mass.
Corinthian, New York.	Raritan, Perth Amboy, N. J.
Corinthian, San Francisco, Cal.	Rhode Island, Providence, R. I.
Detroit, Detroit, Mich.	Rochester, Rochester, N. Y.
Dorchester, Dorchester, Mass.	Salem Bay, Salem, Mass.
Eastern, Boston, Mass.	Sandy Bay, Rockport, Mass.
East River, New York.	San Francisco, San Francisco, Cal.
Eclipse, New York.	Savannah, Savannah, Ga.
Edgewater, Dunedin, Fla.	Savin Hill, Savin Hill, Mass.
Empire, New York.	Seawanhaka Cor., New York.
Essex Florida, Jacksonville, Fla.	Shackamaxon, Philadelphia, Pa.
Great Head, Winthrop, Mass.	Sippican, Marion, Mass.
Greenwich, Greenwich, Conn.	Southern, New Orleans, La.
Harlem, New York.	Southwark, Philadelphia, Pa.
Hudson River, New York.	South Boston, Boston, Mass.
Hull, Hull, Mass.	Staten Island A. C., West New Brighton, N. Y.
Hyde Park, Hyde Park, Ill.	St. Augustine, St. Augustine, Fla.
Isle of Hope, Savannah, Ga.	St. Johns, Palatka, Fla.
Jeffries, East Boston, Mass.	Toledo, Toledo, Ohio.
Jersey City, Jersey City, N. J.	Volunteer, New York.
Knickerbocker, New York.	West Lynn, West Lynn, Mass.
Lake Champlain, Burlington, Vt	Williamsburgh, Brooklyn, N. Y.
Lake George, Caldwell, N. Y.	Windward, Canarsie, N. Y.
Larchmont, Larchmont, N. Y.	Yale, New Haven, Conn.
Lynnn, Lynn, Mass.	Yonkers, Yonkers, N. Y.
Manhattan, New York.	Yorkville, New York.
Michigan, Detroit, Mich.	

CANADIAN CLUBS.

Bay of Quinte, Belleville, Ont.	Quebec, Quebec.
Hamilton, Hamilton, Ont.	Royal Canadian, Toronto, Ont.
Kingston, Kingston, Ont.	Royal Nova Scotia, Halifax N.B.
Longueil, Montreal.	Toronto, Toronto, Ont.
Miramichi, Millerstown, N.B.	Toronto Skiff, Toronto, Ont.
Montreal, Montreal.	St. Lawrence, Montreal.

RECAPITULATION.

United States	110
Canada	12
Total	122

Besides the above organized clubs, racing is carried on regularly every season at Bayhead, N. J., on Barnegat Bay; Shinnecook Bay, Long Island; Shrewsbury River, and Sewaren, N. J.; Mattapoisett, Onset Bay, Wood's Holl, Fall River, Martha's Vineyard, Mass., and Oleander Point, Florida.

Of the total of 110 clubs, 74 are included in the North Atlantic fleet, from Maine to Delaware; 15 are in the Lake System, 12 are in Southern waters, 3 on the Pacific coast and 6 are on the smaller inland waters. No close figures are to be had as to the numbers of members and yachts, but at a rough estimate the former may be placed at an average of 50 members to each club, or from 5,000 to 6,000 men directly interested in yachting. As to the fleet, about 3,000 yachts are entered on the list, and the total number of decked and half decked craft may be placed at something over this figure, making with the open boats used for racing and sailing, somewhere about 4,000 vessels, large and small, used for pleasure sailing and steaming in the United States and Canada, canoes and rowboats of course not included. The condition of these clubs varies within wide limits from the live club with a list of active and enthusiastic yachting men and plenty of racing, down to the club which drags along with little or no improvement from year to year. In the main, however, the majority of the clubs are fairly prosperous, with a club house and anchorage of some kind, in a fairly good condition financially and able to hold their own, if not to grow somewhat each year. There are

very few, however, which are doing all that is possible or are utilizing fully all their opportunities for development.

What is the object of a yacht club, the first great end to which all its energies should be directed? It is yacht racing; the one requisite without which a club cannot flourish or even exist. To be strictly accurate, the end and aim of yacht clubs is to promote yachting in all its branches, to encourage cruising as well as racing, to improve designing, to instruct, and to encourage sociability among its members; but in all this work racing is so important a factor that it may be placed far ahead of all the others. Given a racing fleet and plenty of spirited racing, and the cruising fleet will take care of itself, the limit of membership will be kept full, the club treasury will be well supplied, and every member will take a pride in the club. Without plenty of good racing no club can hope to succeed permanently; it may be kept up for a time by a fine club house, a well-stocked bar and a big billiard room, but it never can be a yacht club whatever success it may meet with as a social organization. Instances have been frequent where a club has been established by a few men who owned and sailed racing boats, their races have attracted others of similar tastes, the club prospers, better quarters are obtained, the fleet increases and the racing assumes larger proportions; then the club branches out, money is spent freely in providing every convenience and luxury, and at the same time the racing is neglected, the interest in it is lost in other features, and what is the result? In a few years the club is in a condition of stagnation; it may be able to maintain its establishment through other attractions, but as a yacht club its day has gone, some younger and hardier rival comes on the course and gathers the laurels that the older once held undisputed.

No club should neglect the comfort and convenience of its members, there should be no cessation of effort until a good house is erected, a protected anchorage secured, with a well-filled library, reading room, dressing rooms and other conveniences; but as soon as any such improvements begin to interfere with the racing, to divert in the least degree the attention of members from the water, they become active elements of weakness. Yachting is essentially a water sport, and though it must keep up a certain connection with the shore the land features are merely incidental and secondary. Club houses, social features, even the admirable efforts for the instruction of yachtsmen by means of special classes, lectures and similar means, are useful only in so far as they are adjuncts to work afloat; yachting can exist without them, but they alone cannot make up for the lack of a certain proportion of water in the composition of a yacht club. If any are inclined to doubt the importance of racing, let them look at the history of different clubs and see how the most prosperous periods of each are connected with a certain group of racing boats.

Though yachtsmen generally will not deny the importance of racing, there are different opinions as to the form in which the sport should be conducted. With too many yachtsmen, especially in the larger clubs, the sole effort is for large prizes and for a few classes of the largest yachts, the schooners and one or two classes of single-strickers, the smaller and less noted yachts being left to shift for themselves. An instance of this is found in the attempt lately made to limit all the racing for the America's Cup to one special size of boat of each rig, to the exclusion of almost the entire existing racing fleet. The result thus far is of itself sufficient proof of the folly and blindness of such a course; in the first season that the rule is in force this specially protected class has practically disappeared from the racing, to lie dormant until a foreign challenge shall perhaps call it forth. The whole transaction shows plainly the fact we commented on last week, that ordinary common sense and business methods have no place in yachting.

The America's Cup has proved the most powerful stimulus that yachting on this side of the Atlantic has yet felt. It has been one great agent in the creation of a better, safer and faster type of yacht, but through the influence of certain circumstances its effects have been mainly limited to a larger size of yacht than experience has shown to be desirable here. The favorite size of singlestick yacht for many years has been about 70ft. l.w.l.; the best boats in the fleet at any given time have always been in this class. In cost of running and in the accommodation which it gives it has suited the majority of men who desire a large racing yacht, and at the same time gives a class of yacht that can be used about the coast in summer. On the other hand, three seasons of fair trial have shown that the 90ft. class, though fine boats for purely racing purposes, are not likely to become popular; in fact, it has been hard to find purchasers even for the fastest. The reason is, that while there are plenty of yachtsmen well able to bear the expense, there are few wealthy men who are willing to assume the labor and responsibility which the successful racing of a yacht of this size requires; while if the boat is not successful as a racer, she is comparatively worthless.

All the experience of many years seems to show that the 70ft. class is the best fitted for the wants of American yachtsmen, while the 90ft. class cannot be made a prominent success. From a business point of view then, it would be sound policy to throw all the influence of the Cup competitions in favor of the most popular class, rather than to waste it on a class that is uncalled for and little likely to be permanent. With all the excitement and enthusiasm the success of Puritan and the others after her have created, but five yachts have been built in three years, additions to the class have now ceased, its conversion to the schooner rig has already begun, and this year there promises to be no racing for it worth mentioning. As regards the 70ft. class, every rumor of a challenge in it has brought forward men eager to build; the report of Thistle's small size resulted in two new additions last year, this year one is building for the ordinary season's work, and, if a challenge were accepted any time in the winter from a foreign yacht of the class, there would be no difficulty in securing a fleet of a dozen good boats to enter in the trial races. Sentiment is a very beautiful thing, no doubt the idea of confining all the races for the Cup to a special class of grand and imposing proportions like Volunteer, is a very fine one, but there are matters of hard common sense, questions of a practical nature, that should outweigh all sentiment.

It has been evident for a long time that steam is making serious inroads on the sailing fleet, and that the number of large yachts is in no way proportionate to the growth of yachting, in fact quite the reverse. Where are the men who owned the big schooners in the days when schooner racing was at its height, when Sappho, Vesta, Henrietta, Columbia, Palmer, Resolute, Fleetwing, Mohawk, Magic, Idler, Dauntless, Tidal Wave, Halcyon and Dreadnaught were first famous? Many of them are alive to-day, with means and health for yachting, but they have long since gone in for steam. One by one they have abandoned the sailing craft, and very few have come forward to take their places, as the very records of the boats themselves for half a dozen years will show. No doubt there are plenty of younger men with ample means who are able to take their places, but it is a self-evident fact that they do not, that they are apt to find amusement in an idle life ashore, or on the turf, or in foreign travel, rather than on the water, or if they do go afloat, it is with the utmost luxury attainable in the modern steam yacht.

Why this is so does not concern us, but it is time that the plain and most important fact was fully recognized by those who have the power to direct yachting interests. They must recognize that men of wealth and leisure do not go into yachting to-day as they once did, that as a class they are far smaller in number than twenty years since, and if they are to be brought in it must be by offering greater attractions than at present exist. In the large steam yacht, and even in the naphtha launch, are powerful enemies to yacht racing, and they are growing stronger each year. The little launch alone is responsible for spoiling many prospective yachtsmen, who are tempted to spend the summer on some lake where they can idle away the day in one of these little kettles, within reach of the comforts and luxuries of a large hotel, rather than to undertake the work imposed by the ownership of a large racing yacht. As the racing becomes keener and more thoroughly systematized it demands more work and more money on the part of the owners, and few comparatively are found who can and will undertake the task. There need be no fear, under proper management, of a lack of good recruits for the racing rank, but they will come mainly from the younger men of comparatively moderate means, men whose business interests demand a certain part of their time, for them the sizes from 53 to 70ft. are the best adapted for both racing and the ordinary summer cruising, and these are the sizes that should be specially fostered by regatta committees, rather than the larger size.

In most clubs the duties of the regatta committee are by no means easy or pleasant, as in addition to the responsibility that always accompanies the position, the certainty of offending some in the effort to please all, there is generally the question of expense to be seriously considered. The amount allowed for prizes is too often smaller than necessary, with the result that classes must be made as few as possible, and often at the expense of good racing. The effort in most cases is to give large prizes, and to do this there must be few of them. The main point is to encourage entries, and the method of a few large prizes is a very poor means to this end. Even for the fastest yachts there is very little profit in yacht racing as yet in America, no man would go into racing to-day with the expectation of making a fair return on the money invested, but what all want is to beat other boats and to have some visible evidence to show of their victory; not necessarily a prize of great value, but some token that can be won only by speed and fair sailing. The main point then is for clubs to enhance the value of a win in their races by a strict adhesion to the best racing rules, and by such regulations as shall secure that each race shall be won as nearly as possible on its merits. With this, which costs nothing but care and work, the fact that a yacht has won in the club's races will be in itself an evidence of superiority, whether the money prizes be large or small, and there will never be a lack of entries. If on the other hand the management be slovenly and careless, no amount of money prizes will place a win in the club's races at a premium.

One requisite to successful racing is a classification large enough to group all boats fairly without too great difference in size, so that each boat in a class may have, as nearly as may be, an equal chance of winning, independent of the inevitable irregularities of even the best systems of time allowance. The nearer the boats are in size the less they are affected by the allowance tables, and for this reason a large number of classes is desirable. This, however, means more prizes, consequently a larger appropriation or smaller amounts. While prizes of some value are always desirable, it will in many cases be found productive of the greatest amount of sport to give smaller prizes, but in more classes; thus increasing the chances of boats in the second flight, the ones least likely to enter. We do not advocate in any way the offering of prizes for slowness rather than speed, but it has frequently happened of late that a boat superior in model and build to the old ones, is at the same time built to the extreme limit of the class and so larger as well as better than a lot of older craft. Under these conditions the latter are apt to leave the field entirely to the new boat, with the result that there is no spirit in the racing, merely a walk over. Now in such a case some compromise is desirable, even though it necessitates an additional class for the older and smaller boats.

The question of second and third prizes comes in, too, in the same connection; the objection being made by some that they are really prizes for being beaten. However plausible this may sound, it is not true unless a second prize be given for two entries only. A second prize should never be given unless four boats complete the course, or at least start and sail over a reasonable part of it, with a third prize for not less than seven starters. With such a plan rigidly adhered to and understood, the fact that a boat won second prize would mean that she had been at least two competitors, or if a third prize was given as well, that the second boat had been at least five others; the value of the second and third prizes will be assured, and at the same time that of the first prize would be enhanced. The value of prizes, both to those who win them and to the club as a stimulus to racing, depends, then, less on the actual sum of money expended than on the manner in which it is apportioned and the stringency with which the racing rules are enforced, and regatta committees will do well at least to consider this matter before apportioning the prizes for the year.

Much, too, may be done to encourage those classes which seem best suited to the means and requirements of the majority of members of the club, and to discourage such classes as, though favored by certain circumstances, seem unlikely to add to the racing interest of the club at large. The main end in view should be sharp and frequent contests between the greatest possible number of boats, with the racing spirit which such work is certain to engender. The money question, both the raising and spending, is one of the most serious that a club has to deal with; but in regard to the first part, if a club once firmly established cannot raise money enough every year for a good series of races, the sooner it dissolves and makes room for a successor, the better. Racing must ever be the first consideration, and whatever attractions a club may offer in other directions, if it cannot promote racing it had better change its name and cease to call itself a yacht club. It may succeed as a social club, a billiard club or a debating society, but as a yacht club it is only sailing under false colors and doing more harm than good.

The problem of expending the allotted sum, whatever it may be, to the very best advantage is by no means easy, nor does it often receive the careful consideration which it deserves when one considers how important a part it plays in the prosperity of the club. In some clubs large sums are expended year after year in the same manner, without a thought as to the altered conditions, or the changes in racing which follow them. In the allotting of the various sums the vested interests deserve some consideration, the men who really contribute the money, but at the same time the races and prizes should be so arranged as to secure the best possible entries from the existing fleet, and also to encourage and direct the improvement that should take place every year. The general direction of this work should rest with such an association as we outlined last week, but at the same time each club must study carefully its individual surroundings and interests.

A careful inspection of the existing fleet, the racing rules, the character of the club course, and the class of boat best suited to the wants and means of the majority of the club, will soon disclose many points where improvement is impossible without affecting injuriously any existing boats, and a little preliminary work of this kind early in the season will bear good fruit before the winter. There may be some old boats so few in numbers as not to justify big prizes for the class, and there may be some others of a size or type specially suited for a number of the members, which class can be built up by a little special attention. We venture to say that there are not a dozen clubs on the list to-day in which such a scrutiny is made each year, if there are even half that many, and yet the benefits to be derived from such a course must be plain to all. The changes that have of late taken place and are still in progress in yacht racing make in themselves a matter worthy of the most careful study by the clubs, it is each year becoming more complicated, more expensive, and more exacting in its demands on time and attention of the successful racing owner, in short it is now following out in this country the course it has run for a long time in British waters, and Americans cannot profit too soon by the lessons to be found there.

Looking back to the infancy of racing in America there will be found a fleet of all sizes and of varying degrees of excellence in model, build and equipment, a fleet built more for general use than for match sailing. Races were frequent, but the yachts were ill-matched, the disparity in size being often more than compensated by superiority in model or handling, so that the value of size was not at first fully estimated. In course of time the various models worked down more or less to a common type, with perhaps less difference between the best and the poorest than at first, and then the value of size became more apparent. The question of time allowance assumed at once a greater importance, and many rules were tried in turn. While many races were sailed, the yachts were also much used for pleasure sailing, and the best were far inferior in rig and outfit to the ordinary cruiser of the present day. While schooner racing was at its height, some fifteen years ago, some yachts were kept up with the greatest care, expense being of no moment, but throughout the bulk of the fleet the rigging, equipment, general outfit and crews were at a very low standard up to the time of the first invasion of the cutter. This was shown beyond dispute in all the races that Madge sailed in New York waters, the various yachts that met her being badly rigged, badly manned and handled, and failing utterly in some of their races, while the cutter never sustained the least injury. Since that time a great improvement has been taking place, until in the late international races were seen a fleet of yachts as well rigged, canvassed, equipped and manned (to say nothing of the brilliant handling of several) as ever sailed in any waters. This improvement has altered greatly the methods and the expense of racing, and has tended to make a specialty of the racing yacht.

It was once a boast that the old fleet, the sloops and schooners of the ante-cutter days, were not only the fastest racing yachts in the world, but the best cruisers; that they were equally good for either use. Bedouin, with her speed and grand accommodations, compared with the limited quarters of the sloops of her class, put a quietus to this idea, and men began to realize that the boasted combination of racing and cruising properties was but a myth. Of late this has become still more apparent, and to-day the man who builds a yacht for prize winning and at the same time expects to cruise comfortably with his family, is pretty certain to fail in both ends. The wisest yachtsmen know that racing is becoming more and more specialized each year, and that soon, if not now, no yacht not specially designed and built for racing will have the least show at the mugs. It is still the fashion to build "fast cruisers," by which a man has two strings to his bow; if the boat is really fast he soon finds it out and keeps her for racing; if she is slow "she was only built for cruising anyhow."

The exact stage of developement at present attained is easily fixed; to race with success a yacht must have a good model, the best of ballasting, sails, rigging and outfit, and must be well skippered, owned and manned, but she need not be lightly built. This latter stage is one that Americans are just entering on, steel has come in as a material for hulls, composite construction has not yet been introduced in the sailing fleet, but must soon come, and then the line between the racer and the cruiser will be still more rigidly drawn. It must be noted that yacht racing in America has not yet reached the stage that it has been at for a long time in England, where the races are numerous enough, and the entries of such number and quality as to create a special racing class, maintained for that use alone, the racing owner often keeping a big schooner or a steam yacht to live aboard in comfort, while his 80 or 90 tonner is kept stripped to the last stick of furniture through the entire season. It is neither probable nor desirable that racing will soon reach this pitch in American waters, the races are too few and the money value of the prizes too small to lead to such a state of affairs. The regular events of the season in which a large yacht can enter are about as follows: June, New York, Seawanhaka, Atlantic, Corinthian, Eastern; July, Larchmont; August, Goelet cups and perhaps one or two more besides the daily runs on the cruise; September and October, one race each of the Seawanhaka, Larchmont, and possibly Eastern. This makes a total of about a dozen races in the year, which alone will not pay for the maintenance of a racing crack for the entire season, to the exclusion of all cruising, the prizes not averaging over $200, each, and no one boat likely as a rule to win a majority of them.

The needs of American owners are such that in the long interval between the few races the yachts must be used more or less for mere cruising about the Sound, or perhaps to Mount Desert, with family or friends on board. For this purpose the yacht must be more than a bare racing machine, but at the same time it is a very plain fact that the man who goes off in July for a long cruise, or even for idle sailing in the Sound, is not going to win the Goelet cup in August from the man who never reefs his mainsail, but who nurses it as carefully as Volunteer's was nursed last year in the races with Thistle. Given two equal boats in the June regattas, the "family racer" is not going to win from the "racing man's racer" in the fall. It was not so a few years since, it is not so yet perhaps in all classes, but it will be so in a year or two throughout the fleet. The brief course of the 90ft. class is a very instructive one, in but three years it has been called into existence, reached a very high degree of perfection, and yet unless galvanized further by means of new international racing, is has already run its course and "died of its own toomuchness;" at least such are the present indications. One boat confessedly has all the prizes of the coming year already in her locker if she chooses to enter for them, another has joined the schooner fleet, a third is already outbuilt in size, and the other two may keep up a semblance of racing this year, or the class may not fill at all.

It is cruel to cast cold water on such an interesting event as the coming revival of schooner racing, but it looks not unlikely that its course will be even briefer than the big single-sticker, and that at the end of the season there may be one racing yacht, like Volunteer in the other class, and a lot of "family boats," despite the length of their mainbooms. The prospects then are that very shortly, while the yachts, especially under a heavy tax on sail area, are likely to be far less extreme than the "tonnage rule" racing machine abroad, they will still be rigged solely for racing, the prizes going to those owners who spend the most money and hard work on their craft and get the least return in any other form such as cruising; who give up comfort and the ordinary pleasure of the yachting season, such as they once enjoyed, to the winning of mugs. What the exact outcome of this state of affairs will be it is now impossible to say, perhaps the racing this year may give some indication; at any rate it is certain that having once reached a certain stage of development the racing yacht can never go back to the old days of clumsy rigs, of baggy sails and lubberly crews. The danger of over-development, so serious in its results in England at the present time, is still imminent enough now to make it worth the most careful study of every racing man, and no doubt by suitable rules and conditions it can be hindered and prevented, but the task is no easy one. Racing is a sport that can never stand still, it must continually improve and advance in detail and complication, but there is one possible solution of the trouble that presents itself.

It is possible, by a wise system of rules, to foster the building of certain types which may be as fast and yet less costly than others, but at the same time, however good the boats, they are certain to need frequent renewals of sails and gear, frequent docking and painting, picked racing crews, and many other expensive details, if they are to win prizes. This class of expenses, which is increasing every year with the progress of racing, varies at the same time with the size of the yacht, increasing directly in a very rapid ratio. The best way then to limit expense without impairing the quality of the outfit, is to encourage racing in the smaller sizes. If size and absolute speed alone are the standards, this, of course, would not be possible; but however much these features may appeal to the idle spectator, the chief points to all racing men are that the boats shall be evenly matched in size and quality and the races closely contested. There is and always must be a certain *eclat* attached to the racing of the largest classes, but from a standpoint of pure sport size alone is not worthy of consideration. If all the five big ones were to race throughout the season (with the result an assured victory for Volunteer) it would awaken little enthusiasm, the racing would be flat and dull, and far less exciting and instructive than a series of sharp races between Clara and Cinderella, such as were sailed two years since, or the promised races between the new Burgess boats in the 40ft. class.

The encouragement of the smaller boats does not mean in any way the extinction of the larger, but on the contrary their further development in their proper sphere, as cruising vessels, with races at times under such restrictions as may be compatible with their general character. The full development of this scheme has been seen in many cases in England, where "threes," "fives" and "tens," are sailed by their owners in Corinthian races, the same men owning each a large schooner or yawl, or a comfortable steam yacht, for long cruises and for a more or less permanent residence afloat. The advantages of such a plan are many; first of all good sport is assured in the racing of a large fleet of boats closely matched in size and quality, the expense is lessened, as the saving between the cost of racing and cruising in a large yacht will more than pay the racing expenses of the 30 or 40ft. craft; no sacrifice of comfort to the needs of racing is necessary, the big craft offers always a comfortable home after the day's racing, with no cold meals, wet sails, and similar drawbacks; while should a new venture fail to justify her owner's expectations as to speed, she may be sold readily and replaced at a small expense.

The man who puts twenty or thirty thousand dollars into a racing craft only to find that she is second instead of first, is apt to be in a pretty bad predicament; he does not care to sacrifice a new and costly boat at a cruiser's price, while he must build anew or give up racing. If, on the other hand, his little crack has cost but two or three thousand, he can soon dispose of her at a trifling loss and try again in a new craft. With his big cruiser he can go where he pleases between the races, untrammeled by anxiety as to the chances of securing a dock at the proper time, and not afraid to sail in weather that may spoil his sails. A crew of two on board his little racer will take her from port to port without the outlay of a couple of hundred dollars for a tow in a hurry, her spare gear going in the big boat. On race days the owner, with his Corinthian friends or a crew picked from the big boat, go on board at leisure and sail in a well filled class with plenty of excitement and friendly rivalry, returning when it is over to a meal in comfort on the big ship. No waste of one day in stripping and another in refitting the big boat for a race, no extra hands and pilot to pay for, none of the many attendant discomforts of life aboard a large cruising yacht. With such a plan once in practical operation there would follow the increase in racing, both in quantity and quality, through the building up of a special racing class within the reach of a very large number, many owners of large craft, both sail and steam, being won back again to the racing ranks.

There is little doubt but that the advancement of small yacht racing would be a benefit to the wealthier yachtsmen, but at the same time such a move would be of even greater importance to the great majority of active yachtsmen, men of unlimited spirit and enthusiasm but of moderate means. There are men in every large yacht club to-day who have at heart the advancement of its racing interests in some form, however lacking in any definite aim their efforts may be. To all such we commend, as a profitable and instructive study, a close scrutiny of the membership list of their club. The smallest of what may be called the large classes of racing yachts is the 53ft. class, such as Clara and Cinderella, and the expenses of a season's racing in the class will be certainly $5,000, while in the small craft it will run from $1,000 downward. Now let them make out a list, placing on one side all who can afford to spend the greater sum in racing, and on the other all whose means will come well within the smaller limit. We venture to say that in even the largest clubs the latter list will far outbalance the former, and if a second search be made, and all checked off who not only *can* but *will* spend each amount on racing, the disparity will be far greater. Such an examination would teach a very plain lesson, that the strength of a club must lie in the many who are anxious to race and cruise in small craft if they cannot own large, rather than in the few who are both able and willing to spend money on large yachts. If also a canvass of tastes could be made, it would be found that in all clubs the racing spirit, the enthusiasm, the will to work and the *esprit du corps* that is of itself of so much value to a club, are mainly on the side of the younger men, who can at best afford a craft with but one paid hand, and often but a little ship to be managed and raced with the aid of friends only. At the same time there are in most clubs men of wealth, leisure and spirit who give time and money freely for the advancement of their club, men to whom yachting is deeply indebted; but in all organizations the strongest and healthiest growth is that due to a general effort on the part of all members, rather than to the special exertions of a few.

Men join a yacht club and pay dues from year to year from a variety of motives, but how many in each club go any further in advancing its interest? The question is not so much to run up a long roll of members as to enlist the active aid of each individual member, but there are very few, except among the small clubs, that do this. In connection with the inquiry suggested above, it would be worth while for the officers of a club to study carefully the question, "What does the club offer to each class of members, owners of large yachts, owners of small craft and non-owners?" Outside of the New York and perhaps the Eastern clubs there is not one in the country that is not indebted more or less to the small boat interests for its growth and prosperity, and yet how few are there that can answer satisfactorily any but the first question? The great success of the Larchmont Y. C., which takes directly from the racing of small open boats; the Atlantic Y. C. has always encouraged the small fry and its younger members; the Seawanhaka Corinthian Y. C. was born of a racing fleet of small craft, crystallized into a strong and vigorous yacht club, and its great element of strength has always been the active participation of a majority of its members in yacht racing and Corinthian sailing. On Lake Ontario a very large number of the yachting men are berthed aboard boats of 40ft. and under, some of the best racing being in these boats; while the young Corinthian Y. C., of Marblehead, devoted solely to small craft, has run up a large membership and a fine fleet in a couple of years. No purely local club is so widely known as the Beverly, thanks to the races sailed by the dozen every season.

There is much in these facts that is worthy of a very careful study by those who are interested in the success of their respective clubs, and though at first some may be inclined to question our statements and conclusions, we believe that a careful inquiry will show that the way to improvement lies in the direction of more and better racing, regardless of mere size, and of the active co-operation of non-owners and of small boat owners Not a club in the country is so rich and powerful that it would not be the better for a fleet of half a dozen or more racers of 30ft. loadline, sailed by their owners and Corinthian crews in weekly or semi-monthly races. As well try to make an army out of generals alone as to build up a pleasure navy without plenty of willing recruits and a large force of trained Corinthian seamen.

It is a pleasure to note the general prevalence of Corinthian sailing throughout the fleet to-day, not only the number of really creditable seamen, but the general attention to Corinthian principles that prevails everywhere. The day of the paid crew and skipper in small craft has gone by; in all the leading clubs paid hands are only allowed on large craft, and there is no lack of owners and their friends who are fully able to sail alone, either in cruising or racing. The abolition of shifting ballast and paid hands marks a most important advance in American yachting, and the permanency of the movement is now assured.

Nearly a year ago we called attention to a change that is gradually taking place in the nature of yacht racing, the crowding out of the old regatta or water spectacle, in which the comfort and convenience of the ladies and guests were the chief considerations, by the needs of real racing, regardless of sea or storm, and we foreshadowed the complete separation of the dress parade and the real race. It seems now not unlikely that this will take place before many years, that yachtsmen will seek a course outside the Hook or off Marblehead to decide all contests of the larger boats, regardless of the club steamer and its crew of landsmen. The changes from the old New York course have been many, the movement on the part of all the clubs is further seaward, and it is not improbable that before long the start off buoy 18 and the finish off 15 will be things of the past. When this time comes, and the three or four events of regatta week are sailed outside the Hook in succession, it will be necessary to find some amusement for the non-owners, the ladies, and the casual spectator. This may be done by setting apart the first day of the racing week for a grand review of the united fleet in the Upper and Lower Bay, a turnout of all yachts, steam as well as sail, for a race or sail down to the Hook or further, and back, with an entertainment on board the yachts in the evening. This part of the performance could be made at least as enjoyable to the ladies and landsmen as the present excursion on the club steamer, with either no race or too much weather; and when it was over the real business of racing, regardless of the fancy responses of the club boat and caterer, might begin. Such a change would be welcomed eagerly by two parties, the members of the regatta committee who have the race in charge, and those other members who look after the comfort of the club guests on the steamer.

The prospects for racing this season are particularly good, thus far at the opening our list of fixtures runs up to 179 events, while some clubs have not set their dates as yet. True there will be no international races, but local racing will be particularly strong, and if properly managed should do as much for each individual club as the great Cup races have done of late for yachting at large. The chief feature of the racing will of course be the schooners, but next to them will come, in all probability the new boats of the 30 to 40 classes, a number of which have been built especially about Boston. Altogether the season promises to be rich in material for a study of types and models, and also for a basis for the further improvement of yacht racing and the racing fleet.

REPORTS OF YACHT RACES.

THE list of fixtures which we print every week shows that at least 200 races will be sailed in American waters this year and perhaps more. Owing to the great distances and the fact that Saturday of each week is as a rule the racing day, it is impossible for the FOREST AND STREAM to be personally represented at more than a few each week, and in order to secure full and accurate reports from all quarters we must ask the assistance of the clubs through their proper officers in the carrying out of the scheme of reports so successfully inaugurated last year. At the beginning of the season we sent out to all clubs not reached by other means a number of carefully prepared blanks, containing spaces for all the essential details of a race, with the request that one should be filled out at once on the completion of the race and mailed to us. A large number of clubs responded to the request and sent in very full reports. This year we shall send out the same blanks, and we trust that the secretaries or the proper officer will fill out and return one as soon as the times are known. With these blanks we send addressed envelopes, which will insure prompt delivery. It is desirable to receive these reports by Monday morning in order to insure their immediate publication, and while at times they may appear if received Tuesday, it will save us much trouble if they are mailed as soon as practicable. While they provide for all the essential points, especially a correct record, there are often many interesting occurrences during a race, and a note of these with any news of coming races will always be welcome.

The list of yacht clubs published in another column is as nearly correct as possible, but there are doubtless errors and omissions in it, and we ask the aid of all who may detect any in sending us notice of them. Some of the clubs may be disbanded, in which case we will be glad to know of the fact. Blanks will be sent on receipt of application to all clubs which do not receive them, and extra blanks will be sent at any time. They will of course be found very useful for an official record, but frequently that the final result in some classes depends on a protest which is not decided at once, or some error is discovered in the original report; in all such cases a correction should be sent as soon as possible, but whenever practicable it should be sent officially through the club, and not by individuals. While in making this request we are imposing some extra trouble on club officers, we feel that it is not only in our interest, but that it is directly in that of the club that the most correct and ample reports of their races should be published. The work of a club is not merely a home or local matter in which only its members are concerned, but it is a part of the national yachting system, and as such it deserves full notice. The clubs which are best known to-day are not all the largest or richest, but the ones which sail the most races, and whose races are regularly reported and so known to all yachtsmen. Last season the reports of races in the FOREST AND STREAM were the most complete yet published, and we ask the aid of all our friends to render them still fuller and more accurate this season.

YACHT RACING ASSOCIATION.—On May 16 a meeting of the British Y. R. A. was held, and the replies to the letter of inquiry sent to each club concerning the admission of centerboards were read. The number in favor of amending or expunging the rule prohibiting centerboards was 34, while only 8 clubs were opposed to a change. One club declined to express an opinion. The letters were referred to a committee, to report by July 1.

GANNET.—In view of an error in the advertisement of this yacht last week it may be well to explain that she is not as broad as she is long, but a handsome little keel boat of 20ft. l.w.l. and 8ft., not 20, beam, an excellent craft for one or two young men who wish to race or cruise.

CARLOTTA, schr. has been sold by Henry Belknap to George A. Matthews, owner of the Culprit Fay.

BABOON.—Mr. C. T. Adams's cutter was launched at Lawley's yard on May 22.

CAPT. NORTON'S SYSTEM OF WATER BALLAST.

WE had last week an opportunity of inspecting the model alluded to by Mr. E. O. Wiener in his communication published in our issue of May 17, which model is supposed to illustrate the peculiar principles discovered by Capt. F. L. Norton. This model consists of a part of a half section of a lifeboat of about 4ft. beam and 2ft. depth, this part being 9in. long in a fore and aft direction. This section floats in a tank of water about 5ft. square, but it is not allowed to float freely, being pivoted on one side to fixed arms extending from the tank bottom. The position of this point of support would be relatively at the middle of the boat and on the waterline. The section or box is provided with ballast tanks made by a false bottom, with an air valve on the top of a vertical pipe, a pressure gauge, and an opening in the true bottom near the keel. The inquiring yachtsman is permitted to press this tank down in the water, whereupon the pressure in the gauge rises, indicating ¾lb. per square inch; then he is allowed to lift the tank out of the water, which requires some effort, as it is quite heavy. These two experiments are supposed to show the value of the positive pressure of water downward on one side of an actual boat and of compressed air upward on the other, and to demonstrate the many points of Captain Norton's comprehensive claims. It will be readily understood that the model in no way represents the conditions in a vessel floating freely, in which case the displacement is at all times the same, but in the model the displacement increases rapidly through the immersion of the entire section, held down on one side by the pivot, while on the other hand the attempt to lift the section out of water results in a lessened displacement, making it much heavier. If the idea were to show the practical working, it could be done by a whole instead of a half model, allowed to float freely; but the entire arrangement of the apparatus conveys the idea that it is intended to mislead the non-technical investigator. It is claimed by Captain Norton that the pressure shown by the gauge is exerted on every square inch of surface of the air chamber, or in one instance given of a life boat of 1300sq. in. with a pressure of .95lbs., say a total of a half ton, when the boat was heeled gunwale to. A very slight consideration will show that this pressure in an immersed vessel is only that due to the weight of a column of water whose height is the depth of immersion of the air tank, and whose base is the opening in that tank, and that the area of the upper side of the tank has nothing to do with it.

Apart from the question of stability the other claims are directly at variance with the recognized principles of naval architecture; for instance, the claim that the speed is greatly increased through the lessened friction due to the hull being carried mainly by water within it, thus lessening the pressure on the outer skin of the vessel. The model is now on exhibition at the office of Haodley & Co., No. 77 William st. New York, where may be seen a model by the inventor, which shows that thus far at least Messrs. Burgess, Smith and Watson need not fear him as a rival. This craft said to be building, is 60ft. on keel and 12ft. beam, designed either for sail or steam. She is to be non-capsizable under a large rig, and to be exceptionally fast. The bow is hardly more than a third of the length, while it is very full below the waterline. The sloop yacht Heron is now being fitted with Capt. Norton's system of tanks and will be launched this week, while Mr. Wiener's yacht is expected in New York in a very short time, so that yachtsmen will be able to judge from actual trial of the real merits of the scheme.

We have received the following letters from yachtsmen who have examined the model:

Editor Forest and Stream:

A letter which appeared in your last issue over the signature of E. W. Wiener calling attention to Norton's method of water ballasting was evidently written with much faith and enthusiasm in the new and wonderful effects which were to be introduced through this "new theory and invention," this evidence of the "world's progress." Within a week or two I have met with several gentlemen of intelligence, and have heard of others, who have been led to believe that a great surprise and benefit awaited the public in this "invention." I have therefore thought it might interest your readers and promote a more just opinion on the pretensions which are made for this contrivance if the writer should give some account of it. I went with much interest and expectation to see a working model and some illustrations of the thing a few days since, and as a result was miserably disappointed and amazed to see on what a small foundation such a bulk of enthusiasm had been built. The system of ballasting which was to give greater stability than lead, was in effect simply water ballasting, and so far as I can see, what is new about it is not good; and what is good about it is not new; and the claims made for these last features appear too puerile and fanciful to impress any one favorably; nevertheless they have done this; and in this consists the only wonder which I can observe in connection with the scheme.

Water ballast and air tanks can both be used conveniently, and with advantage in certain cases, but this is not a new discovery by very many years. Air tanks can be used to secure needed buoyancy and consequent safety in lifeboats or other craft in case of a capsize. Water can also be used to attain safety as ballast, and admits of convenient shipment or pumping out; so that where vessels are engaged in trading between ports where cargoes can only be got one way, and the return trip has to be made regularly in ballast trim, they have been constructed to use water for this purpose. So far as the model and the explanations received exhibit Norton's arrangement, it may be described as consisting of water tanks occupying the customary ballast space under the floor of a vessel, a line of tanks on the port side being separated on the center line from those on the starboard side, the flat tops extending out horizontally to near the limits of the tanks, and the timbers of the vessel; at which points the tanks described have narrow openings into other tanks above them, the sections of which resemble inverted right-angled triangles, having each for its inner side the hypothenuse. In use the office of the lower tank is to contain water, admitted by openings through the bottom of the vessel; and the office of the upper tank wholly, or in part, is to contain atmospheric air. It is, as explained, claimed that the open communication, through the bottom of the vessel, of the water inside the tanks with that outside the vessel and through which she is sailing, adds in some mysterious way to the effectiveness of water carried in this manner as ballast. Your correspondent I see claims that "the boat does not carry her ballast; on the contrary, the ballast carries her by her inner bottom, the top of her ballast chambers." As a matter of course it does nothing of the kind, but neutralizes an amount of buoyancy in the boat precisely equal to its own bulk, acting as respects this matter in just the same way as the same weight of lead, iron or other substance would, but in respect to stability it would in a sharp floored or deep draft vessel be much less effective than lead, or other concentrated ballast, because the center of gravity of the latter would be much lower down, and when the vessel heeled, the center of gravity of the ballast, and the center of buoyancy of the boat, would become more widely separated horizontally, in the case of concentrated ballast than in the case of either water, wood, or feathers. Any of the latter have, however, their special advantages as aids to buoyancy, in the event of the vessel getting filled with water, that is, such part as is left to fill when these things are aboard. As regards the air tanks, it may be admitted that air tanks when space can be spared for them, and simply in proportion as they do occupy space, and are void of weight, are buoyant, and safeguards.

It is, however, as much a mystery to me as "Keely's Motor" how these air tanks, as used by Capt. Norton, contribute the least particle of stability to a boat until she is filled with water, or how in this or any other case they are more serviceable than they would be if all communication with the water tanks below them were cut off. To any one acquainted with the accepted methods of calculating the righting power of vessels, it is quite evident that any small compression of air in the leeward tank due to the force of gravity carrying the water of the lee tank in the direction of the bilge, can only have a hurtful effect, and that, within the limits of its possible movement, the same thing is true of the water on the windward side. I am afraid your correspondent has little reason for enthusiasm in this "new discovery," and that the world's advancement is indefinitely postponed. J. HYSLOP.

Editor Forest and Stream:

In the last issue of your paper, you published an article by Mr. Wiener, entitled "A Novel Singlehander." The description of Capt. Norton's so-called invention is so clear that it becomes a very simple matter to criticise it.

Nearly all merchant and war ships at the present time have double bottoms which are designed for carrying water ballast. The object of this is to give the vessel sufficient stability when light or to alter trim and immersion. The pipes leading from these double bottoms would, if enlarged, serve the same purpose as the air chambers, so that the only change is in the size of the air chambers. In the Norton boat the only effect this change has is to decrease the range and amount of stability. Without the air chambers and with ballast tanks full the water acts the same as any ballast. Were the ballast lead and on the keel the amount and range of stability would be greater.

Let us take the Norton boat in an upright position. Her center of gravity is in a certain position, when the boat is heeled her center of buoyancy moves out to leeward. Her righting lever is the distance between a perpendicular drawn through the center of buoyancy and one drawn through the center of gravity. Now, when the boat with air chambers is heeled, owing to the expansion of the air, a certain amount of water leaves the weather tank, and we may say the same amount, due to compression, enters the lee tank. The center of gravity of boat has moved toward the lee side, or toward the center of buoyancy; the righting lever thus becomes shorter. To put it in plain language, you have done the same thing as moving your crew from the weather to lee side when boat is heeled. Any one can see that this would increase the list of boat. If you take the weight of water that has been moved and multiply it by the distance moved you get the moment of shifted ballast. If you divide this moment by displacement of boat you get the distance the center of gravity has traveled toward the center of buoyancy and consequently the actual decrease in the righting lever. As a boat heels the center of buoyancy travels to leeward. In the beginning it travels slowly, then it increases, then decreases, it comes to a standstill, then comes back again. This action depends largely on the amount of freeboard. Now, the center of gravity travels in the same direction, but with an equal amount for each angle of heel. The higher the center of gravity, the more this amount is. One can readily see that there will be an angle where the center of gravity catches the center of buoyancy. Then the boat has no stability and she will capsize. In the Norton boat the center of gravity moves more rapidly, owing to the shifting of weight; hence the point of capsize will be at a smaller angle.

The problem of stability is very much like the problem of keeping a baby in a cradle from colliding with the floor. As the cradle heels the point of contact of the rocker moves out toward the side the cradle is tipped, corresponding with the movement of the center of buoyancy, the baby moves in the same direction, this movement being the same as the center of gravity. So long as the baby remains inside the point of contact of the rocker, the cradle will not tip over. The rocker of a cradle is a part of a circle. If the rocker was rather flat in the middle, and then curved more sharply, you could tip the cradle so that the child would be outside the point of contact, then the cradle would tip over. One can easily see that the nearer the baby is to the floor the greater the angle before the cradle will tip over. In other words, the lower the center of gravity the greater the range of stability. Experiments made on boats' stability, by putting weights on gunwale, are very misleading. The stability of a life boat, and the stability of that same boat, with deck, cabin, spars, sails, rigging, etc., are two very different things. In the latter case the center of gravity may be several feet higher.

There is no subject in this country connected with mechanics and engineering that people imagine they know well and yet so little understand as naval architecture.

A sea captain is supposed by the majority of people to be thoroughly posted on ship design. In the majority of cases he not only does not understand that subject, but he is not even familiar with the principles of navigation and without his tables would be veritably at sea. It is the general opinion among captains and naval officers that they know it all. Captain Cowles, of the English navy, succeeded in getting the English Government to allow him to design a war ship. The faults of the vessel were pointed out by the naval constructors, but the influence of the line officers was too great and the ship was built. Captain Cowles did not understand the principles of stability and the result was the terrible loss of the ship, the vessel capsizing and going down with four hundred souls on board. Since that time important questions in naval design have been left to those who by training are competent to solve them. Some such terrible accident seems to be necessary in this country before people will learn to leave alone things they know nothing about.

I had an occasion some time ago to look over the design for a large vessel. This design has been very prominently before the public during the last few months. I found that the design, if it could be called such, was wrong in almost every particular. The designer was a man who knew nothing about naval architecture. He had not the slightest idea what the word metacenter meant, and the position of the center of gravity could not be within five feet of where he said it would be. I understand that thousands of dollars are now being expended to build this ship.

It is a strange fact but it is true, that not a single advance has been made in naval architecture by so-called inventors. The advance has been steady and certain, and has been made either by highly trained naval architects or mathematicians of a very high order. Millions of dollars have been spent in this country and abroad on ships gotten up by inventors, and not a single one has proved a success. It is strange that people in this country cannot realize this fact. People have been so often fooled, expectations have been so seldom realized that a serious injury has been done shipbuilding in this country. If Mr. Wiener and others interested in the Norton patent will go to the trouble of purchasing or borrowing Sir Edward Reed's book on stability they will find that what is there left to be discovered regarding stability is very small. GREENWICH.

THE DEED OF GIFT.

THE London *Field* of May 26 criticises the recent action of the New York Y. C. as follows:

"It is an attribute of human nature for a man to love his offspring; but this phenomenal infatuation of the New York Y. C. for the crude piece of attorney's work which goes by the name of the new deed of gift exceeds the philoprogenitive instincts. Seriously, we do not see how any club with a proper sense of self-respect could accept the extraordinary proposal. The committee may be right or wrong in their contention that the new conditions are fair and sportsmanlike, and they no doubt are sincere in asking foreign clubs to adopt them in case of winning the Cup. But how could a club, which has condemned the conditions in the most uncompromising manner, covenant to adopt them after winning the Cup under rules which it declares much less onerous?

"Possibly the committe of the New York club did not realize that their proposition suggests barefaced cupidity on the part of the challengers. It is quite natural that the committee should desire to show that they honestly believe in the fairness of the new conditions, but they have adopted a very awkward method of doing it.

"After all, we do not see how a club could be bound by any such agreement as proposed; and in fact, as we have many times contended, we believe that the club will ultimately have to revert to the conditions of the original deed of gift, which is the only legal instrument attached to the Cup. But the time has arrived when we shall have to consider the conditions under which centerboards may be admitted into our yachts. The case is settled so far as the clubs are concerned and, we may say, yachtsmen generally, as the clubs which polled their members found the feeling strongly in favor of admitting the board."

It is very evident that the New York Y. C. is just now in an extremely awkward predicament, in which it has been placed by the action of the committee on revision, and out of which it can only get in one of two ways: by the aid of a foreign challenge, which will be a practical recognition of the new deed, or, failing that, by a complete backdown and a surrender of the points in dispute. Were the matter taken into the courts the action of the club in violating the provisions of the first deed of gift would not be sustained for a moment. It is very unlikely that such a course will be taken by foreign yachtsmen, as it is not necessary: all that they need do is to sit quietly by and watch the New York Y. C. bid higher each year for challenges that will not come. The present offer is a very great departure from the stand taken last November.

If the foreign clubs are half as wise as we think they are, they will understand that now is the time for them to emulate the policy of the noted "Brer Fox," to "lay low and keep on sayin' nuffin." Without a challenge the Cup must relapse into obscurity, and the holders must suffer accordingly. International racing must go on however, and as soon as it is certain that the America's Cup is permanently out of the field, it will be time to offer a new cup for international competition, the races to be managed by a committee from the leading American yacht clubs. The money could be raised in a week if necessary, and if ever such a cup is offered it will be the end of the America's Cup.

NEW BRITISH YACHTS.—The new 60, Petronella, designed by Mr. Richardson for the Earl of Dunraven, was launched at Fay's yard, Southampton, on April 28. She is composite built, steel frames and pitch pine planking, with 30 tons on keel. She has a clipper stem and is quite a beamy boat, 62ft. long and 17ft. beam. The 60 building from Mr. Watson's designs is 65ft. l.w.l. and 15ft. beam, very much like Thistle in model. Her name is Yavana and she will be owned by Mr. Paul Ralli. Both yachts sailed their first race on Saturday last.

VOLUNTEER is now nearly ready for use, and will go into commission in a couple of weeks. She will not enter in the New York races, but probably in the E. Y. C. regatta June 28.

RAMBLER, schr., will carry a cargo of 500 cases of dynamite to Colon, for use on the Panama Canal.

YORKVILLE Y. C., MAY 27.

THE Yorkville Y. C. sailed a race on May 27 over a 20-mile course, from the club house around the Stepping Stones Light, for Classes A, B and D, and over a 15-mile course, around the Gangway Buoy, for the smaller classes. The wind was light from E. and the tide ahead over the first part of the course. The full times were:

CLASS A—CATBOATS, UNDER 17FT.

	Stat.	Finish.	Elapsed.	Corrected.
Happy Thought	11 51 30	4 16 00	4 24 30	4 22 30

Mystery	11 51 00	5 39 00	5 47 00	5 47 00

The winners in their respective classes are Happy Thought, Carrie B., Traveller, Maud M. and Mystery.

LLOYDS' YACHT REGISTER.

THE issue of Lloyds' Yacht Register for 1888 shows an improvement even on the large and handsome volume of last year, the matter being rearranged and still further extended. The rules for hulls of all kinds, as well as for boilers, are now very complete, while the list of yachts has been carefully revised. An important addition is the length of loadline, which, with the new tonnage, is given in the case of most of the racing fleet. The racing flags, of which nearly 600 are given, including many American yachts, are arranged on a new and most convenient plan, all of one color being placed together. The first page contains all with red on a white field, then all with red and white in various stripes, the next being red field with white, then red and blue, etc. From an artistic point of view, the effect is very pleasing, but its chief advantage is that any special flag is so easily found. With the leading color once in mind, one can turn at once to the particular group to which it belongs, with none of the confusion which comes from looking over a dazzling page of many colors. With the system of abbreviations now employed, almost the whole history of the yacht's construction is told in connection with her dimensions, making the book most valuable for reference. The subscription price is 15 shillings for individuals and 2 guineas for clubs, two copies being given for the latter sum. The agent for Lloyd's is Mr. Thos. Congdon, Kemble Building, Whitehall street, New York city.

HAMILTON Y. C.—The first race of the season was sailed on May 24, the Stella being first in the 25ft. class, with Greyhound second and Mystery third. In the 20ft. class Adeline won, with Sea Gull second and Flight third.

CAPE COD Y. C.—The first race was sailed on May 26, in a strong east wind; the times being:

FIRST CLASS.

Madge, Cummings, Orleans	2 23 00
Ariel, Sears Bros., Dennis	2 03 15
Percy Allen, Frank Allen, Brewster	2 22 31

SECOND CLASS.

Iris Cromwell, Dennis	2 34 47

Judges: Capt. S. K. Kingman and Messrs. R. E. Oliver and A. I. Newcomb.

A YACHT RACE AT GALVESTON.—On May 19 a race was sailed at Galveston, Texas, in a very strong breeze and heavy sea, over a 20 mile course, the entries being White Wing, Viola, Falcon, Palmer, Gypsy Queen, Silver Cloud and Marietta. Only three yachts finished, White Wings, 2:39:28; Viola, 2:40:06; and Falcon, 2:40:39. Silver Cloud lost her mast just before the start.

DAUNTLESS schr., Vice-Com. Colt, N. Y. Y. C., sprung her mainmast lately in the Sound. A new one has been stepped and she is now ready for the match with Ramona. No date has been set, but Mr. Postley's schooner will soon be in commission, so the match is likely to take place at an early day.

ELEANOR.—Inspector Williams' new sloop yacht, built at Inglis' yard by John A. Connelly, was launched on May 26. She is 57ft. over all, 53ft. l.w.l., 17ft. beam, and 5ft. draft, and is sloop rigged, with single jib.

LAUNCHES AT CITY ISLAND.—Elma, schr. was launched on May 27, her spars being stepped at once by Philip Low. Katrina was launched on May 29.

CAMBRIA, schr., formerly owned by Jas. Ashbury, has lately been sold in England to be used as a trader on the African coast

JEAN.—This steam yacht, built for Jas. Renwick by John F. Mumm, is now ready for launching.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. J., Brooklyn.—The law on shorebirds on Long Island will be off July 10.

A. W. B., Hot Springs, N. C.—The model of '86 will answer your purpose very well.

META, Saranac Lake, N. Y.—W. H. Russell's St. Bernard dog Barney won vhc. at New York in 1886.

G. F. M., Boston.—See note of Maine angling resorts in our issue of May 17. The nearest point for salmon is Bangor, Me.

F. S., New York.—The rocks of the North River in the upper part of the city, will reward you as well as any other in the immediate vicinity.

A. P. D., Grand Rapids, Mich.—For mosquito lotion take 8oz pine tar, 2oz. castor oil and 1oz. pennyroyal; simmer over slow fire and bottle for use.

L. A. L., Saylesville, R. I.—It is too late to put out quail. They should be put out early in the spring, or even in the winter time if provided with food and shelter.

F. B. K.—You may go to some of the lakes, Greenwood or Hopatcong in New Jersey, or to the Potomac River (see FOREST AND STREAM, May 10) or the Susquehanna.

W. E. N., Stamford, Conn.—For brook trout fry apply to one of the Fish Commissioners of your State. They are: Wm. M. Hudson, Hartford; Robt. G. Pike, Middletown; Jas. A. Bill, Lyme.

J. M. F., Philadelphia.—You will not find sea trout fishing in June. The run begins about July 1, on the southwestern coast of Nova Scotia, and the fish reach the north shore of the St. Lawrence early in August.

CLAY PIGEON.—If you will send us your address we will supply you with the rules, which are too long for publication in our columns. Hurlingham rules are those adopted by the Hurlingham Gun Club, of London, Eng. The Monaco distance is 30yds., with a boundary of 18yds. It is the practice in strict Monaco boundary shooting, to stretch a wire screen at the boundary line.

V. A. N.—Can you put me in communication with a good, honest man, living at Utica, N. Y., that I can get to do a little business for me? I sent 14mos. ago a rifle to Geo. Ferris, the gunsmith, to have repaired, also the money to pay for same, and ever since that time I cannot get either one returned. Ans. You omit to give your post office address, and if you were as careless when you wrote to Utica, that will explain your failure to receive any response. Moreover, Geo. M. Ferris, the well known gunsmith, died Dec. 13, 1885. His son's name is G. Fred Ferris, he lives in Utica, we believe. He may know something about your rifle.

F. M. C., Leroy, N. Y.—May a party of us ask through your columns for information regarding the trout fishing along the line of the railroad from Toronto toward Nipissing? We have fished for two years on the road toward Owen Sound, but the fish while plenty, have been small, and as we have heard the region beyond Muskoka spoken of we are inclined to try it in June or the first of July. We are after fly-fishing and want trout running from ¼lb. or ½lb. up, and as some of your readers must have fished the region through Huntsville, Burk's Falls, Sundridge, etc., we hope to get a little information before going up there. Ans. The Nipissing region has been described in our columns as affording bass, muscalonge and lake trout fishing, but we recall no authentic reports of large brook trout there. In a paper printed elsewhere is given information about a number of points further on than those named in the inquiry.

B., Toledo, O.—A strange bird was taken alive yesterday in the fifth ward of this city, near the Maumee River. The body is about the size of a common pigeon, the head, neck, breast and under parts of a lustrous lead color, back and wings clouded with dark and light (chocolate) shades of brown. The legs, which are those of a wader, are very long and of a light green color, as are the toes, which are also very long and tapering, the upper and lower mandibles are bright brick red, except at the tips, which are the light yellow color of the legs. The latter on the thigh are the same bright red color. This bird may be a Virginia rail in spring plumage, but it seems like a larger bird. Doubtless you can tell us whether this is a stranger, or simply a bird not at all rare in this locality, masquerading in a new suit that soon grows rusty with the advance of summer. Ans. The bird captured is a Florida gallinule (*Gallinula galeata*). It is a near relative of the rails and coots and is found over a large part of the eastern United States. See Coues' Key or Ridgway's "Manual of N. A Bird."

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have alway taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

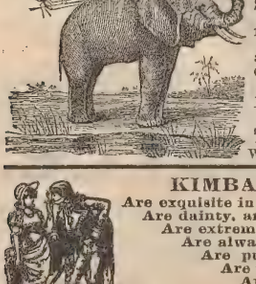
The Old "CRIMP," like the Muzzle-Loader, MUST GO.

The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884. MARCH 29TH, 1887.



Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

FOREST AND STREAM PUBLISHING CO.

Forest & Stream File Binders.

PRICE, $1.00.
FOR SALE AT THIS OFFICE.

The Cot is packed in the side rails, which are shell shaped and made from four-ply white birch veneer. The irons are all malleable, and the duck is manufactured expressly for use in their construction. It is very elastic, acts on uneven ground without straining or breaking it, and when packed, the cloth is entirely protected by the shell shaped rails.
Military and canoe companies, tourists and campers out for the summer have never been offered anything which compares with it. Sent to any address on receipt of price, $4.00. The trade supplied. TOURISTS' FOLDING COT CO.,

Steam Yachts and Launches;

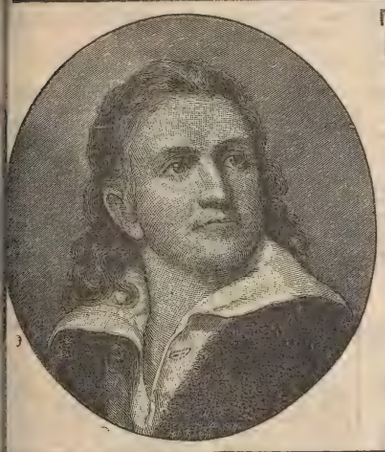
THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.



SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.
From Author's Preface.

CLOTH, 240 PAGES.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
LONDON: DAVIES & CO., 1 FINCH LANE.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

The Atlantic Ammunition Company's Amateur Championship Sweepstake Tournament, 1888.

For Sale.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

Salmon Fishing.

I have for sale, in fee or on lease, several first-class salmon pools and shares in good salmon clubs on some of the best rivers in New Brunswick. I. HENRY PHAIR, Fredericton, New Brunswick, Canada. may24,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JUNE 7, 1888.

VOL. XXX.—No. 20. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

LIVE AND LET LIVE.

THE secretary of the American Kennel Club sent out notice last week that the Baltimore, Washington and other dog shows were not given "under the auspices" of the club, and he added that the use of the A. K. C. rules was not sanctioned by it. This may be accepted either as the grotesque pronunciamento of a body which vainly imagines itself to be in control of the doings of dogs and men, or as the wail of a concern which realizes that its assumed authority is being set at nought by dogs independent enough to wag their own tails, and by owners independent enough to show their dogs where they please. Whichever it may be, the notice must have impressed fair-minded readers as having been prompted by a mean and churlish spirit. For we hold it to be self-evident that if the A. K. C. show rules are good for anything, the wider their use the better for all concerned. Their usefulness conceded, every show, big or little, on all this wide continent, should be governed by them. The A. K. C. ought itself to be foremost in the endeavor to secure such an uniformity of regulations for all shows. In striving to effect this the club would be doing more efficient service than it can ever accomplish by employing its secretary to pose as a bogey and make faces at certain show managers, as those of Boston, New Haven, Baltimore, Washington, Hornell, and others, as if they were children to be frightened by his facial distortions.

Another amusing instance of the extreme to which jealousy and a churlish spirit will sometimes drive clubs and men is related in the letter published in our Kennel columns from the president of the new Southern Field Trial Club. The story he tells is that a newspaper man refused to publish anything about this new sportsmen's organization because of fear that its success might impair the prestige of another association of sportsmen. The mind of a man who acts on such principles must be in an exceedingly curious condition, or perhaps the trouble lies in the heart. Now that Mr. Renfroe has told his story, our well-meant advice to the Chicago little man is to sulk no longer aloof, but to sit up to the table, tuck in his bib, and first having eaten his bit of humble pie, join with the others in the feast of good things; and may good fellowship reign.

To live and let live is a sound and beneficent principle for dogs and men. The good of one is the good of all. The success of one means the success of others. All should work together in harmony, one supporting the other, and each rejoicing in the success of all.

The history of field trials and bench shows in this country gives us an almost uninterrupted increase in the number of annual events, and with this there has been a corresponding growth in the number of entries in the several trials and shows. The more events of this character there are given, the greater is the public interest awakened by them, and a more generous support follows. No club can hope to advance its own interests by pulling down those of others; nor does any club which attempts to do anything of that kind deserve the sympathy and support of fair-minded dog owners.

A NATIONAL ZOOLOGICAL GARDEN.

A BILL introduced in the Senate by Mr. Beck of Kentucky provides for the establishment at Washington of a National Zoological Park, "for the advancement of science and the instruction and recreation of the people." This project is one which has long been talked of by Mr. Goode of the National Museum, and the beginning of a zoological collection has already been established just back of the Smithsonian grounds. In this collection are a few fine specimens of North American mammals, the most important of which is a superb jaguar from Texas. These animals have been collected chiefly as a study collection for the benefit of the taxidermist who is engaged in mounting specimens for the National Museum, but though so small it attracts quite as much attention as anything on the Museum grounds.

To this collection will be added the buffalo recently presented to the National Museum by Mr. Blackford, and there is not the slightest doubt that if a National Zoological Garden or park were to be established at Washington, it would receive generous donations from all parts of the country, and would before long, almost without any cost besides that of the transportation and care of the animals, contain a large and thoroughly typical collection of North American mammals, birds and reptiles. The surplus animals which would be constantly coming in could be exchanged with foreign gardens for such exotic species as might be thought desirable.

The importance of preserving living North American mammals can hardly be overestimated. The buffalo is practically extinct, and the range of the elk has become so contracted in the last few years that it is apparent that the same fate awaits that noble species. There are others that will survive longer, but the people at large know nothing, and never can know, about them unless they shall be brought close to their homes. All these animals should be secured before it is too late, and placed on exhibition where they can be studied by the naturalist and be seen and admired by the people. The United States is perhaps the only great nation on earth that has not a well equipped zoological collection, and we, who in so many respects lead other nations, should not be behindhand in our efforts to enlighten and instruct our own people about the animals that are native to the soil.

If Congress should assent to the establishment of this collection, an admirable site is close at hand, only about two miles from the White House, and is believed to be obtainable for this purpose.

This matter should receive early and favorable attention from Congress.

BRITISH COLUMBIAN FISHERIES.

WHILE the fisheries of the Atlantic coast have proved of such enormous value to Canada, scarcely anything is known about those of the North Pacific Ocean. It is only within the last few years that any interest has been felt in this branch of the natural wealth of British Columbia, and this interest has been confined almost wholly to the salmon canning industry. From very small beginnings this has attained enormous proportions, and owing to the careful and efficient work of Mr. Thos. Mowat, the present Commissioner of Fisheries for British Columbia, salmon are now exceedingly abundant in the Fraser River and promise to become still more so.

The increase of the supply of salmon has been, up to this time, the chief work of the Commissioner. This was very naturally the first work undertaken because the amount of capital invested in the canneries was largely in excess of that employed in all the other fisheries put together.

Mr. Mowat, however, has not been unmindful of the fact that the deep-sea fisheries are likely to be of more value to the Province than even the salmon canning, and he has made efforts to investigate the coast fisheries, with a view to learning more of their probable value. To this end he has consulted with captains of the sealing schooners, who for months at a time are cruising off the coast, and to several he has supplied apparatus for carrying on investigations while absent on their voyages. By this means he has acquired a great fund of information, which he now proposes to supplement by more accurate and careful observations conducted by himself.

All that Mr. Mowat has seen or been able to learn points to the conclusion that the marine fisheries of the Northwest Coast are of enormous value, and that from these deep-sea fields may be reaped harvests not less rich than those which for years have been garnered from the North Atlantic.

Acting on the Commissioner's reports, the Canadian Government has very wisely appropriated the sum of $10,000, to be used in the construction of a steamer especially adapted for the work Mr. Mowat desires to carry on. In many points of construction it will be like the U. S. Fish Commission steamer Albatross. With this steamer Mr. Mowat intends this season to investigate, so far as possible, the deep-sea fisheries and also those of the coast from the mouth of the Fraser River north to the Naas and the Alaskan boundary.

It is scarcely possible to overestimate the importance of the work thus about to be undertaken. Its value to the Province of British Columbia cannot fail to be very great, and if the discoveries made are at all in line with what is already known of the fisheries of the Northwest Coast, the finny shoals of these almost unknown waters will attract from the East a population that will do a vast deal toward colonizing with hardy and useful settlers the now sparsely settled coast of British Columbia.

GROUSE, WOODCOCK AND TROUT.

LAST season was notable for the abundant supply of ruffed grouse in different sections of the country; and indications warrant the anticipation of a like plentiful supply this year. Trout fishermen in New England report that while on the streams they have flushed unprecedented numbers of grouse. This good news comes from all the New England States, and reports to a like effect have reached us from other sections.

On the other hand the anglers report an almost total absence of woodcock and their young broods, which in ordinary seasons are flushed on the trout streams. This, however, does not of necessity imply that the woodcock are fewer than usual, for the spring has been characterized by a heavy rainfall, all the streams are full and the woodcock have probably nested on the smaller watercourses and higher up than is their wont.

The streams have yielded goodly numbers of fish. Anglers have increased so rapidly that waters which, in former years, were fished by only one or two, who carried home big strings, are now whipped by a dozen or a score; each fisherman may be rewarded with a small return, and the fishing may appear to him to have deteriorated, yet the total number of trout taken in a season is often as large to-day as in the past. There are other streams which have been cleaned out with hooks, lime and nets, until not a trout fin remains, nor will there ever be any fishing in them unless they are systematically restocked and let alone until the fry have time to grow. It is a mystery why fishermen do not more often band together to undertake the restoration of these "played out" and profitless trout streams. The expense of restocking is trifling; it is practicable to protect the waters; and the rewards are worth striving for. It is not every fisherman who can afford time and expense to visit distant angling waters; why should not the stay-at-homes have their fun in their own home streams, stocked and preserved by united action?

BY a new law the chief of the Massachusetts district police is directed to detail an officer for duty under the direction of the Commissioners of Inland Fisheries.

The Sportsman Tourist.

THROUGH MIRAMICHI.—IV.

THE young gentleman from Harvard called on us with his Indian, Nicholas, brother to Joe. We offered them the rough hospitality of our camp, and compared notes of our adventures. He had shot two bears while dropping down the river quietly. They haunt the banks at this season to feed on the squaw berries, which are of a white color and pleasant acid flavor, and in a week or two are all devoured, though now growing in large quantities. Until these berries have grown ripe the bears have been regaling themselves on blueberries. In a week or two more they will again visit the blueberry regions, until the frosts ruin their flavor, whereupon they will find groves of oak and beech and feed on the fallen nuts, until the sharp frosts warn them of the approach of winter, and the first snow gives an earnest of its coming, whereupon they will immure themselves in a cave or among fallen boughs and roots, closing up the entrance very cunningly and leaving a small air hole only. The steam of their breath ascending through this small aperture is commonly the only means of betraying their winter hiding place to the hunter. They spare no precautions to avert suspicion from their sleeping place, even sometimes going backward, it is said, on the soft snow, and taking immense sidelong jumps from fallen logs. Joe tells me that they invariably enter their dens while snow is falling, so that their tracks may be covered up. These tricks evince reason almost as much as the clever trick of the highwayman who reversed the shoes of his horse and effectually evaded his pursuers by the ruse. They go to their winter dens very fat, and waking up in the spring, after their long fit of unconsciousness, have apparently lost no flesh by the long fast, but grow very thin when they emerge and travel about, and are then most dangerous.

Mr. Simpson, on the same evening of his arrival, had heard two bears crackling in the bushes, and had seen one protrude his head as if to take notes, climbing up a tree trunk, but vanishing before he could cover him with the rifle.

One of the most extraordinary facts that applies to all wild animals I believe is that they do not appear to dread the sight of a man, but have a terror of catching the wind or scent that passes from the human body, and is imperceptible to our duller senses. Moose don't trust their eyes, Joe says, but their noses. Referring to their keen hearing, he says, "Moose or bear can hear a mile off."

Before setting forth to our next point of destination, Upsalwitch Lake, at a distance of six miles, we undertook a toilsome journey to the summit of one of the highest of a range of hills that we thought offered a good chance of finding a bear. The day was very sultry and the traveling extremely difficult; nor were we rewarded by a successful quest. There were plenty of berries and numerous track of bears; almost every decayed log was broken to splinters by bruin in search of the ants that inhabit them. Mr. Simpson had lately shot two bears in the vicinity, and he was of opinion that this must have frightened the rest away. We had some compensation for our toilsome tramp in the grand view of the lonely wilderness, just before the sun sank behind the hills. From the highest mountain we beheld the lesser hills undulating below us like mountainous waves turned solid, as if some awful voice had suddenly pronounced the fiat to a tossing ocean, "Peace, be still!" Silver threads that wound among the valleys showed the sinuous course of the river and its tributaries. One's very being seemed to be absorbed into the scene, to mingle with it and become a part of sky and mountain. Seeking out a copse beside a brook that brawled down the hill side, we passed the night pleasantly enough beneath the stars, and early next morning returned to camp and commenced to portage our baggage to Upsalwitch Lake, whence we intended to run down the Upsalwitch River, and reach the Metapedia by the Restigouche. The weather was intensely hot, and our portage path lay for part of the distance along a meadow, where we occasionally sank to our knees in the spongy moss, and were assailed by myriads of flies with an energy I had never before witnessed.

I have not referred to the flies, but should mention that they are emphatically a terrible nuisance, the *aliquid amari* that detracts very largely from the pleasure of such a trip as I am describing. They must be felt in their furious attacks for one to realize their full power. I had fortunately provided myself with a gauze netting for the head and gauntlet gloves, but even so, felt much annoyance from their persecutions.

We were glad to deposit our burdens on the shore of a picturesque lake, from which cranes and ducks rose on the wing beneath the protecting arms of some noble trees. It took us two more days to complete the portage; even the canoe—no contemptible burden—had to be carried across. Along this path was a line of bear traps that a hunter had set up last spring. In one we found a few remains of a bear that had been taken after he went out of the woods, and it had been devoured by the other bears.

As there was a good growth of cedars here, and the first portion of the Upsalwitch stream was likely to be very low, we decided to stop in this comfortable camp for one day and shoe the canoe. This process consisted in cutting long thin strips of cedar, so shaped as to envelop the canoe in a complete framework, the strips being firmly lashed together by withes and cords. She could thus be dragged over a rocky bottom with immunity.

On the following morning we embarked with our possessions on the lake; we saw several grebe ducks swimming about, one of which we shot and it proved most delicate in flavor. We also shot two bluewing ducks on our passage to the outlet, a distance of three miles. We were surprised to find the stream so shallow. We were obliged to wade for the first two or three miles and haul the canoe after us. By breaking down two or three beaver dams we were enabled to raise the water considerably, as they had backed it up nearly two feet. These interesting and amusing animals are fast disappearing from the remorseless pursuit of the hunters; the recent rise in the value of their fur will further assist in their destruction. We had the opportunity of examining some extensive works in a small tributary brook. Joe supposed there were six beavers in this colony, two old ones and four cubs. Why they had chosen a small brook out of which to form an artificial lake with infinite labor, where natural lakes were at their disposal, seemed something of a mystery. Two dams had been built to the height of about four feet, cheifly of mud about five feet thick at the base and two at the apex; the total length of these gigantic walls was at least one hundred yards. Imagine the industry necessary for such a construction. Then there were two houses composed in a most skillful manner of mud and sticks, that rose to the height of seven feet, and were at least twelve in diameter. The dams inclosed two ponds, in each of which was a house, the upper doubtless intended as a citadel or refuge in case of being driven from the other. In the middle of their hut they have a landing, where they lie with their heads together all day (like "little boys," Joe said), and their broad trowel-like tails in the water, for they are nocturnal in their habits. They are said to carry mud on their flat tails as well as with their forepaws pressed against the body. We found some enormous beech trees felled by them of nearly eighteen inches in diameter, and a pile of food consisting mostly of limbs of the beech and birch submerged in the water to last through the winter. The entrances to their house were all under water, and they had numerous sallyports or holes under the roots of trees, where they could find refuge in case of attack. A very inhuman way of taking them is to drain off their dams and send in a dog to drive them out—a dog that knows well how to avoid their terrible incisor teeth. The poor animals flounder helplessly in the shallow water and are easily knocked on the head. Their castors, or oil bags, are much prized by hunters, emitting a very pungent smell; when mixed with camphor they prove fatally attractive in traps to bear and lynx.

All along the brook we saw numerous fresh marks of moose; fresh tracks and newly-bitten bushes. In fact, we once must have been nearly upon a moose, for we saw the green chewed leaves he had dropped from his mouth and heard him crackling in the timber at some little distance, but saw him not. He had caught our scent no doubt. We had just crossed some meadows that were well beaten with their tracks and had seen numerous marks in the shingle; so that we were startled, but hardly surprised, when on turning a bend we beheld before us, at about 200yds., a fine bull and cow standing in the river. I got my rifle ready and leaped into the river; meanwhile the bull had partly hidden himself in some thick growth at the bank, and I brought down the cow. The bullet hit in the neck bone, she fell like a log, and I went in search of the bull; but terrified by the fate of his mate he had traveled swiftly away, and a shot sent after him just as he disappeared proved a miss. Regretting his fine head and horns, we turned our attention to the fallen cow, and pitched tent in a cozy, sheltered spot near by, protected by a fine growth of hemlocks. The springy moss furnished the most luxurious bed it ever has been my lot to recline upon. This cow was a young animal, the flesh proved very fat and delicious, and the hide was of a beautiful brown.

Early on the following morning we dropped down the stream, now grown considerably in volume, two miles to the falls, which were very picturesque, but were devoid of any grandeur. Here the river makes a long elbow or bend, and by making a portage of three miles we were enabled to accomplish six miles of river. By nightfall we had portaged all our stuff to the river's brink at the place of re-embarkment, and here we made preparations for passing a quiet Sunday. Nothing was lacking for the promotion of our comfort, our table was well supplied with fish, fowl and flesh; the air was balmy, and its breath was sweet with the soft odors from the forest; our surroundings were very romantic, our tent being pitched in a valley surrounded by fine hills, well wooded. During the night we were awakened by some caribou that passed near the tent, and frequently struck their horns against the trunks of trees, but it was too dark to get a shot at them.

On Monday morning we proceeded down the dancing waters of the Upsalwitch, that by receiving tributary brooks soon swelled into a river of very respectable size.

When we paused for lunch we removed the cedar shoes from the canoe, as the water now allowed of our running freely without contact with the sharp rocks.

We ran over hundreds of salmon that were assembling in the pools in the vicinity of the spawning grounds, preparatory to the act of spawning. It was very amusing to disturb a large fish in very shallow water and watch his plunges and swift darts hither and thither. In one pool we saw some 200 fish, none exceeding 20lbs., the fish of this river as a rule running small.

It took us two days to reach the Restigouche and two very enjoyable days they were. The men, relieved of any toil, were in excellent spirits, the bark floated merrily along, only needing steering; rapidly we passed sweet bits of intervale, shaded by tall elms and steep rocky cliffs, and hardwood groves and imposing hills and mountains.

The gliding panorama did not include the habitations of men until we neared the Restigouche, and these were now deserted—picturesque little fishing villas, owned by wealthy New Yorkers and occupied by them for a brief season only.

The broad Restigouche seemed very noble when we were fairly launched on its bosom. The scenery now grew pastoral, a sudden change from the rugged forest scenes we had grown accustomed to. We met parties being towed up stream in launches by a pair of horses going to their winter's exile in the grim forests in a very jolly frame of mind, keeping up their spirits with lively songs and breakdowns.

In another hour we had our canoe drawn ashore at Metapedia and our journey was for the present at an end, for here was the railway station, and we were soon on board the train for Bathurst, whence Joe had started exactly four weeks previously.

I am sorry to have to record that Joe took the first opportunity of getting gloriously drunk on that "drink of the heroes"—as Dr. Johnson styles brandy—and showed he could be a hero of the spirit-loving order as well as a hero of the hunt.

> "Full many a glorious morning had I seen
> Flutter the mountain tops with sovereign eye,
> Kissing with golden face the forests green,
> Gilding pale streams with heavenly alchemy."

ARTHUR P. SILVER.

Natural History.

SNAKE BITE AND ITS ANTIDOTE.—IV.

Experiments With Crotalus Venom and Reputed Antidotes, with Notes on the Saliva of Heloderma ("Gila Monster").

BY H. C. YARROW, M.D.

Curator Department Reptiles, U. S. National Museum.

A GREAT number of different plans of treatment have been suggested to the writer, and many substances have been sent to the National Museum to be experimented with, but in view of the fact that most of the latter were substances of which the proposer would not reveal the identity, no attention was paid to such except in one instance, that of a "mad stone," or "snake stone," so-called, the composition of which is reported upon by Geo. P. Merrill, Curator of Lithology and Physical Geology, U. S. Nat. Museum. This was sent by Donald MacRae, from Wilmington, N. C., and is "an indurated and impure kaolin apparently. Its virtue as a mad stone doubtless is due wholly to its high absorptive power, which would cause it to adhere to the wound for a time or until saturated." This is presumably the substance which in the United States has so great a reputation among the common people when used in cases of snake bite or mad dog bite; but it is quite a different thing from what is known as the snake stone in India, which is generally found to be, on examination, nothing but a piece of calcined deer horn.

A very interesting account of it is given by Dr. Alfred Eteson, Surgeon-Major, Sappers and Miners, Roorkee, in the *Indian Medical Gazette*, Calcutta, 1876, X., 309. He speaks of having received such a stone from a Catholic priest in British Burmah, which was simply a flat piece of calcined horn, three-quarters of an inch square and one and a half lines thick, and resembled a flint, except that all the edges were square and it was very smooth, with an even grade of close cancellations clearly visible. This stone was one of a number made by another priest for the use of the mission fathers. Dr. Eteson had occasion to use this stone a short time after in a case of snake bite, and states as follows: "* * * I pressed down the stone over the punctures, it adhered at once, I removed my fingers, then sloped his hand and turned it round; lastly, I drew on the stone with moderate force until it lifted the skin, as a sucker would do. In about a quarter of an hour the patient himself first mentioned that the stone was loosed. I touched it with one finger and it became displaced." The man recovered.

Dr. Eteson states with regard to his case: "It is not worth much, for the identity of the snake and the precise conditions of the bite were not established, but at all events the stone did what it was professed it would do, and there was no suspicion of the man having been otherwise than genuinely bitten. When this particular stone was show to the Indian snake charmers they appeared greatly surprised at its form, their own being small, rounded and pebble-shaped, but they recognized it as genuine." Dr. Eteson being determined to investigate the matter still further, corresponded with the priest at Bassein who manufactured the snake stones and received the following directions for making them: "Cut or saw in the shape of a gun flint the hard part of a good deer's horn. Polish these pieces by rubbing them on a stone. Soak them for eight hours in good vinegar. Take a small earthen pot (chatty) and place the bits of horn in the center surrounded by rice hulls in such a way that the stones shall not touch each other. Fill the pot with rice hulls and seal its cover hermetically with earth. Put the pot in the center of a little fire made with rice hulls and let it remain for twelve hours. After the cooking, place the stones again in the vinegar for seven hours. Take out the stones and test them on the lips, if they stick like a cupping glass they are good. To preserve them they should be wrapped in cotton and kept from the air. After one has been used it should be soaked in milk, which will remove the venom." The priest stated that out of sixty stones thus prepared only six were found to be of service.

Sir Joseph Tennant, in his work on Ceylon, 5th ed., 1860, I., p. 197, speaks of the Pamboo Kaloo, a snake stone, which he saw applied by Indian snake charmers in two cases with apparent good effect. Those he saw were of the size of a small almond, intensely black and highly polished, though of an extremely light substance. Dr. Davy, on the authority of Sir Alexander Johnson, says the manufacture of these stones is a lucrative business, and is carried on by the monks of Manilla, who supply the Indian merchants with them, and his analysis confirms that of Mr. Faraday, who declared the stone to be calcined horn.

In Mexico a similar stone was used which was prepared as follows: Take a piece of hartshorn of any convenient size and shape; cover it well round with grass or hay and inclosing both in a thin piece of sheet copper well wrapped round them place the whole parcel in a charcoal fire till the bone is sufficiently charred. When cold remove the calcined horn from its envelope, when it will be ready for immediate use. In this state it will resemble a solid black fibrous substance of the same shape and size as before it was subjected to this treatment. 1. "Use—The wound being slightly punctured, apply the bone to the opening, to which it will adhere firmly, for the space of ten minutes, and when it falls it should be received into a basin of water. It should then be dried in a cloth and again applied to the wound. But it will not adhere longer than about one minute. In like manner it may be applied a third time, but it will fall almost immediately, and nothing will cause it to adhere any more." It will be noticed that the Mexican method of preparing the stones does not differ materially from the East Indian plan. A number of reliable observers have tested these stones and found them to be of no value, among them may be mentioned Fontana, Viand-Grand-Marais, Sir Joseph Fayrer, Vincent Richards and others; it has also been carefully tested by Dr. John Shortt of Madras, who states that he had some difficulty in getting the stone to adhere; dogs and chickens were bitten but all died. He sums up: "There is no truth in the virtues attributed to the snake stone, for it has neither the power to absorb or otherwise neutralize the snake poison from the wound." (*Lancet*, London, 1867, I., 5, 76.)

In view of these unfavorable reports the results of the

writer's experiments with the kaolin snake stone will probably be read with some interest, although they were so few in number as to prove little besides the fact that the stone actually did adhere and became charged with blood.

The first experiment was tried

Jan. 4, 1888—11:55 A. M.—Injected 10 minims of glycerine venom mixed with ten minims of water into right leg of chicken, a ligature having been previously applied above point of puncture. A number of superficial incisions were then made in the vicinity of the wound, and the so-called mad stone applied with firm pressure. It held on for a number of minutes and then fell off, and there was a copious flow of blood following its detachment. The stone appeared saturated with blood and was placed in water and cleansed. The ligature was removed from the limb and the fowl liberated.

Jan. 5—12 M.—The chicken is apparently very sick, with quickened respiration, is sluggish, crouches down and is averse to movement. In the vicinity of the injection there is much engorgement of the tissues. There is a copious flow of bloody serum from the wound. From this time up to Jan. 9 the chicken gradually improved, and at this date appears entirely well. It walks around, eats well, and the wound is cicatrized. It must be confessed that the result of this experiment was entirely unexpected, as it was supposed that the dose of venom given (10 minims) would produce death in about thirty minutes.

To verify the former test a second was tried.

Jan. 13—12:15 P. M.—Injected 10 minims of venom and 10 minims of water into left leg of chicken, no ligature being applied. Multiple superficial incisions were made in the vicinity of the puncture and a new piece of the stone was at once applied. It held on firmly for nearly fifteen minutes and absorbed considerable blood, falling off finally by its own weight. The chicken seemed to suffer little or no inconvenience from the operation, and walked about picking up corn.

Jan. 16.—Is still doing well and the wound healing rapidly.

Jan. 20.—Chicken in perfect health, wound cicatrized entirely.

It should be mentioned that both these experiments were tried upon the same fowl, and it may be that the former inoculation with venom protected it from the second. Another experiment tried upon a fowl failed, the bird dying in about four hours.

In this connection attention is invited to a very interesting paper by Prof. Henry Sewell, of the University of Michigan, published in the *Journal of Physiology*, Cambridge, 1887, VIII., 203, entitled "Experiments on the Preventive Inoculation of Rattlesnake Venom."

Prof. Sewell assumes in this article that an analogy exists between the venom of serpents and the ptomaines produced under the influence of bacterial organisms, he therefore thought that if "immunity from the fatal effects of snake bite could be secured in an animal by means of repeated inoculations with doses of the poison too small to produce ill effects, we may suspect that the same sort of resistance against germ disease might follow the inoculation of the appropriate ptomaines, provided that it is through the products of their metabolism that bacteria produce their fatal effects." To settle this point his experiments were tried with the following results: First, that rattlesnake venom, kept for some time in glycerine, underwent a gradual deterioration of power, this view being in opposition to the experience of other observers. Second, that "repeated inoculation of pigeons with sublethal doses of rattlesnake venom produces a continually increasing resistance toward the injurious effects of the poison without apparent influence on the general health of the animals." These results are abundantly proved by the tables which accompany the report.

It may be of interest at this point to give a brief account of the different remedies and plans of treatment that have been suggested from time to time for snake bite. Some years since the attention of scientific men was called to a reputed remedy known as Bibron's antidote, of which Dr. W. A. Hammond, U. S. A., in the *Am. Jour. Med. Sci.*, Philadelphia, 1858, n. s., XXXV., 94, 82, states that according to Prince Paul of Würtemberg, Prof. Bibron allowed a rattlesnake to bite him on the lips, cheeks, etc., and by taking the antidote suffered no inconvenience whatever. Dr. Hammond reports one case in which a man was bitten by large rattler, four minutes after the bite was given a dose of the Bibron antidote and unpleasant symptoms disappeared but returned; in forty minutes another dose was given. In five minutes all pain had vanished and he recovered perfectly. He had animals bitten, a wolf three months old, thirty minutes after the bite when symptoms had become marked, six drops of antidote were given, wolf became well almost immediately and ate a piece of meat. Same wolf bitten next day in three places, but there was some delay in giving the antidote, wolf died comatose in twenty-seven minutes. Snake made to bite a dog, which died because antidote could not be given. Forty-five minutes after, same snake was made to bite another dog, in three minutes after the injury the antidote was given before symptoms developed, in fifteen minutes another dose, and in two hours he appeared perfectly well. Dr. Coolidge in same paper reported case of girl fifteen years old bitten at Fort Riley; ten minutes after, the doctor placed a ligature above the bite, made free incision and gave the antidote, repeated twenty minutes after, injecting into the finger Brainard's preparation of iodine. Girl got well with extensive suppuration of back of hand.

The formulæ for the preparation of this antidote is as follows:

BIBRON'S ANTIDOTE.

℞ Potass. iod.....gr. iv.
Hydrarg. chl. corros.....gr. ii.
Bromine.....f. dr. v.

M. Sig. Ten drops in tablespoonful of vine or brandy, to be repeated if necessary. Put in glass-stoppered bottle.

After Dr. Hammond's experiments so much faith was placed in this preparation that it was furnished to all the military posts in the West and South, and the writer remembers to have seen a bottle of it occupying a prominent position in the serpent room of the Academy of Natural Sciences, Philadelphia, then in charge of Prof. E. D. Cope.

Mr. Xantus de Vesey performed a number of experiments with the Bibron antidote, and states that none of his animals perished of snake bite when the remedy was used. Dr. S. Weir Mitchell experimented upon sixteen dogs, with that singular care for which he is noted, with the following results, which are simply negative. Of eight dogs bitten and treated with the antidote two died, while of eight bitten and not so treated three died. It is intended to try the effect of the Bibron antidote again if a sufficient supply of venom can be obtained.

In 1853 Dr. David Brainerd, of Chicago, in conjunction with Dr. Green, proposed a plan of treatment for snake bite, known popularly as the iodine treatment, which attracted some attention at the time, the process being as follows: "10grs. iodine and 30grs. iodide of potassium are dissolved in 1oz. of water. The bitten part is cupped or a ligature is placed on the limb until the tissues are so swollen with serum as to allow of the injection passing readily through the distended areolar space. A small trocar and canula is then pushed laterally into the bitten part, so as to reach the site of the wound, and the injection effected by screwing to the trocar a small syringe charged with iodine, and so filling the part by pressing down the piston of the syringe, while the cupping glass remains over the wound and exhaustion is kept up with its aid."

Dr. Mitchell, commenting upon the procedure, very justly says: "Apart from the antidotal value of this ingenious means, it is clear that the necessary apparatus is rarely at hand, and that cups of various curves to fit the equally various surfaces of the body as advised by Dr. Brainerd, are not likely to come into general use in localities where the rattlesnake is found." In Brainerd's experiments one-half of the pigeons treated by Green and himself died, and in Mitchell's experiments out of seven pigeons six died, so that he states that he was unable to confirm Brainerd's conclusions, although he admits that the preparation has a retarding action upon the venom. In cases in which the venom and iodine was mixed together before being thrown under the skin all the pigeons died. It is a fact, however, that iodine does prevent the usual local manifestations to a certain degree. Tannic acid was found to act similarly, and Dr. M. thinks it is due to the action of these agents upon the tissues and not upon the venom.

Different preparations of arsenic have been recommended from time to time by various authors, the famous Tanjore pill having attained quite a celebrity in the East Indies. It is composed of arsenious acid, three East India roots, of which two are purgative, and one an active acro-narcotic, mixed with pepper and the juice of the wild cotton plant. In each pill is three-quarters of a grain of arsenic, and two of the pills are given at a dose, a single one an hour after. We might suppose from the large dose of the mineral that in some cases if the venom did not kill the pill certainly would. This preparation has been experimented upon by several persons, who report against its use. Per contra. Dr. J. P. Ireland in *Med. Chir. Tr.*, Lond., 1817, II., 396, treated soldiers bitten at Santa Lucia by the *fer de lance* with arsenic in large doses, as follows:

℞ Liq. potass. arsenat.....f. dr. ii.
Tinct. opii.....gtt. x.
Aquæ menth. pip.....oz. iss.

to which was added half an ounce of lime juice; this was repeated every half hour for four successive hours—this would be 1gr. of arsenic to each dose. In addition a carthartic clyster was given, and the scarified parts rubbed with a liniment containing oil terebinthina, liquor ammonia and oil olivæ. He reports four cases cured, and one at Martinique.

Another modification of the arsenic treatment is recommended by Dr. L. Lanszweert in the *Pacif. M. & S. J.*, San Fran. 1871-2, V., 108. Arseniate of strychnia, 30grs. of pure strychnia in 4oz. of distilled water containing 75grs. of arsenic acid, and evaporating until crystallization takes place, drying the crystals and reserving the liquid, with the addition of 8oz. of alcohol, for external application. For internal use, 1gr. of this arseniate of strychnia is mixed with 10grs. of sugar and 25grs. of turmeric and divided into twelve powders. One powder to be given at the time of the bite and every 15 or 20 minutes after until better. Upon recurrence of symptoms give every hour. Reports cure but no details of cases.

Alcohol in various forms is probably to-day the agent in which the great portion of the people of the world have the utmost confidence as an antidote, a faith unfortunately not well founded if we may believe the many experiments which have been tried. According to Mitchell it is merely a counter-active agent, a stimulus simply, which may buoy the patient over the prostration produced by the venom, but as a direct antidote it fails, and this is proved by the fact that a mixture of alcohol and venom is no less deadly than the venom itself. It has been claimed that persons in an intoxicated condition or those habitually indulging in alcoholic liquor cannot be poisoned by venomous snakes, but abundant proof to the contrary exists, notably in the case of Adam Lake reported by Dr. Horner in the *North Amer. Med. & Surg. Jour.* 1831, XI., 227. This man had been in the habit of taking from half a pint to a pint of alcoholic liquor daily, and was intoxicated when bitten by a rattlesnake. Notwithstanding the services of excellent physicians, a number of reputed antidotes being used, he died in less than twenty-four hours. The proper use of alcohol in snake bite and conditions under which it should be employed will be considered under the treatment of snake bite further on.

Dr. R. Harlan, in Tr. Am. Phil. Soc., Philadelphia, 1828, n. s., III., 300, gives an interesting account of various antidotes used in rattlesnake bites. The *Prenanthis serpentaria* of Pursh, called lion's foot, is said to have cured moccasin bites seen by Pursh himself; but these may have been harmless water moccasins. The Assembly of South Carolina purchased from a negro a secret remedy, the man allowing himself to be bitten by a number of snakes, jumping naked into a tub of snakes. He cured himself by swallowing tablespoonful doses of the *Alisma plantago* expressed juice, repeating it until the effects of the poison were counteracted. A number of experiments were tried with a decoction of *Hieracium venosum*, a secret remedy purchased from itinerant showmen, one of whom allowed snakes to bite him several times. He swallowed a few ounces of a decoction of the root and held the raw neck of the snake over the bite, the head having been cut off. The *Hieracium venosum* is vulgarly known as hawk's weed, adder's tongue, poor robin's plantain, rattlesnake weed, etc. Man entirely recovered, but venom from same snake killed a pup. Local symptoms existed in man's case. He winds up by stating: "Had I occasion to treat a wound inflicted by a poisonous reptile my faith in the *Hieracium venosum* as a cure is not such as to induce me to resort to its employment to the exclusion of the less equivocal means of suction, pressure or ligature." He supposed the animals had been so long in captivity as not to have much venom.

With regard to the *Alisma plantago*, it was used in Dr. Horner's case and failed to have the slightest antidotal effect.

In 1873 appeared a curious little book by S. B. Higgins, S. A., honorary member of the Homeopathic Institute of the United States of Colombia, entitled "Ophidians; zöological arrangement of the different genera, including varieties known in North and South America, the East Indies, South Africa and Australia. Their poisons and all that is known of their nature. Their galls as antidotes to the snake venom. Pathological, toxicological and microscopical facts, together with much interesting matter hitherto not published." The entire *raison d'être* for the work seems to be a desire to prove the correctness of the following corollary of the author: "Every animal poison has its perfect and specific antidote in the gall of the animal or reptile in which that poison is secreted." After mentioning a number of different methods of cure in vogue in South America, he states the following, which may be taken as evidence of the charlatanry of the so-called curers: "For the bite of the sierpe (python) [a harmless snake] open a hen alive and put half of it upon the wounded part, binding it fast with a bandage. Diet—the first day of the cure give the patient fowl; when better beef and salt fish may be permitted. Absolutely prohibited—fish, eggs, bananas, aquacates (alligator pear), cheese, anything acid or flatulent. Great care must be taken not to go barefooted, and on no account to step in fowls' excrement (this is mortal), total abstinence from any carnal act; and he must not allow any woman, pregnant or menstruating, to come nea him while being cured."

Of his own method of cure he states as follows: "It must always be borne in mind that the gall of a snake has its virtues most fully developed shortly after the skin has been cast and when its poison is most venomous, provided, however, that the reptile has not eaten any food in the meantime, in which case the gall-bladder will be found nearly or quite empty. Many experiments with this substance combined with alcohol in widely different proportions of each ingredient have led me to adopt the following as the method of preparation which has proven itself most efficacious in a great number of cases. Proportion, one drop of pure gall to ten drops of as pure alcohol, or high wines, or spirits of wine, as can be procured. The mixture must be thoroughly shaken and allowed to stand for a couple of days, when a lead-colored sediment will have deposited itself, the supernatant liquid can be poured off carefully into a perfectly clean new vial, using a bit of sponge in the neck of a small funnel to filter it, when it is ready for use. Never mix galls of different species."

Method of Administration.—"For all ordinary cases of bite, 5 or 10 drops of prepared gall (selecting if possible that of the kind causing the bite) in half a tumbler of water well mixed, to administer a tablespoonful of the mixture every five, ten, fifteen or twenty minutes, according to the nature of the symptoms, and varying the dose from three to ten drops of gall, according to the age, sex, condition and susceptibility of the patient, will afford entire relief. In fifty cases treated, I have given ten-drop doses of gall in four ounces of water in two cases only, all the others have been cured by five-drop doses, continuing the remedy at more prolonged intervals, as the symptoms of the action of the poison disappear, and in the ten cases cited, where a five-drop dose was given in tablespoonfuls every five minutes without producing relief, the dose was immediately repeated and entire relief ultimately ensued.

"I invariably make a deep cruciform incision in the wound with a lancet and bathe the limb in water as hot as can be borne, into which I pour a few drops of prepared gall. When the blood flows a bright red (and not before) a small pellet of cotton or sponge, saturated with the gall (prepared) applied to the wound and secured with a bandage will stop the flow of blood, unless a large vein or artery is punctured by the fang; in this case cauterization is necessary."

As a comment upon the method of cure proposed by Higgins the reader is referred to Rep. No. 27 in Rep. Sanit. Meas. in India, fol., London, 1875, VII., 274, entitled, "Experiments at St. Bartholomew's Hospital to test the effect of Mr. Higgins's antidote to snake poison." Present, Dr. Forbes Watson, Dr. Fayrer, Dr. Brunton and Mr. S. B. Higgins. Several experiments were tried, the antidote being administered by Mr. Higgins himself, but in each case it failed to have any antidotal effect. The committee state that the cobra poison used in these experiments was supplied by Dr. Fayrer and that the antidote was prepared by Mr. Higgins himself from the gall of the *Lomo di machete* snake, ten drops of gall being diluted with 100 drops of alcohol of 95 per cent., and ten drops of this solution being diluted with four fluid ounces of water.

It is intended to conduct a series of experiments with snake gall to verify or disprove those of the persons named.

A few years since, in some parts of the South, great reliance was placed in a certain weed or plant called Jestis weed or Justise weed, so named from a person celebrated as a curer of snake bites. This person, called Isham Justise, resided in 1800 in Sumter District, South Carolina, and was so convinced himself of the efficacy of his remedy that he frequently made the offer to allow snakes to bite him for the sum of one dollar. The plant he used is known to botanists as *Eupatorium linearifolium* of Linnæus and Elliott, although the *Eupatorium hyssopifolium* is also known as Justise's weed and possesses similar medical properties. The common name of the plant is boneset or wild hoarhound. Upon what was considered undoubted evidence from respectable citizens, Justise was granted a sum of money by the State Legislature upon his making known the secret of his remedy. A number of cases are reported of the cure of snake bite, using this plant as an antidote, and Mr. Haynesworth in the *Phila. Med. and Phys. Journ.*, 1808, III., pt. I., 57, gives a detailed account of nine cases of recovery from rattlesnake bite, in which the weed was employed. It is prepared by boiling a handful of the plant in a quart of new milk down to a pint, and of this a tablespoonful is given every few minutes until the dangerous symptoms

are over. It should be mentioned that the South American plants *Aya-pana* and *Vejuco du Guaco*, reputed as antidotal to snake venom, also belong to the genus *Eupatoria*. Some little attention has been given to this reputed antidote, as the writer believes that if it really is of benefit in snake poison, it must be so owing to the analogy of its therapeutic effect with that of jaborandi, both being tonic, diaphoretic, diuretic and laxative.

In 1873 Drs. Fayrer, Brunton and Richards instituted a series of experiments with a view to determining whether continued artificial respiration in cases of snake bite would prolong life, and thereby give the system a chance to eliminate the poison. They were successful in prolonging life, but eventually all the animals died from the venom. It may be worth while to further mention a few popular remedies that have been recommended and used from time to time.

Cazentre, in *Journ. des Conn. Med. Chir.*, Par., 1850, 182, recommends cedron, the seeds, if in powder, three or four grains bruised and put in a teaspoonful of brandy or alcohol and swallowed, powder put on wound also. Natives chew it up and swallow. Viand-Grand-Marais in the *Rev. Med. Franç. et Etrang.* Par., 1874, I., 362, recommends the same substance, giving statements of cases cured. He also strongly commends the guaco.

The liquor potassa cure has met with some degree of favor, but the evidence is conflicting, as the following notes will show:

Dr. J. Shortt, in *Med. Times and Gaz.*, London, 1873, II., 215, reports a case in which he gave to a man bitten by a venomous snake, *Bungarus arcuatus*, in the first forty-eight hours 72oz. of brandy and 4½oz. of liquor potassa by the mouth; 14oz. of brandy, 3½oz. of liquor potassa by enemata, 4oz. in a bath. Gave 20 minims in 1oz. of brandy every twenty minutes, wound scarified and alkaline bath given. Bitten May 16, got well May 27. Dr. Shortt claims that this is the third case of snake bite saved by the potash treatment. H. Esmond White reports a case, p. 413 same journal, in which potassa treatment with brandy failed, death occurring in one hour and twenty-five minutes.

Dr. E. B. Shapleigh reports a case in the *Am. Jour. Med. Sci.*, Philadelphia, April, 1869, n. s., 392, in which incisions were made in vicinity of injury. Brandy was administered freely and caustic potassa applied locally, but the patient died in forty minutes.

A host of other substances have been recommended, such as carbolic acid, olive oil, viper's fat, to say nothing of scores of plants and roots, but space will not admit of a discussion of these at this time.

EXPERIMENTS WITH EXTRACTINE PANCREATINE.

De Lacerda announced his opinion that the injection of pancreatine into the tissues would produce the same effect as venom, and the experiments of others seeming to confirm this theory, notably those of Béchamp and Baltus in *Compt. Rend. Acad. Sci.*, Par., February and March, 1880, which were as follows: "Injected into femoral of dog 3 grams of pancreatine at 9 A. M., died at 5 P. M. Another case: Bloody fæces, vomiting, emission of urine; lived ten days. Some got well." The conclusions of Béchamp and Baltus are that the intra-vascular injection of pure pancreatine produces functional symptoms of great gravity, and produces death if the injected material is about 0.gr., 15 par kilogrammes of the weight of the animal. Digestion seems to diminish the toxic effects of the pancreatine. Injected pancreatine is only partly eliminated by the kidneys, and when found is unaltered in character.

In view of these facts it was determined to try the effect of pancreatine on fowls. Through the courtesy of Messrs. Fairchild Bros. and Foster, of New York city, the writer was furnished with a remarkably pure sample of the *Extractum pancreatis*. This was used in solution with distilled water in the following proportion: One half dram of *Extractum pancreatis* to one-half fluid ounce of distilled water.

Nov. 4, 1887—12:40 P. M.—Injected black pigeon with 25 minims of pancreatis solution in right thigh. Bird commenced to droop at once, feathers ruffled, whether from fright or injury by hypodermic needle uncertain.

2:30 P. M.—Bird seems better.

Nov. 5.—Pigeon in normal condition, eating heartily.

Nov. 6 and 7.—Bird entirely well.

12:29 P. M.—Injected hen No. 2 with 75 minims of solution of extract pancreatis (½ dram to 1oz. of water) in right thigh.

12:35 P. M.—Respiration much quickened, mouth gaping.

1:30 P. M.—Fowl eating corn, but seemed inclined to lie down. Respiration still rather fast and mouth gaping, though not as much as at first.

3 P. M.—Fowl in about the same condition as at 1:30.

Nov. 9.—Hen seems to be as healthy as ever, and has a good appetite.

The next experiment, as will be seen from the notes, was really a very severe test and would seem to indicate that pancreatine, if poisonous, must be very much feebler in action than snake venom.

Nov. 10—1 P. M.—Injected in both legs and breast of fowl 25 minims of sol. ext. pancreatis (½ dram to ½oz. distilled water) in each part.

1:05 P. M.—Fowl uneasy, and breathing labored, inclined to lie down.

2:30 P. M.—Fowl seems to have lost use of legs; breathing fast with mouth open.

Nov. 11—11 A. M.—Fowl not able to stand, but sits down with wings outstretched. Respiration labored. Defecates freely.

2:30 P. M.—Fowl in about the same condition as this morning. Has eaten a small quantity of corn.

Nov. 12—11 A. M.—Fowl unable to stand; eats lying down; defecates freely.

2:30 P. M.—Fowl in same condition.

Nov. 13—Fowl in same condition. Paralysis of hindpart of body, unable to stand without leaning against something. Loss of power in muscles of the rectum.

Nov. 14—Same condition.

Nov. 15—Same condition.

Nov. 16—Fowl a little stronger in her legs. Was taken from the cage and tied with a cord so as to allow of more liberty.

Nov. 17—Fowl a good deal stronger than yesterday.

Nov. 18—Chicken can stand on her legs, but puts one before the other to keep from losing its balance while eating.

Nov. 21—Chicken very nearly recovered, can use its legs almost normally. Eats well.

Nov. 25—Entirely well.

Several other experiments were tried with *Extractum pancreatis*, but without definite result.

Those who have read de Lacerda's work on serpent venom will notice the similarity of symptoms in his cases treated with pancreatine and our own, except that in no case did we lose a single subject, while several of his perished.

EXPERIMENTS WITH CROTALUS VENOM IN SNAKES AND LIZARDS.

Fontana, in his celebrated work on poisons, states as a law that the venom of a serpent is not a poison for itself or for other species, whether harmless or otherwise, and a few interesting experiments have been tried with a view to determine the question, particularly as a mass of conflicting evidence exists. Weir Mitchell in his early work was convinced that the poison of *Crotalus*, when injected hypodermically into the same species, could kill, but in his last volume he states this is not the case. Fayrer does not believe that the poison of cobra is poisonous to itself, while Vincent Richards holds an opposite view. Dr. J. Dormet publishes in *Nature*, London, 1883-4, XXIX., p. 504, an account of a black snake of Australia, which, being held forcibly and provoked, turned and bit itself just behind the head, death taking place in one minute. Our experiments show that *Crotalus* venom is not poisonous to rattlesnakes, eutænias (garter snakes) or lizards. The first experiment was upon *Eutœnia sirtalis*, the common garter snake.

Oct. 28—12:15 P. M.—Injected 2 drops of glycerine venom and 3 drops of water into muscular tissue of belly of *Eutœnia*.

3 P. M.—Snake in as good condition as before injection.

Oct. 29—Snake all right.

12:20 P. M.—Injected 3 drops of glycerine venom and 3 drops of water into muscular tissue of belly of *Crotalus*.

3 P. M.—Snake as lively as ever, and shows no effect whatever of the venom.

Oct. 30—Snake all right.

12:30 P. M.—Injected 5 minims of venom solution and 5 minims of water into same *Eutœnia* used before. No result. Injected 10 minims into small *Crotalus*, no result having been obtained by 5 minims.

Oct. 31—No result.

Allowed large vigorous *Crotalus* to strike *Eutœnia* (the same one used before) twice in muscles of the back.

Nov. 1—No result.

Nov. 4—No result.

Nov. 8—12 M.—The *Eutœnia* which had been struck before was again struck by an active rattler, who held on well.

1:30 P. M.—No result.

3 P. M.—No result.

Nov. 9—No result.

Dec. 12—12:05 P.M.—Injected 5 minims of rattlesnake venom solution in 10 drops of water, into muscular tissue of back of *Heloderma* (Gila monster), which had been in confinement for some time, and was not very strong.

Dec. 15—All right. Injected 10 drops more of venom into the right side of the belly of the same *Heloderma*.

Dec. 17—No result. Injected 15 drops more of venom into muscles of belly of same *Heloderma*.

Dec. 20—All right.

Dec. 22—Injected 25 drops of *Crotalus* venom solution into back of another *Heloderma*, followed by 25 drops more into flesh of belly. Absolutely no result.

Dec. 23—Injected 25 drops of *Crotalus* venom solution into the back of a small hog nose snake (*Heterodon platyrhinos*) with no result, notwithstanding the reptile was weak and sickly and had been in confinement without food for over four months.

These experiments, so far as they have gone, seem to prove conclusively that Fontana's statement made as early as 1776 is correct.

THE UTILITY OF HAWKS.

Editor Forest and Stream:

As Dr. Ellzey considers the advice I strove to impart to him as beneath rather than above criticism, he does me particular honor in wasting on my account a whole column of your valuable space. If you will extend to me the courtesy of your columns, I should like to call some further attention to a few salient points in his last communication.

We are asked how the slate-colored hawk does exist if not as a species. I repeat, that as a nominal species the slate-colored hawk does not exist; though with his supreme contempt for "the school jargon of technical descriptions and names" Dr. Ellzey may be content to drag out from its shroud of antiquity this ambiguous vernacular designation, which has no specific meaning to the ornithologist, who likes to give to his science the dignified feature of an exact and systematic nomenclature which shall prevent the possibility of misconstruction by sensible people.

Dr. Ellzey informs us that he "takes issue with all who defend the roughleg hawk." Is he aware that he herein takes issue with some of our most eminent ornithologists, men whose experiences and investigations are far more comprehensive and valuable than those of any one "sportsman and practical shooter"? From a series of letters relating to this question, which were written by prominent ornithologists and were published in the FOREST AND STREAM some time ago, the following extracts may serve to show in what estimation most of our Raptores, and especially the rough-legged hawks, are held by men who are fully competent to instruct the general public on this point. Dr. C. Hart Merriam, Ornithologist of the U. S. Department of Agriculture, says: "Strange as it may appear to the average farmer [Dr. Merriam might have added, to the average 'sportsman and practical shooter' also], the largest hawks are the ones that do the most good. Foremost among these are the rough-legged and marsh hawks, which do not meddle with poultry, and rarely prey upon wild birds." Mr. Robert Ridgway writes as follows: "Of all the species which you name, there are only two which, according to my best judgment, are at all destructive to game or poultry; these being Cooper's hawk and the great horned owl. The rest, with the possible exception of the sharp-shinned hawk, my experience leads me to regard as decidedly beneficial to man, their food consisting very largely, if not chiefly, of the smaller rodents, field mice especially." The following is quoted from Mr. Lucien M. Turner: "Two or three species of hawks (those belonging to the genus *Archibuteo*) are diurnal mouse-catchers of all birds."

Now, if Dr. Ellzey will for a moment lay aside his antipathy to the "jargon of technical descriptions," and consult some authentic "convenient term book," he will find that the rough-legged hawk is the most widely distributed American member of the genus *Archibuteo*, and thus the good words which Mr. Turner speaks on behalf of this genus fall most largely to the share of the roughleg.

Dr. Ellzey alludes to the opinions I may have formed regarding himself, etc. Of his personal, moral or mental attributes I have formed absolutely no conception, for they in no wise pertain to the point at issue. His opinions and prejudices alone I question, and in justice to the hawks, I criticise them openly; but to convince the average "sportsman and practical shooter" that his knowledge on such a point is not profoundly more vast than that of our best "trained scientists," is, I fear, a hopeless task.

EVAN M. EVANS.

ENGLEWOOD, N. J.

BIRDS OF THE FARALLON ISLANDS.—The Farallon Islands are a group of rocks in the Pacific Ocean lying about thirty-five miles west of San Francisco, California. Their bird fauna was hastily investigated in the summer of 1885 and spring of 1887 by Mr. W. Otto Emerson and the results of his observations embodied in a paper by Mr. Walter E. Bryant entitled "Birds and Eggs from the Farallon Islands." This paper was read before the California Academy of Sciences in December last, and has just been published. These desolate islands are favorite breeding grounds for various species of water birds, some of which occur there in such numbers as to fairly cover the rocks. The land birds found are for the most part stragglers carried theere by storms, or lost in the fog. The breeding water birds are abundant in the following order: 1, murre; 2, western gull; 3, cormorants (three species); 4, pigeon guillemot; 5, tufted puffin; 6, Cassin's auklet; 7, ashy petrel. Eighty-one species of birds are recorded, of which over one-half are land birds, and interesting notes on the various birds accompany the names. The Farallons are a great resort of Greek and Italian eggers from San Francisco, who illegally destroy vast numbers of eggs each season.

Camp-Fire Flickerings.

"That reminds me."

233.

JIM REED is one of those luckless and brainless wights who would willingly go supperless to bed if he could play a practical joke on somebody or get a chance to ridicule them because of some mishap, and as a consequence everybody in camp was on the qui vive to get a joke on Jim, which resulted in his being the butt of all.

He got a laugh at me that he enjoyed and improved to the utmost, and it came about in this way. One day I picked up my shotgun, which I had kept loaded for chicken hawks, and while yet in my house I cocked it in haste, holding the muzzle elevated, but as luck, or carelessness, would have it, my thumb slipped off the hammer and the gun was discharged, the charge of shot passing through the canvas ceiling of the room and out through the roof near the eaves of the house. Jim happened to be near, heard the report of the gun, saw the shingles fly, and he came running in to learn the cause of the misadventure. When he found there was no harm done beyond a hole in the ceiling and roof that could easily be repaired, he was immensely pleased to find that he had a good joke on the writer, and for some little time thereafter when he would see me coming he would gather a crowd of men and discourse upon my being a "crack shot," how, in order to hit a house, it was necessary for me to get inside, close the doors and then shoot. How he wore the joke threadbare I need not relate, but I suffered in apparent good humor, and was content to bide my time, hoping to be able to return the compliment, and the opportunity came much sooner than I had hoped for or expected.

Late one night some drunken fellows went to a boarding house kept by Jim's father-in-law and demanded supper, which, because of the hour and their condition, was refused them; they were disposed to cause a disturbance, however, and Jim, hearing the rumpus, rushed down to the house to "take a hand and quell the riot." Jim's presence did not have the quieting effect he had anticipated. He then urged that the presence of ladies should temper their exuberance, but without avail, and he then bethought him to make a show of what would look like business by drawing his revolver. In pulling it from his hip pocket it was discharged, and Jim was "creased." The hurt was not a grievous one, as it merely cut the skin for about two inches in length; but Jim was fearful that it might become generally known, and he begged those present to say nothing about the matter. He gave the boys sundry inducements to win their silence, and hoped he had heard the last of it; but "murder will out," and a friend "gave the joke away" to me. This was just what I wanted, and for days I courted Jim's society, but he was quite shy of me, and very mum in regard to my shooting scrape. I knew that his desire to air a joke at somebody else's expense would soon get the better of his discretion, and so I waited patiently, getting him in good humor and allaying his suspicions by laughing "with counterfeited glee at all his jokes, for many a joke had he."

The time came for Jim's undoing, and yet he heeded it not, he was as full of fun that day as a young colt, and entirely off his guard. A party of gentlemen had come into town from Eureka, a neighboring mining camp. I sauntered down town with the feeling that the chance would occur for Jim to relate his little story, and then I would pay him back with liberal interest. The moment he set eyes upon me he gathered the party, and calling me to them, related the circumstances and manner of my "hitting my own house." When he had concluded there was a hearty laugh, to be sure, and then I asked the attention of the gentlemen present. I said that "Jim, who was disposed to laugh at my shooting, would bear

testimony that I had never boasted of my marksmanship and that I never had and did not now claim to be as good a shot as he, and that when he 'pulled his gun' he hit his man every time, but I thought the gentlemen would agree with me that it was not the height of chivalry to shoot a man in the rear." Jim's hand involuntarily went to the sore spot at the hip pocket, and from that day to this he has never spoken regarding my shooting at my house, or of my marksmanship in any manner whatever.

BARCHLAND.

SILVER CITY, Utah.

234.

A party of gentlemen were fishing on Hoar's Creek, in Albemarle Co., Virginia. "The fishing was good," said Mr. F. M. Paoli, one of the party, "and the fish were excellent, and greatly enjoyed at our noonday repast, as was also the claret, of which a goodly supply had been provided." Mr. T. L. Farish, an industrious fisherman, as well as a good trencherman, had done fair justice to the eating and drinking after the morning's work.

When dinner was over, and after cigars had been lazily enjoyed, my father and I picked up our rods and repaired to the creek for an afternoon's sport. Mr. Farish followed suit, taking up his position on a large log which extended over the water, some hundred yards above us on the stream. The air was soft and balmy, and Mr. F. soon showed signs of drowsiness. My father called my attention to his somnolent gesticulations, with the quiet remark, "He'll fall off the log presently." Mr. F. was extended on the log, his back resting against a limb, and the butt of his rod supported between his knees. His nodding became more and more pronounced until he completely lost his balance, and off he went with a great splash, into the creek. There was of course a lively demonstration in the water, and pretty soon the astonished angler pulled himself up the bank, but did not for a moment lose his presence of mind, for rushing down to us he exclaimed in great excitement, "Did you see that? Did you see that fish pull me off the log? By Jupiter, he weighed ten pounds if he weighed an ounce! The biggest fish I ever hooked, and then to get away! If I ever fish on a log again I'll be hanged!" 'More likely drowned," said my father, "if you don't keep awake."

COAHOMA.

Game Bag and Gun.

A CRUISE FOR WILDFOWL.

GAME being somewhat scarce in our locality last fall, we concluded to go abroad and look for it. Plans were laid to go down the Chesapeake and explore some of the big western shore rivers.

We persistently interviewed the captains of the Bay craft as to whether they had seen much game up any of the lower rivers, and from what we heard concluded to go first to the Rappahannock and from there—well, the rest of the trip was shrouded in uncertainty.

We fixed on an early day in November, and set about our preparations. A short description of our ship may not be out of place here, as she is an old and tried friend. She is (or rather was, for she has been rebuilt since) 32ft. long, 12ft. beam, and drew 3ft. water, yawl rigged, double headrig, and in winter carried a sharp-headed mizzen; and for all round work the yawl is "the cheese." Perhaps your sloops can point up a fraction higher, but for hard thumps, ease in handling, and always having some sail to go under, give me the former rig every time.

The Cora was stowed with a good allowance of tinned goods, not forgetting a plenty of Boston baked beans and condensed milk. Having heard that the ducks lived down there in swarms, we bought our ammunition on a corresponding scale. Everything being ready Nov. 8, we cast off from our mooring at 3:45 P. M. The party consisted of the Captain, the Major, W. and the writer, who generally ships as cook. Last, but by no means least in importance, were Smoke, Flora and Don; the two former setters and the last a Chesapeake Bay water dog.

It was almost calm when we started, but the weather looked very scaly to say the least. It began to rain hard, and right in the midst of it Johnny Nor'wester broke out. Took in mainsail and worked her along under mizzen and staysail till dark, when we anchored under the lee of a thick pine woods, where we spent the night comfortably enough.

Next morning was clear, but blowing hard; we housed topmast as a preliminary, and at 9 o'clock got under way with double reefed mainsail and spitfire set; we had to face the wind and sea for two hours and a half, then turned Tilghman's Point, and went on our way with start sheet. When we got fairly outside we found the bay was pretty rough, and it took two men to steer. Though we had a free wind we concluded not to run for the Patuxtent, as the Captain had not fully recovered from an attack of gout, or rheumatism, or some unholy combination, and we were afraid too much exertion might start him off again. So we held her for Hill's Point and rounded the bar, on which a tremendous sea was breaking, at 3 o'clock. We saw a good many geese sitting in the smooth water to leeward of the bar, and further inshore a bunch of black ducks. Took the dogs ashore for a run, but it was pretty cold, and we were glad to get back around the comfortable cabin stove and discuss our progress fo far.

It was still piping hard from N.W. next morning, but the geese were showing on the bar, so W. and the Doctor got out the goose decoys, and taking the little sneak boat out when they seemed to be using, covered her with "sea ores," and putting out the stools the Doctor got in while W. took the other boat off to a respectful distance. The geese had, of course, promptly cleared out when we advanced on them, but we hoped they would return in the course of the day. So we two lay out there the whole blessed day, and except that we each killed a black duck, never had a shot all day. Cold and hungry, just before sundown we took up and pulled back to the yacht, and just after we got on board all the geese came honking back and settled just where we had been all day. However, we ate our supper of beefsteak and fried potatoes with a good enough appetite, because we knew there were lots more where we were going, and a few more or less at the start made little difference.

Wednesday morning the wind was pretty much all gone, and, in fact, died out entirely after we started. We sent up our topmast and set gaff and jibtopsails in order to take advantage of any wind aloft. A light air finally came out S.W., and just before sundown anchored in the Patuxtent, took the dogs ashore and tried to find a covey of birds, as the beefsteak was running low and the Doctor was beginning to hint at a lack of feathers in the rigging, but no game was found.

The following day was an all sorts of a day, and we had a continuous sail drill, carrying everything sometimes, and at others stripped to close reefed mainsail and spitfire. Passed a bunch of swan to-day, the first we had seen; as they were bound south we hoped to see them under more favorable circumstances. The Doctor saluted them with his Winchester as a mark of respect, but they neglected to respond in any way. We found a nice little harbor about dark called Ball's Creek, and towed into it, having first explored with the bateaux and found 7ft. of water. We were a tired lot and did not stop to cook a very elaborate supper, but turned in after a short smoke.

Friday morning bright and early saw us under way, wind W.S.W., giving us a beat down. We passed Rappahannock Spit at half past ten, crossing in 6ft. of water. We started sheet a little to run up the Rappahannock, and in shaking out a reef one of the nettles jammed and tore the mainsail; vigorous remarks from the Captain, while the Major procured needles, palm, etc., and had damages soon repaired. We went flying up the river, attracting lots of attention, the natives probably never having seen a yawl-rigged craft before and the "little mast astern" seemed to trouble them mightily. The greatest sights in the Rappahannock are the immense fleets of oystermen, and as far as we could see they were, with a single exception, composed of negroes. I refer to the tongmen, and to see and hear them at work is worth going a good way. We saw some magnificent vessels, both schooners and big double head rigged sloops, trading out of the river, carrying oysters to Norfolk, or in some cases directly to New York. They are kept in first rate order, and at a short distance might readily be mistaken for yachts, save for the absence of boats. Some of the schooners carry foretopmasts, and with clipper bow and overhanging stern, present a delightful picture to the eye of a waterman.

We met a squall of wind and rain on our way up, so ran under a point toward a little creek, into which we saw a good many canoes going. A darky in a canoe began to bawl something to us, but it was blowing too hard to understand him. However, we soon found out, for we ran on a mud flat, having not much over two feet of water; fortunately we got her head swung off, and the mud was soft, so she slowly plowed through. The next time our friend yelled we anchored. Got under way again in an hour, as we did not like our berth, we having evidently gotten into a regular settlement of negro tongmen, and the row they were making was something we wanted to get out of. So, seeing a nice-looking creek a few miles above—on the chart—we made for it, hoping to get in before dark. In this we succeeded, and a very nasty night soon shut in, making us thank our stars we had such a nice harbor.

Saturday was a lovely day, only the wind, what there was of it, was dead ahead. The Major, who has a passion for bunting, concluded we ought to have a whip at the topmast head. The rest of us said nothing, knowing from experience what would follow in the light and baffling air. Soon we had to anchor, as the tide began to ebb; so W. and I pulled ashore to post letters, and as we stepped on the wharf we saw in the dim distance the figure of the Major, painfully climbing the rigging, the pennant having wrapped itself around the masthead. We brought back some fresh eggs, a New York *Herald*, and the information that we were in Essex county.

Up to this time we had seen no ducks, no indication of marshes, but a breeze springing up from south with the flood, we ran some fifteen miles further, and began to see some quite extensive marshes as well as a number of geese and ducks. We sailed right up on a bunch of crowbills and the Major, who was armed with a single-barreled semi-hammerless, proposed to pot them and did his best, but after firing three shots one poor little crowbill alone turned up his toes. We had a good deal of fun joking him about it, telling him his gun was trained on mallard and would not condescend to kill mudhens. After we anchored that night, we heard geese honking and ducks flying over all night, or at least when we went out to listen.

The next morning we saw a great many geese sitting in various bends of the river, but it being Sunday, we did not attempt to disturb them; several fields we passed looked very inviting, as though they might be full of partridges. We concluded to spend the day exploring the river, so kept going up all day, but soon began to get away from the marshes, and in their place saw either cripples or high hills. We anchored in a place called Tobago (?) bay, and were about half inclined to go back. The next morning, however, we concluded to go a little further, up to a stream called Corbin's Creek, about ten miles above. We sailed on up to Port Royal, where some of the party went ashore, and found among other things that Corbin's Creek was still ten miles above. Port Royal is one of the has-beens, and like most of the places along the river, suffered from the war. We went on at least ten more miles and seeing nothing of the mystic creek, W. and I went ashore at an old wharf in front of a substantial looking brick house. The inhabitants soon perceived us and an old and young man came down, and commenced asking innumerable questions, a yachting party being evidently a novelty in that section. Both W. and I being nearsighted, wore our glasses, and they seemed an object of special curiosity to the old gentleman, who having ascertained that we were duck shooters, thought we wore glasses as a sort of telescope.

Corbin's Creek still being an unknown quantity we concluded to go down and let the spectre stream look out for itself, so before night we were once more back again amid the marshes.

We put out the stools long before day next morning, the Captain and Major going together and W. and I pairing off. The other party killed two geese, W. and I having only the luck to get a couple of long shots at the geese and killing a pair of ducks. However, we went ashore with the dogs and killed fourteen partridges.

Wednesday and Thursday we spent in pretty much the same way, over the decoys in the morning and ashore shooting birds in the afternoon. Our experience was that a few shots drove off both ducks and geese; I never saw them wilder. We only killed enough game for the table and had none to give away; the ducks killed were mostly mallards and black ducks.

After talking it over we agreed to go up the York River, so on Friday ran down the river to Toll's Point, where we anchored for the night.

When we got up the next morning it was perfectly calm and was so most of the day. The Doctor cut off a coot's head with a rifle at 100yds. to-day, a very good fluke. We drifted and poled along past the Wolf Trap Light, and finally anchored for the night under New Point Comfort. The moon was at the full and not a cloud interfered with her splendor. The bay was almost still, save for the faint pulsation of its mighty bosom and the gentle plash of the tiny wavelets on the shingle. The occasional cry of a seafowl was heard and once the sharp *quack, quack* of a startled black duck feeding in some little creek ashore. We never got our anchor down till 1:30 A. M., and at daylight were under way again, wind S.E. We passed Yorktown at 9 o'clock and had a good view of the town and monument. But interesting as the place is historically, we had no time to stop, as we were bound up the Pamunky. We arrived at West Point about sundown and anchored just above. West Point is a lively little place, connecting by a railroad with Richmond and the terminus of the York River line of steamers.

Monday we had wind N.W., and started up the river. We went up about fifty miles, saw a good lot of ducks, mostly mallard, and put out the stools; we had only killed three mallard when down came a colored individual, and politely informed us we were on rented marsh, and must, "not to put too fine a point on it," get off. Discovering an Indian (at least he claimed to be one) on the reservation, who knew that part of the river, we were told to go further up, where we would not be bothered. This we proceeded to do next day and had a very tedious trip, it taking us nearly all day to go fifteen miles. We passed through the drawbridge at White House, and saw the remains of the burned transports half rotted away.

Finding no game of any amount, we only spent a day there, and started back for the Indian reservation, where our copper (?) colored friend had told us he owned some marsh, and where we could shoot. Having a stiff breeze, we went flying down, accomplishing in an hour and a half what had taken us nearly a day to do before.

We spent the rest of the week trying to make a decent bag, though there were lots of ducks in sight we could do nothing with them. The reason for their wildness we found was owing to the way of shooting them down there. A man will bait a place till the ducks get to using there pretty well, then hiding in a bough house or cover of some kind he waits till a big flock lights, and firing an immense gun, can pick up 15 to 18. This makes the fowl very careful not to trust themselves near any sort of cove.

We started home on Sunday morning and sailed all day through a steady rain. We appointed the Major a committee of one to keep the coffee pot on the stove and our pipes lighted.

By Monday night we made the mouth of York, and as the weather looked very unsettled went into Guinea Creek for a harbor. We began to drag after dark, so let go the big anchor and spent the rest of the night very comfortably.

The following day was very wet, so we spent the time in the cabin, but the day after we all went ashore to shoot birds; killed twenty-seven and came aboard very well pleased. The wind coming out W. S. W. next morning, we got under way at daylight and ran up to the Potomac, where we found a very heavy roll, and the wind shifting to N. W. set us "hobby horsing," and as it bade fair to keep us out till after dark ran back to Wicomico, going into harbor with about thirty scrape boats, making a very lively scene.

The wind having blown itself out during the night, we next day got off about 8 A. M., and the wind coming out S. by E. we packed on all our light cotton, but off Cove Point encountered a very nasty sea, so had to take it in again.

We made a splendid run, though it took two men at the tiller a good deal of the time, and at sundown put two reefs in mainsail, as it looked squally. By 8 P. M. we had our anchor down and were enjoying a hot supper, all the more acceptable after a day's hard work and exposure.

We arrived home by 12 o'clock next day, having had a very enjoyable outing, even though we did not kill "lashins" of game.

We failed to find the paradise we were looking for, and don't believe it exists, save in the imagination of certain individuals, who are prone to magnify ten ducks, geese or partridges into as many hundreds. Our experience was, that when we found a place with plenty of game, it was sure to be owned by some club or other, the members of which very naturally objected to strangers shooting over their grounds. Besides, the land is very rigidly posted, and unless one knows the land owners, it's very little use to go ashore for birds.

SAUGWILLAH.

EASTON, Md.

THE BEST COLLECTION OF YANKEE SKETCHES we have seen for years. There is not a page that does not sparkle. Thus says the Regina (N. W. T.) *Leader* of "Uncle Lisha's Shop."

SUMMER TOURS.—Round-trip excursion tickets at low rates are now on sale via the Burlington Route, C., B. & Q. R. R. from Chicago, Peoria and St. Louis to Denver, Colorado Springs, Pueblo, Salt Lake City, Ogden, St. Paul, Minneapolis, and resorts West and Northwest. The "Burlington" is the only line running sleeping cars from Chicago to Denver without change. It is the only line by which you can go from Chicago to Denver and be but one night on the road. It is the picturesque line to St. Paul and Minneapolis. It runs daily "fast trains" to Kansas City, St. Joseph, Atchison, Council Bluffs, Omaha, Lincoln, Cheyenne and Denver. Fine Government Lands are located on its new lines in Nebraska. It is the best line by which to reach all principal land points in the West and Northwest. Tickets via the Burlington Route can be obtained of coupon ticket agents of connecting lines. Send in postage to Paul Morton, Gen'l Pass. and Ticket Agent C., B. & Q. R. R., Chicago, Ill., four cents for a copy of the Burlington Route Guide, or six cents for an illustrated book about Colorado and the Garden of the Gods.—*Adv.*

NEW JERSEY LAW.

THE following text of the New Jersey fish and game law is sent out by the New Jersey Fish and Game Protective Society. It differs from the text of the law printed by us some weeks ago:

Chapter 253, Laws of 1888.—An Act to divide the counties of this State into two sections; to be known as game sections, and to fix the time for shooting certain game birds and animals therein.

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That the several counties of this State be and the same are hereby divided into two sections, to be known as the northern and southern game sections.

2. And be it enacted, That the northern game section shall comprise the counties of Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren; in the counties comprising the northern game section, as named in this act, no person shall take, kill, or have in his possession after the same has been killed, any American pheasant or ruffed grouse, quail, gray squirrel or hare, commonly called rabbit, except only between the first day of November and the fifteenth day of December of any year; any woodcock, except only during the last fifteen days of September and the months of October and November of any year; under a penalty of twenty dollars for each and every game bird or animal so unlawfully taken, killed or had in possession.

3. And be it enacted, That the section to be known as the southern game section, shall comprise the counties of Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Mercer, Monmouth, Ocean and Salem; in the counties comprising the southern game section, as named in this act, no person shall take, kill or have in his possession after the same has been killed, any American pheasant or ruffed grouse, quail, gray squirrel or hare, commonly called rabbit, except only between the fifteenth day of November and the twenty-fifth day of December of any year; any woodcock except only during the last fifteen days of October, and between the fifteenth day of November and the twenty-fifth day of December; any English snipe, except only between the thirty-first day of August and the first day of November of any year; any rail bird or marsh hen, except only during the months of September, October and November of any year, under a penalty of twenty dollars for each and every bird or animal so unlawfully taken, killed or had in possession after the same has been killed.

4. And be it enacted, That all general acts and parts of acts inconsistent with this act be and the same are hereby repealed, and that this act shall take effect immediately.

Approved April 2, 1888.

THE WILD WEST SHOW.—Buffalo Bill, with his army of cowboys, Mexicans and Indians, has returned to America and on Decoration Day, May 30, opened his show at Erastina, Staten Island. The very large grounds were packed with sight seers, and it is estimated that from 12,000 to 15,000 people witnessed the initial performance. We have in the past had occasion to speak of the excellence of the "Wild West" Show, and it is not less interesting now than it has always been in the past. The force of men who take part is larger than heretofore, and the exhibition as a whole is larger than ever. A number of new "pitching" horses have recently been added to the show, and some of these exhibit a complication of bucking that would make the ordinary cowboy's hair stand on end. The scheme of the show is what it has always been, but a good deal of the fancy shooting, which interests only a small part of the audience, has been omitted with good effect. The performance is thoroughly realistic and is enough to stir the blood in the veins of any old timer whose memory can go back to twenty years ago when all the scenes here represented were common in the wild wild West, now, alas, wild no longer.

THAT NEW JERSEY GAME LAW.—A well known New Jersey sportsmen writes us: "The law is absurd and ought not to have passed, but it was done in the closing days of the session, and will be repealed next winter."

YELLOWSTONE PARK PETITION.

WE conclude the publication of the lists of signers received up to date. The lists given in successive issues of the FOREST AND STREAM have not included all those sent to Congress, for numerous petitions were forwarded without being reported to us:

CALIFORNIA.

John T. Halsted, Jos. Beach, Theo I. Halsted, Julia A. Turner, C. S. Spencer, T. J. Morrow, W. H. Arment, Robt. E. Tener, C. V. Seeber, E. A. Dial, M. F. Lucas, Jas. A. Brainerd, Emilie N. Tener, F. Sea and River Fishing.

THE AUTOCRAT OF THE EDDY.

GRAPE vines and clematis and Virginia creepers tangle their branches together over the prostrate form of the old lichen-covered mill. The thump and rumble of the soggy wheel have not been heard in the quiet little valley for many a year, and the water splashes over the drippy alga-decked shaft and through the holes in the dam, throwing clouds of cooling spray into the warm sunshine.

Collecting its scattered forces the stream bounds off among the rocks, slides under the ferns, and tarries for an eddy at the bend where the scraggy hemlock leans, giving the flecks of foam time to circle about in the shade before they are whirled away down stream again.

Deeply sunken beneath the hemlock's gnarled root is a shelving drift boulder of gneiss, and under the shelf a big trout has lived for many seasons. His colors are dark, his protruding under jaw is hooked, his eye is fierce and his manner is aggressive. No other living thing of his size or less would dare claim a share of the eddy. The beautiful cannibal has caught every baby trout that ventured so far up or down stream this year, and rumor has it that he swallowed one of his best children at a single gulp. The timid little dace hide behind the stones in shallow water and make eyes at him, but one by one he takes them to his bosom and shows them the folly of their ways. When a miller balances on the tip of a waving fern frond near the brink, the old trout throws water at it with his tail and then whirls it under, leaving a single white wing to float off down stream and make the other trout's mouths water.

The hemlock has stood on the bank for a couple of centuries and the trout has lived under it for a decade, but I have no dates for the boulder and the stream.

When the winter storm fills the branches with snow and cold winds moan as they roam through the forest, the eddy is covered with ice, but down at the edge of the boulder the big trout tucks the dark water snugly about him, slowly waves his broad tail back and forth, passes an occasional glassful of water through his gills and cares nothing for the storm and the cold, but in quiet contemplation looks forward with pleasure to the sins of a new season. If the little white-footed evening mouse nops trembling across the ice, the trout is sorry he cannot take her down into his comfortable home, but there is a coldness between the trout and the mouse that he loves, and little does the mouse suspect that the bump which she felt on the ice under her feet was made by the nose of one that would fain approach nearer.

When the birds come back in the spring and the bluebird, nestling in the sunny top of the hemlock, softly carols a love song about Bermuda, the black and white warbler breaks the brown monotony of the rough bark as he glides up, down and around it, and the aromatic fragrance of the hemlock mingles with the gentler odor of red maples and anemones and new moss, the trout still spends his days near the shelf of the boulder and watches for the flies that the phœbe bird misses. When he plunges out after them the timid rabbit hops convulsively backward and opens his great wondering eyes more widely than ever, and the red squirrel scurries up the hemlock trunk, scolding and jerking his tail to give emphasis to his remarks; but nothing can the rabbit and the squirrel see except a few circling ripples chasing each other ashore.

When the summer days come, the cicada sounds his shrill call from the dead limb overhead, the noise of clinking scythes is borne from the hay field to the woods, and the hot breath of the brakes almost smothers the asters on the bank as they look longingly at their cool reflections in the brook. The surroundings have changed, but the trout lies deep down in his favorite place. If a cow wades into the eddy for a drink he does not care. If a clap of thunder makes the ground tremble, he is only a little bit uneasy; but there is one sound that puts him on the alert for danger. He does not often hear a fisherman's step, it is true, but he associates a few startling events with that sound. The stony New England soil cannot compete with the fertile Western lands; the farmers' boys have gone off to the cities, and the few elderly people who remain care a good deal more for 'lection and meetin' than they do for fishing or anything else. But sometimes persons who were once boys go back to the old homesteads during the hot summer days, and these old boys have not forgotten the brook nor the trout that they used to string on a forked willow stick, as slippery as it was yellow. The big trout has not had experience with so very many hooks, but perhaps once a year for the last ten years he has had a misunderstanding with a fisherman, and ten lasting impressions have been made on his memory.

For eleven months and one week in every year the hemlock, the boulder, the eddy, and the trout are inseparable; but when in the late September days the squealing wood duck paddles among the floating dead leaves with his pretty red feet, and the muskrat with thicken-

ing fur dives under the boulder in search of a winter home, the trout has departed.

Then it is that one can hear inquiring voices among the brook sounds if he will sit quietly and not disturb the nymphs. Under the hemlock's roots the voices are low and congratulatory. The nymphs there know the old rascal too well to wish him back again, but they seem afraid to speak much above a whisper, and they hardly dare inquire for news among their neighbors in the rocks; but every now and then a sprightly voice from up-stream or from down-stream will call impatiently for an answer from the eddy. An up-stream sprite asks if a mink has caught a trout, and softly comes an answer, saying that the trout has learned by experience to lie so near the bottom that a mink can not seize him from below, and he certainly could not be caught fairly. "How about the water snakes?" asks another; and the reply "He is too large for them to fight" comes back in a moment. "Has a snapping-turtle caught him?" is asked; but a dozen replies at once say that no snapping-turtle has passed along the stream for a year and a half. "Has a fisherman got him?" asks one; and such a chuckling and laughing comes from all sides that one is quickly convinced that the fisherman is the least dangerous of the four enemies of the trout.

The fact of the matter is that in the fall the old trout's fancy lightly turns to thoughts of love, and in this connection I might as well say that of late years he has been guilty of bigamy. Formerly he would quietly leave the eddy on a late September day, and go down-stream to a shallow nook where a lively spring made the sand boil up at the bottom in four or five puffs at a time; where the caddis worms built their armor of sticks and mica scales, and where alders growing thickly, arched their branches overhead and shaded the pool. In this bower he found his lovely wife patiently waiting for him, and although he would pay her pretty close attention for a few days and pretend to be affectionate, he would soon wander about and flirt with the little girl trout, who went wild over his beauty but who had never seen the old villain at home in his eddy.

Two or three years ago, however, a heavy ice floe coming down in the spring freshet knocked a new hole in the dam, and whenever the water is high enough in early October, the trout runs up through the hole, and goes to see a wife that he met under the lily-pads in still water in the pond. She is larger even than he is, and lazier, and not nearly so attractive as the down-stream wife. Her eggs too are dull yellow, while the down-stream wife's eggs are bright straw color, and why it is that he enjoys the pond trout's company no one can tell; but there's no accounting for tastes.

The old trout is not very deeply affected by love, and he is always back at the boulder by the middle of October. Just a word about his children's nursery:

Down where the sunshine is stirred in the water
By zephyrs that bend the thin tops of the sedge,
The stream shallows out at the head of the meadow,
And dammed by a log, widens more at the edge.

The nettles are rank on the rich bank about it,
And out on the log straggle tussocks of grass;
Beneath the warm driftwood the cricket is chirping,
And green-headed frogs tune their throats for the class.

The little trout practice at vaulting and leaping,
And stir up the sand in their still, shallow pool;
From daylight till darkness and all through the moonlight
They try every trick that is taught in their school.

They strain at a gnat and then swallow a lady bug;
Deep into the air they all dive for a fly.
But larger they're growing, and in the hard future,
The careless ones jumping at feathers must die.

And some of them reaching the age of discretion,
Will solemnly hunt for a deep shady hole;
And like their old father—as cruel as Nero—
Will live as they please, without conscience or soul.

I wonder if the old trout remembers my attempt at getting him out upon the bank last June. Cautiously I had crept to a point where the bushes hid me from sight, and slid the tip of the slender split-bamboo rod through the same opening through which the alder pole had been poked so many times in years gone by. With a slight cast, the brown-hackle and coachman and Reub Wood were tossed over the lair of the trout, and drawn in enticing zig-zags between the foam flecks on the water. It was not the first time that artificial flies had failed to tempt him, and when the cast was changed to a grizzly-king, a silver-doctor, and a stone-fly, he just kept perfectly still, and let me go through all the motions of fishing, as though that were all I had gone out for.

Under a fungus-covered log I found a handsome pink and squirming angleworm, that did its very best on a bait hook deep down where the trout's nose ought to have been, but there was no demonstration of appreciation on the part of the autocrat of the eddy. Next I found in the moss a crimson newt that looked delicious enough for anybody to bite, and when the hook was carefully passed through a small fold of skin, so as not to hurt much, he was tossed over into the pool. Around and around in little circles the newt swam, and deeper and deeper, until there was only a faint red wriggle to be seen way down by the shelf of the rock. Suddenly a vigorous tug whisked the tip of the rod under water, the reel gave a shout, and then all was quiet again; but I could feel the old fellow's teeth grating on the tense line as he sullenly moved his head from side to side. Every instant I expected a rush up stream, and a tumbling wrestle in the swift water above the eddy, but still there was ominous quiet. There I stood all ready for action, the tip of the rod curved over and almost dipping into the water, the line drawn as tightly as a banjo string and leading straight down into the depths of the slow current. Gradually reeling in the line the trout came heavily to the surface with all fins set, and surging doggedly back and forth with short strokes of his sturdy tail.

What could such tactics mean? Why was he reserving his strength at a moment when, according to my notion, he ought to be tearing about in frantic efforts to escape? The landing net was reached out toward him. It was almost under him when, with a tremendous plunge, he threw a shower of spray in my face, and the broken line swishing through the air, snarled among the hemlock branches high up out of reach.

The hook has worked out of his mouth by this time, and at this very moment he lies at the edge of the boulder beneath the hemlock, waving his tail slowly to keep his position in the uncertain current of the eddy. When the stream roars with autumn rains he will swing his tail to the rhythm of the roar. When it thunders in the spring freshet he will churn the strong current with defiant tail strokes, and stay by his boulder. When the summer stream is gentle he will wave his tail softly near the bottom sands, and poise by the shelf of gneiss; and as years go on there will still be found together the hemlock, the boulder, the eddy and the trout.

ROBERT T. MORRIS.

NEW YORK.

BOBBING FOR SUPERIOR TROUT.

"BURR-R-R-R went the little Seth Thomas," as one of your correspondents put it, but oh! under what different circumstances from his. But I was up ahead of the alarm, and out of doors when it went off at 5 o'clock in the morning of May 1, standing near my shanty door, in a bitter cold east wind, the tears streaming down my cheeks, my fingers fairly aching with the cold trying to tie a line on my "pole." I am an unscientific fisherman. With some fresh beef cut into strips, and a sharp pocket knife I started out to open the trout season in the great rapids of the Sault de Ste. Marie. Making my way over the snowdrifts, 4ft. deep on the edge of the river, then over the great boulders and ice to the little island where lives in a shanty the only inhabitant of this most romantic spot, Mr. Ed Showanaw, son of an old Indian chief, who when alive reigned over a numerous tribe. I have recently made the acquaintance of Mr. S., who has had the advantage of an education and is a perfect gentleman. On this occasion he kindly voluntered to show me some good holes for trout.

The sun was now shining brightly, but gave no warmth to the frosty air. Already a lame half-breed was hobbling over the ice on his crutch, bobbing with a line fastened to a short stick and hook baited with a small live fish which the Indians call "cockadoosh." This he would drop through the cracks in the ice. He got nothing, and Mr. S. and I had the same luck. After trying the best holes among the boulders we gave it up. At this moment a fellow came along who said he was going to the head of the rapids. Just above the international bridge is a little bay where the water is very shallow with a smooth rock bottom. For this place he started and I left for home. In an hour or so this fellow came to town with three fine trout of two or three pounds weight each. He told me where he had caught them, so I determined to go the next morning and get one for breakfast.

Early the next morning I was streaking it over the frozen snow. On arriving at the bay I found there, not more than a rod from the shore, an Indian lying down on the ice bobbing, where the water under the ice was about 6in. deep. He had caught two fine trout, one a three-pounder. I went to the outer edge of the ice and cast my baited hook into deep water, but did not get a rise. Turning toward shore I observed that the Indian had gone, so concluding that if I wanted a trout for my breakfast I must bob for it, I forthwith went to bobbing, and soon jerked out two fine ones, which together weighed 28oz. An hour later Mr. Indian came to town with fifteen of the most beautiful beauties I ever saw, running from ¾lb. to 3lbs. each.

The same afternoon the chap who told me about the fishing ground came to town with a dozen glorious trout, which he sold at twenty cents per pound. I was on hand this morning with a companion at 5 o'clock, and on arriving at the bay we found about a dozen bobbers. I was disgusted, bought a trout for my breakfast and started for home. My companion stayed, caught two fine fish, broke through the ice where the water was deep, hustled home, got dry clothes, went back, and for a few minutes all hands had a big run of luck, when the water in Lake Superior began rapidly to lower, leaving the ice on the bottom and thus putting a stop to the catch. The water lowering was caused by a strong east wind.

In the presence of a gentleman who is well posted and an old resident here, I made the remark that this wholesale slaughter of brook trout was a source of great regret to me, and he surprised me by saying, not in the same words, but conveying the same meaning as those of Prof. Huxley in regard to sea fishes, "that man was not a factor in their destruction." Lake Superior and the streams flowing into it, the gentleman said, produce countless millions of brook trout and would always keep up the supply. E. H. B.

SAULT DE STE. MARIE, Mich., May 3.

BLOOMING GROVE PARK TOURNAMENT

THE Blooming Grove Park Association held a fly-casting tournament, together with other sports, in front of their club house, in Pike county, Pa., on Decoration Day. There were two classes of contestants, one for those who had previously cast 70ft., and one for those who had not a public record of that distance. The rules of the National Rod and Reel Association governed, and in the first contest Mr. Robert B. Lawrence beat the amateur record of the association by 4ft., making a cast of 89ft., against the record of 85ft., in the amateur class at Harlem Mere, made by Dr. Trowbridge in 1887. The prize was a badge in each class.

Class A.—For those who have a record of 70ft. Judges, Daniel D. Youmans and H. B. Montgomery.

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Ft.
Robert B. Lawrence	11 00	10	89
Spencer M. Nash	10 10	..	59

Class B.—For those who have no public record of 70ft. Judges as above:

	Length. of Rod. Ft. In.	Distance Cast. Ft.
N. S. Smith	10 11	73
G. M. Eddy	10 06	62
E. B. Youmans	10 05	43
A. J. Post	11 07	52
C. R. Hedden	10 05	56

A FIFTY-POUND MASCALONGE.—On Saturday last a giant mascalonge was to be seen on the slabs of Mr. Blackford at Fulton Market. The fish weighed 50lbs. and was 4ft. 5in. long, but very deep. It was taken at the mouth of the Niagara River and was a formidable looking beast that had, no doubt, destroyed tons of better fish.

A TWENTY-POUND SALMON IN THE HUDSON.—The Troy *Times* of May 26 said: "This morning W. E. Hagan, of the Fish and Game Protective Association, reported to District Attorney Griffith that a salmon had been caught at the State dam in a net. The catch of salmon in this way is a violation of chapter 530, laws of 1887. The penalty is $100 fine or 30 days' imprisonment, at the option of the magistrate. A fine of $25 is also to be imposed on any person having in his possession a salmon caught in a net. The salmon was in the possession of McGrath & Laflam, fish dealers at the Fulton market. They said they purchased the fish from Wm. Askins, who caught it. The fish had been sold to a citizen, but when the latter was told that it would be a violation of law to receive it, he declined to accept the salmon. District Attorney Griffith sent officer Forest after Askins, who said he did not know that he had violated any law. He was admonished to refrain from fishing for salmon with a net hereafter, and as this was the first case reported, it is not probable that Askins will be prosecuted. The same law prohibits fishing in the Hudson River on Sunday, and the agents of the Fish and Game Protective Association called on Supt. Willard and requested that the law be enforced within the city limits. The superintendent said he would direct the police to enforce the law. The salmon caught at the dam weighs 20lbs."

A PICKEREL IN LAKE MEACHAM.—There is sorrow in and about that portion of the Adirondacks which surrounds Lake Meacham. Mr. Fuller, proprietor of the hotel, who has done so much to stock this lake, having, at his own expense, hatched and turned into Meacham and Clear Pond 65,000 trout fry this spring, is disconsolate because a pickerel of ten inches in length was taken in Meacham last week. About eight years ago some persons put these beasts, *Esox lucius*, into Osgood Pond, the outlet of which is the main outlet of Meacham, and they have naturally gone down, and then up into the larger lake. It is time that the men who have been spreading the pike, or pickerel, throughout the Adirondacks should be dealt with as the law directs.

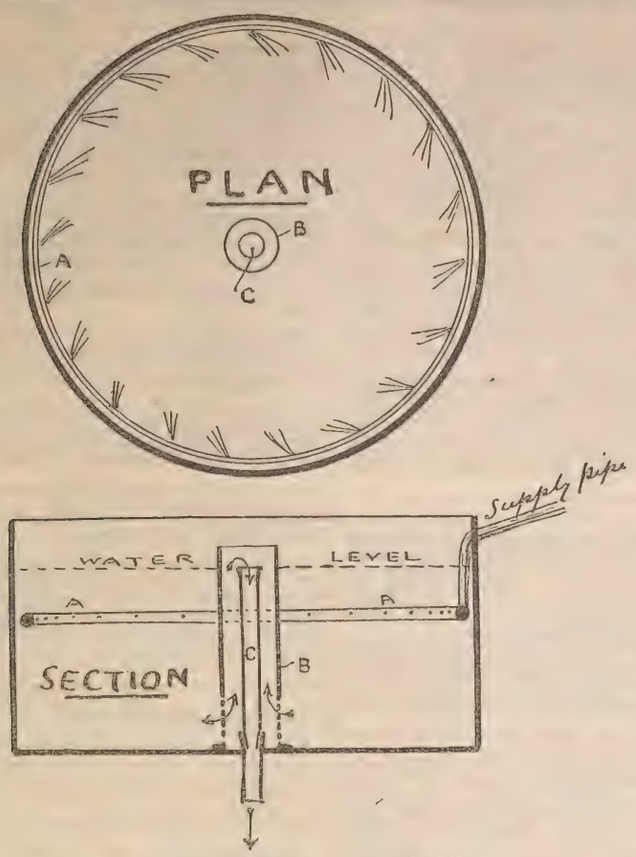
BLACK BASS IN THE ST. LAWRENCE.—The bass fishing in Lake Ontario and the St. Lawrence River is now good, and will, no doubt, continue so throughout this month. We have accounts of good catches from Cape Vincent, Clayton and Watertown, which agree in saying that the season opened with as good fishing as is remembered for many years. The water has been low in the river and the June rise has not yet begun. The fish taken have not only been numerous but of good size. They have taken the fly unusually well this spring.

LAKE ST. JOHN AND SAGUENAY REGION.—The Canadian edition of Mr. W. H. H. Murray's description of the Lake St. John and Saguenay region being already exhausted and no copies available for American purchasers, an edition will be brought out next week by Cupples & Hurd, of Boston, with fifty pages of additional matter from Mr. Murray's pen and a fine map of the Lake St. John region. This is the only map of this region published.

STRIPED BASS.—Ocean Beach, N. J., June 4.—A striped bass weighing 15lbs. and one of 20lbs. were caught here in the surf with rod and reel on Decoration Day.—BIG REEL.

Fishculture.

COMMISSIONER ROOSEVELT RESIGNS.



MR. ROBERT B. ROOSEVELT has tendered his resignation as Fishery Commissioner of the State to Gov. Hill in the following letter:

To the Governor of the State of New York:

DEAR SIR—I hereby resign my office as Fishery Commissioner. It has been my desire to do so for some time, and my appointment to a position under the United State Government makes it imperative. I trust you will not think it out of place if, in surrendering my stewardship of 20 years' voluntary and unremunerated labor, I should give a short and condensed statement of what has been accomplished while I have been an active member of the Commission or at its head as president.

The first law on the subject was passed in 1863, and the first report of the Commission showed that there were thousands of acres of water, hundreds of lakes and miles of rivers and coast which were either wholly unproductive of fish life or furnished a greatly reduced yield from that of previous years. The Commission originally consisted of three members, the late Governor, Horatio Seymour, Mr. Seth Green and myself, but Mr. Green was subsequently made superintendent, and from that date to this he has devoted his entire time to the supervision of our operations, and to him is largely due the success they have attained. At the time when they were commenced, the fish production of the State had reached its lowest ebb; the shad fisheries were nearly run out, the trout ponds and streams were greatly depleted, and many waters were wholly denuded of fish life. The end of our inland fisheries, even those of the great lakes, was at hand. Moreover, at the time, 20 years ago, the public mind was absolutely uninstructed as to the value of fishculture, then hardly more than an experiment, and not little of the work of the Commission was educational. But this education has been so well done that there are now similar commissions in more than 20 of the States, as well as the national one under the charge of the Smithsonian Institution at Washington.

Our first efforts were directed to the restoration of the shad, which had so far fallen off in numbers that the fishermen were giving up fishing for them and allowing their nets to go to decay, while the size of those that were caught had so diminished that shad of over three pounds weight were rarely to be purchased in the New York market. At the same time a distribution was made of the black bass, one of the finest of American game and food fishes, to all waters suitable to them, and commoner sorts were introduced into inferior streams and ponds. A few years later the Legislature authorized the purchase of a trout hatchery and the commencement of trout culture. A site on Caledonia Creek, one of the most wonderful trout streams of our land, was selected, and some old buildings previously used for the same purpose were bought. These were rebuilt and enlarged and fitted up in a most substantial way, till they now constitute a model for fishculture which the State may well be proud of and which is not surpassed by any in the world in practical efficiency and productiveness. Here,

THE "THOROUGH" VASE.

SCALE, 1 INCH TO THE FOOT.

A, Supply pipe. *B*, Guard cylinder with perforated bottom. *C*, Standing waste, ground into fixed waste.

under the care of Mr. Seth Green and his no less skillful brother, Monroe A. Green, Mr. Jonathan Mason, who has lately brought the artificial propagation of muskallonge to a successful issue, and their trained assistants, millions of brook trout, of salmon trout, and of whitefish, have been hatched. From this place they have been distributed to all parts of the State and have contributed hundreds of dollars in money value to the food production as well as health and recreation to the citizens.

Seeing this success, the Legislature ordered the erection of other hatcheries. They are now in process of completion, prominent among them being the one at Cold Spring, on Long Island, under the charge of Mr. Fred Mather, where, to the liberality and public spirit of Mr. John D. Jones, the State is indebted for a free gift of the use of the land and water requisite for its operations. The results of these efforts have been apparent everywhere. Lakes and streams have been restored; inland fishing is improving; fish are to be caught where they have not been found for years; shad of 6lbs. weight are so abundant in our markets that those of three are hardly salable. The yield of the Hudson River has become greater than was ever known before in its recorded history, and fishculture is established in nearly every State in the Union as a matter of public importance.

I feel a justifiable pride in this record, and can now leave an undertaking in which I have had so long a connection and so large a part, in safe hands, with the assurance that my twenty years of work have not been wasted, but have resulted in a benefit to the community that will be fruitful and permanent. Yours very respectfully,

ROBERT B. ROOSEVELT.

THE AMERICAN FISHERIES SOCIETY.

THE Recording Secretary, Mr. Mather, announced that he had received a private letter from Mr. W. Oldham Chambers, Secretary of the National Fishculture Association of England, dated April 22, 1888, which contained some matters of public interest and he would read such portions of it as related to the rearing of fishes. Mr. Chambers says: "I am looking forward to a visit to America, some time, for the express purpose of studying the vast advances you are making in our glorious science. I can conceive no greater treat than to exchange thoughts with my transatlantic friends. I think there is this difference, if I am not mistaken, in our methods, you devote all your energies to hatch out the greatest quantity of fry and then turn them out in the rivers and lakes, whereas we try to invent means of feeding and rearing them after the sac is absorbed, and then turn them out when they are capable of caring for themselves. I have never met with anything that approaches my "thorough" system of feeding. You can make a vase to bring up 100, or one large enough for 100,000 with the same ease, and on the same principle. The fish are bound to be on the move and are equally bound to feed, because the food is always held in suspension and has no chance to get to the bottom. I inclose a sketch, to scale similar to one in my hatchery that now has 15,000 rainbow trout in it. Oblige me by making one, which you can do at a small cost, and give me an opinion of the result. There is no patent on it, so do what you like with it. Be careful to follow the lines laid down in the inclosed diagram, especially in the case of the holes in the pipe which must be at the proper angle, for there rests the secret."

Mr. Mather said that all his trout were distributed or put out in the rearing ponds and he could not try this method the present year, but it may be worth while for others to do it. In 1880, when on the staff of Prof. G. Brown Goode, in charge of the American department at the fisheries exhibition in Berlin, a gentleman from Baltimore, whose name he had momentarily forgotten, sent some glass models of the Bell and Mather shad hatching cones which were designed to keep the food in suspension, just as the shad eggs are, and some fry were fed in the cones for a while, but not long enough to test the system of keeping food in suspension, nor to develop any difficulty which might arise from decaying food.

SPECIFICATIONS OF "THOROUGH" VASE.

The outer casing can be an ordinary wooden tub, one 3ft. in diameter will hold 10,000 fry. The supply pipe to be ½in. lead composition, to be fixed ¾in. away from inside of tub. This pipe to be perforated about every 4in. with very fine holes, which must be at an angle as shown, the water as it enters ths tub is forced round and round and the fish are in a small trout stream; the food is also kept in suspension by the circular motion.

The guard cylinder is tacked to the bottom of the tub by a small flange. This cylinder is made with zinc, but the bottom 4in. is perforated zinc, the waste water, dirt, etc., passes through the perforations.

The standing waste to be 1¼in. lead pipe, the top slightly bell-mouthed, the bottom soldered to a brass piece with ground face, which fits into a brass fixture standing up 1in. from bottom of tub with corresponding ground face.

In washing out pull up the standing waste and with a feather stir up the bottom of tub and away goes the sediment down the waste. You seldom want to do this with care in feeding, not to give too much at a time.

Remember that the entire invention depends upon the holes in circulating supply pipe being pierced at the proper angle.

Reports of the Northern Fisheries Society, of Japan, were shown, and a translation of the headings of the articles read, as was also a letter from the president of that society, Mr. K. Ito, who called attention to some translated extracts from FOREST AND STREAM, and to a portrait of Prof. G. Brown Goode, which adorned one of the reports.

THE OYSTER LAW OF NEW YORK.—Mr. E. G. Blackford, Commissioner of Fisheries, calls attention to a sentence in Chap. 584, Laws of New York for 1887, which is important to oystermen, but which has been overlooked. Sec. 1. of this law, after appointing Mr. Blackford to be the shell-fish commissioner, etc., says: "Said Commissioner shall ascertain the occupants of all lands claimed to be in the possession or occupation of any person or persons, and no grant of lands so occupied or possessed shall be made, except to the actual occupant or possessor thereof, provided said occupant or possessor, within one year from the passage of this act, shall make application for and purchase the same." The act was passed June 16, 1887, therefore the time has nearly expired. We have already published the act, but some of our readers may have overlooked this important clause.

FISHWAYS FOR NEW YORK.—Several fishways will be put in the streams in the interior and western part of the State of New York this coming summer. They will all be of the McDonald pattern, which has been simplified in construction and made cheaper. Since his appointment to the Commissionership Col. McDonald has disassociated himself from all business in connection with fishways, and all this is now in the hands of the McDonald Fishway Company, the general manager of which is Mr. Frank Blaisdell, and the secretary and treasurer is Mr. S. C. Brown, both of Washington. It is expected that work will be begun on several streams next month.

THE WYOMING COMMISSION.—Mr. Louis Miller, of Laramie, is now Commissioner of Fisheries in place of Dr. Otto Gramm, whose term expired.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Bell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

FIXTURES.

DOG SHOWS.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alma M. Ide, Secretary.

FIELD TRIALS.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6291.**

SOUTHERN FIELD TRIAL CLUB.

ATLANTA, Ga., May 31.—*Editor Forest and Stream:* On the 14th day of May, in Chattanooga, Tenn., the Southern Field Trial Club was organized, with thirty-six charter members from the States of Alabama, Arkansas, Florida, Georgia, Mississippi, South Carolina, Tennessee and Texas.

An announcement of the organization was telegraphed to a Chicago paper, the *Turf, Field and Farm*, the FOREST AND STREAM, and on the same day a draft for $50 was sent to each of these papers to pay for advertising. The two latter papers published our telegram and advertisements, but the Chicago paper did not.

On the 24th day of May (ten days after), the editor of the Chicago paper wrote Mr. T. M. Brumby, secretary of the Southern Field Trial Club, returning the draft and declining to publish anything for the Southern Field Trial Club, stating as a reason that "the chief object of your [Southern Field Trial] Club is to break up the American Field Trial Club." A copy of this letter was also sent to Mr. J. W. Renfroe, president of the Southern Field Trial Club.

We submit the facts, and ask, Is the Chicago paper an impartial and true sportsman's journal, or the organ of the American Field Trial Club only?

At Canton, Miss., in 1884, the "Southern Sportsman's Association" and the "National American Kennel Club" (both field trials clubs) were merged into a new club, called the "National Field Trial Club," with W. B. Shattuc president. At Cincinnati, in 1887, the National Field Trial Club was disbanded and a new club formed, called the "American Field Trial Club," with W. B. Shattuc president. Since then local clubs have been formed in different sections of the United States, and for some time a movement had been on foot to reorganize the old, or establish a new, Southern Field Trial Club. On the 17th day of April last I wrote to W. B. Shattuc, president of the American Field Trial Club, informing him of this movement, and stated that Mr. Stone, of Chattanooga, and myself, being the only Southern members of the American Field Trial Club (I did not think of Mr. Holliday at the time), thought proper to write him before joining in the new movement. I also stated in my letter that we knew nothing whatever of his future plans for the American Field Trial Club, except what we saw in his advertisement in a Chicago paper asking for subscriptions to a guaranty fund. I said, further, that it was then nearly May and I saw no announcement had been made as to Derby entries.

In reply to my letter, under date of April 20, President Shattuc said: "I was not aware there was to be a Southern Field Trial Club organized," and further on, "I do not see why a Southern Field Trial Club should not be a magnificent success," and then he sends me some irrelevant and gratuitous advice as to what kind of persons should and should not compose the club, but not a word did he write as to his future plans. Then in the Chicago paper, April 28, there appeared this notice: "At a special meeting of the American Field Trial Club, held Saturday, April 21, it was decided not to run a Derby this year. Cincinnati, O. C. W. Paris, Secretary."

This meeting, mark you, was held on the day after President Shattuc wrote me, and yet he made no mention whatever of his plans for the future, nor was either of the Southern members (only three in number) consulted or notified of that or any subsequent meeting.

Immediately after the appearance of the card of the secretary of the American Field Trial Club announcing that no Derby would be run this year, letters were exchanged between many of the Southern sportsmen calling attention to the matter, and it was agreed to meet in Chattanooga on the 14th of May, for the purpose of organizing a club, in order that the year should not pass without a field trial, and thus obviate the disappointment natural to those lovers of the sport, and those who have gone to the trouble and expense of raising and preparing their dogs for trials, therefore the meeting was held and the club organized as stated above.

The 10th of December was agreed upon by those of us who could get together and consult before the meeting, as the time for our trials, but before the day arrived for our organization, there appeared in another number of the Chicago paper a card, that the American Field Trial Club had reconsidered and named Dec. 10 for their trials to begin. This left us with no other alternative but to set our trial to come off between the closing of the Eastern and commencement of the American trials, or go over into next year, and thus take the rainy season, or go so far into the year that the farmers would be at work. Now, in view of these facts and the vacillation of the American Field Trial Club, we would have been perfectly justifiable in holding to Dec. 10, but in order not to conflict with *any* other club, we decided upon Dec. 3 (first Monday) and appointed a committee with instructions to select grounds as near and as accessible as possible to the grounds selected by the American Field Trial Club. In this they have succeeded beyond our most sanguine expectation, and those wishing to patronize both clubs can easily do so, as the grounds are only twenty-five miles apart, and four trains a day.

With the advantageous grounds we have and the great abundance of birds our Setter Stakes can easily be run off in one week, and our Pointer Stakes will not interfere with the American Field Trial Club's Pointer Stakes, and if necessary the Pointer Stakes can be run at the same time, as we have plenty of ground.

We presume of course there can be none so ignorant or prejudiced as to deny the right of the Southern Field Trial Club to organize and fix a time and place for the trials to suit its own convenience, but as above shown it was its pleasure to exercise these rights with a respectful and courteous regard for convenience and appointment of others.

But, oh for the sin of omission, strange as it may seem, it had not occurred to any of the thirty-six sportsmen present

at the meeting of May 14 to consult with or obtain consent of the American Field Trial Club to exercise any of these otherwise inoffensive rights.

It is more a matter of surprise than regret to us that the Chicago editor, after ten days of anxious cogitations and reflections, should have concluded for the remarkable reasons he assigns, not to publish our telegram or advertisement, but as there are other channels open to us, we respectfully defer to the wisdom and judgment of this good gentleman as to what publications and news may be proper to give the sporting public through the columns of his paper. Certainly that editor must expect great things from the Southern Field Trial Club if, as the result of its (assured) success, others must fail; we congratulate ourselves and similar clubs that at least in such an alarming apprehension he enjoys a monopoly. In all candor we think the pretext upon which the Chicago editor has declined our advertisement is too transparent to deceive anybody, while his unblushing imputation upon the motives that actuated the gentlemen composing the Southern Field Trial Club, is, to say the least of it, impertinent.

In view of my official connection with the Southern Field Trial Club, I deem it due the public thus to present the facts. J. W. RENFROE, Pres. Southern F. T. C.

Editor Forest and Stream:

The committee appointed to select grounds for the trials of the Southern Field Trial Club, to be run Dec. 3, 1888, have secured ample grounds at Amory, Miss., which is situated on the Memphis and Birmingham R. R., about forty miles from West Point. The fields are large and level, with no gullies nor wire fences, plenty of water and birds in abundance, and the grounds are fully protected.

The hotel accommodations are first-class, board $1.50 per day, and $1 per day at private houses; horses at $1 per day.

The *Turf, Field and Farm* donates to the winner of the Derby a cup valued at $100, or $100 in cash, at the option of the winner. This gives the winner of the Derby $400.

The officers of this club are: J. W. Renfroe, President, Atlanta, Ga. Patrick Henry, first Vice-President, Clarksville Tenn. W. R. Holliday, second Vice-President, Prairie Station, Miss. T. M. Brumby, Secretary and Treasurer, Marietta, Ga. Governing Committee: J. W. Renfroe, Atlanta, Ga.; F. I. Stone, Chattanooga, Tenn.; R. M. Dudley, Nashville, Tenn.; W. H. Sherrod, Florence, Ala.; J. E. Hart, Jacksonville, Fla.,; B. W. Bedford, Como, Miss.; J. H. Tresevant, Dallas, Texas; W. E. Venable, Atlanta, Ga.; S. S. Boggs, Pittsburgh, Pa. Committee on Running Rules; F. I. Stone, Chattanooga, Tenn.; J. W. Mernan, Keeling, Tenn.; T. M. Brumby, Marietta, Ga. The rules are nearly ready and will soon be printed, together with the constitution and by-laws, and will be furnished to any one upon application to the secretary. Derby entries close July 1, 1888.

T. M. BRUMBY, Sec. and Treas.

NIGHTS WITH THE COONS.

IV.

ALTHOUGH I can now be enrolled among the few who hunt coons, my career as such dates back only to last season, but my enthusiasm is as great as the time has been short. I spend my vacations, which last from July to October, in Windham, Conn. One day the first part of July, while fishing in the Shetucket River, I noticed many tracks in the mud and sand. These proved to be coon tracks; so it occured to me, as coons were hunted very little about there, it would be a good scheme to get a dog and have some fun hunting them. But it appeared that there were few good coon dogs to be had. Seeing an advertisement of some out West that were for sale, I sent for one, which came after much waiting, but not caring to go out all night with a dog we knew little about, we hired a man who owned a good dog to join our party.

"Bally Hack" had the reputation of being good coon territory, so we went there, but it is a wild place, and we took along a man who knew all about where the different cart paths led, as he had chopped wood there for many winters, but alas, his chopping had been done in daylight, while coons must be hunted by night. Our party consisted of eight, including the aforesaid wood cutter, an old woodchuck hunter, who had never been coon hunting, but had always wanted to, the owner of the extra dog, some boys, myself and the western champion coon dog. The dogs were let loose when we got into the woods, and a start was made for the upper end of Follett's upper pond, with Weaver who knew all about the locality in the lead. We had not gone into "Round Swamp" over 100yds., before all hands were turned around, or rather our leader was, for he insisted we were going south, when going north, for so said the compass, of which there happened to be three. The first two produced pointed exactly north and south, but there was not a man in the party that could tell whether the black or white point was north. At this important crisis Mr. B.; our old woodchuck hunter, came to the rescue, producing a very small compass, about the size of a silver quarter. There was no mistaking this, as it had but one point, the opposite end being in the shape of a quarter moon, so all then took a lesson in navigation, and learned that the black point means north. It was now discovered we were going straight north, and away from the pond we so much desired to reach. "Not much," said our guide, and nothing would convince him, until he went back to Chestnut Hill Brook we had just crossed; it was west of us and he went east to find it. The brook runs into Follett's pond, he knew that; when it was found running the opposite way, he swore the course of the water had changed. Finally convinced, we found the pond, struck a cart path and started for the ledges.

About 11 o'clock Rover barked—being a still-hunter he barks only when the coon is treed—so we knew we had a coon up. Our western dog had been following us closely all time, he now "lit out" to where Rover was barking half a mile away, and we all started on a run. There were three lanterns in the party, those carrying them went faster, thus leaving the rest of us in the darkness to feel our way along, first falling over stumps, then into water and so on until a cart path was reached going in the direction of the dogs. Arriving at the tree we found it too large to climb; there being no creepers in the party, we held a consultation and concluded to build fires under the tree, climb a tree near by, and try to see Mr. Coon by the light of our fires, of which there were four. They, however, were so near the tree that nothing could be seen, although Mr. M. got up the nearest tree, but M. was frightened, did not dare go up high enough, and after waiting a while he did muster up courage enough to get down without help. What was to be done? It was now past 1 o'clock, we must get the coon, so three stayed to keep up the fires, and the coon from coming down, while the rest of us started on the back track for the ledges, hoping to tree another coon before morning, promising to return by daylight or before.

Well, after getting lost twice or three times we found the ledges, but no more coons. It was now 3 A. M., and raining, so Mr. B., our woodchuck hunter, concluded he would go home, but as he must "go it alone," was a little afraid he might get lost, and have to stay it out alone until daylight. He finally started and we found our way back to the coon tree by judicious shouting. All got as near the fire as possible, and some went to sleep. Daylight came at last, the coon was located directly over one of our fires. Now our trouble did commence. I had a Spencer "cornsheller" gun, of seven shots, loaded for foxes. The first shot would have been enough to have disloged him, but this was the first coon I had seen, so I gave him a second shot; this was a settler, and he dropped dead in the crotch of the limb and stayed there too. The tree was a black oak four feet through, we could not climb the tree, and the coon was over forty feet from the ground. What was to be done? Why cut it down, of course. Now we discovered that our old party who left us at 3 A. M. carried the axe home with him. Well, there was a house half a mile from us, I would go for an axe, and Harry T. went with me. We found the house, got the axe, and started back, but how differently everything looked by daylight. At night, where we started at the time Rover first barked, all supposed we went east, instead it was south. Of course we started east with the axe, as we supposed our coon was at least a half mile east. We did not shout until we thought that distance had been traveled; but could not find the place, so returned and commenced over again, always going east; this we did for two hours, until we got lost and found the place, which proved to be not over 200yds. from the house at which we got the axe, and only 75yds. from a brook I had fished every year for the past twenty years. The coon weighed 15lbs. We got home about 9 A. M. pretty well tired out and hungry too, as no one took any lunch, not expecting to be out after 12 o'clock.

Stupid fellows, some may say, but this was my first hunt; I know how to do it better now; just such a combination of circumstances could not possibly happen to us again or anybody else. If this my first attempt at recording any of my hunting experiences, does not prove too tedious, will write you about some remarkably successful hunting I did the last of December with my two dogs Rover and Nero. J. G. L.

CAMBRIDGE, MASS.

V.

The FOREST AND STREAM has given us from time to time descriptions of coon hunts, all of which have been entertaining in a greater or less degree. I do not find, however, that any of them remind me of my own experience in that line, which I regret to say was limited to a single instance, and although not barren of result, it was not exactly in accordance with the anticipations of those interested.

At the time of which I speak, I was a youngster, fond of shooting and fishing, and losing no opportunity to gratify my tastes, so that when it was proposed by some of the boys on the farm where I was visiting to go coon hunting, I eagerly assented, and waited impatiently for the time to arrive when we were to set out.

At length we started, the party consisting of three boys, armed with a small shotgun, and a man, whom we were obliged to ask to join us, in order to secure the services of his dog, which was reported to be "death on coons." I believe a proper coon hunt is conducted by moonlight, the dogs find the coons in the cornfields near the edge of the woods, drive them into the trees, and then await the arrival of the hunters, and we intended to proceed upon this plan, but the first requisite was wanting, there was no moon, and the night was as dark as a pocket. This did not discourage us, although it made the travelling difficult, but the boys seemed well acquainted with the country, although I was lost from the first moment of entering the woods. We stumbled along until the baying of the dog told us that he had found game. It took us some time to find him, but we at length discovered him in the bed of a small stream, making a fierce attack upon a number of tame geese, which were the property of a neighbor. Calling the dog off, we tramped on through the woods for some time without result, but after a time he was again heard. A coon, sure, we thought, but we were again disappointed. Following up the sound took us to the same stream at the same place, and here we discovered the "coon dog" had just succeeded in killing one of the geese. Fearing the dead bird might be discovered by its owner, we hid the remains in a fence corner, and proceeded our way.

Soon we saw the glare of a fire, and as we were near a corn field, it was suggested that we gather some ears, take them to the fire and roast them, which we set about doing. On nearing the fire we found it had been made by a couple of Indians, who had treed a coon, and as they did not appear to be provided with a gun, we supposed that they intended to wait until morning, and then either fell the tree, which was not a large one, or what was more likely, climb it, and shake off the coon into the clutches of a lean hound which accompanied them.

We roasted our corn, and while enjoying our repast, suddenly both dogs rushed to the foot of the tree, barking vigorously. Our companion, the owner of the "coon dog," seized the gun, and pointing it toward the tree, fired. Down came the game, and we all, dogs, men and boys, rushed to the spot, to find not a coon, but a large black and yellow cat, which was recognized as belonging to a neighboring house.

After a good laugh at our Indian friends, we decided to strike for home. The dog gave another alarm on the way, but as the sound came from an open field, we did not look for a coon that time. We soon found the dog digging his way into a hole in the ground at the foot of a stump. Pulling him away from the hole our friend thrust in the muzzle of the gun, fired, and then inserting his arm drew forth an animal whose identity was made manifest to all of us, dark though it was. It proved to be a very large skunk, the only game secured that night that was considered worth preserving, as the owner of the dog took it home to try out the oil, which was supposed to have some medicinal virtue.

At length about two in the morning, wet, cold, tired, and well scratched by the brambles through which we had gone in the darkness, we reached the house, our "coon hunt" resulting in a tame goose, a black and yellow cat, and a skunk.

I do not profess to be a coon hunter, but I have been coon hunting. CHETKO.

ERIE, Pa.

THE ALBANY DOG SHOW.

ALBANY, N. Y., June 2.—*Editor Forest and Stream:* The Albany Kennel Club has secured the services of Mr. Chas. H. Mason to judge all classes at their inaugural dog show. Inasmuch as the club has been misrepresented it has issued the following statement, which, from the high character and standing of gentlemen connected with the club, does not admit of any doubt regarding the aims and status of the club:

The Albany Kennel Club is not formed only for the purpose of giving the forthcoming bench show, but is an organization which proposes to give hereafter an annual bench show in the capital city of the State, and whose object is to contribute to the development of the breeding and of the interest in dogs in this city. The bench show, which opens on June 12, 1888, will be the first show ever given in this city, and in that respect only is it experimental, and the club asks the sympathy and encouragement of all those who are interested in seeing the number of good dogs increase. While its plans are not fully determined as yet, it expects, however, to give another show in the spring of 1889, during the week following the Rensselaer Kennel Club's bench show.

The advisory committee of the bench show is as follows: Mayor Edward Maher, Hon. Erastus Corning, Judge Rufus W. Peckham, Gen. John F. Rathbone, ex-Mayor John Boyd Thacher, Gen. Robert Lenox Banks, Hon. A. Bleecker Banks, Gen. Amasa J. Parker, Jr., Hon. Henry Russell, Corporation Counsel D. Cady Herrick, Mr. J. D. Wasson, Mr. R. D. Williams and Col. J. S. McEwan.

NATIONAL DOG CLUB.—We had in type for this issue the list of members of the National Dog Club of America, but it is held over in compliance with a request from the secretary, Mr. H. W. Huntington, until next week.

DOG TALK.

FOX-TERRIER breeders will have an opportunity this year to dip into some new and valuable blood through the Blemton Kennels. In addition to their well-known stud dogs there is a well bred dog of the Clarke strain, a son of champions Regent and Rachel, a son of champion Reckon and Rejoice, the latter a full sister to champion Regent, also the very promising youngster Blemton Volunteer, by Result and out of Diadem. These, if properly bred to, should show us something worth looking at.

The constitution and by-laws of the American Spaniel Club as published in the *American Kennel Register*, contained two errors that should be corrected. The place of the annual meeting is not at "New York," but at such place as the executive committee may determine. Instead of the committee endeavoring to obtain suitable classes for "cocker" spaniels, all breeds of sporting spaniels are included.

Mr. Charles H. Mason's book "Our Prize Dogs" is nearly ready and the many who are anxiously awaiting its appearance will soon have an opportunity to peruse the pages of this valuable and interesting work.

Mr. Frank Dole has reconsidered his determination to visit England again this summer. He will leave Philadelphia in all probability, as his engagement with the University of Pennsylvania terminates on June 12.

We learn that the base ball requirements of the *Sporting Life* has terminated the existence of its kennel department. "Porcupine" is not so much of a necessity as during the stormy times of a year or two ago.

Mr. Wade has purchased the mastiff Baldur, first under Dr. Turner at the last Kennel Club show. Baldur was a year old on the 10th of May last, and his half and full brothers and sisters carried all before them at the late Warwick show. A half interest in the dog has been disposed of to the Wacouta Kennels in return for a half interest in Lord Raglan, which has just been secured by Mr. Craig. Lord Raglan is the sire of Sears' Monarch, about the best dog bred in this country. Lord Raglan will make his mark at the stud if he can produce many dogs from such inferior animals as the dam of Monarch.

For the Collie Club Produce Stakes 21 bitches have already been nominated, and there will probably be as many more before all are in. There are also over a hundred puppies in the Futurity Stakes. As the latter is divided into two semi-annual stakes, there is another month's produce yet eligible for the first, and the second is yet to be opened.

The champion Gordon setter, Royal Duke, has been retired from competition. He has earned it, and it is always a pity to see a dog which has had such a career kept on the bench till old age pegs him back.

Miss Florence Bayard, daughter of the Secretary of State, may now be added to the list of lady exhibitors. Her fancy is collies. She won a third prize at Washington with Dundee.

THE WASHINGTON DOG SHOW.

THERE were 150 entries at the dog show held at Washington last week. Mr. J. H. Winslow judged all classes. Following is a list of the

AWARDS.

ST. BERARDS.—*Dogs:* 1st, W. H. Martenet's Leo IX.; 2d, J. J. Kupli's Lion; 3d, R. Claughton's Prince. *Puppies:* 1st, J. E. Wilkinson's Adonis II. Very high com., D. R. McKee's Leon.

NEWFOUNDLANDS.—1st, Associated Fanciers' Miro; 2d, C. Klotz's Bismark; 3d, L. Masterson's Grover. Very high com., C. Hoff's Dixie II. High com., Prof. Sheldon's Rose II. and W. S Wormsley's Little Mac.

GREAT DANES.—*Dogs:* 1st, J. R. Wingrove's Lion. *Bitches* 1st, J. R. Wingrove's Jessie II.

ULMERS.—1st, Jacob Bros.' Phyllis.

DEERHOUNDS.—CHAMPION.—Miss Sallie Woods's Bras.—OPEN—*Dogs:* 1st, Mrs. F. B. Loring's Brian.

GREYHOUNDS.—1st, R. A. Cronin's Boss.

POINTERS.—CHAMPION—C. W. Littlejohn's Fritz.—OPEN—SMALL—*Dogs:* 1st, withheld; 2d, F. S. Webster's Prince Don. *Bitches:* 1st and very high com., J. C. Schuyler's Bertie May and Blanche May; 3d, D. W. Oyster's Telie Doe. High com., E. Godey's Bessie G.—PUPPIES—*Dogs:* 1st, J. Waanstall's Don. *Bitches:* 1st, F. Pitzer's Bonnie Jean.—NOVICE CLASS—1st, F. S. Webster's Prince Don.

ENGLISH SETTERS.—CHAMPION—E. W. Jester's Glen Rock. OPEN—*Dogs:* 1st, J. J. Snellenberg's Count Hendricks; 2d, E. W. Jester's Blue Prince; 3d, R. Smith's Dixie Gladstone. Very high com., W. Nailor's Frank. High com., C. S. Killer's Flash and W. H. Ferguson's Ned. *Puppies:* 1st, F. Herzog's Jack; 2d, E. Wagner's Fritz. Very high com., Mrs. E. S. Allen's Ponto.—NOVICE CLASS.—1st, 2d and 3d, E. W. Jester's Don Dee, Sleeping Beauty and Dreaming Beauty.

IRISH SETTERS.—*Dogs:* 1st, E. Maher's Larry S;; 2d, Associated Fanciers' Leo. *Bitches:* 1st, Dr. E. C. Kirk's Berna; 2d, Associated Fanciers' Lady Fawn; 3d, C. H. Offertt's Flirt. Very high com., A. Dodge's Blonde. High com., J. Clarke's Fan.

GORDON SETTERS.—CHAMPION—*Dog:* A. H. Crisp's Alf. *Bitch:* Tioga Kennels' Rose.—OPEN—*Dogs:* 1st, C. F. Keys's Ned Keys. *Bitches:* 1st, Tioga Kennels' Vic; 2d, H. Menken's Faunie.—PUPPIES—*Dogs:* 1st, Tioga Kennels' Royal Duke.

CHESAPEAKE BAY DOGS.—1st, Associated Fanciers' Whiffler.

IRISH WATER SPANIELS.—1st, Associated Fanciers' Banshee.

COCKER SPANIELS.—LIVER OR BLACK—*Dogs:* 1st, H. Sprague's Ligero. *Bitches:* 1st, Dr. W. C. Kimpton's Floss.—ANY OTHER COLOR—1st, Associated Fanciers' Morress. *Puppies:* 1st, Miss M. H. Langley's Phyllis; 2d, J. S. Kempton's Prince Lucifer; 3d, H. Benning's Cachon.

FOXHOUNDS.—1st and 3d, Columbia Kennels' Romeo and Juliet; 2d, Associated Fanciers' Chanter.

COLLIES.—CHAMPION—*Dog:* Jas. Watson's Clipper.—OPEN—*Dogs:* 1st and 2d, Jas. Watson's Glendale and Kenilworth; 3d, Miss Florence Bayard's Dundee. Very high com., Miss Helen Wyman's Ivor and Miss Becard's Don. *Bitches:* 1st, Jas. Watson's Mavis. Very high com., H. Potbury's Flora. *Puppies:* 1st, Jas. Watson's Glendale; 2d, H. E. Barrett's Major II.

FOX-TERRIERS.—*Dogs:* 1st, J. H. Saville's Truck; 2d, Miss Prescott's Crib. *Puppies:* 1st, J. C. Hutchinson's Smart.

BULL-TERRIERS.—CHAMPION—*Dog:* Associated Fanciers' The Baron.—OPEN—LARGE—*Bitches:* 1st, F. F. Dole's Miss Norah; 2d, Associated Fanciers' Nellie.—SMALL—*Dogs:* 1st, F. F. Dole's Sensation. *Puppies:* 1st, R. E. Royce's Jessy.

BLACK AND TAN TERRIERS.—1st, Col. I. G. Morrow's unnamed.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis.

SKYE TERRIERS.—1st, withheld; 2d, W. Murdock's Nell II; 3d, G. F. McElvoy's Nettie.

TOY TERRIERS.—1st, R. A. McMurray's Jack; 2d, James Watson's Manzanita; 3d, R. A. McMurray's Fannie.

PUGS.—*Dogs:* 1st, Dr. M. H. Cryer's Othello; 2d, F. B. Noyes' Flip. Very high com., Mrs. B. Miller's Admiral. *Bitches:* 1st, withheld; 3d, S. E. Babbitt's Daisy.

POODLES.—1st, Mrs. Nelson Brown's Ikey; 2d, Associated Fanciers' Figaro.

COLLIE STUD DOG STAKES FOR 1889.—A subscription of $10 each by owners of collie stud dogs, whose get alone shall be qualified to compete—get to consist of two, the progeny of different dams, whelped on or after January 1, 1888, which may be the property of different owners. The nomination to be made and the subscription paid to the secretary on or before July 1, 1888. For the stake, an entrance fee of $2 will be charged for each one of the get in competition, and the entries will close with the regular entries for the show. The stake to be competed for at a show in the spring of 1889 to be selected by the executive committee. The subscriptions to be divided between the subscribing owner of the stud dog and the winning pair, the stakes to go to the second best pair. The death of a stud dog not to disqualify his get.—J. D. SHOTWELL, Sec'y, Rahway, N. J.

AMERICAN FIELD TRIAL CLUB.—Cincinnati, O., May 29.—*Editor Forest and Stream:* At a special meeting of the Board of Control of the American Field Trial Club held this date, it was decided to extend the time for entries for this year's Derby to July 1. The trials will be held at West Point, Miss., commencing with the Derby on December 10. Entries for this year's Derby up to this time are very satisfactory. The game wardens who are taking care of the grounds for the club report that quail were never so abundant as at the present time. Application for entry blanks should be addressed to the undersigned.—C. W. PARIS, Secretary and Treasurer.

THE RENSSELAER KENNEL CLUB.—The officers of the Rensselaer Kennel Club for the ensuing year are: President, Henry B. Thomas; Vice-President, Charles S. Francis; Secretary, Alba M. Ide; Treasurer, Dr. C. E. Nichols; Board of Managers, the above officers with Wm. M. Keenan, Wm. A. Gilbert, Ogle T. Warren, Wm. H. Warren, Albert A. Sampson, Waldo K. Chase, Nelson L. Wetherbee and Henry A. Wilson. The membership is limited to 30. The second annual dog show of the club will be held the last week in February, 1889.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Tristem. By Onota Kennels, Pittsfield, Mass., for red Irish setter dog, whelped March 17, 1888, by Tim (Biz—Hazel) out of Youbet Elcho—Rose).

Polly. By W. B. Patterson, Williamsport, Pa., for red Irish setter bitch, whelped Feb. 6, 1888, by imported Sarsfield (champion Garryowen—Currer Bell II.) out of Florie (A.K.R. 2679).

Badge. By Floyd Vail, Jersey City, N. J., for liver and white pointer dog, whelped April 9, 1888, by Nick of Naso (A.K.R. 4391) out of Devonshire Queen (A.K.R. 2731).

Midget. By Dr. H. Montague, Detroit, Mich., for fawn pug bitch, whelped May 17, 1887, by champion Max (champion Roderick—Dolly) out of Rubie F. (champion Bradford Ruby—Flossy).

Dainty. By Dr. H. Montague, Detroit, Mich., for fawn pug bitch, whelped Sept. 25, 1886, by Thunder (champion Young Toby—Lady Flossie) out of Tantrums (Pug—Lady).

NEWARK, N. J., May 30.—The Shooting Park was besieged by a crowd of New York, Jersey City and local marksmen to-day. The main objebt was to get into shape for the July festival, and judging from the work done, all the prizes will not go far from Newark. A number of sweepstakes were shot during the afternoon, in which the Newark cracks came out safe. . . . A number of Newark gallery clubs will enter individuals and teams for the short-range matches during the July festival. A number of valuable prizes will be offered. After the July festival, B. Walther and M. Dorrler, of the Zettler Club, will stand ready to make a gallery match with any two men in the world for any number of shots and any prize desired, the only stipulation being that the gallery must be not less than 75ft. in length. On Friday evening, June 15, on the Western ranges, 134½ Springfield avenue, Mr. M. Dorrler, of the Zettler Rifle Club, will attempt to make the highest number of points on record for 100 consecutive shots. Mr. Dorrler has made, for a season of twenty-seven weeks' shooting, an average of 117 out of a possible 120, and in this shoot will attempt to excel all his previous work.

WORCESTER, Mass., June 1.—Members of the Worcester Rifle Association had a meet at Broad Meadow Range on Memorial Day. The work of each man in detail was as follows, the shooting being off-hand:

Sporting rifle, 200yds.

White	10	10	9	10	8	7	8	8	10	6	—86
	10	8	8	7	9	8	10	7	8	10	—85—171

TOPEKA Kan., May 31.—The following scores were made by the Topeka Rifle Club May 30:

G I Royce	80	81	86—247	R R Moore	73	80	69—222
J L Paine	79	78	88—245	T W Bean	64	66	67—197
Robert Thompson	76	80	76—232	C C Trimmer	60	71	65—196
C R Paine	76	77	73—226	E W Sherman	61	58	57—176

Scores shot to-day:

G I Royce	92	79	81—252	J L Paine	81	73	85—239
Robert Thompson	77	84	79—240	C R Paine	77	73	77—227

OTTAWA, Ont., May 26.—The Ottawa Rifle Club shot their fourth spoon competition to-day, at Rideau Rifle Range, 500 and 600yds, 10 shots each. Martini-Henri rifles.

	500	600		500	600
Lt H Gray	44	44—88	J E Hutchison	38	37—75
M Marks	45	34—79	J H Ellis	39	36—75
Capt A P Sherwood	36	41—77	Major Perley	39	35—74
E D Sutherland	39	37—76	T Carroll	41	33—74
T McJanet	42	34—76	F Smith	39	34—73
W A Jamieson	37	38—75	T C Boville	31	33—66

These were the principal scores, many of the best shots failing to come off. Lt. Gray wins the senior class and J. McJanet the juniors.

TORONTO, May 29.—The Toronto Rifle Association held their regular practice this afternoon, and considering that the season is yet early and very little shooting done, the scores on the average are good. Below are the names of all over 65 points, Martini rifles. The ranges have been made very secure and every precaution taken to guard against danger. The mounds have been raised an extra 10ft., while in rear of each a flagman is stationed, whose duty it is to look out for boats, warn them if in hearing distance, and cease the firing. Also in rear of each mound there is a very large board, which reads, "Beware of bullets when flags are up," and can be read a long way off.

	200	500	600		200	500	600
Wm Ashall	27	31	27—85	G M Donnelly	25	23	27—75
W S Duncan	28	30	26—84	S Rennie	27	26	20—73
R Rennie	27	20	24—81	Wm Harp	23	20	23—71
Geo Thompson	27	25	27—79	Wm Mowat	26	22	20—68

LYNN, Mass., May 30.—A large attendance, g ood weather conditions, and some fine shooting is the summary of the day's event at Indian Hill rifle range to-day. F. H. Jackman's remarkably fine record of 48 bullseyes out of 50 shots with a Sharp's military rifle deserves special mention, 43 of those being consecutive shots, while the two out of the black were both close sevens. The all-comer's match would have been more closely contested were it not that all the Lynn militia acted as escort for the Grand Army, and those who took part were obliged to run in their scores in a hasty manner, while others were unable to enter.

Rest Match—200yds.

*F H Jackson	9	11	9	11	9	9	10	12	9	9—98
	8	8	11	11	11	8	9	8	7	12—93

Sergt I W Chase, Co D, 8th Regt	29	26	24	28	20	—127	+	10	—137	

*Military rifles, allowed two points on each score.

HARTFORD, Conn., May 26.—The prize shoot of the Franklin Rifle Club took place at Union Grove this afternoon. The scores were as follows:

German Target, possible 75.

E T Stephens	71	W M Farrow	66
S J Lyon	70	T T Cartwright	66
W W Tucker	70	E H Williams	65
H M Pope	69	H Leroy	64
F K Rand	69	H K Cooley	63
Z C Talbott	68	L S Allen	63
H Engle	68	T H Britten	62
W S Loveland	68	J N Lane	61
E C Henn	68	F Rentchler	58
D Stuart	67	John Russell	55
D J Jordan	67	J Heubler	55

Bullseye Target.—H. Engle, first bull; W. M. Farrow, last bull; H. M. Pope, W. M. Farrow, most bulls, 11 each.

BALTIMORE, Md., May 29.—The Maryland Rifle Club shot a match with the Williamsport, Pa., Rifle Club to-day. Both clubs shot at their own range, and the targets and official scores were exchanged by mail. At the Baltimore range the light was very trying, though the shooting was the best the club ever made in the match. The "0" in both Mr. Field's and Mr. Weaver's scores were in the "3 circle." Mr. Weaver used an infantry gun, without the regular allowance, the other shooters using sporting rifles. Following are the individual scores:

Dr Councilman	7	7	7	10	5	5	5	9	4	6—65
Capt G F Wheeler	5	10	8	10	8	4	5	7	6	9—72
P S Field	5	6	8	5	4	8	5	0	7	8—55
Louis Bell	8	9	9	7	6	5	9	10	7	9—79
Dr R D Coale	7	7	8	9	6	8	10	7	8	7—77
J S Weaver	4	8	7	9	0	6	5	4	9	5—57
M O'Brien	6	7	10	7	10	8	8	9	10	6—81
F T Redwood	9	5	5	8	7	9	10	5	9	6—72—558

National Rifle Association rules governed. No shot less than 4 counted. Hinman's target; range 200 yards. Scorer, Jas. J. C. Scully.

PITTSBURGH, Pa., May 30.—There was a larger attendance of rifle shooters at the Pittsburgh Rifle Club shoot to-day than there has been at any local rifle contest for years. The shooting was below the average but it was close enough to be interesting. Mr. Briggs surprised everybody by defeating champion Huggins. Following are the scores:

						Average.
J W Briggs	71	83	82	87	81	81—82½
G A Huggins	83	70	84	87	79	79—82
J B Jones	75	74	74	74	81	..—75½
Dr Orr	58	66	..	..	..	..—62
Dr Swentzel	65	58	..	..	..	..—61½
Dr Buckstoe	57	58	..	..	..	..—57½
J Carson	41	58	64	..	..	..—54½
J England	46	54	65	60	65	67—57⅝
L Brehm	72	72	..	..	..	..—72
D Stoner	48	45	57	..	..	..—50
— Brown	79	60	70	..	..	..—69½
T H Orr	60	57	..	..	..	..—58½

SALEM, Mass., May 30.—The shooting at the Independent Association range to-day was for State medals, Association prizes and medals and practice match with military rifle, 200yds., standard target.

State Medals.

R W Ropes	34	34	—20
J E G Hall	44	33	—18

Association prizes, 5 scores, 5 shots each:

G A Lawrence	40	38	38	37	30	P F Packard	29	29	28	26	24
J H Johnson	31	30	29	28	24						

The next shoot was for the Association medal, which was won by P. F. Packard.

P F Packard	7	4	3	8	7	—29				

THE PAINE-BENNETT SHOOT.—Springfield, Mass., June 4.—The first day's shooting at Hampden Park this afternoon between Chevalier Ira A. Paine, of Providence, R. I., and Frederick E. Bennett, of Boston, for the revolver championship of the world and $2,000, resulted in Paine's securing an advantage of 50 points over his opponent, to be counted in the final result. Paine scored 867 points and Bennett 837 out of a possible 1,000. According to agreement the shooting was done with Smith & Wesson's .44-caliber Russian model revolvers, on an American standard 200-yd. rifle target, at 50 measured yards. The weather was bad for good shooting, as there was a strong and gusty wind blowing, and the scudding clouds and a peculiarly bright blue sky made sudden and frequent changes of light and shade which baffled all attempts at sight regulation. There was an attendance of from 200 to 300 interested spectators. Myron W. Bull, of Springfield, acted as referee, and Newton N. Dexter, of Providence, was judge for the chevalier, while J. N. Fellows held the same position for Mr. Bennet. Chevalier Paine shot the first string of 10 shots and scored 81 points, his poorest score. Mr. Bennett followed with 82 points, but only scored 79 on the second string. It took Bennett nearly twice as long to shoot as it did Paine, and he waited longer for a breeze to die out or a cloud to pass. The score stood:

Paine	8	9	8	7	8	6	7	9	6	10—81
	7	7	10	8	8	8	7	8	10	10—84
	8	8	10	8	10	9	10	8	9	7—86
	9	8	9	10	10	8	7	8	9	10—88
	10	10	6	10	9	8	9	10	10	7—89
	10	8	8	10	9	9	10	10	10	9—93
	7	10	10	9	9	7	10	8	10	8—88
	10	8	8	10	10	10	10	7	7	9—89
	8	8	7	9	9	9	9	9	8	7—84
	8	7	10	10	8	9	9	8	7	9—85—867
Bennett	6	8	8	8	9	10	8	9	7	9—82
	8	7	9	9	6	7	8	6	9	10—79
	10	10	7	10	8	10	9	10	10	8—92
	9	9	9	9	8	9	7	9	9	10—88
	9	8	9	9	10	9	9	8	9	6—86
	9	9	10	7	8	8	10	7	9	8—85
	8	9	8	6	8	8	6	10	9	8—80
	8	9	8	9	8	9	6	8	8	8—81
	7	8	8	6	10	7	9	7	7	10—79
	9	7	9	6	9	8	10	8	9	10 - 85—837

The score of Tuesday was: Bennett, 887; Paine, 879.

DOVER, N. H., May 30.—Scores of the Cocheco Rifle Club, 200yds.:

Record Match.

Wentworth	9	7	10	7	8	9	9	9	8	10—86
Stevens	10	9	8	9	10	8	7	7	8	7—83
Wiggin	10	7	7	8	8	10	7	5	9	9—80
Good	8	6	9	10	6	8	8	10	7	8—80
Horton	10	8	0	10	5	6	8	8	6	9—70
George	7	3	5	10	4	4	6	7	5	2—53

Fifty-shot match: Wiggin 387, Stevens 384, Horton 330.

WORCESTER, Mass., May 30.—There was a light attendance of the marksmen at Broad Meadow range to-day, and the all day shoot languished somewhat. The weather was good, in fact exceedingly good in the morning, but for some reason or other the scores were not remarkable either forenoon or afternoon. Those shooting in the forenoon had rather the best of it, as the light was strong and steady. The usual collation was served at noon. The following best scores were made:

Sporting Rifles—200yds. Off-hand.

White	10	10	9	10	8	7	8	8	10	6—86
Thomas	10	6	8	9	9	9	10	8	9	9—87
Leighton	9	8	6	7	8	7	10	10	10	3—78
Brown	9	9	10	7	9	10	9	6	8	6—83

Military Rifles—200yds.

White	4 4 5 4 5—44	Ferguson	4 4 4 5 4—41
Morgan	4 5 3 4 4 5—42	Jones	4 5 4 4 4 4—41
Early	3 4 5 4 4 5—42	Logan	5 4 3 4 5—41
Hunt	4 4 4 5 4 4—41		

WALTHAM, Mass., May 30.—Practice rifle shooting by the Hillside Rifle Club resulted as follows: Off-hand, 200yds—E. A. Emerson 74, J. K. Lowe 73, W. H. Stone 70, G. Bassett 63, C. F. Richardson 49. Rest Match—E. A. Emerson 96, W. F. Foster 95, J. V. Cosbushey 73. Lawrence Landregan, of Co. A, Fifth Regiment, made a clean score of 35 in seven shots at 200yds.

NEW HAVEN, May 30.—The impressive service of the members of the G. A. R. at the grave of Col. Merwin to-day were somewhat marred by the fact that two or more of the eight guns used in firing the salute failed to respond. The guns were Peabodys, borrowed from the Second Regiment, C. N. G., and selected for their special fitness for the purpose. This failure of one-quarter of the guns used on this occasion to respond naturally suggests the inquiry if the guns carried by the regiment are in any better condition, as a whole. A well-known military man of this city, now an officer of the Second Regiment, said that it was a notorious fact, well-known among military men, that the guns were practically "good for nothing," and that should any trouble arise and the people need the strong arm of the militia for protection, it must necessarily fail them because of this imperfection of its weapons.

REMINGTON ARMS CO.—Ilion, May 28.—A warranty deed has been filed in the Herkimer county Clerk's office by which Hartley & Graham transfer to the Remington Arms Company the Remington plant for the consideration of $200,000. The conveyance includes all the lands, premises, tenements and hereditaments, property and rights, real and personal, of whatever nature, and being the same property conveyed by deed from Albert N. Russell and Addison Brill, receivers of the late firm of E. Remington & Sons, to Hartley & Graham. The documents caused a rumor that the property had again come into the hands of the Remingtons, but the fact of the matter is that Hartley & Graham recognized the value of the Remington name in connection with the work of the plant and therefore purchased the charter of the old Remington Arms Company. The trustees named by the charter for the first year are Samuel T. Russell, John A. Giblin and John L. McMillan. Last week two new trustees were added—F. C. Cross and W. W. Reynolds. The terms of office of the first three named expire on July 7 next, when undoubtedly three others will be named. Messrs. Hartley & Graham will operate the plant under the firm name of "The Remington Arms Company." Six car loads of steel have already arrived consigned to the Remington Arms Company and the plant will soon start up. Willard Hartley, secretary and treasurer of the new corporption, is in town.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FOREST AND STREAM DECORATION DAY TROPHY.

CONDITIONS FOR THE COMPETITION FOR 1888.

THE competition will be open to all gun clubs in the United States which were organized by March 15, 1888.

To be competed for by teams of three club members, each man to shoot at 15 artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $10 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient.

Any target manufactured by the following concerns may be used, viz.: The Ligowsky Clay-Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; The Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, New York city, agents. No more than one style of target can be used by any one team.

Targets may be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, 5 at a right angle to the right, and 5 at a right angle to the left.

Guns of 10, 12 or smaller bore may be used; both barrels permitted. Distance from trap, 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder with 1⅛oz. shot. Gun to be held below the armpit until shooters call "pull."

Prizes to be determined on the aggregate of best 3 in 5 shoots, held between May 15 and Sept. 15, 1888. Each shoot to be held on a ground open to the public and at least 2 weeks' notice of the intended date of each shoot to be sent to the office of FOREST AND STREAM.

First Prize.—The team making the highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

If there are ties, they will be decided according to the rules of class shooting. In case of a tie on highest score the tie must be shot off as directed by FOREST AND STREAM, and the Trophy will be awarded to the team then making highest score. The second prize will be given to the team or teams making the second best score in the match. If two or more teams tie on second best score, the tie must be shot off unless the money be divided by unanimous consent of all interested. The remaining prizes will be awarded in the same manner. Ties will be shot under the same conditions as those of the match.

Points not provided for in these conditions to be governed by the National Gun Association rules.

Entries for the Trophy match must be mailed to the Forest and Stream Publishing Company on or before May 31. The entry of each team must be accompanied with entry fee of $10. The members of each team must be named with the entry, and each shooter must be designated by his real name.

Scores must be recorded in ink or indelible pencil on printed blanks which will be furnished, and their correctness certified by the scorer and two officers or other members of the club not contestants and witnesses of the shooting. They must be mailed within twenty-four hours after the completion of the match.

There are no restrictions as to how the different strings must be shot; *i. e.*, a shooter may shoot all straightaway birds before shooting the others, or may alternate.

The one-trap rule does not prevent use of more than one trap, so that two or three may be shooting at the same time, to expedite matters, provided one-trap conditions are preserved.

The N. G. A. rule is that all targets to score must be broken in the air before falling to the ground.

In all cases of dispute the decision of the FOREST AND STREAM will be final.

Members of the team must shoot on the same ground.

One score only to be shot, not the best score selected from a series. The Trophy score may be merged with that of another match if previously announced.

No changes of personnel of teams to be made except in case of death or physical disability.

A second barrel break counts a whole bird.

THE NEW YORK STATE SHOOT.

AUBURN, May 28.—There was a great gathering of armed men about the Osborne House to-day, and this evening the sportsmen began the fun with a joyful meeting of the Association. The delegates were given a hearty welcome, and one organ of public opinion bade the visitors make themselves at home in the following words:

"On behalf of the citizens generally we extend to each and all of the visitors a hearty welcome and *accolade*. The sportsmen we have known have been generous-hearted, hospitable fellows, and to give the gun as the sign manual has meant an invitation to come up to the table and be fed and taken good care of in the guest chamber. Go where one will the sign of a gun has always meant good treatment and sometimes good, long, old-fashioned east-wind stories about how he cut off his head with a rifle ball or how he killed twenty straight. The gun and the rod are emblems of peace and fraternity that go further than any other emblems, mean more and are more generally potent as means of getting mankind down to one common brotherhood."

When President Tuttle called the meeting to order, the loud hum of voices ceased and Geo. B. Wright, Jr., president of the Auburn Gun Club, was introduced. Mr. Wright spoke as follows: "Gentleman—I have learned that it is the duty of the president of the local club to welcome you and your friends to our city and to extend to you our hospitality. Upon me, therefore, as president of the Auburn Gun Club, devolves that pleasant task, and I, in the name of the club, do welcome you most heartily and cordially. I know that the Auburn Gun Club is one of the youngest clubs in the Association, but what its members lack in experience they have tried to make up in good hard work, and be assured they will do what lies within their power to make your visit to Auburn one of pleasure and the State shoot one of the best ever held. And now, gentlemen, hoping that if you do not take the first prize you will take all the rest, I welcome you once more to Auburn."

The following is a list of the delegates and the respective clubs represented:

Union Gun Club, of East Aurora, F. B. Kelsey, W. B. Moore, Edward Andrews; Rome Gun Club, T. H. Striker, W. R. Huntington, M. R. Bingham, A. H. Galley, J. S. Wardwell; Port Byron Gun Club, Wallace Hadden, Manro Bennett, H. A. Stevens, J. D. Burritt, T. F. Dixon; Cortland-Homer Gun Club, Edward Harrington, A. Schemerhorn, Edward Ridge; Cayuga County Rod and Gun Club, Wm. Embody, Henry Lewis, E. R. Richardson, John Poole, George M. Miles; Genessee Sportsman's Club, of Irondequoit, William Richmond, Hicks, Risenger, Hadley; Queen City Club, Barker, Tolsman, George Wride, Matthew Wasser, Arthur Coombs, Chas. Ohmig; Onondaga Sportsman's Club, G. C. Luther, Munroe Smith, Edward Hudson, D. M. Lefever, F. Hudson, Jr.; Northern Wayne Gun Club, of Wolcott, Benjamin Catchpole, T. M. Keel, Milton McIntyre; Oneida County Sportsmen's Association, of Utica, W. H. Booth, W. H. Beckwith, H. L. Gates, A. Sharpe Hunter, W. C. Harris; Buffalo Audubon Club, Henry Clark, George Vine, Otto Besser, Jr., W. E. Story, John B. Sage; Auburn Gun Club, S. F. Rathburn, Henry N. Howland, Irving Brigden, Wm. Wheaton, W. H. Stewart; Lakeside Gun Club, of Geneva, H. B. Whitney, J. S. Barnes, J. G. Stacey, C. J. Rumsey, F. W. Kendall.

The secretary read applications for admission to the Association from the Cortland-Homer, the Elm Grove Gun Club, of Albany; the Union Gun Club, of East Aurora; the Port Byron Gun Club, of Port Byron; the Cayuga County Rod and Gun Club, of Auburn, and the Rome Gun Club, of Rome, N. Y.

Mr. Gates, of Utica, moved that the several clubs be elected to membership in the State Association, which was done by acclamation.

Mr. Hadley, of Rochester, asked to know how the Association stood financially. Secretary Sage said he could inform the gentleman, and after referring to his books said: "At present the Association owes me just $1,998.21."

The kingbird was adopted as the target. After a discussion about the classification of shooters the session closed.

May 29.—The morning of the first day of the State shoot opened bright and sunny, and the hearts of the marksmen were glad with the anticipation of a good day's sport, but at 8 o'clock the sky began to cloud over and shortly after 9 the rain began to fall. Promptly at 9 o'clock, however, the members of the Auburn Gun Club and the delegates from out of town clubs were at the fair ground, and soon the crack of their shotguns could be heard far up into the city. The rain caused no cessation in the shooting, and two squads were continually shooting at two different traps. The traps were located in the middle of the grounds, just opposite the grand stand, with the sweepstake trap on the east side of the ground. The traps were of the Crittenden make and kingbirds were used. The traps were located 18yds. from the shooting stands, the ties to be shot off at a distance of 21yds. The scores made on the first shoot were as follows:

Contest No. 1.—$500 in prizes; entrance $4; 12 single birds; 77 entries:

90 Per Cent. Class.

Besser	111111111101—11	Whitney	111111100111—10
Peacock	110111000111— 8	Luther	101001111111— 9
Smith	010011111111— 9	Kelsey	101111111111—10
McMurchy	101111111101—10	Tuttle	111111111111—12
Wagner	111111111101—11	Fleischer	010000111110— 6

Ties divided.

80 Per Cent. Class.

Elliott	101111011111—10	Hookway	011110101110— 8
Booth	001101101111— 8	Spangler	010111111000— 7
Stewart	111111111000— 9	Hudson	111111110110—10
Stacey	010101111110— 8	Kendall	111010001111— 8
Barnes	111111111111—12	Baker	111101011111—10
Lefever	011101111111—10	Smith	111111111111—12
Gavitt	111110111111—11	Gardner	001111110111— 9
Forsyth	111001100011— 7		

In shoot-off Smith won first, Hudson third, fourth divided.

70 Per Cent. Class.

Catchpole	111111001111—10	Schemerhorn	101101111011— 9
Steele	110101111011— 9	Hicko	011111110111—10
Tripp	100011110110— 7	Richardson, Jr.	110011001011— 6
Harris	011000110101— 6	Brigden	011111101111—10
Story	010001001101— 5	Embody	001110111110— 8
Rathbun	111101111101—10	Wheaton	100011101111— 8
Perr	101010110100— 6	Lewis	111111111111—12
Hadley	111011101111—10	Felton	111111111111—12
McIntyre	111111011011—10	Ferree	011111101111—10
Walters	111111111011—11	Fuller	111011110110— 9
Mother	000001010100— 4	Richmond	111110101000— 7
Howland	111111101110—10		

In shooting off Lewis won first and C. M. Felton second best

Walters won second prize, H. N. Howland won third in shoot-off, fourth divided.

60 Per Cent. Class.

Peterson	111101111010— 9	Hudson	101110001101— 7
Howell	001110110111— 8	Kneistern	110011111100— 8
Wride	111111100111—10	Moore	011111111111— 9
Keel	101100000101— 5	Andrews	001111011111— 9
Vanderlicu	000001011001— 3	Kerr	101101011111— 9
Rissinger	101111111100— 8	Hadden	001100000010— 4
Stapleton	011001011000— 5	Paddock	110000100000— 3
Rosecrans	101101010100— 6	Beckwith	101111111111—11
Parshall	001010001111— 7	Blakely	100011111111— 9
Sinclair	010011010001— 5	Kipp	110110011000— 6
Kerr	101111010110— 8	Rumsey	110111111110—10
Church	111111111111—12	Rickman	011111111110—10
Ayres	000001110001— 4	Norton	111101111111—11
Rindge	001010100101— 5	Burns	001101111001— 7
Doan	010101110101— 7		

Third and fifth divided, fourth won by Kerr on shoot-off.

In the walking match of the afternoon the shoters started from the score and walked toward the traps which are screened and pulled while the shooter is walking, thus giving the shooter the best imitation of field work ever thought of. There were 90 entries in the match. Norton, of Geneva, secured the A class prizes, he being the only one breaking the birds consecutively. Tuttle and Kelsey divided the second prize. In the ties on 3 birds Gardner won first and Whitney won second prize. The ties on 7 birds were divided between McMurchy, Luther and Winton. In the ties on 6 birds Booth won first and Bessinger second prize.

At the evening session of the association Albany was selected as the meeting place next year. Thos. H. Green, of Albany, was elected President; H. L. Gates, of Utica, First Vice-President; Geo. C. Luther, of Syracuse, Second Vice-President; J. B. Sage, of Buffalo, Recording Secretary; H. B. Derby, of Albany, Corresponding Secretary, and D. Lefever, of Syracuse, Treasurer.

May 30.—To-day brought out some remarkable shooting in the contest for team championship.

In 90 class ties, McMurchey and Fleischer divided, C. W. Tuttle won second. Manro Smith and E. H. Smith divided third and Besser won fourth. In 80 class ties, Gardner won first, Lefever and Montgomery divided second. Hookway and Stewart divided third and Chamberlain won fourth. In 70 class ties, Hunter, Brigden and Walters divided first, Harris and F. Steele second, Howland won third and Rathbun won fourth. In 60 class ties, Hanck, Rumsey and Peterson divided first, Wride won second, Paddock and Strange divided third, and Moore won fourth. Not one of the contests of this morning was finished at noon, when darkness and a heavy thunder shower set in, which stopped further shooting for to-day.

May 31.—Another beautiful day with light winds and a cloudless sky greeted the grand merchandise contest. The same sportsmen who were in the contests yesterday entered to-day, and in addition a number of others were present, some of whom entered the lists.

An accident occurred at the middle trap this morning which might have resulted fatally. One of the marksmen was preparing to shoot when his gun went off accidentally. It was pointed out toward the field and the shot struck the roof-shaped box which is used to shield the boys who load the traps. As luck would have it, the charge passed directly through a knot hole near which one of the boys were seated, and so narrow was his escape that the shot grazed his cheek, taking off the skin.

The first contest this morning was No. 5 with prize valued at $1,000, $5 entrance fee, 18 kingbirds. The score follows:

90 per cent. Class.

McMurchy	111111111011111101—16	Fleisher	001111110011101111—13

Winners in the 90 class: Wagner, Rochester, Lefever hammerless guns; Luther, Kelsey, Minton, McMurchy and Besser, divided, Paris range; Smith, Syracuse, 4,000 cigarettes and 6lbs. of tobacco; Tuttle, Auburn, spring tooth harrow; Fleischer, Rochester, pair of pantaloons; Peacock, Westfield, smoking set.

Eighty class: Brigden, Auburn, Parker gun; E. Hudson, Syracuse, Happy Thought range; Baker and Stewart divided, silk dress pattern; Barnes, Geneva, lawn mower; Booth, Utica, dozen Danz decoy ducks; Gavitt, Lyons, King's quickshot powder; Hookway, Syracuse, rubber hunting boots; Elliott, Utica, amethyst ring.

Seventy class: Howland, Auburn, L. C. Smith hammerless gun; Ferree, Cayuga, Ithaca gun; Rathbun and Hicks divided, single harness; Schemerhorn and Hunter divided, gents' boots barrel of oil, pair of razors: Koch, buffalo, geese decoys, box cigars, set axles; Beckwith, Utica, Hazard powder, cake basket, Daisy chair; Richmond, Irondequoit, fly-rod reel; Evershed, Dunlap hat, bridle and martingales; Peterson, Auburn, Empire wringer, box of cigars; Candee, Waterville, box of cigars.

Sixty class: E. Hudson, Jr., Syracuse, Ithaca hammerless gun; Andrews, Sardinia, Osborne mower; Talsma, Olmstead, Rindge, divided sewing machine; Heffer, Hadden, Sinclair, road cart; White, Auburn, watch and chain, gents' shoes; Kerr, Auburn, barrel flour, rubber coat, dozen perfume; Carr and Lewis divided piano cover, four cases lager; Kipp, Montezuma, trunk, smoking set; Rosecrans, Auburn, rocker, pail chewing tobacco, clothes wringer; Strange, box cigars. For the lowest score in the 60 per cent. class Ben. Doan, of Auburn, was presented two dozen bottles of Hamilton's emulsion.

The Association met in the Audubon's tent on the fair grounds at 12 o'clock to-day and was called to order by President Tuttle. Mr. Richmond, the committee appointed to see Secretary Sage concerning the financial affairs of the society, reported that the committee had been unable to find Mr. Sage, but they had determined that his claim against the Association was invalid. Mr. Wright moved that the report be tabled until next year. This was carried. Several delegates spoke upon the matter and some criticized Mr. Sage very severely, claiming that he ought to have turned all moneys over to the Association and let them order his salary paid. The matter was finally referred to the present committee with power. The question of the classification of delegates in State shoots was left to the Albany club, under whose auspices the next State shoot occurs.

Mr. Hadley called up his resolution that clubs which wish to enter the Association be allowed to enter free. This was amended by Mr. Richmond, that the entrance fee be decreased from $10 to $1. There was considerable discussion on the matter, but the amendment and motion were finally carried, and the convention adjourned.

June 1.—At 9 A. M., the usual hour for the gunners to begin shooting, it was cold, wet and disagreeable at the fair grounds. At 9:30 however the irrepressible marksmen began to assemble and, wrapped in heavy overcoats, commenced to get their guns in order and prepare for the sixth contest. Although shaking with cold, the marksmen were jolly and good natured and in the tents of the Audubons, Queen Citys and Uticas everything was booming and lively. The Auburn Gun Club made the Utica men a handsome present this morning and a jolly time was enjoyed in their pavilion. Mr. Candee, of the Utica or Oneida County Club, also presented a gift to the Audubons. Many of the teams which are to represent the different clubs in the Dean Richmond shoot had not been appointed this morning. It is claimed that Mr. McMurchey, who is shooting with the Onondaga club, is not a resident of the State and that he is a professional. The Buffalo clubs and, it is said, the Rochester club made an agreement not to enter the contest if he is allowed to shoot. The entrance fee for contest No. 6 was $3.50, 10 kingbirds for each man,—ties shot off at 5 single kingbirds.

Winners in 60 class: 1. Babcock. 2. Blakely, Syracuse. 3. Andrews, Kipp and Stillston divided. 4. Kerr, Auburn. 5. Olmstead, Yorkshire. 6. Rickman, Rochester.

The big day of the State shoot opened yesterday with a high wind that threatens to do damage to the score of the sportsmen in the last contest of the week, but the afternoon brought good weather and remarkable shooting. As early as 1 o'clock the people began to gather on the grounds to witness the closing match for the Dean Richmond trophy and the championship of the State, and a large and interested crowd watched the shooting from the beginning till 7:45, when the last bird was shot. Six teams of three men each paid their entrance fee of $30 and fought for the coverted prize with desperation, challenges being made so frequently as to delay the match considerably The six captains of the teams selected Wm. Richmond, of the Genesee Club, and W. E. Storey of the Lakeside Club for judges, and the match opened with the Onondagas at the trap.

THE PHILADELPHIA TOURNAMENT.

THE four days tournament of the North End Gun Club ran from May 28 to May 31 inclusive and was very successful. The rainy weather affected the attendance, while the withdrawal of Mr. Hincken's prize affected the temper of the contestants.

The tournament opened on the 28th with the North End Team No. 1 at the traps, facing a northeast rain storm. Under the circumstances their score was the best during the tournament.

The Wawasetts were fortunate in getting the best day of the four for their team shoot, but they deserve unlimited credit for making such a brilliant exhibition, their score in the doubles (77 out of 100) being particularly notable.

The management of the tournament was first class throughout, and speaks well for the next tournament, which the North End Club will give during 1889, on June 5th, 6th, 7th, 8th and 9th, when a magnificent Challenge Cup will be put up emblamatic of the championship of the world.

The Wayne Gun Club team was the last on the list, and included the following gentlemen: Messrs. Morris, Sparks, G. Hessler, Davis, F. Hessler, Seidel, Shephard, Scargle, Henry and Poinsett. Just before getting ready to go the score, a prominent member of the team was taken sick, and compelled to go home. The team therefore withdrew.

Besides the principal matches there were some 25 sweeps and the Inter-State amateur championship shoot for a handsome gold medal donated by the North End Gun Club; entrance, 50c.; 25 blue rocks; 42 entries. By agreement, all those having missed in the first nine birds shot at were laid off, and those with straight scores continued the contest. These were Crowther, Pack, Wolstencroft, Richards, Miller and Shepard. Richards dropped out on the 10th bird, Shepard on the 11th, Crowther on the 13th, and William Wolstencroft on the 22d. Amidst great excitement, Pack and Miller continued the struggle for supremacy; each shooter breaking his 25th bird, the excitement was increased. Peck then went to the score in his usual confident manner, and pulverized his twenty-sixth bird. This was the break also caused the tension of Mr. Miller's nerves to give away, and he showed his nervousness by missing. Mr. Peck's friends surrounded him and showered their congratulations.

ELECTRICAL TRAP PULLING.

Editor Forest and Stream:

With the approach of warm weather the sportsmen of the Missouri Valley have closed the spring campaign against the migratory geese and the swift flighted plover; field outfits and 5½-dram cartridges are laid aside, and the members of the various gun clubs are gathering again in friendly competition at the trap, renewing the pleasant associations and spirit of comradeship that heighten with touch of gold so many hours of a sportsman's life. The Bismarck Gun Club has awakened from its long winter sleep, and on its finely located grounds the booming of guns, the flying of shattered targets, and the crowd of members and spectators at the shooting stand, tell of the healthy interest in outdoor sports that exists strongly among us.

Last Friday the club held its second weekly contest. It decided to try the "walking shooting" suggested in a late issue of the FOREST AND STREAM, and this novel innovation was voted a great success. It was very much enjoyed and warmly endorsed, and will hereafter be a permanent feature in the club's weekly meetings. The interest in the change was much increased by a new and excellent device for springing the traps, an invention of the fertile brain and practical knowledge of a member of the club, a practical electrician Mr. G. E. Fletcher.

This invention consists of an arrangement for springing the traps by electricity, and is certainly the best practical improvement made in the appurtenances of trap shooting since the adoption of the artificial target. It consists of a battery, connecting wires and a series of buttons. The attendants set the traps in the usual way, and the connecting wires run to a point behind the shooter, where the operator sits at a small key board. The apparatus is exceedingly simple, requiring a battery of only one cell to operate it. The trap selected is sprung by a touch upon its corresponding button, as one would press a call bell. The current releases the trap by acting upon a mechanism as simple as the battery. The action is quick, noiseless and very sure. In using double traps, two wires and one button only are required. In using more than one trap singly, one more wire is required than the number of traps in use. For instance, if the shooting is from five traps, the device requires six wires and five buttons.

Mr. Fletcher has applied for letters patent, covering the idea of discharging traps by electricity. To say that the last meet was enjoyable, hardly expresses it. The novelty and interest of the "walking shooting" were stimulating, and with the silent discharge of the trap, the flight of the inanimate target proved to the surprise and satisfaction of the shooter to be as close an imitation of a bird rising from the field as it seems possible to invent. There was no jerking of strings, no movement of cords to give the shooter any warning or hint to take advantage of. As he advanced with faculties all alert, silently and without warning the target rose from the ground and sailed away like a swift and noiseless bird; and the look of eager expectancy, the pause, the quick raising of the gun, the steady poise for a moment, and then the sharp report, and the success or failure of the shot made up a tableau vivant that quickened the blood and stirred the enthusiasm of the groups that clustered near the gun racks, absorbed with interest in the result. We owe you thanks, Mr. Editor, for your excellent suggestion, and hereafter the shooting of our club will be done "walking."

J. G. RAPELJE, President Birmarck Gun Club.

BISMARCK, Dakota.

MINNEAPOLIS, May 15.—The most successful gun tournament ever given in the Northwest closed late this afternoon, after a day of great enjoyment to the participants. The weather was very favorable, and some excellent shooting was done. The outside marksmen were very successful, and return to their respective homes with more money and prizes than fell to the local shooters. There were 29 entries in the first event, a shoot at 7 live birds. The score was: J. G. Smith 7, Beck 4, Ruby 4, Skinner 6, Blakely 5, Balsam 5, Daily 6, Ruble 6, Chandler 6, Burke 6, Anderson 5, M. F. Kennedy 6, Scriver 5, Vallie 6, Forbes 4, Cutler 4, Hanson 5, Tabor 6, Dyer 5, Holt 7, Kruger 7, Van Saun 5, Durant 7, Koch 6. J. G. Smith, Kruger, Holt and Durant divide first, Vallie and Koch divide second and Balsam third.

Ten Peoria blackbirds were sent up for the second event of the day in 6 singles and 2 pairs. Seven men killed 10 straight birds. The score was: Skinner 10, Daily 10, Chantler 9, Balsam 8, Cooper 9, Newton 10, Holt 9, Jewell 6, Tuttle 9, Van Saun 9, Forbes 7, Anderson 10, Smith 9, Raines 5, Blakeley 6, Latz 5, Vallie 6, Burke 9, Krueger 9, Hanson 10, Dunn 9, Paulson 6, Wallace 7, Larson 5, Hanna 8, M. F. Kennedy 8, Marshall 8, Noreen 10, Ensign 7, Ahlstrom 6, Westerson 3, Hadfield 5, Cook 5, Tabor 7, Ed. Morse 9, Dalton 7, Whitcomb 5, Dyer 6, Turner 6, Lawrence 7, Gordon 5, Williams 5, Nicholson 4, G. Morse 6, Ruble 10, Eli 8, Ruby 6, Grant 6, Pye 5, Gossman 6, L. F. Kennedy 8, Shott 7, Cutter 7, Durant 9, Boardman 7, Steele 9. Noreen won first, Van Saun and Ed. Morse divided second, Forbes won third and Ahlstrom fourth.

The marksmen got nerved up for the last regular event on the programme. It was a shoot at 9 singles and 3 pairs. Balsam and Tabor succeeded in hitting 15 straight birds. The score was: Hanson 14, Noreen 14, Anderson 12, Skinner 10, Ed. Morse 11, Van Saun 14, Daly 10, Balsam 15, Turner 11, Newton 14, Jewell 13, Dalton 13, Marshall 7, Williams 12, Forbes 9, Paulson 9, M. F. Mundy 13, Cooper 12, Larson 12, Nason 7, Gordon 12, Ingalls 9, Latz 9, Cutler 7, Schuler 9, Highhouse 8, Chantler 13, Blakely 13, Pye 10, Wallace 10, Kruger 11, Rose 9, Tabor 15, Smith 11, Lawrence 11, Whitcomb 8, Dyer 10, Cook 9, Vallie 10, Ensign 14, Dunn 8, Ruble 13, Ahlstrom 13, Geo. Morse 10, Goosman 8, Tuttle 13, Holt 13, Durant 12, Burke 13, Hanna 13, Westerson 13, L. F. Kennedy 13, Ramrod 10, Thomas 10, Balsam and Tabor divided; Hansen, Noreen, Van Saun, Newton and Ensign divided second money; Ruble, Tuttle, Holt, Burke and Hanna divided third money; Cooper won fourth, and Turner and Lawrence divided fifth money.

The most interesting feature of the tournament was the last feature of the day—a shoot with a possible of 100 blackbirds. In many instances the prizes were divided, and in others the ties were shot off. Below is given the order of the averages, with the number of birds broken out of the possible 100:

Van Saun	87	Krueger & E Morse	73
Newton & Hanson	86	Gordon	72
Balsam & Ruble	85	Whitcomb	71
Chantler & Skinner	84	Pye & Cutter	70
Holt & Westerson	83	Turner	67
Tabor & Daly	82	L F Kennedy, Wallace & Williams	66
M F Kennedy, Jewell, Ensign & Noreen	81	Lawrence & Paulson	65
Burke, Dalton, Dunn & Hanna	80	Marshall	64
Vallie	79	Elliott	63
Blakely	78	Cook	61
Smith	75	Shott	59
Forbes	74	Latz & Goosman	58
		Schuler	54

Cooper shot off with Van Saun for first prize, and Tuttle, Anderson and Durant shot off with Blakely, who won the prize for tenth best average. Ahlstrom and Dyer shot off their ties with Forbes, who secured twelfth place in the average shoot.

OTTAWA, May 23.—The St. Hubert's Gun Club are elated at the stand they were able to make during the week with the crack shots from Toronto and Montreal. The club are determined that at the next attempt they will do still better, and intend sending a strong contingent to Montreal on Dominion Day to contest in all open events. Shooting will be kept up right along, and on Saturday the following was the result:

First sweep, at 10 birds each, 18yds., 5 traps:

Dr A Martin	1011111111—9	E White	1111000111—7
Dr Horsey	1111111110—9	R Dalton	0111000001—4
G White	0111111011—8	J Deslauriers	0110001001—4
B Thompson	1111011011—8	R Stevens	0100110010—4
A Throop	1101010111—7		

Martin first, G. White second, Throop third, Dalton fourth.

Second sweep, same conditions:

J Deslauriers	1011111111—9	A Throop	0100100011—4
B Thompson	1110101111—8	R Dalton	1000000000—1
Dr Martin	0111100010—5		

Third sweep, same conditions:

G White	1111011111—9	A Throop	0111010110—6
Dr Horsey	1110111001—7	E White	0110110100—5
J Deslauriers	0111100111—3	R Dalton	1110010001—5

Horsey second.

Fourth sweep, same conditions:

G White	0111110111—8	E White	0101011101—6
A Throop	1101100111—7	R Dalton	0111100101—5
J Deslauriers	0011011111—7		

The following scores were made at the weekly shoot of the Peterboro Gun Club, At 10 Peoria blackbirds, screened drop, 18yds. rise:

R Tivey	1101101111—8	J D Collins	1101110111—8
H Calcutt	1010100101—5	H W Kent	0111111100—7
Judge Weller	0011100011—5	H Reil	0110001101—5

NEW YORK SUBURBAN SHOOTING GROUND.—There will be a meeting of those interested in the organization of the New York Suburban Shooting Ground Association, at the office of the Atlantic Ammunition Co., 291 Broadway, Friday afternoon, June 8, at 1:30 o'clock.

CLEVELAND, O., May 30.—The Kirkland Gun Club held it annual Decoration Day shooting tournament on the club range. No definite programme had been announced previous to the shoot, yet the turnout of clay-bird shots were fair. Sweepstake No. 1, 9 single blue rocks at 18yds. Entrance, $1: Jones 8, Prechtel 8, Damm 3, Frosty 7, Reach 5, Lamont 2, Towns 6, Sall 4, Peters 4, White 4, Roof 8, Willard 4. First money, Jones; second, Frosty, third money, Towns.

Sweepstake No. 2, 9 single blue rocks at 18yds. Entrance, $1: Jones 6, Prechtel 8, Roof 8, Peters 5, Damm 6, Cook 3, White 6, Willard 3, Sall 7, Frosty 6, McGuire 5, Towns 5, Roach 5, Williams 2, Myers 6, Lamont 3. First money, Prechtel and Roof; second money, Sall; third money, Frosty.

Sweepstake No. 3, 9 single blue rocks at 18yds. Entrance $2: Jones 8, Prechtel 8, Roof 9, Towns 4, Frosty 7, White 5, Peters 7, P. Sall 7, Roach 8, Lamont 2, Damon 6, Meyers 5, Willard 3, McGuire 4. First money, Roof; second money, Jones and Prechtel; third money, Sall.

LAFAYETTE, Ind., May 29. The members of the Lafayette Gun Club have discovered that English sparrows make cheap and excellent targets, aside from their erratic disposition. But this objection can be largely overcome by practice and a heavy charge of shot. The club had to-day several hundred of these birds and gave a sweepstake shoot. Dr. Smith and Mr. Graham also attempted to shoot off their tie. The attendance was good, the weather nice and the birds more erratic than ever. Shooting began at 2 o'clock and the sparrows were trapped at 21yds., boundary anywhere within the park and both barrels allowed. Smith and Graham were handicapped at 28yds. and Graham was additionally handicapped by his No. 12 gun. In second sweepstake same conditions were observed except that no one was handicapped as to distance.

First Sweepstake.

Martin	11111—5	Crain	11111—5
Ingersoll	11111—5	Smith	11101—4
Behm	01110—3	Graham	11010—3
Korty	11111—5	Carman	01100—2
Boyer	11110—4	Levering	10010—2
Rosa	00110—2	Burroughs	11011—4
Krauss	10101—3	Wells	10000—1

Crain and Martin divided first; Smith, Boyer and Burroughs second, and Graham won third.

Second Sweepstake.

Martin	00111—3	Everett	11012—4
Ingersoll	00021—2	Krauss	20121—4
Korty	11010—3	Rosa	10202—3
Davis	00112—3	Smith	10100—2
Carman	01122—4	Crain	10001—2
Boyer	10112—4	Wells	10011—3
Borroughs	00222—3	Graham	00226—3
Behm	10000—1	Wagner	01000—1

Carman, Boyer, Krauss and Everett divided first; Davis second, and Smith and Graham divided third. The match between Dr. Smith and Mr. Graham then began. Wesley E. Wells acted as referee and W. S. Crain and Capt. A. O. Behm were judges. The shooting was done at 28yds., Monaco boundary:

Smith	0011101011001120111111—16
Graham	0001110121001101111012—16

Smith used both barrels once and Graham twice. The tie will be shot off, or an attempt will be made to do so soon.

NEW HAVEN, Conn., May 30.—Between 200 and 300 people, many of whom were ladies, were in attendance at the grand tournament of the New Haven Gun Club at the club's grounds on West Chapel street to-day. Marksmen representing several gun clubs throughout the State and a few New Yorkers came with their guns and contested for money and glory. The shoot was for sweepstakes, all sweeps being divided into four moneys. There were 10 events, and the shooting was at birds in singles and pairs. The sport commenced at 9:30 A. M. and lasted nearly all day. The winners were: First event—F. Potter first, Seeley second, E. Folsom and Peck third, Ridge fourth. Second event—F. Brown first, Bristol second, N. D. Folsom third, F. Potter fourth. Third event—Bristol, E. Folsom and Woodford first, C. Mitchell second, Longden, Saunders and Ridge third, W. W. Hansom fourth. Fourth event—A. O. Traeger first, Dunn and Savage second, Colbert, Savage and Woodford third, N. D. Folsom fourth. Fifth event—Saunders first, Traeger second, Seeley third, Woodford. Sixth event—Traeger first, Folsom second, Brown third, Clark fourth. Seventh event—This was the event of the day. The shooting was at 5 pairs blue rocks and 10 American clay birds. The purse was a guarantee purse of $50, divided into $15, $12, $10, $8 and $5 purses. The winners were: M. Clark first, N. D. Folsom, E. A. Folsom and Seeley second, Gould and Mitchell third, Potter, Barnum and Ricker fourth.

LYNN, Mass., May 30.—The trap shooters at Indian Hill range kept the boys at the traps busy all day, the most interesting event being a match of 25 birds—15 blue rocks and 10 clay pigeons—between J. P. Clark and P. Reneaud. Reneaud won as follows:

P Reneaud	1110111111—9	1111111111101—10	22
J P Clark	1110011111—8	0010111111111100—13	18

Other scores at blue rocks:

Reneaud	1111111111—10	F Banty	1010111111— 8
Paine	1110110101— 7	B Phillips	1110010110— 6
Clark	1111100011— 7	G Chandler	1111010101— 7
Clays	0011101000— 4		

WILKESBARRE, Pa., May 30.—A glass ball shooting match took place to-day at the shooting grounds near the Empire breaker. There were 50 entries for the contest, and some fine shooting was witnessed by 1,500 people from all parts of the county. The first prize, which was a breechloading doublebarrel gun, was won by Dr. C. S. Bock, Jr. He broke 10 out of 11 balls. Morgan R. Morgan did the same, and they shot the tie off, Beck breaking 5 balls and Morgan 3 out of 5. The second prize was a doublebarrel muzzleloader. It was won by Wm. W. Jones, of Rolling Mill Hill. The third prize, a muzzleloading doublebarreled gun, was won by Robt. Jones.

TOLEDO, May 30.—The Toledo Gun Club held their regular shoot to-day at the grounds on Detroit avenue. The shooting was at blue rock birds, governed by Chamberlin rules. Following are the scores: Badge shoot at 25 singles:

Class A.

Osborn	1011110111111111011101111—21
Acklin	1111111101111111101111—23
Rushmore	1111001001010111001101111—16
Thatcher	1110110110011100110111110—17

Class B.

Parnell	0010100111010010111111110—14
Longdon	0110111000001000011110010—12
Forbes	1111010100111001111010111—17
Brown	0001101111111111001101111—18
Hatcher	1001100110111001011010100—14

Class C.

Monroe	1000100001000000010 101101— 8
Rakestraw	1101001101100011011001101—14
Cone	1011000011010111110011101—15
Thomas	0010111100000010010110101—12
Carter	0110011001110011111010010—14
Knierim	1110111011111001001110001—17
Rike	0111110001001010001010001—11

Acklin won Class A badge; Brown won Class B badge; Knierim won Class C badge.

CLEVELAND, O., May 30.—The eighth annual Decoration Day shooting tournament of the Cleveland Gun Club was held on the club range beyond the Blue Rock Springs. Numerous invitations had been sent out, and as a result many clay-pigeon shots were on hand to take part in the matches. The executive committee made the following classification, assigning the experts to Class A: T. G. Cathan, C. A. Calhoun, H. Phare, E. Benscotten, Paul North, Roberts, Auld, D. C. Powers and J. J. White. The plan worked well, and many entered who would not have done so under the usual conditions. All matches were shot at 18yds. rise, but special permission was given those having 12-gauge guns and under, weighing less than 8lbs., to shoot at 18yds. rise. The entire programme, consisting of six matches, was shot off and two sweepstakes were arranged and shot also. The shooting was uniformly good, as the following scores show, and the purses about equally distributed:

Match No. 1, 9 single standard targets; entrance $1.25: Haycox 9, T. G. Cathan 9, G. Drake 7, J. Martin 5, W. Bruder 6, X. Bacon 6, G. Brockway 5, D. Keys 7, C. Calhoun 7, L. O. Jones 5, H. Phare 8, E. Benscotten 9, W. H. Bassett 8, Paul North 9, J. Holt 6, Q. Wellington 8, Fred Wallace 5, A. B. Chandler 6, A. Paul 6, J. Sherman 7. Class A—First, Haycox, Cathan and Benscotten; second, Phare and Bassett; third, Drake and Sherman. Class B—First, Chandler second, Wallace and Brockway.

Match No. 2, ten single Peoria blackbirds. Entrance $1.50. T. G. Cathan 9, T. B. Haycox 5, W. Benden 7, H. J. Martin 4, D. Keys 7, W. Roberts 8, D. Auld 10, L. O. Jones 5, W. H. Bassett 7, Paul North 7, H. Phare 9, S. Brockway 5, C. A. Calhoun 9, J. J. White 9, G. Drake 5, E. Benscotten 9, G. Brockway, Jr. 7, S. Phare and J. Bassett; third, Drake and Sherman. Class B—First, Chandler second, Wallace and Brockway.

Match No. 3, nine single blue rocks. Entrance, $1.25. C. Calhoun 8, Paul North 6, W. Tamblyn 8, W. H. Bassett 7, D. Auld 7, W. Bender 7, G. Brown 7, H. Phare 7, W. Roberts 9, L. O. Jones 5, E. Benscotten 8, T. G. Cathan 8, D. C. Powers 4, J. Holt 4, T. B. Haycox 6, J. Sherman 8, H. J. Martin 9, A. B. Chandler 6, W Bell 6, A. Paul 6, F. A. Tamblyn 6, Fred Wallace 9, Q. Wellington 4, L. J. White 8, G. Drake 4, D. Keys 3. Class A—First, Roberts, Martin and Wallace; second, Cathan and Calhoun; third, Bender and Phare. Class B—First, A. Paul; second, L. O. Jones.

Match No. 4, nine single standard birds. Entrance, $1.25. T. G. Cathan 7, Paul North 8, D. Auld 8, W. Sweetman 8, Benscotten 9, W. H. Tamblyn 7, L. D. Jones 7, W. Roberts 7, Allen 7, J. J. White 7, P. C. Powers 9, H. J. Martin 7, W. H. Bassett 8, C. A. Calhoun 7, H. Phare 7, D. Keys 7, Bonnor 7, Brown 7, J. Held 5, J. E. Jones 6, Haycox 6, L. Sisby 5, W. K. Purray 1, Chandler 5, A. Paul 8, F. A. Tamblyn 7, Holt 5, Wherry 6, W. Bell 6, Drake 5, Wellington 5, M. Silsby 7, Fred. Wallace 8, K. D. Bishop 5, H. A. Bishop 7. Class A—First, Benscotten and Powers; second, Bassett and Paul; third, J. J. White. Class B—First, Sweetman, Jones, Haycox, Tamblyn, Wherry and Bell; second, Held, Sellsby, Holt, Drake, Wellington and K. D. Bishop.

Match No. 5, 10 single Peoria blackbirds, entrance $1.50: D. C. Powers 8, W. Bell 7, Benscotten 9, W. H. Bassett 6, W. Tamblyn 8, W. Roberts 8, H. J. Martin 8, Brockway 3, D. Auld 9, T. G. Cathan 10, Haycox 7, Sweetman 5, L. O. Jones 7, C. A. Calhoun 9, J. J. White 8, H. Phare 9, Brown 9, Brockway, Jr. 6, Paul North 6, Elford 4, D. Keys 7, J. Sherman 7, J. E. Jones 7, R. Allen 8, M. Silsby 7. Class A—Cathan first; Benscotten, Auld and Calhoun second; Roberts third. Class B—O. S. Jones first; Bassett and Brockway second.

Match No. 6, 9 single blue rocks, entrance $1.25: L. O. Jones 4, J. J. White 7, D. Andrews 7, M. Silsby 5, D. Keys 8, T. G. Cathan 9, H. J. Martin 9, G. Brown 6, K. D. Bishop 5, W. Bell 6, C. A. Calhoun 7, W. Roberts 7, D. C. Powers 9, E. Benscotten 8, Paul North 9, J. Holt 6, A. B. Chandler 5, R. Paul 7, W. H. Tamblyn 4, W. H. Bassett 6, T. B. Haycox 6, H. A. Bishop 6. Class A—Powers, North and Cathan first; Keys and Benscotten second; Calhoun third. Class B—Haycox, Bassett, Holt, Brown, Bell and H. A. Bishop first; M. Silsby and K. D. Bishop second.

Sweep No. 2, 5 pairs of standard birds, entrance $1.50:

Paul North	10 11 11 10 10—7	Brown	10 11 00 10 11—6
H J Martin	10 10 11 11 11—8	W Roberts	11 11 10 10 11—8
W Bell	01 10 10 00 11—5	J Holt	10 11 01 10 11—7
D Andrews	11 11 11 11 10—9	H A Bishop	11 10 11 10 11—8
W H Bassett	10 11 11 10 10—7	D C Powers	11 11 11 10 11—9
K D Bishop	11 11 10 11 11—7		

Class A—D. Andrews first; Powers, K. D. Bishop and Benscotten second; H. J. Martin, W. Roberts and H. A. Bishop third. Class B—Bassett and Holt first; Brown second.

Sweepstake No. 1, 5 pairs of standard birds, entrance $1.50:

D C Powers	10 10 11 11 11—8	Bassett	11 10 11 11 11—9
W Bell	00 10 11 11 11—6	S Sherry	10 11 00 10 10—5
E Benscotten	11 11 11 10 11—9	Paul North	11 11 11 11 11—9
D Auld	10 10 11 11 11—8	H J Martin	00 10 00 01 01—3
W Roberts	01 11 01 10 10—6	H Phare	00 10 11 11 00—5
T G Cathan	11 11 11 11 10—9	K D Bishop	10 11 11 01 10—7
H A Bishop	10 10 11 10 01—6	H Elford	00 10 00 00 10—2
J Holt	10 10 00 11 00—4	W Tamblyn	11 10 00 11 00—5
D Andrews	10 11 00 11 11—7	Brown	10 10 10 10 11—6

Class A—Cathan first; Benscotten, Bassett and North second; Powers and Auld third. Class B—K. D. Bishop and Andrews first; Bell, H. A. Bishop and Brown second.

MILWAUKEE, May 29.—Local and outside marksmen assembled at National Park to-day to take part in the third annual shoot of the South Side Gun Club, and they made things lively for the unfortunate birds that were sprung into the air. While the attendance was not so large as expected, there were some very clever marksmen on hand.

The first contest was with Peoria birds, 18yds. rise, entrance fee $1, and the stakes made into three purses. Several ties necessitated a division among highest scorers. The result was: W. C. Holtz 1, M. M. Anderson 3, Fred Erb, Jr., 6, R. H. Mertz 4, E. C. Sherman 5, F. Brill 3, B. Anderson 6, Bowe 5, Seefeldt 6, Milbraith 6, I. H. Hansen 3, Geo. Anderson 5, Cahoon 6, Penrose 6, Tiehorne 4, Brann 5, Schlœtthauer 3.

The contest for 10 Peoria single birds, 18yds. rise, $2 entrance fee, resulted as follows, the stakes being divided into three prizes: H. A. Penrose took first, R. H. Mertz second, Calhound and Dieter divided the third prize. The score: Fred Erb, Jr., 9, Penrose 10, Sherman 8, Bass 9, Mertz 9, Schlœtthauer 4, G. Anderson 8, Bowe 6, M. M. Anderson 9, J. Brill 7, Fauerback 7, Meir 9, G. Fæhmann 6, Budd 9, Manegold 6, Ormsby 9, Cahoon 7, Dieter 8, Dingy 8, Milbraith 7, Howe 7, Calhoun 8, Brand 9, Anderson 9, Foster 5, Young 6.

The next contest was for 4 single and 3 pair blue rocks, with an 18yds. rise for the singles and 15yds. for the doubles. The entrance fee was placed at $3. Erb took first money, Budd, Calhoun and Penrose divided second, and Mertz, Dieter and Brand divided the third. The score:

Penrose	1101	11 10 11—8	Dieter	1110	10 11 10—6
Mertz	1110	11 11 00—7	Manegold	1001	00 00 11—4
Budd	1101	11 11 10—8	Brand	1111	10 10 10—7
Erb	1111	11 01 11—9	Holtz	0100	10 10 10—4
Calhoun	1111	00 11 11—8	Sherman	1110	00 10 01—5
Ormsby	1111	10 00 01 —6	Dingy	0011	01 10 01—5

The third match of the programme was for 7 live birds, entrance fee $5. The birds had a 30yds. rise. The first prize was divided among C. Mohr, Fred Erb, Geo. Anderson, Franklyn, R. G. Mertz and H. G. Penrose. The second among Chas. Deiter, C. C. Cahoon, Robt. Stewart and J. B. Howe. The third was divided among Jos. Ormsby, W. C. Holtz, C. M. Milbrath, M. M. Anderson, H. Seefeldt, Blanchard and C. Meunier. The fourth among J. H. Hanson, J. E. Brand, J. Strassburger and C. Alster.

A supplementary match was shot with Keystone birds, by 30 marksmen. An entrance fee of $1 was charged. Erb and Mertz tied. Anderson, Budd, Cahoon and Alster divided second honor; Dieter, Brant, Pickles and Penrose divided the third prize, while the fourth was divided among Messrs. Blanchard, Anderson, Sherman, Ormsby, Strassburger and Milbrath.

May 30,—The second day of the South Side Gun Club's tournament opened under a fair sky, and the marksmen congratulated themselves on having a notably fine day. By noon, however, clouds obscured the sun and the grand team shoot of the afternoon was contested in a drizzling rain. The shooting took place in front of the club's headquarters, a very tasty building which faces the east upon an open stretch of some six acres, excellently adapted to trap shooting.

The result of the first contest of the 10 bluerocks, 18yds. rise was as follows: Fred Erb, Jr. 8, E. C. Sherwin 7, G. L. Dieter 8, C. H. Penrose 9, C. W. Budd 8, G. W. Harris 8, R. H. Mertz 10, H. Richards 6, E. Dingey 7, Ed Richter 4, M. M. Anderson 7, E. Hirschbuchl 2, C. E. Cahoon 9, L. Fauerbach 2, W. Ockershauser 5, G. W. Franklin 9, Wm. Bass 7, F. C. G. Brand 5, A. C. Mayer 9. The first money went to R. H. Mertz, the second and third divided on account of a tie.

The next match was at 5 pairs of Peoria blackbirds. The traps were placed 15yds. off and an entrance fee of $3 was exacted. The result was as follows: Robert Stewart 7, James Young 3, C. W. Budd 9, G. W. Harris 7, Fred Erb, Jr. 9, C. E. Cahoon 9, R. H. Mertz 9, E. C. Sherwin 8, A. H. Chamberlin 9, F. C. G. Brand 7, G. Dieter 7, Ed Richter 8, G. W. Franklin 7, E. Dingey 6, H. Penrose 6, A. Meier 6, Wm. Okershauser 5. The four moneys, $17.50, $13.10, $8.75 and $4.35 respectively were divided among the ties.

After dinner 4 traps were set for the team shoot. It was half-past 6 o'clock before the seven rounds of the team shoot were concluded, and the announcement was made that the Chicago team had won the four medals. Following is the score:

Lake City Gun Club, Madison, Wis.

A H Chamberlin	1111111—7	Wm Bass	0010000—1
Louis Fauerbach	1111110—6	A C Meyer	0110101—4—18

Team 1, S. S. Gun Club, Milwaukee.

Jas Ormsby	1011001—4	H Bosworth	1000000—1
E F Richter	1111000—4	Edw Richards	1111111—7—16

Stock Yard Team, Milwaukee.

Chicago Gun Club.

Sam'l Dingey	1111101—6	H A Foss	1111111—7
R B Wadsworth	1101101—5	J Hutchinson	1111010—5—23

The medals which were presented to the Chicago team are of gold, and consist of a bar with a pendant, shield and suspended

by chains and surrounded by a wreath with crossed guns. The medals are very handsome and are suitably inscribed.

May 31.—The South Side Gun Club finished its tournament today at National Park. The marksmen were kept busy from 9 o'clock in the morning until 7 in the evening. The principal event was the shoot for the citizens' purse, thirteen prizes. C. W. Budd won the first prize of $50, Mertz won the second, Richter, Ormsby and Cahoon divided third; Penrose, S. Meunier, Land and Richards divided fourth, Edward Vass took fifth, Charles Alfter took sixth, Henry Mangold took seventh, Milbrath and F. Seefeldt divided eighth, F. J. Holtz took ninth, Stath tenth, Strassburger eleventh, Albert Hambach twelfth, Geo. Fuhrman thirteenth. Following are the scores: Penrose 16, Budd 20, Teal 9, Sherwin 15, C. Schmidt 15, J. Meunier 10, Thomas 13, G. Fachmann 7, Bowe 9, Stuth 10, Richter 17, Anderson 14, Milbrath 12, Manegold 13, Strassburger 9, Hambach 8, Mertz 19, S. Meunier 16, Land 16, Ormsby 17, Wadsworth 14, Wm. Holtz 14, Tobbert 7, Hausen 13, Brandt 11, Seefeldt 12, T. Holtz 11, Cahoon 17, Voss 15, Richards 16, Alfter 14. Other matches resulted as follows:

Match No. 7, three moneys—Mertz took first money, C. W. Budd, Penrose and Ormsby divided second, J. G. Brandt took fourth.

Match No. 8, three moneys—James Ormsby and Edward Richter divided first and second moneys, Mertz took third.

Match No. 9, 7 live birds, four moneys—C. W. Budd, Mertz, S. Meunier and Sherwin divided first money, Ormsby, Milbraith, Stuth and Cahoon divided second, Land, Teal, Strassburger and Anderson divided third, E. F. Richter took fourth.

First Extra Match—J. Ormsby and Sherwin divided first money, Brant took second, Penrose third, Manegold fourth.

Second Extra Match, 6 birds—Land and Sherwin divided first money, Mertz took second.

SACRAMENTO, Cal., May 27.—The monthly medal shoot of the Pacific Sportsmen's Club took place to-day, G Wittinbrock winning the medal by a full score. Messrs. Flohr, Chapman and Nicolaus each killed 11 birds. Following is the score:

Damm	11101101111—10	Morrison	00110001111—7
Boase	01110010010—6	G Menke	01110111110—9
C Flohr	11111111011—11	Johnson	00011011110—7
Wittenbrock	11111111111—12	Pediar	01100000110—5
Gotabed	11101111100—9	Nicolaus	11111111110—11
Judge	11101110001—8	Mannix	10101110101O—7
Chapman	11111111110—11	J Gerber	01110111111—10
Kunz	00101001000—4	H Gerber	10010111101—8

The ties on 11 will be decided at the next shoot. The birds were a good lot and the sport was very fine.

MINNEAPOLIS, May 30.—The East Minneapolis Gun Club held its weekly shoot this forenoon at its Seventeenth avenue grounds. In addition to their regular match, a special match at 10 single blackbirds was shot. The wind was too strong for high scores, but all had a pleasant time. Appended are the scorcs:

Regular match, 20 singles:

Rowe	12	Stahl	15
Thielen	10	Stein	9
Hoffman	13	Huebner	10
Brown	10	Bowen	7
Day	5	Morrill	7

Five pairs:

Rowe	11 11 11 01 00—7	Stahl	10 00 00 10 10—3
Thielen	10 00 11 10 10—5	Stein	00 10 00 01 00—2
Hoffman	10 10 10 10 10—5	Huebner	00 01 00 10 10—3
Brown	10 10 01 11 00—4	Bowen	11 10 00 10 01—5
Day	00 01 00 10 00—2	Morrill	11 10 00 10 00—4

In the prize match Brown won first prize, Stahl second, Day third, and Hoffman carried off the beer.

In the regular match of 20 singles Rowe, Thielen and Hoffman were handicapped 10ft.

PITTSBURGH, Pa., May 30.—The members of the Herron Hill Gun Club had a pleasant time to-day on their shooting grounds. There was an unusually large number of contestants and several hundred spectators. Four matches were shot and Mr. Wm. King officiated as referee There was no wind and a dense cloud of smoke hovered around the grounds all day, making shooting difficult. The contests were close and exciting in some instances, four extra matches being required to shoot off for first place. Following are the scores: First match, handicap, at 12 blue rocks: Geo Snyder 11, C. A. Painter 10, A. King 9, E. E. Shaner 8, Major Hazelett 7; there were 31 entries. Second match, handicap, at 12 birds: E. E. Shaner, C. A. Painter and Alf. Lawton 11 each, A. C. Krueger 10, Geo. Snyder 9, S. Shaner 8, Bastian Surles 7; there were 32 entries. Third match, handicap, at 12 birds: J. Beam 11, Alf. Lawton 10, Bas. Surles 9, F. Ewart 8, T. Ewing 7; 33 entries. Fourth match, handicap, at 12 birds: J. G. Messner 11, Wm. McCrickart 10, C. A. Painter 9, H. Penn 8, J. Beam 7; there were 30 entries. Altogether there were 4,003 clay birds broken during the day. The prizes consisted of gun cases and boxes of cartridges.

OTTAWA, May 31. With the Ottawas it was badge day. Five met and shot at 15 Ligowskis each, and A. Stewart with 13 captured the prize.

A Stewart	111111111010111—13	H Street	101110011011001— 8
W H Tracey	110100111101110—10	C H Labelle	110101000100001— 6
J Stewart	011011001111000— 9		

It being an off-day in the departments, the St. Huberts took a pop at the clays, too. First sweep, 15 Ligowskis:

J Deslaurier	011111111111111—14	A Stewart	101011001110011— 9
A Throop	111110110111110—12	W Johnson	101101100001011— 8
P Thompson	110101111111100—11		

Second sweep, 15 birds.

P Thompson	011111111111101—13	A Throop	101111010110010— 9
J Deslaurier	100111001111011—10	R G Dalton	011011110100010— 8
W Johnson	101101111110100—10		

Third sweep, 10 birds:

P Thompson	1110111111— 9	J Deslaurier	1101100101— 6
A Throop	1111101011— 8	P Thompson (ex 10)	1111111111—10
R G Dalton	1011101101— 7		

On looking over the score it will be seen out of a possible 50 Thompson broke 43 and 16 consecutive; 13 out of 14 go straight to Deslaurier, and out of 40 he got a string of 30. Throop, out of his 40, done up 29.

KANSAS CITY, May 30.—A large number of sportsmen assembled at the Kansas City Shooting Park, near the Blue, this afternoon to witness the monthly medal shoot of the Kansas City Gun Club. All the gun clubs in the city were represented. An unusually strong lot of birds were trapped, and as a natural consequence the scores were not as large as usual. The medal was won by the veteran Major A. B. Cross, who killed 8 out of 10. The terms of the shoot were 10 live birds each, 3 at 21yds., 3 at 26yds. and 4 at 31yds., 80yds. boundary. The score is as follows:

D Underwood	1111000010—6	F J Smith	1101100010—5
D Williams	0010111111—7	Joe Underwood	1110011011— 7
C Bassett	1010001110—5	Dr Stark	0110111001—6
A A Bombeck	0001001110—5	A Wetzel	1101110011—7
F Denser	1101011101—7	G Yeoman	0110111000—5
A B Cross	0111111010—8	M Dunlap	0100010111—5
W J Baehr	1110111010—7	W L Luck	0110101010—5
G Mock	1000101110—5	J Savage	1011111100—7
L Scott	1010110111—7		

After the medal shoot a sweepstakes shoot took place at 10 Peoria blackbirds each, 21yds. rise, and resulted in a victory for Mr. O'Brien, who broke 10 straight. Messrs. Anderson, Bish, Smith and Kuntz tied on 9 for second money and the shoot off resulted in a tie between Anderson and Bish, who divided second money, and F. Denser won third. The score is as follows:

W Mensing	1101111100— 7	L Kuntz	1111101111— 9
O'Brien	1111111111—10	J B Barber	1011011101— 7
C P Fairman	1111111011— 9	G Fowler	1000001111— 5
G Mock	1100111101— 6	F Denser	0111111011— 8
J Bish	1011111111— 9	Dr Stark	1101011000— 5
F J Smith	1111111011— 9	J Anderson	1111111110— 9
L Scott	1110110000— 5		

The sport concluded with a sweepstakes at 5 live birds each, 31yds. rise, 40 entries, and no less than 15 made clean scores and tied for first money. As there were not enough birds to shoot off the money was divided, and it was found that each winner would receive 90 cents. The score is as follows:

P Denser	11111—5	C Bruce	11111—5
W Mensing	01111—4	L S Millett	11111—5
W L Luck	10011—3	F S Casey	11111—5
A B Cross	11011—4	G Wasson	11111—5
W K Everingham	01011—3	F J Smith	11111—5
C P Fairman	01110—3	F W Fowler	10111—4
J O'Brien	11111—5	L Barth	11110—4
J P Barbour	11111—5	J Scott	11111—5
R H Miles	11101—4	J W Potter	01111—4
J C Allendorf	10110—3	J Reeves	11111—5
G Mock	01011—3	J McGee	10111—4
W H Knots	11111—5	G Yeoman	11111—5
F W Troynson	11111—5	Dr Stark	10110—3
W S Hallwell	10101—3	A Thomas	11001—3
J K Guimotte	11011—4	J Underwood	11111—5
F M Holloway	11101—4	J Anderson	11111—5
D Williams	11010—3	W Anderson	11110—4
L Kuntz	11111—5		

WELLINGTON, Mass., May 30.—The Wellington Club had an all-day shoot to-day, and there was a large number of spectators present to watch the breaking of clay-pigeons and blue rocks by 30 gunners. Following are the winners in the several sweepstake matches: 1. 6 clay-pigeons, Perry. 2. 6 blue rocks, Brown. 3. 6 blue rocks, Phelps and Bartlett. 4. 6 clay-pigeons, Perry. 5. 6 blue rocks, Brown. 6. 6 blue rocks, Brown and Hall. 7. 6 clay-pigeons, Perry. 8. 6 blue rocks, Adams. 9. 6 blue rocks, Perry. 10. 6 clay-pigeons, Carson, Adams and Perry. 11. 6 blue rocks, Adams, Schaefer and Perry. 12. 6 clay-pigeons, Hall and Somes. 13. 6 blue rocks, Adams and Schaefer. 14. 6 blue rocks, Stone, Adams and Perry. 15. 6 blue rocks, Somes and Hall. 16. 6 clay-pigeons, Hall and Brown. 17. 6 blue rocks, Bradstreet. 18. 6 clay-pigeons, Somes, Brown and Adams. 19. 6 blue rocks, Brown, Adams and Hall. 20. 6 blue rocks, Bradstreet. 21. 6 clay-pigeons, Hall. 22. 6 blue rocks, Brown. 23. 6 blue rocks, Trimble, Hall and Richards. 24. 6 clay-pigeons, Brown. 25. 6 blue rocks, Adams, Brown, Hall and Bond. 26. 6 clay-pigeons, Brown and Richards. 27. 6 clay-pigeons, Hall and Stone. 28. 6 blue rocks, Hammand, De Rochemont and Perry. 29. 6 blue rocks, Bond. 30. 6 clay-pigeons, Hall and Brown.

BOSTON, May 30.—The Jamaica Plain Gun Club held an all-day shoot at the Clarendon Hills range to-day, there being a large attendance, and good scores were made: 1. 6 blue rocks, Green. 2. 6 clay-pigeons, Ingersol and Slocum. 3. 6 bats, Ingersol. 4. 6 blue rocks, Charles and Slocum. 5. 6 clay-pigeons, Ingersol. 6. 3 pair bats, Slocum. 7. 6 blue rocks, Slocum. 8. 6 blue rocks, Slocum. 9. 5 blue birds, Hall. 10. 6 Niagara birds, Austin. 11. 6 blue rocks, Slocum and Collony. 12. 6 bats, Baker. 13. 6 Niagara birds, Austin. 14. 3 pair clay-pigeons, Charles and Ingersol. 15. Merchandise prizes, 10 clay-pigeons, 10 bats, Brown first, Ingersol second, Charles third. 16. 6 blue rocks, Ingersol and Boothby.

READING, Mass., May 30.—The Reading Gun Club had a clay-pigeon shoot on their grounds to-day, and several sweepstake matches and a team match were shot. Following scores were made in the team match, 8 men to a team and 10 birds per man. One team was captained by Captain Eames and the other by Captain Davies. In the first team Captain Eames made 8, Willis 4, G. Eames 8, Blanchard 5, E. J. Gerry 8, Gillam 5, E. Burrell 6, Austin 7, total 52. In Captain Davies' team he scored 5, Killian 7, Brooks 7, C. Gerry 7, Tuttle 3, J. Weston 3, C. F. Gould 6, Loring 5, total, 43. The first prize, a case of birds, for the best score of 10 birds, was won by E. Eames; the second, a fishing rod, was won by Killian; and the third a keg of powder, was won by Brooks. The sweepstake matches were as follows: 1. Six Peorias—Killian. 2. Six clay-pigeons—Killian and Blanchard. 3. Five blue rocks—Gillam. 4. Three pairs Peorias—Evans. 5. Five clays—Killian. 6. Six clay-pigeons—Davis and Brooks. 7. Five Peorias Burrell, 8. Three pairs clay-pigeons—Davis. 9. Five clays—Gerry and E. Eames. 10. Five clay-pigeons—Blanchard and E. Eames.

CINCINNATI, May 30.—A larger attended nor a more spirited shoot never took place here than that of to-day at the Five-Mile House, Avondale, between teams of 15 men composed of old-time shooters and the youngsters—shooters pre-eminent to-day—and had the race been one of greater length the probabilities are it would have ended in a victory for the gray-bearded men. Pat. McAvoy was booked for poor work, owing to his advanced age, but astonished all by killing all his birds as clean, if not cleaner, than any of the contestants, and that with a gun but 22in. long in the barrel—the same he killed the lion and leopard with which escaped from the Zoölogical Garden some 8 or 10 years ago. A more agreeable lot of gentlemen than those present never met, one and all doing and resorting to everything in their power in a legitimate and funny way to rattle their respective opponents. The youngters did not shoot up to expectations, while to the contrary, the opposing team, the old boys, surprised even themselves, many of the latter not having fired a gun for at least five years, which can be said of the majority, barring, of course, Wick, Mason, George and Ferris:

Youngsters.		Old-Timers.	
Age.		Age.	
25..Bandle	1110112—6	49..Mason	1112111—7
22..E Taylor	1011111—9	56..Caldwell	1122022—6

* Shot at 6 birds.

SHELBY, O., May 30.—The Mansfield Gun Club came down to this city to shoot a return match with the Shelby Gun Club. The contest came off at the grounds of the Shelby Gun Club and much enthusiasm was manifested. Standard birds were used and 18yds. rise for 10-gauge guns and 16yds. rise for 12-gauge. A large crowd went out to witness the contest, and the defeat of the Mansfield Club caused considerable excitement. Another match, to come off in Mansfield, has been arranged for.

Shelby.

BLOOMING GROVE PARK.—Decoration day matches at the club range, Blooming Grove, Pa. Decimal target, hunting rifles, open sights, 200yds., for badge:

Lawrence	5 8 4 4 9—30	Youmans	0 2 4 5 8—19
Post	3 3 3 3 4—16	Eddy	2 2 2 7 2—15
Nash	3 6 3 4 3—19	Smith	0 5 3 3 0—11
Hedden	3 4 8 3 3—21		

Match at live pigeons, handicap rises, for badge:

Smith (26)	1111101111010101101—16
Hedden (30)	1011111101111101101—16
Lawrence (30)	0111101111111111111—17
Youmans (26)	1101010111111010101—14
Nash (29)	0000001101100000011— 7
Eddy (27)	1010010111111010111—14

Match at clay birds:

Smith	0 1 1 0 0 1 1 0 0 1 0 1 0 0 1 1 0 0 0 1½ 1 0 1 0—11½
Hedden	0 0 0 1 0 0 0 1 1 0 1½ 1 1½ 1 1 0 1 1 1 0 1 0—14
Eddy	1 0 0 0½ 1 1 1 1 1 0 0 1 1 1 1 1 0 0 0 1 0 1 1 0—14½
Youmans	1 0 1 1 1 0 0½½ 1 1 1 1½ 0 0½ 0 0 1 0 1 1½ 0—14½
Lawrence	0 1 1 0 1 0 1 1 1 1 1 1 1 0 1 1 1 1 0 1½ 1½ 1 1—19

Nash withdrew with 3 out of 10, and Montgomery with 1 out of 10.

THE ST. HUBERT GUN CLUB'S TOURNAMENT.—The St. Hubert Gun Club's tournament held on May 24 (Queen's birthday) was a success, financially and otherwise. The day was beautiful and there was but little wind. There was intense excitement over the shooting off ties for first place in the team match by the Toronto Gun Club and the Dominion Gun Club (Montreal) teams. They tied twice; the second time it depended on "Josh" Wayper, the tail ender of the Toronto's, making a straight five to tie the Dominions again. One miss and the two beautiful silver cups, five medals and the illimitable glory pertaining to the winning of so important a match were lost. But this heavy responsibility did not flurry "Josh" in the least. He stood up to the score, powdered all his birds and again it was a tie. Then Toronto waxed arrogant and almost any odds were offered that they would win, with no takers. Your correspondent overheard a Torontonian remark: "The trouble with these down East boys is that they can't stay." That they could "stay" and just a little better than the Westerners the sequel shows. The Dominions shot first, and so poor was their score that the hopes of their sympathizers fell to zero; but, to the astonishment of all, their opponents seemed to go to pieces, and amid prolonged cheering the announcement was made that the Metropolis had beaten the Queen City. The winner of the individual championship, "Josh" Wayper, is a phenomenal shot, as can readily be conceived when it is seen that he missed but one bird in upward of eighty shot at. These were shot over three different ranges, from three sets of five traps facing different points of the compass. Is not this a creditable performance? He uses a Greener hammerless gun.—F.

WORCESTER, Mass., May 30.—A two days' tournament at Coal Mine Brook Range under the auspices of the Worcester Sportsmen's Club closed to-day. The three principal events each day were as follows, three sets of traps being kept in constant use:

Pony Class totals, a possible 15 birds.

	May 29.	May 30.	Tl		May 29.	May 30.	Tl
Howe	13	14	27	E S Knowles	8	11	19
M Knowles	13	13	25	Rugg	8	10	18
Swan	13	11	23	Crompton	7	8	15
Joe	9	14	23	Franklin	7	8	15
Russell	13	9	22	Jourdan	6	9	15
Rule	8	12	20				

The men in this race contested for a Winchester rifle, which was secured by Howe.

Merchandise Class, a possible 25 birds.

	May 29.	May 30.	Tl		May 29.	May 30.	Tl
Smith	24	23	47	Rule	19	21	40
Holden	25	22	47	Howe	22	18	40
Dickey	24	23	47	Harvey	21	18	39
Straiter	22	24	46	Bowdish	22	17	39
Sampson	22	24	46	Davis	19	18	37
Eager	21	22	43	Rugg	16	21	37
Yerrington	22	21	43	Dean	18	15	33
Wheeler	22	21	43	Franklin	15	15	30
Gilmore	20	22	42	Swan	14	16	30
Russell	21	21	42	Dodge	13	17	30
Perry	20	20	40				

In this race the three men each with a score of 47, and to them belongs the L. C. Smith gun. The two men each with the score of 43 secured the Winchester shot gun. The three men each with a score of 43 shot off the tie, and H W Eager secured the prize, a Wesson rifle. The two men with a score of 42 shot off the tie, and M. D. Gilman secured the box of cigars. The three men each with a score of 40 shot off the tie, and W. S. Perry secured a barrel of flour. The two 39 men divided a ton of coal, and the two 37 men have a keg of powder between them.

The seventh event each day was of much interest. On the 29th it was a guaranteed purse of $75, a possible 20 clay-pigeon throw from open traps. The totals of each man were as follows:

Holden	20	Russell	16
Howey	20	Perry	16
Dickey	18	Straiter	16
Dean	18	Tinker	15
Sampson	18	Yerrington	15
Gilman	17	Eager	14
Potter	17	Knowles	14
Smith	17	Franklin	11
Wheeler	17	Davis	11
Bowdish	17	Dodge	11

The prizes were finally awarded as follows: Holden, $30; Howey, $22.50; Dickey, Dean and Sampson divide $15; Wheeler and Bowdish divide $7.50.

The result of the seventh event to-day for a purse of $50, the other conditions the same, were as follows:

Perry	20	Bowditch	15
Smith	20	Harvey	14
Swift	20	Davis	14
Rule	18	Swan	14
Yerrington	17	Dodge	14
Childs	17	Holden	14
Dickey	16	Dean	14
Home	16	Sampson	14
Gilman	16	Eager	14
Straiter	16	Knowles	13
Wheeler	16	Crampton	10
Russell	15	Franklin	9

The prizes were: Swift, Smith and Perry divide $10, Rule $15, Yerrington and Childs divide $10, and Dickey, Howe, Gilman, Straiter and Wheeler divide $5.

LOS ANGELES, Cal., May 27.—One of the pleasantest and most interesting affairs to local sportsmen that has ever taken place in this city, was the team shoot between the two local clubs to-day. The conditions were 10 men from each club to shoot at 24 single blue rocks, from 3 traps, at 18yds. rise, each man shooting at 3 birds before leaving the score. The match was brought about by a challenge issued by the Rod and Gun Club about a month ago, which was promptly accepted by the Recreation Club, although its members had not done any trap shooting for over three years. In fact, some of them had never shot over a trap at all. Mr. J. C. Cline, who was chosen captain of the Recreation team, selected his ten men soon after the challenge was accepted, and got them out for four or five practice shoots—and from the scores that they made he felt reasonably confident of success. The fact that the wind was strong may account for the poor score made by both teams. The average was 14 for the Recreation and 14 9-10 for the Rod and Gun. The result will probably lead to another match, when better scores should be expected from both clubs. The score:

Rod and Gun Club.

SPRINGFIELD, N. J., May 31.—The Union Gun Club held its second prize shoot open to all comers yesterday, and, although the day was quite unpleasant and warm, quite a large number turned out to try their hands at the skimmers, and, as result proved, all did very well. Honors were about evenly divided between Sopher, Haines, Conover, Johnson, A. Sickley, Dunican and Roll. Our South Orange friends S. and D. Tillon and Mr. Bond also held their end up nicely. In the first sweep Sopher and Johnson divided 1st with 9; G. Pudney 2d; Dunican, Conover, Haines, D. Tillon and made 3d with 7. Second sweep at 10 clays, Johnson 1st, 10 straight mashed fine. Conover and Dunican 2d with 9; Haines 5d with 8. Third sweep, 10 blue rocks, Sopher and Haines 1st with 9; Dunican, D. Tillon and Johnson 2d with 8; G. Pudney and A. Sickley 3d with 7. Fourth sweep, 10 bats, A. Sickley 1st with 10; Haines 2d with 9; Johnson 3d with 8. Fifth sweep, 5 pair bats, Conover 1st with 10 all broken to atoms; Sopher and Morrison 2d with 8; Johnson 3d with 7. Sixth sweep, 15 blue rocks, Conover 1st with 13; Sopher, Haines and Roll 2d with 12; Dunican, A. Sickley and Johnson 3d with 11. Seventh sweep, 10 blue rocks, Conover and Dunican 1st with 9; Johnson, Sopher and G. Pudney 2d with 8; Roll 3d with 6. The eighth event was the prize shot. Sopher 1st with 28; Haines 2d with 26; Dunican 3d with 25 after shooting out Conover; A. Sickley, Johnson and Joe Briant, E. Sickley and G. Pudney 4th with 24, and, each being afraid of the other, concluded to divide; Roll 5th with 23; D. Tillon 6th with 20; Morrison 7th with 19 after doing up Sayre and Haukins. Wade with 18 all alone put 10 paper shells under his arm and trudged off to Doc's Baru for his horse. S. Tillon 9th with 14 seized on to 25 loaded shells, and Ben Pudney (the best trapper in America) broke 13 and pulled 250 primers out of the pot. The shoot was at 30 targets, ten each of bats, Ligowsky clays and blue rocks, thrown from three screened traps, 18 yds. rise for 10 bores and 16 for 12 bores. General sweepstake shooting was kept up until dark. Johnny McCord furnished the boys with refreshments and the boys about cleaned him out.—12 BORE.

WINONA, Minn., May 27.—Nic Artz won the medal at the Sportsmen's Club shoot, killing 16 out of 20 Macomber tin birds. G. Pennoyer, O. H. Clarke and F. H. Lalor broke 14 each, and C. Copeling 13. In the sweepstakes at 10 double Peorias Artz carried off the prize, F. Lalor second and G. Pennoyer third.

WALTHAM, Mass., May 30.—The Lexington Gun Club, of Lexington, defeated the Crescent Gun Club, of Waltham, to-day. The score: Lexington—Vickery 14, Tucker 12, Hutchinson 19, Herrick 11, Titon 16, Gleason 13, Jackson 13, Shumway 19, Payson 17, Reed 20; total, 154. Crescent—Kimball 12, Pierce 13, Binn 20, Hildreth 14, Dodge 16, Gray 21, Wurm 13, Furbush 17, Roesger 12, Berry 8; total, 146. Several sweepstakes were shot.

NEWARK, O., May 30.—A shooting match this afternoon between a team of 12 from the Sherman Gun Club, Columbus, and 12 from the Newark team, resulted in a victory for the Newark team by a score of 221 to 205. They shot at 25 birds each, the best shot being W. A. Robbins, he breaking 23 out of 25.

YONKERS, N. Y., May 30.—Yonkers Gun Club. Match at live birds, 3 traps:

Austin (20)	1211222110—9	Waring (20)	1111011201—8
Kolb (30)	1212221110—9	Paulson (27)	1002011110—7
Osborn (28)	1012211111—9	Langraw (30)	2221211011—9
Burneau (24)	2222011021—8	Thomas (28)	0102012010—5
Schlesinger (20)	1011111102—8	Jackson (23)	0022211012—7
Rowland (24)	1121100112—8	Fiedler (24)	1100110121—7

In shoot-off at 5 birds, Kolb, Austin and Langraw, 4 each; second tie, Austin 3, Osborn and Langraw 4; third tie, 4 each; fifth tie, Osborn 4, Langraw 5 and won.

WINCHENDON, Mass., May 31.—At the regular meet yesterday of members of the Winchendon Gun Club at their range the work of each man who had a possible score of 10 birds the following was the result:

H J Lawrence	1100111111—8	E M Whitney	0111001011—6
A H Felch	1111110110—8	J G Henry	0111110100—6
P S Davis	1111001110—7	F F Hapgood	1001001111—6
A O Lawrence	0110100111—6		

NEWARK, N. J., May 30.—The Mutual Gun Club had a shoot to-day on its grounds at Weidenmayer's woods. The score at 25 blue rocks was: Hasvinger 23, Ostrander 22, Humphrey 22, Nichols 21, Steifel 20, Pfau 19, Gould 19, Rau 19, Erristberger 18, Ruff 18, Koeller 16, Scieve 14, Wiedenmayer 13. * * * There was great shooting at Erb's. Nine high-priced sweeps were shot in fine style, and a match for $50 a side between E. Francis and C. M. Hedden was sharply contested under Hurlingham rules at 25 birds each. Hedden stood at 30yds. and Francis at 29. Hedden killed 21 birds straight, using his second barrel 7 times; he missed his next bird and killed the 23d, winning the match. Francis his 9d, 7th, 8th, 17th and 22d bird, and killed 18 birds out of 23. Arrangements were made for another match.

WELLINGTON, Mass., June 2.—There was a larger attendance than usual at the grounds of the Wellington Club to-day, owing to the fact that it was the first Saturday for several weeks with no rain. In the merchandise match Perry made the first clean score of the series, killing 20 birds straight. In this match points were scored as follows: Perry first with 20, Bond second with 18, Snow third with 16, Stanton, Shumway, Sanborn and Brown fourth with 15; Schaefer, Baxter, De Rochemont and Scott fifth with 14; Bradstreet, Swift and Chase sixth with 13, Hart and Melcher seventh with 12, and Conant eighth with 10 out of 20 birds. A number of sweepstake matches were shot.

TORONTO, May 31.—The Toronto Gun Club concluded their series of six shoots for the Enos James gun and prizes donated by the club to-day at McDowall's grounds. A. Wyness won the gun with the good score of 103 out of a possible 120. D. Blea took second prize, a beautiful set of China, with 101; Geo. Briggs won third, a fine set of carvers, with 81; Geo. Pearsall fourth, a silver inkstand, with 84, and W. Felstead fifth, a piece of plate, with 76. The shoots have done much good by encouraging practice among the members.

HAMBURGH, N. J., May 26.—A match between L. M. Morford of Newton N. J. and R. L. Edsall of Hamburgh. 50 blue rocks, 18yds. rise, screened trap. Morford shot a 9lb. Greener gun loaded with 4½drs. F. F. G. dead shot powdor, 1¼oz. No. 8 shot. Edsall used a 9lb. Ithaca hammerless and Chamberlain shells, 4drs. powder and 1⅛oz. No. 8 shot. L. M. Morford 49, R. L. Edsall 40.

KATRINA.

THERE is comparatively little for New York to be proud of in the yacht work she has turned out for some years past; the changes and additions to the fleet, both sail and steam, have shown but little advance or improvement. That this is not due to the lack of skilled mechanics and artisans in all branches of yacht construction, but rather to the absence of taste and enterprise on the part of owners is a fact that needs no demonstration, but where the demand is made for really first-class work it can be had in New York as well as elsewhere. After some of the specimens of naval architecture and construction of the last three or four years, especially in the steam fleet, it is a pleasure to find a piece of work that, apart from the excellence of the model, is mechanically perfect, not only in the finished result, but in the means employed to attain it. It has been a reproach to New York that while steel and iron have long since driven out wood in yacht construction elsewhere, her yards were capable of nothing better than in the time of Steers and Webb, and it is a matter of pride now that she has at last one modern shipyard where the highest grade of work is regularly turned out, that of Mr. Henry Piepgrass, at City Island, formerly at Greenpoint. Nearly a dozen years ago Mr. Piepgrass, a Dane, who had learned his trade in some of the best shipyards of Europe, a trained mechanic and a deep water sailor as well, began in a small way to build yachts at Greenpoint, having been for a time connected with the shipyard of Mr. Henry Steers, then in existence there. Among the first of his yachts were the cutters Muriel, Volande, Valiant and Leila, all small craft of narrow beam, but of the most thorough construction. Moving into larger quarters at Pottery Beach, Mr. Piepgrass built in succession Oriva, Bedouin, Wenonah and Ileen, all splendid examples of the most modern wooden construction, the double skin with alternate steamed and sawn frames. In 1885 the yard was much improved by the addition of a complete plant for iron and steel work, the first steel vessel being the steamer Wanda, built that year. In 1886 Cinderella, a wooden boat, but of specially light construction, was built, and in the fall of the same year, in consequence of the property being needed for other uses, the yard was moved to its present location at City Island, Mr. Piepgrass purchasing the old yard of Mr. David Carll, the birthplace of many once famous yachts.

The plant was very old and imperfect, hardly more than a couple of railways, but under the new ownership the whole place was greatly changed. A large basin was built, the wharf repaired and a number of new buildings erected. The chief of these is three stories high, the lower floor being filled with drilling, shearing and punching machinery, bending rolls and plate planing machine, all the shaping and fitting of the plates being done here. The engine room is in a small addition, with lathes and machine tools. The second floor is given up to the joiner shop, being fitted with the latest wood-working tools. On the third floor is the mould loft, of spacious proportions. The bending floor for frames, the blacksmith shop and storage sheds for yacht's gear are in separate buildings on the west side of the yard. There are three railways, two of large size, with a good depth of water off the yard. All supplies are brought direct to the wharf by boat. Not only is the plant most complete, but Mr. Piepgrass has gathered together a force of skilled mechanics in all departments. The first yacht built at the new yard was the sloop Titania, a steel yacht designed by Mr. Burgess last year. This season, besides the work on Priscilla and other repairs to yachts, the principal work has been the new racer Katrina, now nearly completed.

Katrina is in every way a New York boat, a fitting representative of the improvement which though slow has at last begun in earnest. Her owners, Messrs. Edgar S. and Hugh D. Auchincloss, are well known New York yachtsmen, members of the New York, Seawanhaka and Atlantic clubs. It was to them that the little cutter Madge was consigned in 1881, and for a time they sailed her, but of late they have owned the Mischief. The designer is Mr. A. Cary Smith, also a New York man, so well-known in connection with Intrepid, Fortuna, Nora, Yampa, Priscilla, Cinderella, Iroquois, Mischief, Madcap and many other racers and cruisers. The new boat is built to the limit of the 70ft. class, always the favorite size with New York yachtsmen, and she is built too for speed, while at the same time very comfortably fitted below for cruising and ordinary sailing. It is a relief in these days when names are chosen from the slang vocabulary, or to suit any whim, regardless of euphony or taste, to find one that is at the same time appropriate and distinctive, but Katrina is in every way a representative Knickerbocker name, and fitting for the boat which is apt to carry New York's laurels for some time to come. The new yacht is a "compromise," but a marked departure from any other of her kind in many features. She is perhaps most like Cinderella but still shows a great advance of her. The leading dimensions are as follows: Length over all, 84ft.; l.w.l., 69ft. 6in; beam, extreme, 20ft. 4in.; l.w.l., 20ft. 2in.; draft, 9ft. 4in. The displacement is a little over 60 ballast about 35 tons. The hoist of mainsail is 46ft.; mast, deck to hounds, 55ft. 9in.; masthead 10ft.; boom 70ft.; gaff, 45ft. 6in.; topmast, 45ft.; bowsprit outboard, 34ft.; spinaker boom, 60ft. The mast is stepped 26ft. 9in. from stem, and the centerboard is 18ft. long and placed further forward than common.

The keel has a slight rocker aft, but forward it rounds up quickly, with a very moderate amount of forefoot. Above the water it runs out into the longest and handsomest clipper stem yet seen in American yachts, the sweep being very graceful. The sternpost has moderate rake, while above it the counter runs far out, light and graceful, with much less fulness about the load line than in Mr. Smith's previous efforts. The sheer is fair and handsome, without the exaggerated cockup aft of the Thistle and many American craft. It is rather straight forward, with the curve aft of the middle, but with no marked contrast of straight and hollow. Both stem and counter show a far better finish than any of the older boats, and evidently owe a great deal of it to the influence of Thistle. The planksheer and rail harmonize well in their curves. From a point astern, though she shows all her beam, the sideline carries a perfectly fair sweep from stemhead to taffrail, without the pinched-in appearance aft so many wide boats. The midship section differs materially from that of Titania, the flaring topsides of the latter being replaced by a little more beam at waterline and a straight side with just enough round to avoid a flat and ugly look. The bilge is dropped very much lower than in Titania, while the absolute depth of the section to bottom of keel is also greater by 6in. Another point in which greater stability is gained is in the widening of the keel from 7in. in Titania to 18in. in Katrina, a very important gain in ballast space when the large opening of the trunk through the center of the keel is considered.

In no other detail of iron construction has the improvement been so marked of late as in the keel system. In Mischief and Priscilla both centerboard craft, the ordinary bar keel was used, that in Priscilla being 3in. deep outside and 5in. wide on bottom, including garboards, while Mischief's was somewhat smaller. In each the widening for the centerboard was made by a square offset in the keel of 1¼ to 2in. on each side, leaving a very ugly bunch. In Titania the keel was built of four separate pieces, all 2in. thick, the forward and after sections being each 5in. wide where they met the trunk, and 2in. at the ends; while the two pieces alongside the trunk were 2in. square with a 5in. space between them for the board. Each pair of ends lapped an end of the taper pieces, the three being riveted through. This construction was by no means as strong as desirable and gave little space for ballast. In Thistle and Galatea the keels were really troughs, of semi-circular section, 18in. diameter, forged out of one width of plate, a very strong and neat job mechanically, but the form itself was bad as far as the lateral resistance was concerned. The forging of a dish-plate keel of the size and shape required for Katrina would be difficult and expensive, but instead of a forged plate a very strong and simple method has been devised by Mr. Smith. The bottom of the keel is a flat steel plate, 18in. wide at the center and ⅜in. thick, tapering in width with a fair sweep from forefoot to heel of sternpost. Along each edge runs a single length of angle iron, 3x3x⅜in., specially rolled for the purpose, the usual square outer angle being rounded away. To this angle iron the garboard strake, which lies nearly vertical, is riveted. The foundation for the centerboard trunk is a piece of the ordinary square-heeled angle iron, the same size as the other, bent around the four sides of the slot and riveted to the keel plate; the sides and head ledges of the trunk, the latter being of channel beams, being riveted along the lower edges to the vertical web of this angle iron.

The stem is forged from a flat steel bar, 4in. moulded and 1⅛in. sided, being planed to a sharp edge forward, with a rabbet for the plating. The sternpost is a very handsome forging, moulded 3in. and sided 2¼in. at the rudderpost and 1⅛in. at heel, where it is riveted to the keel. The after side is hollowed to fit the rudder. Rabbets are cut here also for the plating, which is of steel, as is the entire hull, the thickness being No. 4 wire gauge, or .238in. We noticed last year the excellent plating of Titania, but in the present job Mr. Piepgrass has gone a step further, and the result is the best piece of light plating yet turned out in an American yard, while it is doubtful if it has ever been excelled anywhere. The skin is flush throughout, rabbeted into stem and sternpost as noted, and with no laps or offsets save a small one on each side where the garboard laps on the angle iron, and these will be filled flush with cement.

The lining of the strakes, the laying off of the plates, and finally the shaping and fitting of each plate in a steel yacht are operations that require greatest skill and the eye of an artist; but in the present case there is no fault to be found with either. Both frames and deck beams are of steel angles, 2½×2½×¼in. and spaced 21in. The floors, on every frame, are of No. 6 steel, 2ft. deep, the heels of the frames being rivcted to them. The beams for the cabin floor are of the same size and spacing as the frames. Gusset plates of No. 4 gauge are used liberally between the heads of frames and the deck beams and about the trunk. The latter is plated up with No. 4 steel, stiffened by angle bars of the same size and space as the frames. Reverse frames are used abreast of the mast, the deck beams also being doubled. The outside plating extends up to the planksheer, and the trunk runs to the deck. On top of the deck beams a stringer plate of No. 6 steel 1ft. wide is worked for the entire length, with an angle iron 2×2×¼in. joining it to the outer skin. On top of this stringer is the planksheer of 2¼in. yellow pine, 10in. wide, bolted down to the beams and stringer plate. The rivets in the hull are all ½in. steel, spaced 6in., the longitudinal seams being single riveted and the butts double. The deck is 2¼×2¼in. white pine, laid fore and aft, and fastened from below by ⅜in. steel screws through the beams. A partner plate 3×3ft., No. 4, is worked about the mast, with smaller plates in the wake of eyebolts, etc., on deck.

The deck fittings will be of mahogany, but the rail is a piece of clear American elm, specially imported from Scotland for the purpose, as it cannot be had in this country. It is a beautiful piece of stuff, with fine straight grain, 5×2¼in., tapering a little toward the ends. The stanchions are of yellow pine, 3×3in., extending 2ft. below deck, the heels being bolted to the plating. The bulwarks are of white pine, 10in. high and ⅞in. thick. About the taffrail a very neat finish has been made, the rail being quite low. The chain plates are all inside, with only a lug for the whiskers and one for the bowsprit shrouds on the outside of the boat. Below deck there is an average of 7ft. headroom for the whole length. The bulk of the ballast has been run into the keel, the latter being first cemented, the lead pigs piled in, and a sufficient amount of hot lead poured over them to fuse the whole into a solid mass. The small spaces formed by the contraction of the lead, between it and the plating, were completely filled with red lead and oil, run into all the crevices, after which the top of the lead was cemented. The lead keel is about 35ft. long and of an average depth of 20in.

The main companion is well aft against the after bulkhead of the saloon, the sail locker being immediately abaft the latter. The saloon is 12ft. long and of good width, owing to the steel construction. It is fitted up with buffet and transoms of mahogany, the fronts of the latter drawing out to form wide berths. The fore bulkhead comes at the end of the trunk, a stove being fitted in the center of it. On the starboard side a door leads to a large stateroom, forward of which is another of the same size. On the port side of the trunk is a passage, opening on which is first a toilet room with bath tub, then a very convenient steward's pantry, and forward of this two rooms for captain and mate. The galley is large and lofty with room for cook and steward, ice chest, refrigerator and tables, and is separated entirely from the forecastle by a close bulkhead. The forecastle is large and well lighted, with 7ft. headroom. All the fittings below except the cabin furniture, are of white pine of a neat and simple finish and will be varnished. The hull itself is very light and weight has been saved wherever possible in the fitting up. The plumbing is so arranged that all water flows to a drainage tank in the hold, from which it is pumped overboard. The deck has no break or cockpit; the steering will be done by a wheel. All the blocks, gear and rigging have been specially made for the yacht, the canvas, woven by the Druid Mills, being in 12in. cloths, made with the greatest care. The mast is of Oregon pine, the boom of white pine, the gaff of spruce and the bowsprit of yellow pine. The jaws of the gaff are of steel in English fashion.

The rigging is in the hands of Mr. Phillip Low, Mr. Sawyer has made the sails, Mr. Brown the iron work and Mr. Bishop the plumbing, all the rest being done by the builder. The joiner work was all made and fitted in the shop from the moulds by which the frames were bent, so that little time was lost in putting it into place. The rigging, sails and spars were ready some time in advance of the hull, the latter being delayed at the start by the blizzard, which stopped all outdoor work and at the same time made it impossible to get the steel from the mills. Every part of the fittings and equipment has been carefully weighed and a record kept of the weights. When the yacht is in perfect trim she will be heeled to find the position of the center of gravity.

On May 29 the owners, with a large party of guests, boarded the steamer Laura M. Starin at New York, and after a pleasant sail as far as Larchmont, during which luncheon was served, they landed at City Island, where the yacht was cradled, ready for launching. At 2:30 the wedges were set up, and soon after she left the ways with a rush, entering the water very smoothly and easily. The little daughter of Mr. E. S. Auchincloss broke the bottle over the stem head and christened the yacht Katrina as she made her bow to the land. The work of fitting out will go ahead rapidly and the yacht will be ready for a trial trip this week. She will be in the spring regattas, though it will take some time probably before she is in racing trim. Captain Berry, now of the Mischief, will command her, with the Mischief's crew.

MIRAMICHI Y. C. OPENING CRUISE, MAY 24.

ON the day previous to the opening cruise of the M. Y. C., many were the conjectures as to what the weather would be on the morrow. Although many were in favor of voting "Queen's weather," such as our good Queen is usually favored with on her birthday, it was thought doubtful that we should escape without rain this time, as we have had but little this spring, although on the whole vegetation has been very backward, the weather having been cold.

The barometer was watched very closely, and as far as could be judged it read fair, and the morning was ushered in according to its reading but perfectly calm. A large part of the outers for the day hailed from Millerton, the home of the commodore, and the first part of the run as far as Newcastle had to be done under steam, giving a delightful trip down river of eight miles. Four steamers made the start, all gaily decked out, with band on board one of them.

Arrived at Newcastle the yachts were found all ready, their crews soon on board and preparations made for the boat down river to meet the contingent from Chatham. By this time the hearts of the sailors were made glad by the springing up of a light easterly wind. The start was made from Newcastle about 11 A. M. Steam yachts and launches Laura, Derby, Bessie, Lily, and sailing yachts Kittoch and Kilbride, the latter with commodore and party on board, and the Kittoch with party of ladies and gentlemen.

After starting the signal was given from the Kilbride to proceed to Chatham, and on getting to Douglastown and meeting the Chatham people, who turned out rather slimly, only two yachts, Fedora, Vice-Commodore Stewart, and Blondy, Mr. Gould, coming out, the signal to proceed to Sheldrake Island was hoisted. On nearing Chatham the wind had got up so briskly that the commodore thought it advisable to change destination, as an east wind down river makes it rather lively for an excursion party, so he ran up signal to proceed to Beaubear's Island, above Newcastle. The boats were all put about accordingly, giving a good run up before a brisk east wind. On the Kittoch advantage was taken of running before the wind for a light lunch with which to quiet the wants that an invigorating sea breeze was working up. Many were the jests thrown out in all good humor from each boat, and congratulation on the fine day as we ran by or fell behind a slower or faster boat.

On nearing Newcastle we were ordered to run close under the town, we suppose to make as much display as possible, which we did, and shortly after the signal was displayed "yachts will pass to leeward of flagship and salute." The Kittoch's signal officer read the order upside down, transposing the letters to read proceed around Beaubears Island. The Kittoch being ahead the commodore hailed us with his trumpet and ordered us to follow his instructions, that to comply we should fall behind, and for explanation of the order we should refer to back of our club book. Our captain could not understand what the commodore was driving at, thinking that we could sail round Beaubear Island just as well ahead of him as behind if allowed, and moreover could not understand why we should refer to back of book for instructions, but at last it dawned on our signal man that he had read signal wrong side up and made J. C. read C. J., so after a good laugh and ample apologies we dropped behind prepatatory to going through the maneuver required of us. After breaking the line we ran up alongside a steamer moored at the island, dropped our anchor a little way out, hauled in to steamer, prepared and had our dinner on board, and all went ashore to join those from the steamers and other boats, making quite a large party when all together.

The island Beaubears, latterly called Harley's, is a fine place for picnicing, only two miles up from Newcastle, lies at the junction of Southwest and Northwest branches of the Miramichi, only separated at the upper end from the mainland by a narrow, deep channel called by the natives "The Tickle." The lower end of island has a lot of houses, the greater part in bad repair, formerly occupied by managers and workmen, the island in the days of wooden ships having been a large ship building yard. The upper part is well wooded; in extent it is about 1½ miles long by ¼ or more broad.

The excursionists took possession of the manager's old house, the veranda of which was used as an eating place, the roof making a nice shade from the sun. A couple of amateur photographers created a good deal of fun by their exertions to get pictures. During dinner excellent music was discoursed by the band and enjoyed by those present.

At 3:30 P. M. the order was given to get under way, the commodore thinking it a pity to lose such a fine breeze, still easterly and very steady; the sailing craft getting off first, but not before a picture of them was taken under promise that we should have a copy all round. The beat down river was delightful, the breeze strong enough at time to put our scuppers under. We managed to overhaul and pass Fedora, but were not able to get up with Kilbride and Blondy, but of course we do not think they increased the lead they had at the start.

All arrived off Chatham about 6 P. M., the Kilbride ran in and landed the Chatham part of her crew, Blondy and Fedora ran for their moorings. Kilbride and Kittoch made for home, the former running up her topsail. We did not care to go to the trouble, but fear of being left behind made us alter our decision and put it up, and we were soon rewarded for our trouble by hauling up on them.

At Douglastown, two miles above Chatham, Laura offered us a tow, as it was getting late and ladies tired after the long day. We accepted, arriving at Newcastle about 7:30 P. M. After putting up the yachts we left for Millerton about 8 P. M., arriving at 9 o'clock, having thoroughly enjoyed the day, which was perfect in every respect, the wind although easterly not being too cold. If the day was a precursor of what our yachting season is to be, it will be an enjoyable one.

MILLERTON.

QUINCY Y. C. OPENING, May 29.—The Quincy Y. C. celebrated its opening on May 29 by a race in a strong E. wind, the times being:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Echo, E. Burwell	24.06	1 43 56	1 17 50
Moondine, W. H. Shaw	25.00	1 40 44	1 15 05
SECOND CLASS.			
Nereid, C. F. Colby	20.03	1 37 38	1 11 02
Hester, P. R. Blackmur	20.06	1 43 10	1 16 48
JIB AND MAINSAIL.			
Diadem, L. Hayward	18.01	1 45 23	1 16 23
THIRD CLASS.			
Flora Lee, E. B. Grover	16.09	1 29 31	1 03 15
Rocket, H. M. Faxon	16.03	1 30 20	1 03 19
Elsie, C. F. Hardwick	16.10	1 32 06	1 05 56
——, J. F. Parrott		1 39 56	.....
FIRST CRUISER CLASS.			
Hebe, H. Edwards	19.00	1 39 56	1 11 59
SECOND CRUISER CLASS.			
Mabel S., John Shaw	17.09	1 32 40	1 03 16
Julia, C. W. Hall	17.00	1 40 20	1 10 00
FOURTH CLASS.			
Cosette, W. Marsh	15.00	1 27 00	0 56 00

The judges were Messrs. H. H. Sheen, E. W. Baxter and G. G. Saville.

CHIQUITA.—This name has been given to the new 40ft. boat for Mr. Hemmenway, former owner of the Beetle.

DORCHESTER Y. C.—At the last meeting this club adopted the new rule of the New England Y. R. A., but will not enforce it in the coming race of June 18.

SOUTHERN Y. C.—A race will be sailed on June 23 for the handsome challenge cup presented by Vice-Com. Brewster for the cabin sloop class. This class is rapidly coming into favor and promises soon to be more popular than the open boat class.

A RACING MEET ON THE SCHUYLKILL.

A DELEGATION, consisting of thirty-three members of the Shackamaxon Y. C., of Camden, visited the Montgomery Sailing Club, of Norristown, on May 20. Camp was made in a grove on Barbadoes Island, where refreshments were provided for the yachtsmen.

Among the visiting yachtsmen was Mr. Chas. L. Work, well known to the readers of the FOREST AND STREAM through his frequent contributions to the yachting columns. The visitors brought with them three duckers, the Emma A., Sunbeam, and Ettie T., which they raced against the entire fleet of the M. S. C., consisting of canoes, duckers, tuckups, and the hiker Pennsylvania.

Two races were sailed over the upper course, from the head of Barbadoes Island to Indian Creek and return, twice around, total distance 6 miles. When the first race was started the breeze was quite fresh, northwesterly, making it a beat to the buoy and a run back. The first hitch in the programme was occasioned by the official starter not being on hand, and when he finally arrived he did not have the starting signals with him. The race committee decided at the last moment to start all boats at the same time—10:30—the starter occupying a small punt which was anchored just above the shoal at the head of the island. The signals for the start were given with a handkerchief; and the word "Go" being passed from boat to boat, and re-echoed from the unfortunates on the island, the fleet got away in a very scattering and irregular manner.

FIRST RACE.	Length.	Finish.
Igidious, tuckup	15.00	12 04 40
Emma A., ducker	15.00	12 05 50
Priscilla, tuckup	15.00	12 07 05
Pennsylvania, hiker	16.00	12 07 22
Flying Eagle, tuckup	15.00	12 10 18
J. S. Frith, tuckup	15.00	12 12 32
Ettie T., ducker	15.00	12 27 55
H. C. Scott, tuckup	15.00	12 27 57
Sunbeam, ducker	15.00	12 30 25
Ino, ducker	15.00	12 33 30
Sadie, canoe	16.00	Withdrew
Gracie, skiff	12.00	Withdrew
Elsie, ducker	15.00	Withdrew
Bowers, tuckup	15.00	Withdrew

The Shackamaxon ducker Sunbeam, sailed by her owner, William Martin, capsized off Abram's run. The Bowers dropped sail and towed the unlucky mariners to the tow-path, where they quickly bailed out the ship by holding her over their heads, keel upwards. After polishing up the nickel work with a dry silk handkerchief the Sunbeam was again launched and continued the race.

It was a stern chase, and a long one; but the genial champion of the Shackamaxons was equal to the occasion, and finally beat the Norristown ducker Ino 3m. 5s. A fire was built, and the wet crew partially dried out before the afternoon's race. It was decided to set the tuckups back three minutes in the second race. The wind was in the same quarter but had diminished somewhat in strength, so that the Gracie and Sadie could easily carry full sail, which they could not do at all times in the morning.

SECOND RACE.	Start.	Finish.
Sadie, canoe	1 35 00	3 20 40
Sunbeam, ducker	1 38 00	3 25 23
Emma A., ducker	1 35 00	3 25 25

The skiff Gracie was fourth and withdrew at the end of 4 miles, as the wind had almost entirely died out. The ducker Ino was fifth and withdrew at 3½ miles. The ducker Elsie, sixth, withdrew at 3¼ miles. Eight tuckups, one hiker and two duckers withdrew at the end of the first round, 3 miles. Shortly afterward the wind again sprang up, and the three leaders came home at a good rate of speed.

It is evident that the Shackamaxon duckers with 19¼ or 20yds. of sail are much faster than our duckers with 18yds. The difference in the sail area does not seem to be sufficient to account wholly for the difference in speed. Careful rigging and expert handling probably had more to do with the result than any other factor. We are not ashamed to acknowledge that such men as Anderson, Martin, and many others of the S. Y. C., can teach us how to sail. Under the rules of the M. S. C. the ducker Emma A. would have won easily in the first race. In the afternoon the canoe Sadie fairly beat the crack duckers, and would still be the winner if set back for excess of sail area, 2 s. per foot per mile.

The affair was a grand success in every way, and although it is the first of its kind in this locality, we hope it may not be the last.

Two cruises were on the programme for May 27. In the morning there were only four entries. The Gracie started at 9:00:40 and rounded the buoy at Indian Creek at 11:04, the Frank and Willie Playford, tuckup, being about one length astern. The Playford started at 9:10 with a crew of two men, being handled by John Dewees, her regular captain, who was coached by John Sheard, a professional tuckup sailor from the Delaware. After rounding the buoy the Playford got a slight lead, and the race was abandoned soon after as it was impossible to finish inside the time limit. The afternoon race proved to be another drifting match, the Gracie having a lead of about three-quarters of a mile at Abram's Run, two miles from the start. As her last competitor, the tuckup E. C. Potts, turned and sailed for home about this time, the Gracie also withdrew. E. A. L.

Editor Forest and Stream:

I have just returned from spending one of the most enjoyable days that I have to credit the sport of yachting with, a day looked forward to for a long time: its object being a test of the sailing abilities of the ducker as compared with a canoe.

Upon invitation of the Montgomery Sailing Club, of Norristown, one of the most active organizations of its kind in the State, the Shackamaxon Y. C., of Philadelphia, shipped three duckers, two of them cracks, the third, a new boat never before having had a sail upon it, to Norristown, to try conclusions between them and the canoes. May 20 was selected for the race, that being the only day on which a full representation from both clubs could be present. About thirty members of the S. Y. C. went up on the 7:30 train, and the same number of members of the M. S. C. were waiting for them. The two parties seated in boats of every type proceeded to the head of the island, about one mile above the city, where the hospitable instincts of the M. S. C. were seen evidenced by a commissary tent amply stocked for a hungry crowd, and a refreshment table near by a swing, trapeze and quoits, all ready for use, with several boats near by, showed such an evident desire for our comfort that a cordial friendship was established at once.

The first race was started at 10:30 A. M., all the boats present entering. According to the rules of the club, in order to bring the boats to something like an equality, the sails of the different classes are limited and a time allowance given. In this case all boats were equipped with their largest sails, and no time was allowed, the desire being simply to find out the comparative merits of the boats.

The wind was light N. by W., the water smooth, with only a slight ripple on it, a condition not to be met with ten days in a year on the Delaware. Course 1½ miles from head of island to buoy, then back and repeat, 6 miles in all. As you will doubtless have a full report of the race from the M. Y. C., I will here only give the time of finish. The start was a flying one and not a good one, very few of the captains understanding it. The two canoes got away first, followed by a majority of the tuckups, then the Philadelphia duckers and hiker Pennsylvania, finally the slow people.

	Length.	Finish.
Igidious, tuckup	15.00	12 04 40
Emma A., ducker from Philadelphia	15.00	12 05 50
Priscilla, new tuckup	15.00	12 07 05
Pennsylvania, imitation hiker	15.00	12 07 22
Flying Eagle, tuckup	15.00	12 10 18
J. S. Frith, tuckup	15.00	12 12 32
Eddie T., ducker from Philadelphia	15.00	12 27 55
Scott, tuckup	15.00	12 27 57
Sunbeam, ducker from Philadelphia	15.00	12 30 25
Ino, tuckup	15.00	12 33 30
Elsie, ducker	14.00	Withdrew.
Warren, ducker	14.00	Withdrew.
Gracie, canoe	12.00	Withdrew.
Sadie, canoe	16.00	Withdrew.
Geo. W. Bowers, tuckup	15.00	Withdrew.

The Eddie T. is a new ducker and never had sail on before. The Elsie and Warren are called duckers at Norristown, but are not.

Now, here's a pretty mess. The canoes, our particular mutton, got away first, yet the winners were over the course twice while the canoes were going around once, and we were informed that this is reversed when the wind is so light that the canoes' light sails will fill, while the heavier canvas of the larger boats will not. For my part I should say that this indicates faulty rigging in the larger boats and adds nothing to the merits of the canoes.

The winner is a tuckup that was at one time considered very fast in Philadelphia, but there are fully fifty tuckups to-day who will beat her readily. She carried 156 sq. ft. of sail, while the ducker Emma A. had only 117 sq. ft.; if time allowance had been given the ducker would have won by nearly nine minutes. The Priscilla is a new tuckup built by an amateur, and is one of the neatest boats in the fleet. Her lines were published in FOREST AND STREAM a few weeks ago. The Pennsylvania is a big nothing in particular, she was built for a hiker but is not one by great odds. She carried 360 sq. ft. of sail on the same waterline as the ducker which, with 117 sq. ft., beat her nearly two minutes; had a time allowance been granted she would have beaten her nineteen minutes. One of her main difficulties is that having a barrel bottom she rolls over on slight provocation, in fact does so nearly every race, the effect of this on her crew's mind can be imagined, it is another case of "giving a dog a bad name, etc." She was said, however, to have done the best sailing in this race she has ever done. It is not necessary to say anything about the other boats, except to call attention to the Sunbeam's performance; she turned turtle through the carelessness of her owner in not reeving his sheet rope properly, yet her crew swam her ashore, righted and bailed her out, went over the course, and then beat the Ino, the two canoes and three other boats.

Remember, this was new water to all the Philadelphia people, and the course although a beautiful stretch of water, is surrounded by hills which keep the water smooth but breaks the wind up, so that it is puffy and generally disagreeable.

After eating lunch, and spending an hour in games, the second race was started at 2:30 P. M., the contestants being the same as in the morning, with the addition of Cocktail, a tuckup. The wind was very light, nearly a calm, with occasional catspaws.

All got away together, but after the first round all the boats but the canoes Sadie and Gracie and duckers Emma A. and Sunbeam gave it up, they had no show whatever. Shortly afterward the canoe Gracie also threw up the sponge. The finish was canoe Sadie first, then four minutes after the two duckers, close together.

Now for the conclusions to be gathered:

1. The tuckups were all old models and it is not fair therefore to take them into consideration at all.

2. The hiker is not a liker at all but is a failure.

3. The so-called duckers sailed in the Montgomery Sailing Club matches are not duckers at all, their standing can be judged by the fact that they were both distanced in both races.

4. The canoes were carefully designed and splendidly rigged and handled, and the duckers were taken up because they were cracks, consequently all the race there was, was between these four boats.

5. That when there was enough wind to sail by, the canoes were distanced.

6. That in a drifting match one canoe being especially rigged for just such an occasion, was slightly faster than the duckers, rigged for sailing.

A word in here: Two weeks ago, a young man from Camden, who had never owned or sailed a proper ducker but who had owned one of these 14ft., double-ended abortions, went up to Norristown as a champion of the duckers and taking one of their crude double-enders entered into a race with the canoe Gracie, who of course distanced him, whereat the canoe people were able to crow and the readers of the FOREST AND STREAM, who did not know the true facts, undoubtedly had many a quiet laugh at the expense of the duckers; those of us who know better were content to wait until we got a true ducker in the fray.

The duckers in these two races were rigged in our ordinary sailing rig, such as we enter any race with, even if half a gale is blowing and whitecaps rolling high. The canoe Gracie is 12ft. long and sharp as a needle at both ends, and her spars are of bamboo, and her rigging in general a marvel of lightness. Should she, however, appear on the Delaware River, the first passing steamer's swells would swamp her. For her own waters she is perfect, but she must stay there. The canoe Sadie is 16ft. long, and was built by her owner, Mr. Ritter, after the lines of Notus. She is a beauty and the smartest boat in the fleet. She carries 104sq. ft. of sail. She is far superior to any canoe I have seen on the Delaware, but she could not carry that sail one day in ten.

Finally, the results of these races confirm me in my opinion, which I have frequently asserted in your columns, that, for a boat that does not have to be portaged, the ducker is the most comfortable, speedy and safe of any boat of her size in existence, more especially on water other than mill ponds. The canoeists of this section will hold their meet from next Saturday to Decoration Day, at Delanco, on the Delaware River. It is possible that Mr. Ritter will be able to get down with the Sadie; if so, and he can carry his sail, I predict for him an easy victory in all sailing races. I should also like to see the duckers Emma A. and Sunbeam visit the meet, although I believe that they have engagements elsewhere. CHAS. L. WORK.

PHILADELPHIA, May 21.

[We understand that the Priscilla was built by Wignall, the leading builder of tuckups, and not by an amateur. Gracie was built originally for rowing only, and cannot be considered in any way a canoe.]

MEMORIAL DAY RACES.

THE annual races and cruises on Decoration Day (or as it is now more appropriately called, Memorial Day) were held throughout the country, but in many places, notably about New York, the calm weather spoiled all attempts at racing. The chief event of the day, the match between the Vivid and Wizard, was a complete failure, being re-sailed on Saturday, as told elsewhere. The various events were as follows:

Atlantic Y. C.—The orders for the day laid out a review of the fleet and an informal race down the Bay, the larger yachts rounding buoy 8½, and the smaller ones buoy 11. After forming in two lines, one headed by the Haze, Vice-Com. Hogan, and the other by the Gevalia, Rear-Com. Coates, the following yachts started in a very light wind: Cid, Haze, Hidalgo, Gevalia, Anaconda, Stella, Kangaroo, Enterprise, Nirvana, Hildegarde, Eurybia, Huron, Ariadne, Tourist, Mischief, Grayling, Roma, Bertha, Annie, Nimrod, Amaranth, Winona, Shamrock, Azalea, Leon, Mystery, Concord, Ilderan, Southern Cross, Clio, Iolantha, Rival, Agnes, Gleam, May T., Iris, Daisy, Estelle. After a time some anchored and finally gave up, the wind dying out entirely.

Seawanhaka C. Y. C.—The fleet started from Staten Island in the morning headed by the new flagship Sea Fox, just arrived from Wilmington. There were present Medusa, Yampa, Ray, Iseult and Banshee. The day was spent in a drift, the members and guests returning to the club house for a dinner in the evening.

Knickerbocker Y. C.—The following yachts started in the annual regttta:

Class 1. Cabin sloops and cutters, 32ft. and over—Wacondah first; Dora second; Melvina, Culprit Fay, Florence, John Demarest, Undine, Ariel.

Class 2. Cabin sloops and cutters, 32 and over 25ft.—Yolande first; Alice H. second; Rover, Black Hawk, Mamie.

Class 3. Cabin sloops and cutters under 25ft.—Weary Witch first; Marvel second; Madge, Nanita, Wave, Lakme, Ianthe.

Class 4. Cabin cat-rigged yacht—Torino first; White Cap, Idalia, Thisbe, Whim, Elaine, Fannie.

Class 5. Open sloops over 26ft.—Zena first; Mascotte.

Class 6. Jib and mainsail, under 26ft.—Lorna first; Duster second; May.

Class 7. Cat-rigged, 23ft. and over—Truant first; Adele second; Alice, Nellie W., Mayotta.

Class 8. Cats under 23ft.—Minnie R., Susan.

Class 9. Steam and naphtha launches—Mystic, Cosy.

The steamer Taurus was chartered for the members and guests. Starting at 10:56:30, it was five hours before the leaders had drifted over half the course to the Gangway buoy as follows:

Lorna	4 14 48	Wacondah	4 20 46
Truant	4 19 02	Dora	4 20 47

The race was abandoned finally, the first boat in, Lorna, being a few minutes beyond the time limit. It will be re-sailed later.

Jersey City Y. C.—The yachts of this club sailed down the Bay with members and guests on board, returning to the club house at 3 P. M., where dinner was served.

Pavonia Y. C.—A race was sailed by this club for the Fullman cup, the starters being Phantom, Avalon, Lauretta, Julia P., Jewell, Holmes, Three Brothers, Len B., M. W. Conway and Needless. The course, around Liberty Island and Fort Lafayette, was only completed by Avalon, owing to the light wind.

Brooklyn Y. C.—A reception was held at the club house in the morning, followed by a sail in the afternoon, with dancing in the evening.

Canarsie Y. C.—This club sailed a race in light winds, the course being around the red can buoy in Rockaway Inlet. Gelert won in her class, with Cygnet second. So So won in her class, with Aurora second.

TRITON, sch., Mr. J. J. Faye, is now hauled out at Poillon's, where a new and longer stern of more than usual ugliness has been put on. With so many good examples to be seen everywhere, it is strange that work goes on year after year in the same old rut.

SOUTH BOSTON Y. C., MAY 30.

AN open regatta for prizes given by the makers of the "Cutter Cigar," was sailed on Memorial Day under the management of the South Boston Y. C. The wind was very light from S.E. during the race, the start being made at 12:30. The courses were: First class, 14 miles; second class, 11 miles; third class, 9 miles; fourth class, 6 miles. The times were:

FIRST CLASS—KEELS.	Length.	Elapsed.	Corrected.
Prince Karl, E. L. Williams	29.01	4 38 45	3 59 32
Breeze, C. E. Paget	29.06	4 44 11	4 05 27
FIRST CLASS—CENTERBOARDS.			
Shadow, John Bryant	34.06	3 48 15	3 15 02
Magic, E. C. Neale	31.01	4 24 11	3 47 20
Violet, H. J. McKee	33.08	Disabled.	
SECOND CLASS—KEELS.			
Echo, F. N. Isham	24.10	3 31 20	2 55 52
Annie Maud, F. O. Vegelahn	23.06		
Rival, W. S. Nickerson	23.06	3 40 00	3 06 19
Nydia, N. Moreland	23.02	3 51 50	3 14 14
Wanda, G. W. Griffis	23.03	3 52 20	3 15 57
Æolus, Jacob Rood	27.00	3 49 50	3 16 50
SECOND CLASS—CENTERBOARDS.			
White Fawn, W. Cherrington	24.06	2 50 50	2 14 54
Black Cloud, Aaron Brown	23.10	3 21 08	2 44 25
Moondyne, W. H. Shaw	25.00	3 20 35	2 45 19
E. W. D., E. W. Dixon	25.01	3 35 15	3 00 05
Madge, Cummings & Howe	23.08	3 38 15	3 01 19
THIRD CLASS—KEELS.			
Vesper, R. M. Benson	19.01	2 29 33	1 33 45
Volante, J. Minot Hall	22.03	2 29 20	1 57 32
Alice, R. O. Harding	21.01	2 30 47	1 57 36
Flying Yankee, Sawyer & Rich	19.01	2 32 35	1 59 46
Pride of the Wind, F. T. Tobey	22.00	2 31 52	1 59 49
Hard Times, W. E. Geyer	18.06	2 37 14	2 00 34
Notus, Alley & Co	21.07	2 34 29	2 01 54
Thelga, B. T. Hall	22.01	2 37 30	2 05 31
Gleam, W. G. Sadler	21.00	2 39 22	2 06 05
Ruby, J. W. Swint	19.09	2 48 39	1 13 45
Mabel, W. P. Bennet	17.10	3 11 55	2 34 15
THIRD CLASS CENTERBOARDS.			
Em Ell Ey, P. M. Bond	19.02	2 19 22	1 43 40
Sea Bird, C. L. Joy	22.08	2 20 50	1 49 31
Mavis, F. E. Swallow	20.10	2 26 12	1 52 40
Wraith, Hodges Bros	21.11	2 28 21	1 50 05
Torment, Frank Williams	22.02	2 28 29	1 56 36
Silver Cloud, John McLaughlin	21.01	2 30 00	1 56 49
Trouble, Mason Bros	20.00	2 32 06	1 57 32
Good Luck, J. B. Farrell	22.00	2 32 37	2 00 32
Hector, P. R. Blackman	19.11	2 35 38	2 00 57
Pearl, J. F. Reed	22.08	2 46 00	2 14 11
Sunshine, W. E. Haskell	20.01	2 54 22	2 19 55
Ruth, W. E. Gordon	22.05	2 52 22	2 20 46
Magic, M. F. Kelly	19.05	3 03 27	2 26 06
FOURTH CLASS—CENTERBOARDS.			
Diadem, L. Hayward	18.01	1 27 49	1 02 57
Zoe, W. A. McField	18.01	1 28 07	1 03 15
Rocket, H. M. Faxon	16.02	1 30 55	1 03 58
Flora Lee, E. B. Glover	16.08	1 38 35	1 12 13
Scamp, Frank Gray	18.05	1 38 33	1 14 01
Modoc, D. W. Belcher	15.07	1 50 07	1 22 28
Spray, C. F. White	18.10	1 48 43	1 24 36
Mamie, H. G. Bowers	17.06	1 50 05	1 24 37
W. E., J. E. Robinson	17.10	1 50 35	1 25 29
Josephine, D. H. Follett, Jr	18.08	1 52 24	1 28 07
Alpine, Wm. P. Tarr	16.04	1 56 02	1 29 17
Viper, A. N. Norris	18.08	1 57 24	1 31 02
Alice, B. Lynch	17.08	1 37 05	1 31 48
FIFTH CLASS.			
Sprite, H. M. Wells	12.10	2 17 02	1 56 02
Lucy, W. H. Ranson	13.08	2 18 11	1 58 02
Minnie, Henry Jackson	13.08	2 19 15	1 59 06
Teaser, F. C. Estes	14.11	2 19 05	2 00 05
Bessie, J. R. Tufts	12.00	2 26 20	2 04 24
Mist, O. Wadsworth, Jr	14.04	2 30 04	2 10 29

Prince Karl won first prize, $30; Breeze second, $15, in first class keels; Shadow first and Magic second prize, same amounts, in first class centerboards.

Echo takes first prize, $25, Annie Maud second, $15, and Rival third, $10, in second class keels; White Fawn, Black Cloud and Moondyne take first, second and third prizes, same amount in second class centerboards.

Vesper, Volante, Alice and Flying Yankee won first, second, third and fourth prizes of $25, $15, $10 and $5, in third class keels; Em Ell Eye, Sea Bird, Mavis and Wraith respective prizes in centerboards.

In fourth class Diadem won first prize, $20; Zoe, second, $12; Rocket, third, $8; and Flora Lee fourth, $5.

In fifth class, first prize $10, won by Sprite; second, $7, by Lucy, and third, $3, by Minnie.

The judges were Hubert Pope, R. W. Gifford, Theodore Harold, N. E. Bowen, G. F. Clark, Thomas Christian, J. P. Bullard, W. H. Godfrey.

In the evening a hop was given at the club house, with a display of fireworks.

FALL RIVER RACES, MAY 30.

IN spite of a very light breeze a successful open regatta was sailed on Mount Hope Bay, on May 30, the principal prize being the challenge cup for the largest class of sloops, to be held by any yacht winning three times. The entries were:

FIRST CLASS—SLOOPS, 30FT.	
Mabel, F. Swift, C. W. Anthony	Fall River
Peri, L. P. Sands	Newport
Kelpie, C. F. Jones	Providence
Alice, L. H. Holding	Providence
Mignon, C. P. Bloomer	Pawtucket
SECOND CLASS—SLOOPS 20 TO 30FT.	
Tahena, Charles E. Williams	Fall River
Louise, Charles L. Cummings	Fall River
THIRD CLASS—CATBOATS, 23FT. AND OVER.	
Madeline, George I. Fields	Fall River
Windward, G. J. Burdick	Fall River
FOURTH CLASS—CATBOATS, 18 TO 23FT.	
Ideal, W. E. Simmons	Dighton
Annie, George Hindle	Fall River
Helena, Peleg Card	Bristol
FIFTH CLASS—CATBOATS UNDER 18FT.	
Florrie, L. P. Davis	Somerset
Elsa, W. S. Wood	Fall River
Fedora, Frank Anlea	Fall River
Turk, I. H. Lawton	Fall River
Shadow, L. Buffington	Swansea
Mary Louise, George W. Simmons	Fall River
Bertha, Peter F. Davis	Fall River

The start was made off the King Phillip B. C. house, the courses being:

First class—To and around Coal Mine Buoy; thence back between boat house and judges' stakeboat to and around stakeboat at Slade's ferry bridge, and finishing at starting point, 19 miles.

Classes two, three and four—To and around stakeboat at Common Fence Point, thence back and around judges' stakeboat, thence again to and around stakeboat at Common Fence Point, 18 miles.

Class five—To and around stakeboat at Slade's ferry bridge, thence passing between boat house and judges' stakeboat to and around stakeboat at Common Fence Point, thence passing between boat house and judges' stakeboat to and around stakeboat at Slade's Ferry bridge and finish at point of starting, 13 miles. The times were:

FIRST CLASS—SLOOPS.	Elapsed.	Corrected.
Mignon	3 05 07	3 01 26
Peri	3 11 54	3 09 13
M. F. Swift	3 17 39	3 16 21
Alice	3 18 19	3 18 19
Kelpie	3 35 02	3 21 52
SECOND CLASS—SLOOPS.		
Louise	4 06 58	4 04 36
Tahena	4 09 22	4 09 22
THIRD CLASS—CATBOATS.		
Windward	3 54 16	3 48 32
Madeline	3 51 44	3 51 44
FOURTH CLASS—CATBOATS.		
Ideal	3 39 33	3 39 33
Helena	4 00 45	3 56 46
FIFTH CLASS—CATBOATS.		
Florrie	3 03 31	3 03 31
Fedora	3 08 45	3 08 45
Turk	3 10 17	3 10 17
Elsa	3 17 00	3 16 44
Shadow	3 31 00	3 18 05
May Louise	Did not finish.	
Bertha	3 03 01	3 02 49

QUAKER CITY Y. C. OPENING, MAY 30.

THE new club house of the Quaker City Y. C. was opened on May 30. The event was to be celebrated by a review and race, but the latter feature was given up on account of a lack of wind, a calm existing the greater part of the day.

At four o'clock in the afternoon a large number of the members and club guests assembled, and Mr. John J. Maloney, of Philadelphia, acting on behalf of the house committee, in a few well chosen words, turned over the house to the club, who accepted it through John H. Sloan, the president.

A gun was fired and the club burgee broken out from the flagstaff when the club house was formally declared open. The members and guests then partook of a collation, and in the evening dancing was indulged in by the members and guests.

The club house is most favorably situated on Prospect Hill, at Gloucester, N. J., three miles below Philadelphia; is of easy access by the boats of the Gloucester Ferry from Philadelphia, the West Jersey Railroad and the Gloucester and Mount Ephraim Railroad, and commands an elegant view of the Delaware for a distance of 10 or 12 miles down the river.

The start and finish of the club course is nearly on a line with the house, thus affording the members and their friends who do not desire to follow the regattas a most excellent opportunity to view the races.

The building is two stories in height with a large basement with 8ft. head room, in which yawls, skiffs and yachting gear can be stored. On the first floor to the right of the hall, is a reception room 14ft. by 22ft., furnished in antique oak, back of which is a small room 14ft. by 10ft., furnished in the same style.

An ample hall and stairway leads to the second floor, tastefully fitted up, which will be used as a general meeting and model room. The dimensions of this apartment are 18ft. by 31ft. It is the intention of the club to have sleeping accommodations constructed for those who desire to remain over night.

A comfortable porch surrounds three sides of the structure on both the first and second stories.

The furnishing of the house and all details were under the direct supervision of the house committee, consisting of ex-Commodore Addison F. Bancroft, Chas. L. Wilson and Wm. S. Hoffman.

The old club house at the West Jersey Ferry, Camden, will be retained for the present as will also the club rooms in Philadelphia. The club address will still remain the same, Camden, N. J.

CLOVE HITCH.

THE NAVAL RESERVE.

THOUGH the bill now before Congress relating to the Naval Reserve has not been passed yet, the State of Massachusetts has taken a practical step toward the organization of a State militia of sailors. Through the efforts of the Dorchester Y. C. a bill has just been passed by the Legislature of Massachusetts containing the following provisions:

SECTION 1. There shall be allowed, in addition to the companies of the militia provided for in Section 22 of Chapter 411 of the acts of the year 1887, not more than four companies of naval militia, which shall constitute a battalion, to be known as the naval battalion of the volunteer militia.

SEC. 2. The officers of this battalion shall consist of a lieutenant commander, whose rank and pay shall assimilate to that of a major of infantry, and a staff to consist of one adjutant, one ordnance officer, one paymaster, who shall be the mustering officer, and one surgeon, each with rank of lieutenant, junior grade. They shall be paid the same as battalion staffs in the militia. There shall also be attached to the staff the following petty officers: One master-at-arms, two yeomen, one hospital steward, one chief bugler, who shall receive the same pay as the non-commissioned staff of a battalion of infantry.

SEC. 3. To each company there shall be one lieutenant commanding, two lieutenants (junior grade), two ensigns, to receive the same pay as captains; first and second lieutenants, respectively, of infantry; two boatswains' mates, two gunners' mates, two coxwains, two quartermasters and forty-four seamen. All enlisted men of companies shall receive the pay of enlisted men of companies of infantry of the militia.

SEC. 4. The naval battalion shall be uniformed as the commander-in-chief may direct out of any existing appropriations for uniforms or supplies for the militia, and shall be instructed as he may direct, and be subject to the rules and regulations governing the militia; the duty required by law may be performed afloat.

SEC. 5. The companies comprising the naval battalion may be raised as provided by law when the United States Government is ready to furnish arms and equipments and a vessel of war for performance of duty required by law.

SEC. 6. This act shall take effect upon its passage.

The Dorchester Y. C. will at once undertake the organization of a company under the above act.

THE NORTON PATENT WATER BALLAST.

WE publish *verbatim* the following letter in defence of Capt' Norton's system. The points in dispute are matters of fact, and the objections we have made, as well as those of our correspondents, cannot be answered by abuse and ridicule, the only defence which Captain Norton offers.

Editor Forest and Stream: In your issue of May 31 you publish letters from some of your correspondents criticising my system of water ballast. All of the writers appear to have seen the working model I have at the office of Messrs. Hoadley & Co., No. 77 William street, New York, and evidently do not like it. One of them has examined a half model of a 60ft. yacht I have under construction, and finds that the bow is hardly more than a third of the length. Since reading this I have examined the model more closely, and I find other possible defects; for instance, the stern is very far aft, and I now fear that I have placed the keel too far down, too near the bottom, as it were. Your correspondent, Hyslop, is evidently an individual of great learning and observation, and condemns my system *in toto*. He, however, finds some little "good" in it, but this is not "new." He also finds something "new," but this is not "good." Now all this is very good for Hyslop, but can you tell me just what Hyslop is good for?

The genius of your trio of critics, however, appears to be "Greenwich." He is simply superb. His explanation of stability, by illustrating with the baby in a cradle, is beautiful. He is evidently a married man, and has a baby and a cradle of his own to experiment with at pleasure, for no mother would permit an outsider to fool with a baby in that way. His reference to the ignorance of sea captains in matters relating to ship building will, I have no doubt, be generally endorsed by them.

His discovery that the great injury that has been done to shipbuilding in this country is chargeable to the inventors, is certainly an important one if it is true.

"Greenwich" should certainly be voted a medal! "It is just awful, you know." If this sort of thing continues, where shall we land? Congress should intervene at once, and stop these inventors just where they are.

"Greenwich's" advice to Mr. Wiener and others interested in the "Norton Patent" to purchase or procure Sir Edward Reed's book on stability, is, however, not good. Sir Edward is still living, and his book is not old enough. Books of this character have but little value as authorities, unless they are dated "way back."

FRANCIS L. NORTON.

JERSEY CITY, June 4.

LAUNCH OF THE ALISTA.

Editor Forest and Stream:

The yawl Alista, with Capt. Norton's system of ballasting, was launched on May 30. She seemed to take the water like a sea bird, a thing of life. Ten men, making about 1,500lbs. in weight, were placed on one of her gunwales, though but a 30-footer, they depressed her but 6in., leaving about 16in. for the water to reach her deck. This was an agreeable surprise to me and it substantiated the guarantee of the patentee as to her great stability. My impression of this invention is that it is as important, useful and interesting as anything ever considered. Admirable for its simplicity, since its application depends upon the two natural elements—air and water—properly adjusted. All passenger-carrying vessels should be built on the captain's principle, as it tends to speed and perfect safety.

Anyone understanding the invention will rejoice with me that our Government is not encumbered with a large navy of vessels, every one of which would sink with the explosion of a torpedo under her bottom. With the new system it would be necessary to explode a number of these to tear off the greater part of the bottom of a vessel to overcome the buoyancy of the air cushions along the bilge at the loud line.

Although my boat is built on very comely lines, it amuses me to think that she will float principally on a regular San Francisco Bay scow bottom, that is, she will be maintained by her cabin floor, under which are the twelve metallic water ballasting chambers with their crooks upward at the bilges to form the air cushions for the sea to act upon.

The captain deserves to be crowned by all humanity, and to receive a mint of money for his ingenuity. E. O. WIENER.

WILMINGTON, Del., June 1.

[After examining Captain Norton's model and claims, we should require a very much stronger guarantee than the above before investing any money in such a scheme. The application of the elementary laws of stability, and of hydrostatics to the model, will show that the claims are entirely unfounded, and that Captain Norton's air-ballasted vessel is inferior in every way to the common system of water ballasting].

WIZARD-VIVID MATCH, JUNE 2.

ON May 30 an attempt was made to sail the match made last winter between Vice-Commodore Colt, owner of the sloop yacht Wizard, and Mr. T. N. Motley, owner of the Vivid. Both are sloops of the old type, Wizard being 58ft. lwl., 18ft. 4in. beam, 5ft. 6in. draft. The former is now owned by Mr. Ernest Stapics, the latter by Mr. W. A. Wolff. Twenty-seven miles, from Larchmont around a stakeboat in Hempstead Harbor, thence around another 1½ miles S.W. ¼ W. of Stamford Lighthouse and return.

Wizard was sailed by Mr. Governeur Kurtright, and Vivid by Mr. Henry Van Wyck, the race being under the direction of the Larchmont Y. C., Messrs. H. B. Willard, W. G. Scott and E. J. Greacen.

The race was started at 11:32 A.M., in a very light southwest wind, the yachts being timed: Wizard 11:44:50, Vivid 11:47:45. They ran slowly, with spinakers to port, to the first mark, being timed, Vivid 2:42:20, Wizard 2:47:20.

After rounding and shifting spinakers they drifted on, turning the second mark Wizard 5:41:10, Vivid 5:51:45. At 6:30 the race was given up, the yachts being towed home.

A second attempt was made on June 2, the start being made in a light E. wind at 11:14, the yachts crossing thus: Vivid 11:15:20, Wizard 11:17:20. The first leg was a drift, the turn being made: Vivid 11:49:30, Wizard 11:50:50.

The second leg was sailed very slowly, Wizard finally going ahead, while Vivid lay becalmed off Matinnicock Point with headsails down. About 2:15 she took a light breeze from S. and started after Wizard, both sending out spinakers to starboard. When near the second mark Vivid caught Wizard, and as the latter rounded, Vivid luffed out across her stern and took the weather berth, the maneuver being very cleverly executed. The times were: Wizard, 3:23:59; Vivid, 3:23:51.

The next leg, back to first mark, was now to windward, with a freshening breeze, and Wizard soon walked away from her rival, leading around the mark by two miles. The times were: Wizard, 5:48:10; Vivid, 5:05:35. The finish was soon reached, Wizard holding her lead. The full times were:

	Stat.	Finish.	Elapsed.	Corrected.
Wizard	11 17 20	6 10 20	6 53 00	6 53 00
Vivid	11 15 20	6 28 10	7 12 50	7 10 33

Wizard wins by 17m. 33sec.

The 40ft. Burgess boat Nymph sailed long enough in company with the racers to show her equality with them, in spite of the great difference in size.

A NEW LENGTH AND SAIL AREA RULE.—The new rule of the New England Y. R. A., lately adopted, is as follows. It was devised by Mr. Burgess: "The racing measurement shall be one-half the sum of the waterline length and spar measurement. The spar measurement shall be one-third the sum of the base line, height and length of gaff.

$$\text{LWL} \times \frac{\frac{B \times H \times G}{3}}{2}$$

These measurements shall be taken as follows: The base line (B) to be taken from the jib or flying jib back to the extreme end of the main or mizzen boom. The height (H) to be measured along the after side of the mainmast from the pin of the uppermost halliard sheave in the mast or topmast, or the point of attachment on the same of the highest halliard block, to the upper side of the boom when the latter is resting in its lowest position. The length of the gaff (G) to be taken from the after side of the mainmast to the extreme end of the main gaff when the gaff is horizontal. In case any mainsail or mizzen is extended by any device beyond the boom or gaff, the measurements shall include such extension. The length shall be taken in a straight line from the fore end to the after end of the low water line, provided always that if any part of the stern or sternpost, or any other part of the vessel below the waterline, project beyond the length taken as mentioned, such projection or projections shall be added to the length taken as stated; and pieces of any form cut out of the stern, stern post or fair line of the ridge of the counter, with the intention of shortening the low water line, shall not be allowed for in the measurement of length, if at or immediately below the boat line, nor above, if within 6in. of the water level." It will be seen that the sail area is approximated by taking a mean of the base line, height and length of gaff. In Pappoose, as an example, the measurement by New York Y. C. rule will be about 41.6ft., by Seawanhaka C. Y. C. about 43.5ft., and by the new rule 43.75ft.

BABOON.—In naming his new racing cutter, Mr. Adams has made of himself a shining mark for the newspaper paragrapher, and two papers have already hit the bullseye. The *Boston Traveler* discourses as follows: "Mr. Adams has given to his new yacht, just launched from a South Boston yard, the name of Baboon. The Baboon is said to be a first-class racing cutter, and there is a natural curiosity why, for the first time in pleasure-sailing craft, the Simian tribe has been so distinctly recognized. Our famous yachts of late have borne the names of Puritan, Mayflower and Volunteer, in honor of those who made New England great, and of the soldiers who made the Republic one and invincible. Whether Mr. Adams in selecting a name for his boat meant it as a rebuke against sentiment in yacht nomenclature, or whether he choose it out of respect to the Darwinian theory, that the baboon is the father of us all, it is impossible to decide. 'What do you suppose my husband has done now?' asked a woman whose partner for life was very generous but very plain. 'I cannot imagine,' replied the friend who had been addressed, 'but I presume something quite odd, as usual.' 'I should think so,' said the wife, 'he has sent me home a nice young little baboon, but then it is just like him.' It is to be presumed that in explanation of the naming of Mr. Adams's racer nothing further need be said than that it is just like him." The New York *World* also makes a suggestion: "Mr. Adams, of Boston, a gentleman of culture and refinement, has built for himself a yacht which he calls the Baboon in honor of his Simian ancestry. How much more appropriate it would have been to call his vessel the Jibboom. That would at least have sounded nautical."

CEDAR POINT Y. C., May 30.—The first race was sailed over a 15-mile course, to Sunken Island, Buoy of Southport, thence to Cankeen's Island Bar, thence to starting line. The wind was light. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS E.				
Sylvia	11 17 35	2 28 23	4 01 08	3 01 08
Hebe	11 17 20	2 51 16	3 34 56	3 46 26
CLASS F.				
Amateur	11 13 25	1 58 15	2 45 45	2 43 54
Teal	11 13 30	2 38 17	3 25 47	3 25 47
CLASS H.

Scud	11 45 49	Did not finish.		

The judges were Messrs. A. S. Cram, J. Crofut, Jr., and S. S. Smith.

A NEW COMPROMISE SLOOP.—Mr. John F. Mumm has nearly completed a compromise boat 47ft. l.w.l., 16ft. 8in. extreme beam, and 6ft. draft. She displaces 33 tons and has 12 tons of ballast, part in the form of a lead keel. Both bow and stern have considerable overhang. The main cabin is quite roomy, with ample headroom, and is neatly finished in maple and mahogany. There is a good stateroom on the starboard side, a smaller one on port, and forward of the latter a large galley. The forecastle is quite large and high, with a separate room for the captain. The yacht was built for sale, and has not yet found an owner.

ATLANTIC Y. C. NO. 2.—A new club by this name has been recently organized in Boston, andon May 29 the new quarters on Commercial wharf were formally opened. A handsome club house has been built, and on this occasion it was decorated with bunting and Chinese lanterns. In view of the abundance of good names and the long possession of the name Atlantic by another yacht club, the choice of the new club is not a specially good one.

GOVERNMENT RULES FOR STEAM YACHTS.—The following decision has lately been made public: "All pleasure yachts (steam) under 100 tons gross burden must carry a licensed pilot and a licensed engineer, but do not require a licensed master. Steam pleasure yachts, without regard to tonnage unless otherwise specifically provided for, are subject to the general inspection laws applicable to passenger steamers. The term 'persons' used in the certificate form 2, 116, in contradistinction to the word 'passenger,' used in certificates forms 2, 113 and 2, 113½, issued to steamers regularly engaged in commerce, is simply to distinguish between the class of persons or passengers carried, in the one case such persons being guests of the owners and carried free, while in the other they are persons who are carried for hire. Different penalties, however, would apply in case of excess of persons or passengers being carred over the number allowed in the certificate of inspection. In the case of a steam pleasure yacht the penalties would accrue under Section 4,400, Revised Statutes, namely, a fine of $500, while in the case of an excess on a steamer certificated as a passenger steamer the penalties are defined in Sections 4,465 and 4,499 of the Revised Statutes, namely, under the first-named section $10 and the passage money for each person carried in excess, and under the last-named section a general penalty of $500."

MERLE, VERVE, IOLANTHE AND MADGE.—The talk of a race between Merle, Madge, Verve and Iolanthe, which has been in the mouths of the yachtsmen all over Lake Ontario this present season, is assuming definite shape. The writer has talked with Vice-Com. Ames, owner of the Merle, Capt. Dick, owner of the Verve, which famed little cutter made the run from Toronto to this city a few days ago, giving the Americans an idea or two on early cruising. Com. Newell, who passed through here on May 25 on his new purchase, the Majel, assures us that Madge's owners are eager for such a heat, and we know Com. Biggar well enough to put the Iolanthe on the course. Now, all that seems necessary to complete the bargain is the location of the race and the date, and we would propose that Charlotte be chosen, it being a central point and a place where all yachtsmen like to anchor. As to the date, Tuesday, July 24, would be the day following the circuit regatta, and would not interfere with the Hamilton race on the 28th, as a long interval, three days, intervenes. The race should be sailed under the direction of the regatta committee of the Rochester Y. C., and would certainly be very interesting.—R. G.

SAVIN HILL Y. C.—The first race of 1888 was sailed on June 2, the times being:

	Correct Time.
FIRST-CLASS SLOOPS—20 TO 25FT.	
Alice, A. Harding	58 00
Annie Maud, F. O. Vegelahn	1 01 00
Blue Bird, P. Shugrue	1 01 30
SECOND-CLASS CATS—16 TO 20FT.	
Nora, E. M. Dennie	57 00
Jester, W. H. Besarick	59 00
Avis, J. H. Odell	1 02 00
Jessie, W. Briggs	1 03 00
Iris, J. Shugrue	Not taken.

AMERICAN Y. C.—The new club house of this club, on Milton Point, Rye, was opened for the members on May 28. The house is a handsome three-story building with a dining hall 63×23, subdivided at will into three smaller rooms, a billiard room 18×24, a smoking room 15×15, a parlor 18×20 and a reading room 14×20. The main hall is 14ft. wide, with a large open fireplace. Upstairs are 16 large sleeping rooms, with toilet and store rooms, and in the third story is a large locker room. The kitchen and servants' quarters are in an extension. A feature of the house is a lofty circular tower. The formal opening will be on June 16, with ladies' day on June 23.

SOCIAL, schr., Mr. O. B. Smith, parted her hawser while in tow of the tug G. W. Wright in Hell Gate on May 31. The hawser damaged the gig at the davits, while the yacht was carried on to Flood Rock, straining the keel and causing a leak. She was taken in tow again and proceeded to her destination, Port Jefferson, where she will be repaired. She was on her way from Watch-aprigue, Va., at the time of the accident.

MONATIQUOT Y. C.—We have received a copy of the neat club book just issued by the Monatiquot Y. C. of Weymouth, Mass., a club that at the end of its first year has a membership of 158 and a fleet of 31 yachts. A number of good races was sailed last season, and a list of 11 events are already announced for the present season. A chart of the club's courses is given in the book.

YACHT RACE AT BEAVERTON.—On May 24 a race was sailed at Beaverton, Ont., over a 14-mile course, wind light. The times were:

Oriole, F. McRae	2 43 00	Rowan, J. Proctor	3 08 00
Island Queen, J. LeBar	2 47 47	Petrel, J. Dorran.	Not timed
Jumbo, W. Harrison	3 06 50		

TOLEDO Y. C., May 30.—A pennant regatta over a course seven miles to windward and return, from Turtle Island, Lake Erie, was sailed on Memorial Day in a good N. E. breeze, all being single-reefed. Alice Enright won in the second class and Sunbeam in the third. The Victoria struck a snag and sank on the way to the race. A dinner was given in the evening at the club house.

BO-PEEP.—A new steam yacht by this name was launched last week at Piepgrass's yard, City Island, where she was built for Mr. E. H. Wetherbee, of New York. She is 65ft. over all, 60ft. l.w.l., 12ft. beam, 7ft. 6in. depth. Her engine is triple expansion, built by J. W. Sullivan, of New York. Thus far she has shown very good speed.

YARANA AND PETRONILLA.—Very meager reports have as yet been received as to the races sailed by these two new yachts, but thus far Yarana, 65×15ft., has beaten Petronilla, 62×17ft., and has sailed very well alonside of Irex.

EMMA D.—A catboat by this name was launched on May 30 at Lawrence's yard, Greenport, where she was built for Mr. Chris Dreyer. She will be enrolled in the East River Y. C.

HAMILTON Y. C.—Com. Kilvert's new cutter Psyche has been under way for preliminary trial and has performed very satisfactorily, being particularly good at pointing.

SCITUATE.—A race for spritsail boats over a 5-mile course was sailed on May 30, Capt. Wm. Bates winning, with Jos. Ward second. The dory race will be sailed on June 16.

STILETTO.—This fast steam yacht has been thoroughly examined by the Government, and will probably be purchased at once from the builders, the Herreshoff Mfg. Co.

ROSALIND, Mr. C. S. Eaton's new 40ft. cutter, has been on the ways to have the fore end of her lead keel cut off and lead added aft, as she trimmed by the head.

GREAT HEAD Y. C.—The race of May 30 was postponed owing to the absence of many of the yachts which were detained all day at the South Boston regatta.

MONHEGAN.—Mr. A. S. Rice's new schooner, designed by Mr. Burgess, was launched at Harrington's yard, Bath, Me., on May 30.

HARLEM Y. C.—An open race for catboats was sailed on June 2, over a 5-mile course, in a strong S. wind. Happy Thought won.

MADGE, cutter, arrived at Oswego on May 28, on her way to her new home at Rochester.

MOHICAN, schr., Mr. Henry D. Burnham, will have 9 tons of lead added to her keel.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. McA., Worcester, Mass.—Diseases of Dogs by Ashmont is the book you want. We can send it. Price $2.

A. C. S.—1. The permit should be applied for from Mr. Allen as stated in the former reply. 2. Use Eaton's rust preventer. 3. The dog must not be allowed to chase birds.

GUIDO, Memphis, Tenn.—Kindly tell me if *Nelumbium luleum*, sometimes called monocanuts or yonquepins (resembling water lilies) are eaten by wildfowl? Also will they mature in one year if properly planted in loamy, shallow lakes? Ans. 1. Yes. 2. No.

G. B. S., Port Hope, Ont.—I send the skin of a fish for identification. This is the second one of the kind taken here this spring, below the first dam on the Port Hope Creek, and it evidently came up from Lake Ontario. What is it? Ans. The skin was in bad shape for identification, the fins not spread so that the rays could be counted, and it was impossible to note the dentition. From the shape of the fish, its size (five inches) form of scales and number of scales in the lateral line, we think it one of the log perches, probably the *Percina caprodes*, and, if so, it was a full grown specimen. The better way is to keep a fish in alcohol for a few days or a week and then send it. We do not care for the color, but the deutition is most important, and this is not seen in a mere skin.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..R. W. Bailey.....W. B. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div..Henry Stanton...A. S. Pennington..E. W. Brown, 140 B'way, N. Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney...W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen. W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio,
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Bouge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 28. Regatta begins Tuesday, July 10.

FIXTURES.

JUNE.

9. Knickerbocker Annual.
14. Mohican, Gibson Cup, Albany
16. New York, Annual.
16. Ianthe, Spring.
23. Brooklyn, Annual.

30-July 5. Passaic River Meet.

JULY.

4. Mohican, Regatta, Down River.
7-23. W. C. A. Meet, Ballast Is.
12. Mohican, Gibson Badge, Alb'y
16-26. Atlantic Div. Meet.
17-23. Pequot Camp, Norwalk Is.
19. Mohican, Gibson Cup, Albany
26. Mohican Oliver Cup, Albany
—. Northern Div. Meet, Lake Couchiching.

AUGUST.

2. Mohican, Gibson Badge, Alb'y
10-24. A.C.A. Meet, Lake George.

SEPTEMBER.

6. Mohican, Gibson Cup, Albany
13. Mohican, Oliver Cup, Albany
20. Mohican, Gibson Badge, Alb'y

THE A. C. A. REGATTA PROGRAMME.

THE following programme was received from the committee early last week, but as the FOREST AND STREAM was printed one day earlier than usual on account of Wednesday's holiday, it could not be inserted in our last issue:

RACES IN WHICH RECORD POINTS ARE SCORED.

No. 1. Paddling, Class II.—1,000yds., straightaway. Men entering this event shall not enter Nos. 2 and 3.

No. 2. Paddling, Class III.—1,000yds., straightaway. Men entering this event shall not enter No. 3.

No. 3. Paddling, Class IV.—1,000yds., straightaway.

No. 4. Paddling and Sailing Combined.—On triangle; paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile; 3 miles in all.

No. 5. Sailing, Classes A and B.—On triangle, no limit to rig or ballast; 4½ miles. To be started in squadron if necessary. (See Note B.)

NOTE.—Canoes to enter Events 1, 2 and 3 must be decked at least half their length, be provided with keel or centerboard to enable them to sail to windward, and have two bulkheads or watertight tanks, one in each end; in other words, properly equipped cruising sailing canoes. Every canoe entering for the Record can compete in three races—one paddling, one sailing and the combined race. Five Record prizes are awarded. The man getting first Record prize will receive a large practical flag, showing him to be one of the three Honor men of the year. There will be paddling Honor man, the winner of the Paddling Trophy Race, and a sailing Honor man, the winner of the Sailing Trophy Race. Record points are scored as follows: The winner of a race is credited with 10 points, the last man to finish gets one, the number of men in the race determines the points received by the others. Greatest possible score, 30 points practical. It is not necessary to win any one of the races to score the highest average.

TROPHY EVENTS.

No. 6. Sailing.—On the triangle, A. C. A. trophy. Classes A and B; no limit to rig or ballast; time limit, 3 hours; 7½ miles. The American squadron will be selected according to the result of the trial race—viz., event No. 5, with the exception, however, that the Regatta Committee reserves the right to name three of the American squadron independent of the result of the trial race. 15 in all. Besides the Silver Trophy (which the winner holds for a year), a large practical flag will be awarded, showing the holder to be the sailing Honor man of 1888. This flag is the winner's property, and it is hoped that future Regatta Committees will yearly award such a flag, in this race as well as in the paddling trophy race and the Record.

No. 7. Paddling.—One mile, straightaway. The contestants will be selected as follows: The first and second man in each of Events 1, 2 and 3—together with two of the men selected from among the contestants of Events 1, 2 and 3 by the Regatta Committee, 8 in all. It is believed that a suitable prize is being provided for this contest by individual members, to be held by the winner for one year, as the sailing trophy now is.

OTHER EVENTS.

No. 8. Paddling, Class I.—This race exempt from "one man, one canoe" rule; 1 mile.

No. 9. Paddling.—Open canoes with single-blade paddles; 1,000 yds.

NOTE: This race may be made a Record event.

No. 10. Paddling Tandem.—A and B sailing canoes, decked with wood; 1,000yds.

No. 6. Paddling Tandem.—Open canoes. Single-blade paddles; 1,000yds.

No. 11. Paddling Upset.—Classes II., III. and IV.; no special appliances allowed; at signal every canoe must be turned completely over, righted, and with the crew inside, paddle across the finishing line, 200ft.

No. 12. Hurry Scurry Race.—100yds. run, 20yds. swim, 200yds. paddle.

No. 13. Sailing.—On triangle, Classes A and B; sail limited to 75sq ft.; no limit to ballast; 3 miles; to be started in squadrons, if necessary.

No. 14. Sailing.—On the triangle, Novices, Classes A and B; no limit to rig or ballast; 1½ miles. Open to members who never sailed a canoe prior to September 1, 1887.

No. 15. Sailing, Consolation.—Winners of either first or second places in either events Nos. 4, 5, 6, 13 or 14 excluded; no limit to rig or ballast; 1 mile to windward or leeward and return.

No. 16. Sailing, Upset.—Classes A and B; no special appliances allowed; canoes to carry two sails; no limit to ballast; ½ mile. At signal canoe to be tipped over until top of the foremast touches the water; canoe to be righted and to cross finishing line under sail.

No. 17. Sailing, Maneuvering Race.—While under way, at signal, to be given by lowering a flag at the starter's station, half a paddle must be thrown overboard aft, out of reach; the same must be recovered and the race continued to the finishing line; ½ mile.

No. 18. Sailing, Class C Experimental Limits. Canoes not over 17ft. in length with a beam limit of 36in. On triangle. 4½ miles.

No. 19. Sailing.—Unclassified canoes, sneakboxes and the like. Handicap race, 4½ miles.

NOTES.

NOTE A.—As any programme for a fixed day, which includes sailing races, is subject to the risk of being disarranged by a lack of wind, the committee has decided not to have any stated sailing programme for each day, but to announce on the bulletin board at 8:30 A. M. each day the races to take place in the forenoon, and at 1 P. M. each day the races to take place in the afternoon, with the hour of starting each race. The first race of each forenoon will start at 9:30 o'clock. The first race of each afternoon will start at 2 o'clock.

As the paddling races, hurry scurry race, upset race, and the like, are not dependent upon wind, and are of especial interest to visitors, the committee will arrange, if possible, to fix a time for them, and so group the various events that friends of the canoeists staying at the hotels near camp may have ample notification of the date and time when the races will be contested. The sailing races will be called when there is a fair chance of their being successfully held.

NOTE B.—The unlimited and limited sailing races, viz., events Nos. 5 and 13, will be started in squadrons (if the number of contestants makes it necessary), by signals, as follows:

First signal, 5 minutes before the race, "fleet assemble," one gun will be fired from, and the A. C. A. flag run up at, the starter's station.

Second signal, 4 minutes later, "first squadron prepare," one gun, and A. C. A. flag hauled down.

Third signal, 1 minute later, "first squadron start," one gun, and red flag run up.

Fourth signal, 4 minutes later, "second squadron prepare," one gun, red flag hauled down.

Fifth signal, 1 minute later, "second squadron start," two guns, two red flags run up.

The number of signals will be increased on the same plan to cover the number of squadrons into which the fleet may be divided. The clerk of the course will assign contestants to the different squadrons by lot, and any contestant starting in any squadron other than that to which he has been assigned will be disqualified.

A time allowance between the several squadrons will be given corresponding with the starting signals.

NOTE C.—The committee reserves the right to amend this programme at any time, and also to cancel any event in which the entries are not in the opinion of the committee sufficiently numerous to warrant a race.

NOTE D.—The committee hope to have the prizes mean something. The first and second man across the line in every race will receive a flag as heretofore; but three flags will not be small, ornamental silk affairs. They will be of bunting and are intended to be used to hoist in front of the owner's tent. They are the honor flags. Each will have the year and honor plainly sewed into it, and when in future these men appear in camp they will hoist these flags over their tents to show the scalps they have taken in the years gone by.

NOTE E.—As there may come a time when larger canoes should be entered regularly for races, the committee have put a limit on such canoes for this year, hoping the A. C. A. will take action in the matter, if for no other reason than because larger canoes than the above Class C cannot well be handled by the railroads as the smaller canoes can, and we may therefore lose privileges we now get from the companies if such canoes are shipped under the Franking Act now in vogue.

NOTE F.—The regatta committee under Rule II. have the power to admit non-members to the races. They therefore extend cordial invitations to all members of the Western Canoe Association to come to and take part in the races, likewise all members of foreign clubs will be welcome.

Regatta Committee { PAUL BUTLER, Lowell, W. A. LEYS, Toronto. C. BOWYER VAUX, Chairman, New York.

MOHICAN C. C., MAY 30.

AT 9 A. M. Dr. Masten's launch, the White Wing, steamed out of the basin, having in tow the Necken, Henrietta, Kaw, Uncas, Oriole and Racquette, with Lundberg, Smith, Wack, Brown, Thomas and Bender as passengers, and Pilot Mix at the wheel. The day promised fair, to be all desired, and the trip to the house was too quickly made, as the Doctor showed as much anxiety as the veriest able-bodied seaman to reach the lodge and the day's sport by keeping the steam gauge at 125, while a light cloud clung persistently to the pop valve. On nearing the lodge the old turtle was seen flopping idly against the flag staff, and on landing we were greeted by Capt. Palmer. The boats were soon beached and the steward landed sundry baskets, then Capt. Palmer jumped aboard, and the launch was soon engaged in setting the buoys. This was quickly done, and the White Wing was at rest just off the point, while her crew sought the cool of the piazza and patiently waited for the wind.

No blessed breeze struck us the whole day, but occasionally a flaw would steal over the river from the north which proved only a delusion and a snare to several of the uninitiated, who, after gently skimming the smooth surface for a few blissful moments' toiled with paddle many minutes to recover their lost ground, the river still being very high and the current strong. The executive committee being of a quiet, orderly and economical turn of mind, gently but firmly impressed on us the necessity of killing time by a house cleaning and add to our sorrow by producing several cans and brushes with which each in turn proceeded to beautify the interior of the lodge with a coat of shellac, while others agitated the mops and brooms. However, it paid and they are to be congratulated on their nerve and forethought.

The crowning feature of the day was the ball game between the Landlubbers and the A. B.'s, in which the Landlubbers failed to score a decided victory, contrary to all expectation. Capt. Mix, of the Landlubbers, filled the position of first base in a laudable manner and Thomon and Staats on the battery were in danger of a re-engagement, while Capt. Smith with Wack and Stanton, having the welfare of the A. B.'s on their shoulders, were responsible for the untimely slugging of their opponents. The result and the umpire proved unsatisfactory, and the return game on July 4 is looked forward to with mingled joy and apprehension.

Three of the boys appeared in the afternoon and swelled the chorus regarding the lack of the needful zephyr, while the gentle murmur of the yacht club anchored just above the lodge was wafted to us over the water with each recurring puff.

The day as on sailing was a great success, as a sailing day a glorious failure. However, we had a paddling race—the first since Corp. Gibson scooped the club championship for the second time in 1883—over a ½ mile course with a turn. Judge Maston sent 7 canoes off at 3:30, the new man Bender winning in 7¼ minutes, with Capt. Palmer a close second, lapping in fact the Kaw. The prize, a nickled lantern, was the gift of the captain.

The return trip was uneventful but jolly, with songs and yarns, while our able pilot clearly demonstrated to the fo'cas'le landlubbers that his craft had the right of way, being on the starboard tack.

LANDLUBBER.

DELAWARE RIVER MEET, MAY 26-31.

THE second annual meet of the Delaware River canoeists was held on May 26 to 31 at Delanco, the site suggested for the Atlantic Division meet. In point of number the meet was larger than last year, there being about 25 canoes and 30 men in camp. The clubs present were the Trenton (including ex-Secretary A. C. A. Wm. M. Carter), Keystone, Quaker City, Philadelphia, Red Dragon, of Camden, and a number of unattached canoeists, among them a lady and gentleman who cruised from Gloucester in a 12x30 canoe and remained until camp broke up, the lady presenting the regatta committee with two handsome silk pennants, lettered in gold, for the races. The racing took place on Tuesday and Wednesday, as follows:

Event 1. Novices, Class B.—Course, triangular, 3¾ miles, 5 starters. Won by Pandora, Fred Yard, Trenton C. C., time 1.04.25. Prize, wooden cup, given by Capt. Norgrave, Keystone C. C. This was sailed on Tuesday afternoon, but owing to light wind other races were not started.

Wednesday. Event 2. Class B, Sailing.—Sail limited to 75ft., 3½ miles. 13 starters. Won by Bubble, Frank Sigles, Trenton C. C., time 2.40.14. Prize, silk pennant, given by Miss Ransom. Owing to light winds the other canoes did not finish.

Event 3. Class IV., Paddling.—Course, 1 mile to buoy and return, 10 starters:

1. Valesca, Harry Kreamer, Red Dragon C. C.; prize, alcohol stove.
2. Malta, J. A. Barten, Quaker City C. C.; prize, A. C. A. burgee.
3. Nameless, W. Hutuit, Trenton C. C.; prize, private signal.

This was a close race from the start, Malta leading and holding it until near the home buoy, when Valesca gave a final spurt, crossing the line a winner.

Event 4. Standing Paddling.—200yds., 8 starters:

1. Malta, J. A. Barten, Quaker City C. C.; prize, silk pennant.
2. Joker, Harry LaMotte, Philadelphia C. C.

Event 5. Hand Paddling.—100yds., 7 starters:

1. Lorelei, Wm. Cutler, Quaker City C. C.; prize, private signal.
2. Zet, Chas. Cunningham, Quaker City C. C.

Event 6. Hurry Skurry.—200yds. run, 500yds. paddle:

1. Joker, Harry LaMotte, Philadelphia C. C.; prize, private signal.
2. Valesca, Harry Kreamer, Red Dragon C. C.

This ended the racing, and, as the weather was threatening, canoes were packed and the whole tribe paddled homeward, leaving several canoeists of the Quaker City and Philadelphia clubs in camp, which was broken Thursday morning amid a heavy downpour of rain, in which they had the misfortune to paddle home. The lady canoeist formed one of our party, and, being made of the genuine canoeing material, she paddled home in the heavy rain and against a head wind to Gloucester, a distance of twenty miles from camp.

* * *

EASTERN DIVISION MEET—MAY 26-31.

THE first day's race of the Eastern Division cruising meet, to Rock Landing was made by twelve canoeists, but a number joined later, among them being Paul Butler, Vesper Club, of Lowell; Thornton Smith, Larchmont Y. C.; Moxton Holmes, J. M. Johnson, E. B. Lewis, J. F. Sevin, Jr., N. A. Gibbs, A. A. Young and F. B. Lewis, Chelsea B. C., Norwich, Conn.; C. R. McNeil, C. S. Bissell and W. H. Wheeler, Litchfield (Conn.) C. C.; Dr. Rice, Emil Knappe, C. M. Shedd, N. D. Bill and B. Patterson, Springfield C. C.; Com. Jones, Dr. Parmalee, G. Forrest, W. B. Davidson, H. Fenn, A. W. Dodd, G. Nichols and C. R. Forrest, Hartford (Conn.) C. C.; F. Kimball, Newton B. C.; L. R. Ingraham, Pathfinder Club, Hartford, Conn., and Robert Wakeman, Pequot Club.

The second day's run was to Hadlyme, where camp was made for the racing. On Tuesday night a business meeting was held, the following officers being elected: Vice-Com., Dr. H. E. Rice, S. C. C.; Rear Com., Maxton Holmes, Norwich, Conn.; Purser, H. D. Marsh, Springfield; Member of Executive Com., C. M. Shedd, Springfield. The prizes were elaborate banners. Emil Knappe won the record for events 2, 7 and 8. The summary of the races is as follows: About 50 canoeists took part in the cruise.

Event 1, paddling, ½ mile, straightaway.

	Start.	Finish.
H. E. Rice, S. C. C., Narka	10 35 00	10 40 15
J. F. Sevin, Chelsea, Grit	10 35 00	10 40 20
E. C. Knappe, S. C. C., Agawam	10 35 00	10 40 30
W. S. Wheeler, Litchfield, Petrel	10 35 00	not taken.

Event 2, paddling, 1 mile straightaway.

H. E. Rice, S. C. C., Narka	12 16 55	12 20 48
E. B. Lewis, Chelsea, Grit	12 16 55	12 21 12
E. C. Knappe, S. C. C., Agawam	12 16 55	12 21 00
Geo. Forest, H. C. C., Dimple	12 16 55	not taken.

Event 3, tandem paddling.

Rice and Knappe, S. C. C., Narka	11 31 20	11 35 11
Sevin and Lewis, Chelsea, Peterboro	11 31 20	11 35 23
Forest and Stone, H. C. C., Leda	11 31 20	11 36 10

Event 4, standing paddling:

Geo. Forest, H. C. C., Dimple		
E. B. Lewis, Chelsea, Grip		
Knappe, S. C. C., Agawan		
W. B. Davidson, H. C. C., Venture		

Event 6, sailing 2 miles:

Geo. Forest, H. C. C., Dimple	2 42 08	3 12 51
E. C. Knappe, S. C. C., Agawam	2 42 12	3 16 55
Paul Butler, Vesper, No. 774	2 42 12	3 16 10
W. B. Davidson, H. C. C., Venture	2 41 50	3 13 02

Event 7, 3 miles, sailing on the triangle, record:

Geo. Forest, H. C. C., Dimple	3 22 08	3 53 00
E. C. Knappe, S. C. C., Agawam	3 22 02	4 01 45
Paul Butler, Vesper, No. 774	3 22 00	3 51 52
W. B. Davidson, H. C. C., Venture	3 22 04	3 58 10

Event 8, 2 miles, combination, record:

Paul Butler, Vesper, No. 774	4 21 30	4 39 55
Geo. Forest, H. C. C., Dimple	4 21 30	4 44 00
E. C. Knappe, S. C. C., Agawam	4 21 30	4 42 55

ROSS LAKE REGATTA.

THE Cincinnati C. C. held one of their popular meets in honor of skipper Longworth's return from Europe, and the occasion proved certainly memorable. Their commodious club house was full to overflowing, and the quarterdeck and large wall tent were pressed into service each night. The course was triangular, three rounds, the first race and flag being won by O. A. Woodruff, of the Ruckawa (Dayton, O.) C. C., canoe Dixie. Second, H. D. Crane, Cincinnati C. C., canoe Laura. Wind in S.W. and steady. Both used balance lugs, the former 120ft., the latter 110ft.

The next race proved a drift and was easily won by J. O. Shiras, canoe Albatross, who on rounding the second buoy first, caught a slant of wind and finished fully half a mile in the lead. He carried two sprit sails, 60 and 40ft. The following is the record:

J. O. Shiras, Albatross	1	1	1	†O. A. Woodruff, Dixie	5	7	6
T. P. Gaddis, Nethla	3	3	2	T. Gaff, Fifine	9	6	7
G. A. Warder, Corinne	2	4	3	Dr. Henshall, Diana	8	8	9
H. D. Crane, Laura	4	2	4	C. Weeks, Snark	6	w.	
G. B. Ellard, The Skipper	7	5	5				

†Not racing for prize.

Third race, wind light, ending in a drift:

*Warder, Albatross	2	1	1	Crane, Dixie	5	w.
Bartlett, Laura	1	2	2	Gaddis, Nethla	6	w.
Weeks, Snark	3	3	3	Henshall, Diana	7	4 w
Ellard, The Skipper	4	w.		Gaff, Fifine	8	w.

*Barred for "pumping" sails across finishing line.

As usual, the novices capsized, the new "hull down" canoes did not win, and the "ifs" were plentiful, but the meet was a great success, and only sharpened the eagerness of every man for the W. C. A. regatta now not far distant.

To the A. C. A. and unattached canoeists a cordial invitation is extended to attend the meet on Ballast Island, July 7 to 23. It will be the largest ever held in the West.

JABBER.

HARVARD C. C.—The spring races of the club were held on the Charles River on May 29. The first race was for tandem birches, 1 mile with turn, 3 entries: Greene, '89, and Vaughan, '90; Townsend, '89, and Holder, '88; Debois, '89, and Marquand, '89. The race was a close one to the turning flag, where Vaughan and Greene fouled Townsend and Holder. The foul was not claimed, and the race was awarded to Vaughan and Greene. Time, 11m. 8½s. Holder and Townsend were second. The next race was an open paddling race for tandem canoes, 5 entries: Amory, '90, and Crehore, '90; Herrick, '90, and Payson, '90; Parker, '89, and Pulcifer, '90; Williams, '91, and Potter, '91; Stokes, '91, and Winthrop, '91. Herrick and Payson won by a quarter of a length. Time, 10m. 14½s. Crehore and Amory were second, Parker and Pulsifer third. Near the turn Stokes and Winthrop capsized, and just after the turn Williams and Potter also went under. The last race was a paddling race for single canoes, ½ mile, 2 entries: Herrick won easily in 6m. 30s. Amory second.

SOUTH BOSTON C. C.—On May 29 the South Boston C. C. sailed its 4th annual regatta off City Point. The first event was a paddling race, ½ mile, 5 starters, won by Wm. Martin, the prize being a silver medal. The sailing race was next started, course 3½ miles, 10 entries, for a pennant. The times were:

Eleanor M., B. Landers	42 55	Ibis, C. F. Pollard	58 19
Amaranth, F. Passmore	45 4t	Mohawk, F. L. Lavis	59 31
Ethel B., J. Campbell	45 25	Ray, C. R. Gould	1 00 14
Moondine, T. Ackland	54 20	Enchantress, J. Crad'k	1 02 43
Dilly, S. M. Wales	58 00		

The tandem race was postponed on account of the late hour.

BROCKVILLE C. C.—Officers, 1888. Com., J. J. Bell, Vice-Com., F. M. Turner; Sec'y and Treas., F. R. Shepherd; Committee, Jas. Moore and Neil McLean.

LINDSAY C. C. SPRING MEET, May 24.—Royal weather and a whole sail breeze from the northeast greeted the Lindsay canoeists at Sturgeon Point. The club sailing race, for the challenge cup was won by Sam'l Britton in Aurora (2); 2d, K. Fee. The open sailing race was also won by S. Britton; 2d, J. Britton, in the Bittern. The club has several new canoes which should give a good account of themselves at Lake Couchiching in July.

KNICKERBOCKER C. C.—The programme for the spring regatta, June 9, at 152d street, N. R., includes a sailing race for Classes A and B, 3 rounds for triangular course; a paddling race for decked sailing canoes, ½ mile straightaway; a sailing race for unclassified canoes and boats, 2 men allowed, 2 rounds of triangle; a tandem paddling race, decked sailing canoes, one round of triangle; a paddling upset, 100yds; a grand race of Indian war canoes, the exact nature of which is still a mystery; and in conclusion a tournament and canoe gymnastics. The first race will be called promptly at 2 P. M.

BROOKLYN C. C. REGATTA.—The annual regatta of the Brooklyn C. C. will be held on June 23, at the foot of Fifty-fifth street, South Brooklyn. The first race will be for unclassified canoes and boats, one man only allowed, course 3 miles; the second race for canoes, sailing, no limits; the third race, tandem paddling, 1½ miles, for decked sailing canoes; and the fourth a combined race, paddle 1½ miles, sail 1½. An extra prize for novices will be given in second race.

A. C. A. MEMBERSHIP.—Central Division: J. W. Canaday, Albany, N. Y. Atlantic Division: Fred W. Noyes, Western Underwood, Phila., Pa. Eastern Division: D. J. M. Wilson, C. M. Foster, Bridgeport, Conn.; Fred B. Lewis, Norwich, Conn.

ATLANTIC DIVISION.—A meeting of members of the Atlantic Division will be held on Monday, June 11, at 8 P. M., at the Harvard Rooms, Sixth avenue and Forty-second street, to consider the question of the division meet, as the camp site committee has found no spot in all ways suitable.

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have alway taken great pride in securing and perfecting every improvement in order to maintain our position as the makers o the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most libera manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

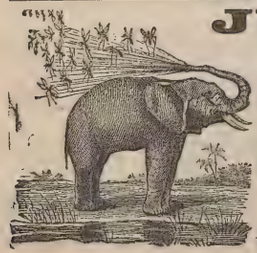
The Old "CRIMP," like the Muzzle-Loader, MUST GO.



The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884. MARCH 29TH, 1887.

Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

The strongest and lightest Cot in the world. Weighs 11 lbs. and folds in 2¼x33½ in. space.
The Cot is packed in the side rails, which are shell shaped and made from four-ply white birch veneer. The irons are all malleable, and the duck is manufactured expressly for use in their construction. It is very elastic, sets on uneven ground without straining or breaking it, and when packed, the cloth is entirely protected by the shell shaped rails.
Military and canoe companies, tourists and campers out for the summer have never been offered anything which compares with it. Sent to any address on receipt of price, $4.00. The trade supplied. TOURISTS' FOLDING COT CO., No. 1 Pearl St., Grand Rapids, Mich. H. C. RUSSELL, Manager.

CANVAS CANOES,

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in. × 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

THE ITHACA HAMMERLESS GUN.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

LONDON: DAVIES & CO., 1 FINCH LANE.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice. —*From Author's Preface.*

STANDARD TARGETS.

Standard Targets

Can be used without any change in Blue Rock traps, as they are of exactly the same dimensions.

Standard Carriers

Can be attached to the arms of all Blue Rock, Peoria and American Clay Bird traps.

TESTIMONIAL.

MESSRS. VON LENGERKE & DETMOLD, NEW YORK.—*Gents:* We have used your Standard Targets at our last tournament in our Blue Rock Traps, and find they work to perfection. There is no difference noticeable excepting that the general breakage was much less with the Standard than with the Blue Rocks.

(Bridgeport, Conn., May 18, 1888.) HARRY NICHOLS, WM. LONGDEN, } Managers.

Many other clubs can testify to the same superiority. The STANDARD TARGETS are made by A. H. Hebbard's Patent Automatic Target Machine, guaranteeing even size, even weight and density, and are *superior in quality to either "Blue Rocks" or "Cleveland Targets."*

Standard Targets are the Cheapest and the Best made.

NEW YORK AGENTS:
VON LENGERKE & DETMOLD,
843 Broad Street, Newark, N. J. 8 Murray Street, New York.

THE STANDARD TARGET CO.,
CLEVELAND, O.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

For Sale.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

HIGH CLASS BEAGLES.

All are well bred and either registered or entitled to registration. Many are broken and not a single one is gun shy.

No. 1. FAY (formerly Miss Mame), A.K.C.S.B. 7627, whelped July 5, 1887. Winner of 3d prize, puppy class, for both sexes, New York; vhc. open and 3d prize, Philadelphia; also judge's cup with her litter sister for best brace; vhc. open class and 2d puppy class, Boston; 13in.

No. 2. BLUE BELLE (A.K.R. 1711), whelped 1880. An excellent hunter, and an invaluable brood bitch for an outcross with a Rowett dog; 13½in.

No. 3. LITTLE PRINCE (A.K.C.S.B. 5405) whelped 1886 (champion Rattler III. ex Betty); 13½in. Winner of many prizes. A good hunter and an excellent stud dog.

No. 4. BLUE CAP II. (A.K.R. 4008), whelped 1884 (Blue Cap ex imported Blue Bell); 14½in. A most excellent worker. His field qualities are hard to beat.

No. 5. MOTTLE, whelped 1884 (Elmore's Ringwood ex Maida). Full sister to Krueger's Queen; 14in. Now in whelp to No. 10.

No. 6. MAUD, whelped 1884 (Elmore's Ringwood ex Jenny). An excellent hunter and a nice looker. 13½in.

No. 7. DIXIE, whelped 1887 (Cameron's Racket ex Mottle). Now in whelp to No. 10. 14in.

No. 8. SPOTTIE, whelped 1887 (Cameron's Racket ex Mottle); 12½in. Superb in bone and body; good ears and head but a bad color. Has the best tongue we ever heard.

No. 9. CHIC, full sister to No. 7; 13in. high. Full of hunt.

No. 10. TRUMPETER, whelped 1886 (champion Bannerman ex Zora); 12½in. Unusually heavy in bone, and good all over except he is out at elbows. His puppies are something wonderful in both bench and field qualities.

No. 11. MERRYBELL, whelped 1886 (Victor ex Midget); 13½in. Now in whelp to No. 3.

No. 12. FAIRY, litter sister to No. 1; 14in.

No. 13. FLAUNT, whelped 1887 (Bob ex Mary). Bred by Elmore. A true basket beagle; 10½in.

No. 14. BELL, bred by Mr. A. C. Krueger, by Grand Duke ex Gipsy. Black and tan; 14in. An excellent hunter and a fair specimen.

No. 15. LILLY, whelped 1884 (Ashburnam's Blue Cap ex Krueger's Lill); 14in. A good starter; a tireless hunter and has an excellent tongue.

No. 16. GIPSEY, whelped 1887 (Rover ex Silk); 14in. Quite a promising young bitch; hunts well.

No. 17. PUFF, whelped July, 1886 (Victor ex Veta); 13½in.; well broken. From his excellent combination of blood will make a desirable stud dog.

No. 18. MUSIC, whelped 1886; 14in. Litter sister to No. 17. A superb hunter; in whelp to No. 3.

No. 19. TWINKLE, whelped 1887 (Old Victor ex Cotton). Very promising young bitch.

Also several litters of pups from 2 to 3 mos old, of the best possible breeding, at $12 each for males and $10 for females. Full particulars, prices and pedigrees of any of the above sent on application. Address with stamp,

ANSWERS TO CORRESPONDENTS.

RAILROADS AND SPORTSMEN.

AMONG the very best patrons of the railroads are the sportsmen. The nature of their recreation obliges the larger number of them to travel, and as a rule, they are men whose means enables them to indulge their desire to journey from place to place in search of sport. The railroad companies appreciate this fact, and the further one that the sportsman is always either considering the trip which he is on the point of making, or is planning, perhaps a year or two in advance, the one he has in contemplation. To him the saving of time is the great object. He wants to leave his business at the last moment, to go by the quickest and shortest route to his destination, there to plunge into the woods or to take to the water, and spend his vacation far from civilization. Then when the time for leaving has come, he must return without delay to his every day cares and occupations.

Whether he desires to kill salmon in Canada or bears in the Rocky Mountains, prairie chickens in Minnesota or tarpon in Florida, he wishes to go by the quickest and easiest route, and he is always trying to get information about the best means of transportation. It is not strange, therefore, that the sportsman studies railroad routes, nor that the railroads appreciate the importance of keeping the advantages presented by their lines before his eye. A glance at the list of roads whose advertisements appear in the FOREST AND STREAM shows that there is no branch of sport which cannot be had on some of these railroad lines.

Does the sportsman desire to kill big game in the Rocky Mountains, to visit the Yellowstone Park, the Pacific coast, Alaska? Does he plan a summer's trip to Canada for salmon, or an autumn expedition for moose or caribou? Does he want to spend his vacation where trout, bass, pickerel and maskinonge are abundant, or is he thinking of prairie chicken and fowl shooting as the autumn sets in, or of a winter's trip for quail, ducks and snipe? Whatever his destination, east, north, west or south, he will find out how to get there by a study of the railroad lines whose announcements we are constantly publishing.

As game and fish become more scarce the sportsman is obliged to go further and further for his recreation. It is well within bounds to say that the number of men who annually make long trips north, east, west and south in search of sport is now ten times what it was ten years ago, and this number is increasing and will continue to increase each year. This increase will benefit the railroads by adding to the travel over their lines, and as new routes are opened and competition grows more keen, it will be more than ever important for them to bring to the notice of their sportsmen patrons the advantages of their routes. As there is no traveler more important to the railroads than the sportsman, so there is no one who is so dependent on the railroads as he is. To him—up to the time when he reaches the last station on the line—time and comfort are everything, and he is willing to pay liberally for quick time, good service and the best accommodations. These he insists on having, and to the credit of the railroads be it said, he almost always gets them.

THE NEW YORK SHOOTING GROUND.

THE projected New York Suburban Shooting Ground Association has filed its certificate with the Secretary of State of New Jersey, and so soon as the prescribed forms can be complied with the association will be a duly incorporated institution, prepared to equip and maintain shooting grounds. The proposed choice of location is at Claremont, which is within the city limits of Jersey City, accessible by railroad and within fifteen minutes from this city. It need not be said that the facilities which will be afforded by the new grounds will be highly prized by lovers of the gun in the metropolis.

One great drawback to trap-shooting practice in New York has been the lack of a convenient resort where a business man might find conveniences for indulging in this sport without giving up his time for a long journey to and from the grounds. But if the promises held out by the Suburban Association are made good it will be practicable for shooters to go and come in half an hour from the ferry on this side and the time thus consumed will virtually not be counted.

The Suburban Grounds will be equipped with full sets of traps and targets; trap-pullers will be in attendance, and all the shooter will find incumbent upon him will be to hit or miss his *quantum suf.* of targets, pay his moderate bill and betake himself home. The advantages of membership in the Suburban are such as should induce the active participation of all trap-shooters in this vicinity, whether members of clubs or not.

THE SEIZURE OF NETS.

WE print the full text of the opinion of Judge Williams in the Jefferson county fish net seizure case, and with it is given an appeal from the Jefferson County Association asking aid from other societies in carrying the case to a higher court.

This appeal is one which should meet with a prompt and liberal response. The principle at stake concerns every fish-protective society in the State and elsewhere as directly as it does the Jefferson County Society; and it is of vital concern to the interests of the community, for what is a fish-protective society after all but the organized efforts of enlightened citizens who recognize and labor to advance the public good in this particular regard? For this reason, that all are concerned, the fish-protective associations of the State should give a prompt and liberal response to this appeal. No community counting fisheries among its natural stores of wealth can afford to let the decision stand so long as there is a hope of reversing it in the higher courts. It strikes at the very heart of fish protection. If illegal nets may not be summarily seized when and where discovered by the officers of the law—and Judge Williams holds that they may not be—then there is an end to protection of fish against the netters.

Experience has demonstrated clearly and repeatedly the futility of attempting to abate netting by trying to discover who sets the nets, who owns them and who is responsible for their use in forbidden waters. The only efficient way to remove an illegal net is to take it then and there, and make an end of it. This has been done in the past under sanction of the act of the Legislature which declares illegal nets common nuisances and authorizes their seizure and destruction as such. But Judge Williams holds that in making nets common nuisances, the Legislature has exceeded its authority, hence the law is void. If this decision be not reversed the nets will multiply not only in the waters of Lake Ontario, but in all the lakes and bays and rivers and streams, wherever fish are found. It is said that already, as a direct result of this decision, large quantities of nets have been manufactured or their manufacture ordered, and the netting campaign promises to be waged more actively and ruthlessly than ever.

SNAP SHOTS.

PRIVATE advices from northern Texas, where Mr. Jones has been at work capturing buffalo, advise us of the taking and saving alive of six calves and one cow. Up to late in May only twenty-three head besides the calves had been seen, and of these it was necessary to kill three in self-defence while catching the calves. Later news from the camp announces the capture of two more calves, and the giving up of the idea of roping and hobbling the adult buffalo, as was at first contemplated. Instead of this the more laborious but much safer plan of running them down has been adopted, and apparently with a degree of success. About June 1 a bunch of twenty buffalo, most of them cows, and with no calves among them, was discovered, and after suitable preparations had been made, were started. The first day they are said to have run about eighty miles and were pretty tired, and the following day seemed disinclined to run much, but still kept well ahead of their pursuers. Each day they became less wild, and after being followed for seven days Mr. Jones says that they are under perfect control. The present intention is to stay with them until they can be handled without trouble, and then to drive them to the ranch where the other animals are now under fence. If this can be done, Mr. Jones, even if he gets no more, will have succeeded in gathering in about thirty head of buffalo, and may congratulate himself on having accomplished what no man has ever done before, and certainly what no man will ever do again. We hope before long to be able to lay before our readers full details of the trip.

At Fort Ontario, N. Y., one day last week, a squad of United States soldiers were engaged in rifle practice on the lake shore, when one of the bullets passing the target sped out on to the lake and severely wounded a man on a scow a mile from shore. The reports of this piece of carelessness are so meagre that it is not easy to determine the degree of blame attaching to those in charge of the practice, but it may be said that the United States troops are sometimes extremely reckless in their target firing. The range at the St. Francis Barracks, in St. Augustine, Fla., is in line with the Matanzas River, and we have been told that on more than one occasion boats have been struck by bullets.

The New York fish and game protectors have performed their duties under the supervision of the Commissioners of Fisheries, but they have been appointed by the Governor. To secure more efficient service the last Legislature passed a bill to put the appointing power into the hands of the Commissioners, and the Governor has just signed the bill, stating his belief that by making such officials directly responsible to the appointing power a more reasonable and satisfactory administration of the game and fish laws of the State will be attained.

The genius who considers it a fine joke to set his dog on people to scare them has received some attention in the courts. Recently a Baltimore youth was convicted of assault by setting his dog on a man. The judge who passed sentence said that "a person who set in motion a series of events which, like this, resulted in another person being severely wounded, is responsible, although it appeared that he tried to stop the dog when he saw the person attacked was likely to be wounded."

Pezon, the famous French lion tamer, owed his success to his system of "Training vs. Breaking." In his manual of lion taming he wrote: "Learn to love, study and know and, above all, not to fear your animals. This is the key to the whole thing." This, with the exception of the injunction against fear, is also the key to successful dog training.

New Brunswick has made a close time on moose and deer extending to 1892.

The Sportsman Tourist.

NEW FIELDS FOR GUN AND ROD.

BEFORE me on the table lies one of those illustrated time tables and guides in book form of the Canadian Pacific Railway. It is soiled and worn from use on a trip across the Continent on this line which I made last summer. I happened to get it out from a lot of traveling souvenirs and memorabilia to find some information for a friend; and seeing it to-day has given me the thought that as this road is a new one and in its whole extent furnishes as much opportunity for reaching fine sport to the hunter and angler as any road on the continent, and is comparatively unknown to the great mass of sportsmen, I might be able to contribute some notes of interest. I had the good fortune to stop off at several places and try the fishing, though no hunting, as it was in mid-summer. I will take the route going westward.

After leaving Montreal on the express in the evening the first place of interest the traveler sees is North Bay on Lake Nipissing. All the cultivated and developed part of Canada westward, including Ottawa, has been passed in the night. North Bay is interesting because here one meets the dining car and obtains his breakfast. The country around North Bay, at least along the road and westward for a considerable distance, is flat, swampy and covered with a dense growth of small evergreens. North Bay is not much of a place from our standpoint, but no doubt is a good spot to arrive in from a sportsman's view. There are steamers on Lake Nipissing, and I saw one departing with an excursion apparently. The fishing on the lake is said to be good and of great variety. A gentleman told me he caught a 7lbs. lake trout from the dock while waiting for a train. I saw canoes and boats, and guides no doubt could be obtained. I saw a number of clearings and farms along the lake shore.

After leaving here the next interesting point to the sportsman is Sturgeon Falls. The road passes over the falls and at the foot of them is a magnificent pool, in which I have been informed by friends great numbers of sturgeon are taken as they come out of the lake to spawn. Westward from here the country is broken and rocky, a most desolate region covered with shrubbery and dead trees. Great patches of it have been burnt over, presenting a most forlorn appearance. It has lately, however, assumed a great importance from the discoveries made in it of mineral wealth. Copper and silver are mined and gold I notice is said to have been recently found.

The country is literally covered and packed with small lakes, and notably from Chapleau westward the railway seems to be crossing arms of these lakes, which wind in various directions among the pine-covered rocky hills, as much as it runs on the ground among the woods. There is literally no end to them and an attempt to count them soon becomes monotonous. It is said the Hudson's Bay voyageurs used to travel 500 miles on them making short portages. As the country grows I have no doubt in time they will become famous for their opportunities for canoeing.

At Sudbury I stopped several days to visit friends and see the large copper mines recently developed there. The town is new and, like our western places, of small unpainted houses. It is growing rapidly, however, and will soon be quite a place. Besides the mines another factor that is aiding it is the junction here with the main line of the Algoma branch from Sault Ste. Marie. This if not already opened soon will be, and a new extent of country will be opened to the sportsman.

There are as usual a number of fine lakes around Sudbury and one is scarcely a mile from the town. It has a sawmill and a little settlement on it and here we obtained a boat one day and explored the lake. The surprising way in which these lakes wind among the hills makes the exploration of them interesting and delightful. One imagines he has come to the end, when rounding a rocky point, suddenly a new body of water opens before him as large as that he has just quitted. As yet they are practically untouched and the angler can reap a golden harvest. They contain muscalonge and bass, some of them brook trout in large size and some, strange to say, both trout and bass. On the lake we visited we cast the fly for bass, and although the day was bright and hot and we were rowing and exploring most of the time, we took eight small-mouth bass that weighed 23lbs. when we returned, besides a number of rock bass running about a pound, which took the fly and proved very game.

In the fall and winter, I was informed, there is good hunting for moose and caribou, the latter having been seen scarcely a mile from the town. Bears are also common, and as for small game, the duck shooting on the lakes is fine, while grouse are plenty beyond precedent.

This character of country and sporting opportunities continue all the way west to Lake Superior.

The line runs along the Spanish River for some distance and the latter has falls and pools in its rapid course that make the angler's heart swell with the desire to cast a fly on their black and foam-flecked eddies. I was informed by several well-known anglers that it formerly contained magnificent trout rivaling the Nipigon, and was still a fine trout river, though the first real top cream had been skimmed. (In parenthesis—the fishing opportunities are so fine and new waters so abundant, they speak in this way if a water has been visited a dozen times.)

Nearly all the stations along here are situated upon the side of some lake, for the convenience of watering I suppose, but making it extremely convenient for sportsmen who will take the trouble to carry a canoe and outfit with him. All he has to do is to disembark, launch his canoe and go to work; if he don't like it, take the train, go to the next station and try a new sport. A guide cannot be at all necessary as everything is right by the railroad. This could be done through several hundred miles of country and I imagine would be a most delightful experiment. He would have to carry his supplies, however, generally speaking, as most of the stations consist of simply a house built in the wilderness for the operator.

At one such lake and station I saw several camping parties of sportsmen. The lake was celebrated for the fine brook trout fishing it contained, running to 3lbs. and above. The last of this country contains Lake Windemere, which twists its narrow length like a snake for fifty miles along the track and around the hills. It is evidently the bed of an ancient river. The reports of the fishing which I heard here were simply fabulous. I did not have a chance to verify them.

Westward from here the train runs along the north shore of Lake Superior, where the scenery is very fine from the towering cliffs that overhang the lake. I need not advert to the opportunities for sportsmen here, as they are already well known.

A stop of several days was made at Nipigon, which has been also described. Unfortunately I was not able to stay long enough to go up to the falls, and so missed what is said to be the best part of the river. What I saw, however, fully justifies the praises of this noble river, probably the finest trout stream in the world. It may interest sportsmen to know that a small inn has been put up at the station, where fair accommodations may be had. The fare was not of the best type, but with fresh bread and butter, and eggs and fried trout, and the appetite that an outing brings, we ask nothing better. We only fished the lower river, but had plenty of sport, getting trout up to 4lbs. Indians and a canoe can be obtained at any time from Mr. Flanigan, the genial Hudson's Bay Co.'s agent at the post. He is in charge of an excellent store, where everything that one can need in those parts can be purchased. Mr. Flanigan has a visitor's book, wherein parties fishing in the river are requested to write their names and an account of their luck, and it would make an Eastern angler's eyes stand out to read some of the scores between its covers. There were no insect plagues to trouble at the time I was on the Nipigon, and their absence and fine sport made the stay halcyon days indeed. May they come again and more of them!

Westward between here and Port Arthur, at the end of the lake, there are several streams where fine sport may be had, though not to compare with the Nipigon. At one point there is a lake called Loon Lake, on the right side and but a short distance from Lake Superior, the railroad running between them. In this lake there is fine trout and small-mouth bass fishing, as noticed by one of your correspondents last fall. A singular sensation truly to hook a 3lbs. brook trout and a bass at the same time, and play and land the lively team.

At Port Arthur, at the upper end of Superior, the Kamanistiquia River comes in, carrying the largest volume of water next to the Nipigon. Unlike that river of crystal purity, its waters are dark and brown.

The road runs for a long distance by its banks, giving views of splendid pools and eddies in its rapid and often turbulent course. I know nothing of it personally, but it is said to yield fine sport.

There was a long Scotchman on our train at this point who was an enthusiastic angler (and there are few Scotchmen who are not), with whom I fell into angling talk galore. The magnificent pools we often saw on this river would rouse him tremendously, and when we passed one he would clap me on the back and say, "Hech! mon, did ye ever see onything like that? Suppose ye could lay a fly on the edge of that froth. Hey?" and he would spring like a rubber ball at the very thought.

The country between here and Winnipeg is not of an inviting aspect to sportsmen; it is wild and desolate, abounding in tamarack swamp, probably the continuation to the northward of the great swampy region of northern Minnesota.

No doubt there is good hunting in the winter time; the mosquitoes make life unendurable here in summer. Moose exist, and it is said they are killed in numbers in the winter.

A train conductor told me a curious and amusing story relative to the moose here. He was running the freight a year ago this winter and the engineer had slowed his train in a desolate spot to fix some connection or other. The conductor was in the cab warming himself, when he suddenly heard the engineer shout to him to pull the lever, at the same time starting for the cab. Peering out he saw ahead of the moving train, shown in every detail by the brightness of the headlight, an enormous moose, his antlers thrown back, bounding up and down on the track ahead of the engine. In his excitement he reversed the lever and slowed the train, and when the engineer, who had reached him, hurriedly put on all steam the moose disappeared in the forest, fortunately for the noble animal, who deserved a better fate than to be killed in such a cruel way. As the conductor phrased it, "he would have surely got him if he had not pulled the wrong way." But the end was not yet. About a week later, not far from this place, the engineer again saw a huge animal running on the track ahead of his engine. Putting on all speed he crashed into the astonished beast before he could get off the track. The train came to a halt, and taking lanterns they went out to see the prey and found a fine large ox which belonged to a settler whose cabin was not far off. Draw a veil of silence over the rest.

Westward from Winnipeg to the Rockies the game is that of the great mid-continental plain. In the settled parts of Manitoba it is of the feathered kind mostly.

I saw numbers of prairie chickens, and the shooting in the early fall must be good. In Assiniboia and Alberta I saw no antelope, but was told that in summer they go to the northward, returning during the winter. There were the usual millions of gophers or prairie dogs, and these with one badger and the coyotes were the only four-legged animals indigenous to the country I saw in this stretch. As usual the gophers were a curse to the farmers who cursed them in return. But as for feathered game no man who has not been there can imagine it. In Assiniboia, between Regina and Medicine Hut on the Saskatchewan are numbers of flat lakes on the prairies. Beside many of these the railroad runs. Many are very alkaline. The surfaces of these lakes are black with waterfowl, while waders of various kinds, plovers, sandpipers, etc., stand in solid rows and rows on the beach. The air is full of the flying multitudes, long trains of various species of birds coming and going in every direction. It is a veritable Golconda of feathered riches. Sportsmen coming out in the early fall before the birds have departed for the South, and bringing an outfit with them, could enjoy a veritable gunner's paradise, and that in the immediate vicinity of the railroad and stations.

Further west we come to the Canadian Rockies. The kinds of game, the hunting for them, the fishing to be found and the scenery are not essentially different from the same region on our northern border which has been often described, and the admirable sketches of "Yo" have left little to be told. The Canadians have a national park at Banff, in a valley on the main range. There is a fine hotel here and the railway company has a splendid building in course of construction. Roads and buildings are being constructed, and when I visited the spot last summer I found quite a little settlement there, many visitors camping in log huts and tents for the enjoyment of the scenery, air and sporting advantages, while the white tents and red coats of the mounted police maintain the best of order. There are several warm springs impregnated with sulphur which afford medicinal advantages, and at one of them is an excellent bathing house. The views in the valley through which the Bow River winds are magnificent, comparing favorably with Switzerland or the Tyrol. There is fine fishing in the lakes and streams for the black-spotted mountain trout, and there are also several other species of trout here. One of these, which is commonly caught in the Bow River, and goes by the local name of "bull trout," and of which I caught a number, bears a much stronger resemblance to our Eastern *fontinalis* than the black-spotted *iridea*, and I am inclined to believe it to be the same as Suckley's *Salmo parkii* of the Kootenay system of waters.

Mr. W. F. Whitcher, formerly connected with the Canadian Fish Commission, has spent two seasons in the Canadian Park investigating the game and fish for the Government. From his report, which he kindly had sent to me, I quote: "The fishes comprise generally whitefish, mountain trout, lake trout, river trout, brook trout, herring, gold and silver carp, catfish and suckers. It does not appear that jackfish, perch and pickerel exist in the neighborhood. The whitefish and lake trout breed during October and November, the other trout vary from spring to autumn; indeed, there are some of different kinds in spawn throughout the season. The best variety, known as rainbow trout, is undoubtedly a spring breeder. In March, April and May the spawn is either far advanced or ready for extrusion.

"There is a remarkable confusion of trouts hereabouts that may be related to the former profusion. Of identified river trout the rainbow variety (*Salmo iridea*) ranks originally in form, size, color, flavor and gaminess; the brook trout (*Salvelinus fontinalis*), though much smaller, ranks next; the Rocky Mountain brook trout (*Salmo stellatus*) runs small, but is very lively and tasty: the largest river trout (*Salmo purpuratus*) is heavy and dull, but fairly eatable; a brownish trout, called 'bull trout,' seems to be a variation of *fontinalis*—an awkward country cousin, but a hard fighter when hooked, but of insipid flesh. There has been so much interbreeding among these trout that many others are found, and their aspect and flavor are affected by consequent irregularity of spawning condition.

"If like circumstances exist elsewhere in the myriad waters flowing by circuitous routes through diversified stratas and variable temperatures toward the North and South Saskatchewan within the trout range, it is no wonder many persons express uncertain opinions and relate diverse experiences concerning the regular spawning season.

"In the large lakes the *Salmo naymacush* predominates, and is logy and coarse-fleshed. In the smaller lakes there is a trout answering in shape and markings to *Salmo amethystus* but not structurally differing from other lake trouts. Brook trout also occur in these small lakes.

"The above particulars are stated in support of a recommendation to generalize close seasons rather than as data relating to species and variations, which in those northwestern wilds develop strange perplexities."

The fishing in the mountain streams is best in early summer, as later the melting snows and glaciers in the mountains cause them to rise and become turbid, interfering seriously with sport.

The grayling is reported to be in some of these mountain lakes and streams as also in those running westward into the Frazer. The so-called grayling at Banff, of which I was unable to see a specimen, is a species of the genus *Coregonus* and not a *thymalloid*, so Mr. Whitcher told me.

From here as everywhere else comes the cry of lawless, destructive and wasteful methods of fishing. *Iridea*, as Mr. Whitcher says, is the best fish in these mountain waters, taking the fly well in clear streams, running to many pounds in weight and being very gamy. I was told a number of wonderful stories, but I refrain.

On the summit of the pass through the Selkirks, amid magnificent scenery of mountains, glaciers, torrents, waterfalls and forests, is a hotel and dining station of the C. P. R. Here the traveler and sportsman can stop and sample the surrounding. On the summit of the Gold Range lies a number of deep dark lakes, surrounded by tall mountains, and resembling the wildest of Scotch tarns to a marvellous degree. Their black depths are said to contain fishy monsters, but to this I can add nothing. I saw Indians fishing from their canoes on several of them, however, and where Indians fish there are generally fish to be found. They do contain musquitoes; that I can testify right well.

Further west is Shuswap Lake, an immense long narrow body of water, beside which the railway runs for miles and miles, amid beautiful scenery. From the western slopes of the mountains to the coast and down the Frazer, in whose boiling cañon one sees the Indians dipping salmon, the traveler passes through a wilderness whose forest depths and myriad waters are yet comparatively unknown to the sportsman.

If it be the good fortune of some reader of the FOREST AND STREAM to cross the continent on this line do not fail to stop at some of these places and tell us about them on your return.

In closing I cannot refrain from giving a just word of praise to the Canadian Pacific for the excellent train service and accommodations they offer when the country through which they pass is considered. The sleepers are marvels of comfort in upholstery, with bathrooms, smoking compartment, etc. The dining cars and stations even in the wilderness a thousand miles from civilization are as good as any in the East, while the officials are polite and wonderfully accommodating, and especially to sportsmen.

PERCYVAL.

NEW YORK LAWS.—The Governor has signed Assembly bill 511 to provide for a more effective organization of game and fish protectors; also signed Assembly bill 150 for the protection of fish in the waters of Richmond county. He has failed to sign Senate bill 348, prohibiting between March 15 and June 1 pound and purse net fishing in the Hudson River; also Assembly bill 732, for the protection of homing and fancy pigeons; also the bill, 1,093, for the better protection of fish in Cayuga county.

THE AMERICAN BUFFALO.

BY DR. R. W. SHUFELDT, C.M.Z.S.

WE now pass to the consideration of the Family *Bovidæ*, or rather such members of it as we have represented in our United States fauna, and these have already been classified and presented in my former contribution on the peccary. As I write these lines, there still exist a few living buffalo (*Bison americanus*)—old bulls, cows and young—herding in the very least frequented districts of their former domain, to yet assert themselves as being the noblest representatives of the bovine kind in this country. Miserable remnants of a race that once numbered its head by millions upon millions, and roamed over the greater part of the territorial regions now our own, even in early days extending east as far as western New York, Virginia and the Carolinas.

My own experience with these animals is quite limited. In the month of June, 1877, when accompanying a small military party, composed of one troop of cavalry, nine packers, and a dozen or more Sioux scouts, we struck at the head of Tongue River, on the north side of the Big Horn Range, a herd of sixty head of buffalo—and I joined in their chase accompanied by two soldiers and a young Sioux buck. On that occasion I killed a cow buffalo and three old bulls, when my horse played out from the run. The meat was all utilized, and packed

THE AMERICAN BUFFALO (*Bison americanus*).—AN OLD BULL.

along on the mules. It was the first time I ever noticed an Indian use the sights on a Government carbine, but the young fellow that was with me put his up in the proper manner, to 200yds., and handsomely killed an old bull at that distance across an intervening ravine. During the month of August of that year we were again on Tongue River, and met General Crook and his party, who crossed over the Big Horn Range from the Wind River country, and they reported that on the opposite side of the range they had come to close quarters with a herd of some 3,000 head. I saw none of these, as we did not cross the range that summer. Later in the same year we passed around the north side of the Big Horns, and on one occasion when west of the Big Horn River, I saw to the right of the column an old solitary bull out on the prairie, with no others in sight.

Next day I saw some of our Sioux scouts run down and kill three old bulls that formed a "herd" by themselves. These miserable Indians were loaded down with deer and antelope meat at the time, and so only took the tongues of these three noble animals. A day or so later, and we crossed a stream near Pryer's Gap, and I sighted eight buffalo up on the mountainside, and with one of the packers I started out in their pursuit. We came upon them during a fearful blizzard of heavy hail, during which our animals could barely retain their feet. In fact the packer's mule absolutely lay down on the ground rather than risk being blown down the mountain side, and my own horse, totally unable to face such a violent blow and the pelting hail, the stones being as large as big marbles, positively stood stock still facing an old buffalo bull that was not more than 25ft. in front of me. It was impossible for me to shoot as I had a double blanket over the back and sides of my head to prevent the severe punishment of the hail, and was obliged to keep my eyes on the falling limbs, which came thickly down as the entire forest roared with one continuous peal like the near firing of the very heaviest artillery. Strange to say this fearful gust did not last more than ten minutes, when it stopped as suddenly as it had commenced, and I deliberately killed my old buffalo at one shot, just where he stood, and separating two other bulls from the rest, charged them down a rugged ravine. They passed over this and into another one, but with less precipitous sides and no trees in their way, and when I was on top I noticed that the largest bull had halted in the bottom; checking my horse, an excellent buffalo hunter, I fired down at him without dismounting. The ball merely barked his shoulder, and to my infinite surprise he turned and charged me up the hill, and before I could put about, my horse actually reared almost into the vertical position, standing on his hindlegs, and leaving nothing for me to do but slide off the cantle of the saddle, as it was too narrow for me to retain my place upon it alone. Stepping to one side of my horse with the charging and infuriated bull not 10ft. to my front, I fired upon him, and the heavy ball took him square in the chest, bringing him to his knees, with a gush of scarlet blood from his mouth and nostrils. He tried powerfully to plunge forward, and actually succeeded in righting himself again for a charge, but I gave him another just behind the shoulder, and he rolled over dead. At this feat my horse seemed much ashamed of himself, and came snorting forward to inspect the victim of my fire. Upon examining the specimen I found it to be an old bull, apparently smaller and very much blacker than the ones I had seen killed on the plains only a day or so before: then I examined the first one I had shot, as well as others which were killed by the packer from the same bunch, and I came to the conclusion that they were typical representative of the variety known as the "mountain buffalo," a form much more active in movement, of slighter limbs, blacker and far more dangerous to attack. My opinion in the premises remains unaltered to-day. In all this I may be mistaken, but it was also the opinion held by the old buffalo hunter who accompanied me, and who at once remarked when he saw them that they were "mountain buffalo," and not the plain variety. I am well aware that this is a very different view of the matter from the one held by no less an eminent authority than Mr. J. A. Allen, who says in his exhaustive memoir on this subject ("History of the American Bison") that "there are two commonly recognized varieties of the buffalo, known respectively as the wood buffalo and the mountain buffalo. The wood buffalo is described by Hind as larger than the common bison of the plains, with very short, soft pelage and soft, short, inculled mane, thus more resembling in these points the Lithuanian bison or aurochs. . t is said to be very scarce, and to be found only north of the Saskatchewan and along the flanks of the Rocky Mountains, and to never venture into the plains."

These specimens were not actually measured by me in either case, and their being considered smaller only rested upon my judging them by my eye. But they were of a softer pelage, black, lighter in limb, and when discovered were in the timber, on the side of one of the Big Horn Mountains.

It will not be my aim in the present connection to present an account of the appearance of the buffalo, as that is more or less well known, no doubt, to every reader of FOREST AND STREAM. To those who would have an exhaustive history of the animal, I can recommend no better work than the one written by Professor J. A. Allen, referred to above, and the best figures of buffaloes, known to me, are those recently published by Mr. W. T. Hornaday, in *The Cosmopolitan* (N. Y., Vol. IV., Nos. 2 and 3, 1887)—they are very life-like and deserve the thanks of every naturalist in this or any other country. The bibliography of the authoritative works upon this animal is quite extensive, including some fifty or more, and commencing with Catesby in 1743, so I will be unable to offer it in such a brief account as the present one.

We have reason to believe that in some parts of Texas quite a numerous little herd of buffalo still exist, while others are undoubtedly to be found in Wyoming and some parts of the country further to the northward. I wish that I could use language sufficiently strong, or reasons sufficiently cogent to induce our government to make the effort to secure living specimens of a dozen or more of these, and by properly caring for them, let them form a nucleus upon which to rear a stock that might pass down and increase in future ages. I much fear that my poor words will not have their weight; yet even to-day such a step is perfectly practicable, and would, if promptly and properly undertaken, meet with success.

The extermination of the American bison teaches us many a lesson. Aside from the fearful waste of the very best of material, it further goes to show how rapidly a species of large animal, represented by its millions, can be swept from the face of the earth; and finally, may I ask, at the end of the next hundred years, where will the paleontological student find *in nature* the skeleton of a buffalo? Comparatively speaking, how few have mired where their skeletons will be preserved, and how slight the chances of finding them really are.

PANTHERS CLIMB TREES.

PIEGAN, Mont., May 10.—*Editor Forest and Stream:* In regard to the panther question, I can give some very positive evidence that they climb trees on certain occasions.

In the months of January and February, 1878, I hunted panthers in Brown's Tract, N. Y., with E. L. Sheppard and Edwin Arnold, two of the best-known guides of that region. We would start out, carrying provisions to last say two weeks, a blanket or two, a teapot, two axes and a rifle. Being a novice and anxious to kill a "cat," I was allowed to carry the rifle and do the shooting. Each one of us led a dog, the chains being fastened to our pack straps, and, as we wore snowshoes, we got many a fall by the dogs stepping on our shoes and tripping us.

We would strike out into the forest and travel for days, and when we found a panther track, follow it until we came up with it. But this we never did until we came to where the animal had killed a deer. The panther would be lying close by, and of course would run as soon as he heard us coming. We then turned one dog loose, and if he left the panther's track for a deer's track, as sometimes happened, we would turn another dog loose. Like all others of the cat family, the panther can run very swiftly for a short distance, but soon tires out, and then he climbs a tree. The first one I killed that winter climbed a maple tree, and crouched on a large limb about 15ft. from the ground. When we came up, the panther was watching the dog, which was barking frantically around the tree; its large eyes were a blaze of yellow light, and it switched its tail nervously to and fro. It paid no attention to us. We sat down and smoked and watched it for at least an hour, when I took a careful aim and shot it in the brain. It was a female, and measured 6ft. 6in. from tip to tip.

The next one we got after that climbed a very tall spruce, and stopped on a limb at least 40ft. from the ground. I wounded this animal mortally, and it made sad havoc with our dogs before it gave up its life. It was also a female, and measured, I believe, 7ft. 8in.

Shortly after this Mr. Sheppard and Frank Johnson killed a very large old male, which was also treed by the hounds. Others whom I know have killed panthers in trees are: Mr. B. P. Graves, Boonville, N. Y.; Mr. Verplanck C. Colvin, Albany, N. Y.; Mr. E. L. Sheppard, Boonville, N. Y.; Mr. Edwin Arnold, Boonville, N. Y.

I am very certain that adult panthers never climb trees unless pursued by dogs. Young cubs, however, do so to a certain extent in play. Mr. Graves once killed a female and two cubs, and by the tracks in the snow and the torn bark he saw that the cubs had been up and down the tree a number of times. I am also certain that panthers never climb trees and lie in wait to pounce down on passing game or children, as the newspapers often tell us is their habit. Mr. Sheppard says that at least the only place he ever knew them to do so was "around the bar room stove in the winter time."

I have often thought that I could have great sport in the mountains here if I could get two or three mongrel hounds, as "mountain lions," as we call them out here, are very plenty. J. W. SCHULTZ.

Editor Forest and Stream: Last October a party of three of us from Livingston, Mont., enjoyed a fine hunt in the Crazy Mountains. The day before starting for home, we went to the top of a large foothill for pine hens, taking nothing with us but our shotguns. Having hunted all over the hill without raising a bird, we started down a ridge, my partner taking the right side and I the left. I sent my little cocker spaniel Mollie down, while I staid near the top. She worked nicely until she got near a clump of brush, and then she stopped, sniffed the air a bit, and then made a dash for the brush. As she reached the clump, a fine mountain lioness bounded out of the opposite side. The dog took after it, and it ran up a bare tree which had no limbs on it. I called for my "pard" and ran down hill. The mountain lion jumped out of the tree and ran for a large thicket, the dog still after it; and we lost it in the thicket. As soon as my friend came up we began searching for it and could not see it from outside. We then began from opposite sides to crawl into the thicket. As soon as I was able I stood up, just in time to see the lioness ready to spring on my friend. I raised my gun and taking deliberate aim shot her in the neck. She tumbled from the limb on to the ground, and after tumbling around a short time fell dead.

The marks of her claws were on the tree where she climbed up, and the limb she was lying on was not heavy enough to stand the strain of her jumping on it from the ground; and from what I saw in regard to her climbing the first tree I take my stand that the mountain lion does climb trees. She measured from tip to tip 7ft. 4½in., and was one of the largest killed in those parts. I have the hide and am getting the head mounted.

This was the first game larger than a duck I had ever shot. I used a 10 bore gun, 5½ drams wood powder and 1¼oz. No. 1 shot; shot her in the neck, right in the jugular—did not want to spoil the head, you know.

Mr. Ed Cook, of Livingston, was the gentleman with me on this affair, and he will corroborate my statement, and besides I believe the two trees are still there for doubting Thomases to examine. N. B.—Dog not for sale.

WILL J. MACHAFFIE.

HELENA, Montana.

Editor Forest and Stream: Panthers are very abundant on the McCloud River, and very destructive to stock, especially to pigs; and from the experience we have had with them here, I should say that in this region at least they very seldom climb trees. They are perfectly well able to, but they can jump into a tree so much quicker and easier than they can climb into it, that they very seldom if ever resort to climbing. I think they would consider it slow work.

The hunters here assert very positively, and stick to it, that panthers can jump to the limb of a tree twenty or thirty feet from the ground, and as all the trees about here have limbs nearer the ground than that, it is obvious that our panthers would have very little occasion to resort to the slow process of climbing. But in other parts of the country where the trees grow to a greater height without branches there is hardly a doubt, I think, that panthers climb up the trunks of the trees when necessity for it occurs. But even then I fancy that they jump the first twenty feet or more up the tree. They must certainly be able to climb trees whenever they want to, for

their claws and limbs are much stronger compared with the weight of their bodies than is the case with our common house cat, which climb trees easily enough. L. S.

BAIRD, McCloud River, California.

Editor Forest and Stream:

In regard to panthers climbing trees, I would say they can climb. In 1861 Stephen Ward and myself bought all of Charles Marsh's wolf and panther traps. Marsh and myself started on the 18th of April to go around where he had them set. One was on top of Cat Mountain, near the bluff. There had been a panther in this trap the fall before. The marks were plain. He went about five rods and jumped down on the next shelf or ledge, some 20ft. Here there was a spruce tree about 18in. through and about 20ft. to the lowest limb. The panther climbed into the limbs with the clog and trap. By the marks on the tree he must have been there several hours, then tearing loose, left trap and clog in the tree. We cut the tree down to get the trap and found three of his toes between the jaws. The same year in June Ward and myself got one at the Toad Hole on the carry between Grass Pond and Mud Lake. This was a very heavy trap weighing 22lbs. and the clog weighed probably 100lbs. besides. The first jump from where the trap was set measured 23ft. The panther went down to the right of the trail into a thicket of tamaracks and climbed one of them, perhaps 25ft., carrying trap and clog with him. He then apparently slid back down the tree. We got him the next day. The marks of his claws are still to be seen upon the tree. PHILO SCOTT.

FINE, N. Y., May 20.

Editor Forest and Stream:

To add my mite to the tree shinning business: A year ago a friend of mine summered in camp about twenty miles from Albuquerque, N. M., with a queer old bald-headed genius from Massachusetts as guide. One night there was a row outside and the guide running out could see nothing definite, but thought he saw a black something high in the tree above him. He incontinently blazed away, for luck, and down came a huge mountain lion, shot dead. If that lion didn't climb that tree for fun what did he do it for? JOHN PRESTON TRUE.

BOSTON, Mass.

A TROUP OF EDUCATED ANIMALS.

THERE has recently been a FOREST AND STREAM show at one of the big New York theaters. And it was more of a real bona fide FOREST AND STREAM concern than any of the previous stage exhibitions which have received a mention in the paper, exhibitions mostly—these last were—of unerring marksmanship with firearms and an athletic agility in smashing glass balls. But this particular FOREST AND STREAM show of the present is of interest to every sportsman and naturalist, because it shows to what a point of cultivation the so-called brute creation may be educated. At the Star Theater, Broadway and Thirteenth street, where Henry Irving has trod the boards with his halting ball-and-chain tread, and where more recently O'Conor reeked tragedy and dodged stale vegetables at one and the same time, has been a theatrical company of dogs, monkeys, horses and a goat, which, in ability to imitate the ways of that higher animal, man, has surpassed anything of the kind ever attempted. Professor Henry Brockmann, a pleasant, happy-looking German, is the pedagogue who has succeeded in teaching his brute pupils the clever things that they do on the stage, and never before did a professor have scholars of whose accomplishments he could be more justifiably proud.

To enumerate in detail all the attainments of this high school of animals would consume more space than FOREST AND STREAM can spare. But to particularize some of the most remarkable features the first scene when the curtain goes up will do. Four monkeys, dressed in the same sort of clothes that we descendants of monkeys are now wearing daily on the street, are sitting in chairs about a table, which is laid for dinner. They are apparently out for a famous lark, for they turn to each other and make believe to chat, they gesticulate to one another as does he who is telling a wonderful yarn, and they are meanwhile too well bred in table etiquette to loll upon the board, to place their elbows on the cloth or to yawn. Presently, after the diners have adjusted to their satisfaction the white napkins that are tied under their chins, from the wings there trips a neat waitress in gown and pantalettes, a monkey Hebe, who jumps upon a vacant chair by the table and looks inquiringly from one guest to the other, as if taking their orders for consommé or other potage. As she scurries away toward the make-believe kitchen after receiving the orders one droll, rakish-looking monkey follows her figure with his eyes, and then nudges his neighbor and winks diabolically, for all the world as if he were saying, "Nice gal that, old chappie!" The waitress returns bearing the portions for the first course, and is assisted by a young monkey in knee-breeches and roundabout. This monkey is a mischievous little imp. While the guests are dining he steals bits from their plates, which he eats with a grin of enjoyment, and after he has brought in a basket of wine, and the professor has filled glasses all round, this precious young rascal slyly grabs a half empty bottle and gets under the table to drain it.

The second pantomimic comedy introduces some of the dogs. A white poodle walking on her hindlegs is dressed as a modern belle; a tailor-made poodle, indeed, with white fluffy bangs, faultless attire, even to the bustle, and a walk that fairly imitates that of some of the tailor-made girls of Fifth avenue. She is accompanied by a discreet duenna in the person of an old-maidish-looking monkey, who is as prim and precise as duennas in caps and spectacles always are. A coal-black poodle dude, in a suit perhaps by Poole, enters from the left, walking very erect and Englishy on his hindlegs, and flirts a little with the tailor-made miss. The duenna is properly shocked, and tries to draw her charge's attention from the "horrid man;" but the young miss boldly encourages the dude's attentions, and finishes by walking lovingly off the stage with the young masher, while the duenna follows meekly behind.

The most interesting pantomime of the performance occurs when a liveried coachman monkey drives out his monkey master and monkey mistress in a minature open coach, with a liveried monkey "boots" sitting in solemn state behind. The "horses" are two dogs running on all fours, and they are as skittish and restless as thoroughbreds. The coachman has some difficulty in guiding them, and indeed they eventually run away, during which event the off hind wheel of the coach comes off, the hind axle of the coach breaks, and footman, master and mistress are tumbled out. The master is not hurt, neither is the mistress, and as soon as the former has used his weight to balance the coach back to a semi-upright position, he attends to the poor footman, who is sprawled out his full length, evidently seriously injured. His master feels his ribs, listens to his heart beats, and goes through some hocus-pocus which resuscitates the poor footman. Meantime the coachman has chased and captured the runaway team, and it is very amusing to see the monkeys as they all stoop with their hands on their knees, exactly as men would, and examine the broken axle and wheel very critically.

Besides the above dramatic bits there are dogs that jump forward and backward, on four feet and on two feet; dogs that walk on their forelegs alone, and dogs that stand on their heads; dogs and horses that dance waltzes and polkas and square dance movements, and that keep accurate time to the music in doing it, too; a monkey that walks a tight rope, and a monkey clown that trundles a wheelbarrow, makes funny failures on the tight rope and imitates the well-known characteristics of the human circus clown; a dog that rides a bareback horse around a ring and jumps through hoops, on and off the horse, and shows the highest judgment in balancing and jumping; a goat that climbs to the top of a pyramid of bottles and balances himself there on two legs; and ponies that do all manner of tricks, such as waltzing on their hindlegs, marching in time to music, leaping and forming intricate and beautiful figures on the stage.

Now, I am something of a dog training crank myself, and I watched this performance, therefore, with great closeness and interest. The feature that surprised me most was the fact that Prof. Brockmann gave very few audible commands to the animals, and when the monkeys and dogs were performing their most wonderful parts he apparently said nothing to them and made no gestures to guide them. The brutes seemed to go through their performance as if they understood perfectly the rôles they were expected to fill. I was positive that certain of the dogs were able to count, because in a scene where several of them at once were executing fancy movements, leaps and sommersaults together, an "act" in which the *ensemble* would be entirely lost if one single animal had forgotten on which turn to execute his leap or his sommersault, not one dog failed to put in his particular act at just the right period, although he had perhaps been placed in the same relative position to the other dogs three or four times before. And their trainer was naturally unable to count for all of them at once and issue his commands to all at the same time.

After the performance I had a talk with Prof. Brockmann on the stage. He is a fine-looking German of about forty-five years, with a pleasant face and manner. "The whole secret of training animals," said he, "is to first get so thoroughly acquainted with your animal that you understand his every mood and temper. Do not treat him as if he were a dunce and unable to reason or think. Every animal can think and can reason, too. In training my dogs and monkeys I always let them suggest tricks and little acts to me. I give them a rudimentary education, first in comparatively simple things, such as walking on their hindlegs, carrying articles, jumping, and so forth. Then the rest seems to come naturally and easily to them, and as I live right among all my animals the greater part of the time and talk with them—"

"Talk with them?"

"Certainly. I don't talk to them as I talk to you and they don't talk to me as you do, but we understand each other just the same, and we like each other, sympathize with each other and share one another's griefs and joys, I may say.

"When I say I let my animals suggest tricks to me I mean that they are constantly at one time or another adding a little act to those I have taught them, and I then make the animal who has accidentally added something clever to his performance do the act over and over again until he understands that his new trick is a part of every performance. The clown monkey in the tight-rope performance, you noticed, chalked his feet, just as the tight-rope walker does, and then very comically chalks his nose. That always causes a laugh, but it wasn't done in the programme until one day when we had some new and queer-smelling chalk, and the clown, after he had chalked his feet as usual, put it to his nose and smelled it. I made him do it again and again after the performance and he has done it at every performance since. At the first rehearsal of the runaway coach act, after I had taught the monkey footman to lie still on the stage after the upset, the big monkey on the seat, who has a great affection for the little footman monkey, ran to him in real unfeigned concern, thinking he was truly hurt. I saw that this little act would be a good addition to what I had already taught, and it has been done at every performance.

"Do I use the whip in training? Almost never. I have a different method of teaching each act, and I could not explain to you all the ways I go about the education of the animals without consuming too much time. But I never break the spirit of a dog or other animal, and I exercise my will power over them so that my mind has an influence on their minds. Oh, yes, brutes have minds, and good minds, too. And I always reward the animal when he does anything to my satisfaction with something that he likes to eat. I use the whip only to punish my pupils when they have failed in their lessons, and they understand so well this fact that if I see a dog or monkey is neglecting some part of his performance I have only to point the whip which I carry in his direction and he will use his brains to remember in what he is making a mistake, and generally with success if I can myself discover his error in time. If he fails I do not whip him before the audience, because that would spoil the performance, but after the show is over I whip him, and then make him go through that portion of his act in which he failed until he is perfect in it."

"Do you use poodles instead of other dogs because you consider them the most intelligent?"

"Oh no. When a poodle is nicely clipped he makes a finer appearance on the stage than any other dog. That is the only reason I use them. I consider the poodle, however, to be as intelligent and easily trained as any other dog. You think a setter or spaniel or pointer is more intelligent, perhaps, because they learn to hunt and point and find game so readily, but you must remember that all those attainments are natural to these dogs, because they come by instinct and generations of breeding hunters."

"Do you begin teaching the dogs when they are puppies?"

"No. A dog's nervous organization and brain are not fully developed until he is one year old, and until that age I never teach a dog anything except to know his name. There is no way of ascertaining the age of a monkey, and I find them tractable to learn at whatever age I happen to get them. The same is true of horses and goats as of dogs. They learn most readily and retain their educations best when their instruction begins at the age of one year.

"I do not give orders or signals to the animals on the stage. They have gone through their performances so often that they understand what they have to do without direction.

"Can dogs count? Certainly, and so can other animals. And they are very appreciative of music, too. I train them and rehearse them with an orchestra playing at the same time, and they associate certain acts with certain melodies, and are guided by those melodies. If my orchestra leader should start an act with the wrong tune it would break up the performance."

Prof. Brockmann says his monkeys do not stand the strain of acting so well as the dogs. It is a severer task for a monkey to perform on his hindlegs alone than it is for a dog, and the former are subject to back-ache and other ills to which the dogs are strangers.

The animals are fed but once a day. Their daily meal is given them each night after the evening's performance. The dogs are fed on rye bread, over which is poured the liquor from boiled beef, and each canine is also allowed a portion of the boiled beef containing considerable bone, the meat and bones having been chopped into pieces about the size of an egg. In feeding them the dogs are formed in line and are called up to the festive board—or rather the festive bowl—in turns. When the Professor thinks one dog has eaten enough he orders him back to the ranks and calls out the next in line.

Prof. Brockmann has one poodle who does not act now. He is old and lame, blind and deaf. When I asked the Professor why he carried this old and useless dog about, the pleasant German's face lit up with an expression of great tenderness. "Ah," said the Professor, "Fritz is no longer useful, but the old fellow has served me faithfully and made much money for me, and shall I turn him out to die when he is old? No; Fritz will be my welcome pensioner so long as he lives." And then the old dog limped up to the speaker's side and put his gray muzzle in the Professor's hand.

I am beginning to believe that perhaps dogs can talk after all. SENECA.

BITE OF THE GILA MONSTER.

BY DR. H. C. YARROW.

[This is Part VI. of Dr. Yarrow's series of papers on "Snake Bite and Its Antidote."]

ON Feb. 7, 1883, Drs. S. Weir Mitchell and Edward T. Reichert read a paper before the College of Physicians of Philadelphia, entitled "A Partial Study of the Poison of *Heloderma suspectum* Cope, the Gila Monster," in which the statement was made that after several experiments with the saliva of this reptile, they had come to the conclusion that it possessed strongly venomous properties. This had been suspected by some naturalists, from the fact that this lizard possessed anterior deciduous grooved teeth, which communicated by ducts with large glands near the angle of the lower jaw. All sorts of conflicting reports have been published from time to time regarding this reptile, some observers claiming that it is deadly venomous, others believing it perfectly harmless; in fact, in some parts of the Southwest it was kept as a household pet. Bocourt and Dumeril mention the bad name it has in Mexico, and Sumichrast states that the natives hold it in the utmost terror, and consider it as more fatal than any serpent. A fowl bitten by it died in twelve hours, with bloody fluid exuding from its mouth, the wound being of a purple tint. A cat bitten was very ill, but recovered, remaining thin and weak. Sir John Lubbock reports that a *Heloderma* sent him killed a frog in a few minutes, a guinea pig in three minutes. Dr. R. W. Shufeldt, of the United States Army, reports serious symptoms after having received a bite on the right thumb, but no permanent disability followed.

The writer has for several years endeavored to trace out an authentic account of death resulting from the bite of a Gila monster, and the following is all the evidence in his possession. The first account was secured through Dr. S. P. Guiberson, of Ventura county, Cal., and is as follows:

"G. J. Hayes, a miner in from the Frazer mine, says that in 1878, or '80, in Tip-Top Mining Camp, Arizona, he saw a Gila monster bite a man by the name of Johnny Bostick, who at the time was under the influence of liquor. That he took hold of the *Heloderma* and shoved his finger at it, and the reptile seized his finger, and its jaws had to be pried open before he could disengage his finger. The *Heloderma* was 22in. long and lay on the card table. It was also seen by a man named Lou Smith, and a lot of Italian miners. Immediately Mr. John Bostick drank large quantities of liquor, and from the effects of the bite one side was paralyzed, and he died in about three months, April 19, 1878. I hereby certify that the above statement is correct. (Signed) G. J. HAYES."

Subscribed and sworn to before me, a notary public, this 19th day of April, 1885.—S. P. GUIBERSON, Notary Public for Ventura county, Cal.

The second affidavit, which follows, differs somewhat from the first, but relates to the same individual. The query is, was the *Heloderma* bite the cause of death or was it the whisky so lavishly administered.

STATE OF CALIFORNIA, County of Ventura.—R. C. Carleton who first being duly sworn, deposes and says that he was present at the time, and knows of his own knowledge, that Johnny Bostick, of Tip-Top, Arizona, was bitten by a Gila monster, from the effects of which he afterward died. That the Gila monster seized one of the fingers or thumb of the said Johnny Bostick, and that in order to disengage the reptile the boys cut its head off, that deponent thinks it occurred in 1880. Subscribed and sworn to before me this first day of December, 1886.—R. C. CARLETON.

S. P. GUIBERSON, Notary Public. (A true copy.)

In conversing with Dr. F. V. Ainsworth, U. S. A., who has had a large experience in Arizona, upon the subject

of the bite of the Gila monster, he informed the writer that he had heard of a case of death from the bite of this reptile, but that his brother Frank K. Ainsworth was conversant with the details, and he obligingly offered to write and procure full particulars. From the letter which follows, it will be seen that the case is reported by Dr. G. E. Goodfellow of Tombstone, Arizona, to Dr. Ainsworth:

TOMBSTONE, July 23, 1887.—*My dear Ainsworth:* I at last am ready to reply to your letter concerning "snakes." The Fairbanks case was as follows: Yeager, about 55 years of age, was in May, 1885, in Fairbanks, Arizona Territory, bitten by a Gila monster. He, to prove the innocuousness of the beast, put his left thumb and forefinger into its mouth, and he was bitten. He was immediately loaded to the guards with whisky—it happened in a saloon—and he seemed all right, save for a slight numbness and swelling in the hand and arm. He sat down in a chair in the saloon, talked with those around for an hour. The crowd thinning out, he seemed to drop asleep. In about an hour more, the saloon keeper spoke to him, but not making a reply, he was taken hold of and found to be dead. I was sent for, but before I could leave received a second message announcing his death. He was a man addicted to the use of liquor, and so far as I can ascertain had been on a prolonged spree for months. Whether he died of the reptilian poison or a combination of whisky, disease and Gila monster I cannot say.

About four years ago on the lower San Pedro I was informed that a man had been bitten in the foot while in the field and died within three hours. I could neither prove nor disprove the case.

That the Gila monster is a poisonous lizard cannot now be denied. That its bite is fatal uniformly is open to discussion. I have always considered that they were a trifle more poisonous than the scorpion, tarantula and centipede, not even approaching the rattlesnake, and I have been accustomed to regard the bite of the three first mentioned as little worse than the sting of a bee or wasp. I have known of bee stings killing, but though I have seen many bitten, and have had a personal experience as well, never have I known of a death to occur from the bite of a scorpion, tarantula or centipede. That they can kill under certain conditions I am convinced. * * * Very respectfully, G. E. GOODFELLOW.

These accounts are the only authentic ones the writer has been able to gather, after ten years of constant labor and research.

On the other side it may be stated that Mr. Horan, the superintendent of the National Museum, has been bitten several times by this lizard without serious results following.

The first experiment of Mitchell and Reichert was as follows: "About 4 minims (of saliva) was diluted with one-half cubic centimetre of water, and thrown into the breast muscles of a large strong pigeon at 4:25 P. M. In three minutes the pigeon was rocking on its feet and walking unsteadily. At the same time the respiration became rapid and short, and at the fifth minute feeble, at the sixth minute the bird fell in convulsions with dilated pupils, and was dead before the end of the seventh minute. The first contrast to the effect of venom was shown when the wound made by the hypodermic needle was examined. There was not the least trace of local action, such as is so characteristic of the bite of serpents, and especially of the *Crotalidæ*. The muscles and nerves responded perfectly to weak induced currents, and to mechanical stimuli. The heart was arrested in the fullest diastole, and was full of firm black clots. The intestines looked congested. The spine was not examined." A number of other experiments made by these experienced investigators left no doubt in their minds as to the terrible venomous character of the *Heloderma* saliva.

Before giving notes of the experiments made at the National Museum, it may be well to describe the process by which Drs. Mitchell and Reichert obtained the saliva and our own. The first consisted in "provoking the reptile to bite on a saucer edge, which it was not disposed to do. When once it had seized the saucer it was hard to pull it away, so powerful was the grip of the lizard's jaws. After a moment a thin fluid-like saliva dripped in small quantities from the lower jaw. It was slightly tinted with blood, due to the violence of the bite, and it had a faint and not unpleasant aromatic odor. The secretion thus collected from the mouth was distinctly alkaline in contrast to serpent venoms, which are all alike acid."

Our own method consisted in forcing the lizard to bite upon a piece of artist's gum, which being elastic and yielding, did no injury to the teeth and afforded a fair hold. So soon as the saliva appeared to be flowing it was carefully swabbed up with pledgets of absorbent cotton, which were washed out with glycerine, and in this way we had no difficulty in securing all of the fluid needed. It was preserved in glycerine the same as our serpent venom.

The first experiment, Nov. 8, 1887, was as follows:

Nov. 8, 1887—12:17 P. M.—Held left hindleg of rabbit to *Heloderma*, who grasped it with his teeth, and held on for three-fourths of a minute, biting fiercely.

1:30 P. M.—Rabbit a little lame, but enjoyed eating as much as before.

3 P. M.—No result so far.

Nov. 9.—Rabbit appears to be perfectly well with the exception of a very slight lameness of the left hindleg, due to the lacerated wound made by the lizard's teeth.

12:30 P. M.—Held leg of another rabbit near the mouth of a different *Heloderma* from the one used in the former experiment, and irritated the reptile until he took hold. In this case the rabbit's leg was seized several times and bitten to the bone, the reptile being unwilling to let go. There was a copious flow of saliva, which ran over the teeth wounds and was rubbed in by the experimenters, care having been taken to remove the hair from the rabbit's leg. In fact this was done in every case, as it was feared the thick fur might prevent the saliva from reaching the wounds.

3 P. M.—No result.

Nov. 10.—No result.

Nov. 11.—No result except slight lameness.

Nov 17—12:45 P. M.—Injected three minims of solution of *Heloderma* saliva in leg of hen (brown). Respiration somewhat increased, but no other symptoms noticed.

2:30 P. M.—Fowl in about the same condition; respiration slightly increased and breathes with beak partly open.

Nov. 18.—Fowl appears to be entirely recovered.

Nov. 20.—Chicken completely recovered.

In this case the increased respiration was probably due to the fact that the chicken being a very noisy one it became necessary to compress its throat to avoid annoying other workers in the Museum.

Nov. 22—12:19 P. M.—Injected 10 minims of solution of *Heloderma* saliva and 10 minims of water into left breast of another hen. This chicken was very thin but perfectly healthy, and had been used for two rattlesnake venom experiments with ligature and recovered.

12:25 P. M.—Increase of respiration, wants to lie down, defecates, feathers ruffled.

12:30 P. M.—Panting heavily; peculiar outward and inward movement of rectum; eyes closed and very drowsy.

Nov. 23.—Chicken entirely recovered, and has been so for several days.

12:35 P. M.—Injected 25 minims of solution of *Heloderma* saliva into left leg of another hen.

12:40 P. M.—Hen lying down, respiration quickened, and breathes with mouth open.

2:30 P. M.—Chicken still lying down and breathing fast.

Nov. 29—11 A. M.—Chicken in same condition as yesterday; will not eat.

Nov. 30—11 A. M.—Chicken improving; eats a little.

Dec. 1—11 A. M.—Chicken appears to be all right; eats well.

Dec. 2—11 A. A. M.—Chicken entirely recovered.

Dec 5—12:15 P. M.—Injected 25 minims of solution *Heloderma* saliva into breast of chicken, same quantity into right leg, same quantity into left leg, making in all 75 minims. In a short time fowl had copious watery discharge *per anum*, with a curious oscillatory movement of that opening.

12:25.—Chicken lying down with its feathers much ruffled.

Dec. 6.—Chicken found dead. This fowl had been used for previous experiments, and was very thin and weak, and it is by no means certain whether the copious diarrhœa probably produced by the glycerine did not cause its death.

Dec. 5.—Forced largest *Heloderma* to bite a chicken on the leg (from which feathers had been removed) several times. There was a copious flow of saliva and many lacerated wounds.

Dec. 6.—Chicken seems perfectly well, no swelling or local manifestations whatever.

Dec. 7.—Chicken perfectly well.

Fearing that possibly the glycerine solution of venom (2drs. of saliva to 6drs. of glycerine) was too weak or had lost it strength through keeping, on Dec. 8 the following conclusive experiment was performed:

12:15 P. M.—Forced open the jaws of the largest and most savage *Heloderma* and collected upon a piece of absorbent cotton from ten to fifteen drops of fresh saliva. An incision was made in the breast of a chicken and the cotton placed in it and allowed to remain.

Dec. 10.—The chicken appears perfectly well; no sign of indisposition or local manifestations whatever. Wound appears to be healing kindly.

Jan. 20, 1888.—Wound in breast has been healed for some time, the cotton remains where it was placed and can be felt encysted under the skin and has produced no injury.

April 4.—The chicken alive and healthy with the cotton still *in situ*.

This experiment would seem to show that a large amount of the *Heloderma* saliva can be inserted into the tissues without producing any harm, and it is still a mystery to the writer how Drs. Mitchell and Reichert and himself obtained entirely different results. Were it not for the well-known accuracy and carefulness of Dr. Mitchell it might be supposed possibly that the hypodermic syringe used in his experiment contained a certain amount of *Crotalus* or cobra venom, but under the circumstances such a hypothesis is entirely untenable. Moreover no local symptoms were manifested as would have been the case had venom been inserted. Both the Gila monsters were good-sized active specimens, full of vigor, secreting a considerable amount of saliva, and we can hardly suppose that the short captivity they had suffered could have so modified their saliva as to render it innocuous.

THE BEAR IN CAMP.—Fredericton, N. B.—*Editor Forest and Stream:* Mr. Silver says a bear will not enter a camp door. I know that they do not care to do so, but yet they will. Some few years ago I saw where one had entered a camp by the door, and taken out a paraffine lamp, thrown it down; and when the body of the lamp lay at one side, and the chimney at the other, bruin had lain down and rolled himself between the two. The bear seems to have a great liking for this oil. I have also known other instances, where bears have gone into camps by the doors, though they usually prefer to knock off the shingles and go in at the back of the camp.—EDWARD JACK.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—One peba armadillo (Tatusia peba), one vulpine phalanger (Phalangista vulpina), one velvet monkey (Cercopithecus lalandii), one Campbell's monkey (Cercopithecus campbelli), one green monkey (Cercopithecus callitrichus), three sooty mangabeys (Cercocebus fuliginosus), four eutellus monkeys (Semnopithecus eutellus), one serval (Felis serval), one wild swine (Sus scrofa), two gray foxes (Vulpes cinereo-argentatus), one wedge-tailed eagle (Aquila audax), four snow geese (Anser hyperboreus), one European quail (Coturnix communis), one kestrel (Tinnunculus alaudarius), two passerine parrakeets (Psittacula passerina), four nonpareil finches (Cyanospiza ciris), and 2 indigo birds (Cyanospiza cyanea). Received by presentation—One opossum (Didelphys virginiana), one green monkey (Cercopithecus callitrichus), eleven striped gophers (Spermophilus tridecom lineatus), one common Macaque (macacus cynomolgus), one night heron (Nyctiardea grisea), two turtle doves (Turtur risorius), two painted terrapins (Chrysemys picta), five alligators (Alligator mississippiensis), and one dragon-like lizard (Dracaena guianensis). Born in garden—One American buffalo (Bison americanus), four prairie wolves (Canis latrans), one aoudad (Ovis tragelaphus) and one hybrid deer (from C. virginianus ♂ and C. mexicanus ♀).

GRAND EXCURSIONS TO CALIFORNIA.—The Burlington Route is the official route for the teachers bound for the National Educational Meeting at San Francisco. Join the splendid official excursion party from New York, Pennsylvania, Brooklyn, New England, Ohio, Michigan and Indiana, leaving Chicago July 3, 5, 8, 9 and 10. Magnificent trains, free chair cars, Pullman and tourist sleepers, etc. The public entitled to one fare for this occasion. For further information write E. J. Swords, 317 Broadway, New York city; H. D. Badgley, 306 Washington st., Boston, Mass., or address P. S. EUSTIS, G. P. & T. A., C., B. & Q. R. R., Chicago, Illinois.—*Adv.*

MR. REUBEN HARWOOD, Somerville, Mass., whose advertisement appears in another column, issues some very complete price lists of guns, rifles, revolvers, etc, which it would be well for intending buyers to see.—*Adv.*

Game Bag and Gun.

RIFLES FOR SMALL GAME.—II.

Editor Forest and Stream:

Since the article under the above heading appeared in FOREST AND STREAM of May 10 I have received so many inquiries about the .22-cal. rifle that I have been tempted to answer some of them through your columns. While I fully realize that I have yet a great deal to learn, I will give a few points that have been learned in the school of experience.

To those who are so fortunate as to possess a good rifle it is sometimes a mystery why they do no better work with it. Here is a point to begin with, simple as it is, it is many times forgotten or ignored altogether. Keep your rifle clean. When your barrel is clean it remains fixed and unalterable, every time the same; but when your grooves are full of dirt and lead you are dealing with an unknown quantity. Many a one who would not think of such a thing as firing a muzzleloading rifle fifteen or twenty times at a target—trying to do fine work—without cleaning it, will blaze away with the breechloader shot after shot, and when he sees plainly enough that the first two or three shots are the best, does not stop to think that in order to do its best the rifle must be clean. Of course it is often necessary to use several shots without cleaning when hunting, but in target work where fine shooting is desired it is a great mistake. Try it. Shoot one string without cleaning, and in the next one have the barrel perfectly clean every shot.

This question has been asked me by so many that it requires an answer, Whose make of cartridges are the best? My experience has proved the .22 short cartridge made by the Winchester Co. to give the best results. I have used many thousands of all the most prominent makers and have made my best targets with Winchester cartridges. I however can not say this of all their cartridges. The .22 long "rifle" cartridge I think is made only by the U. M. C. Co. and with a Stevens rifle I have made some remarkble targets using this cartridge. With the Maynard 10-45 c.f. I use the shells (everlasting) made by the manufacturers of the rifle expressly for it; also use the reloading tools made by them and run my own bullets from pure lead and lubricate with a home-made compound of which I will say more further on. I use American Powder Co.'s Dead Shot FFG. powder and after many years' experience with all kinds, must pronounce it the very best for fine work that I ever used.

There is a point worth considering regarding our cartridges being new and fresh. If not fresh from the factory the lubricating material becomes hard and brittle, or perhaps the bullet is all corroded; and in reality there is little or no lubricant left. Wipe it all off and put on new. Do not put on too much, for that is just what will cause wild shooting, especially in cold weather. It shoud be evenly and lightly coated; but my advice is get new, fresh cartridges if possible. I have an excellent lubricant that I have found to be the best thing for large or small bullets that I ever saw. If any of my brother riflemen would like to give it a trial I will mail them a box of it if they will send stamps for the postage and packing. (It is not for sale so this is not an advertisement.) It is cheap to produce and I shall be pleased to give it to any practical rifle shooter who will test it thoroughly.

One question was asked me that shows that a wrong view is taken by some shooters regarding the holding of a rifle for hunting shots, which are most always made off-hand. How can you hold a rifle still enough to do such shooting? I cannot hold a rifle still, not for one second. If I try to hold still the gun begins to wobble, and the more I try to hold it the worse it will go; and just here is one mistake that young riflemen are apt to make. They will try to use a hip rest or a body rest; they set every muscle as rigid as they can, hold their breath, shut the left eye until they are most ready to pull, and then close the other one; go through all sorts of unnatural performances, and—well, strange to say, some of them get a good target sometimes on the range. I have had some very successful hunting trips, and this is the way I go to work. I use the ordinary hunting butt on the rifle, and like the shotgun butt on the larger caliber. I hold the rifle the same as I do a shotgun, with both arms free from the body, and with the left hand well out under the barrel. I leave both arms free to carry or swing the gun wherever I wish it to go. I keep both eyes open and then cannot see any too well in the woods. I use the Lyman rear and ivory bead front sights. Many a time I have had a squirrel start on his travels when I was raising the rifle to draw a bead on him, and following along after him, either up or down a tree trunk or along a limb with the little white bead, tumbling him at the crack of the rifle. This as you will see would be almost impossible if the rigid, cramped and awkward positions that we see on the ranges were used.

The whole secret (if any there be) of off-hand shooting at game is to keep both eyes open, watch your game, and when the front sight is there give the trigger the pressure instantly, or in other words, catch it when it gets there and do not let it go by. A ball of wood suspended by a string and made to swing like a pendulum on a clock makes a good target for practice, using the position I have described. Let your arms move easy and free, put no unnecessary strain on the muscles, keep both eyes open and you will be surprised to see how often you will hit it and how it will help you to hit small stationary objects off-hand. In this way very nervous persons often do the best shooting, as they "catch" the trigger quickly and at the right instant. Rest shooting is well enough in its place, and is of course necessary in adjusting sights and testing the shooting qualities of the rifle, but it is entirely out of the question when you are in the woods after game. Glass balls thrown in the air are well enough for amusement, but are of no valne as regards making a good shot for game shooting. With my 10-45 Maynard I have shot woodchucks dead at over 100yds. on several occasions, and every one who has ever hunted them knows that they are hard to kill. With the 3-30 cartridge I have made several old veteran Thomas cats bite the dust and stop within four feet of where they were shot, and most of us know that the old fellows have "nine lives." I have dropped many a ruffed grouse from tall trees with this same little bullet, and on one occasion killed a black duck at about 200yds. that I shot at out of spite, as I found I could get no nearer.

The .22-cal. is so light and handy to use and carry, the

ammunition is so small and weighs so little, and the smoke, noise and fuss that this really powerful little weapon makes is so small that I think every lover of sport in the forest and field will like this arm when he comes to be acquainted with it, and to have it serve him as it has the writer.

Set or "hair" triggers are (in the writer's opinion) a delusion and a snare on the hunting rifle. If you have them you will set the trigger so that it will go easy and then forget about it, then off goes the gun before you want it to, and you have not only made a miss, but have scared the game away; to say nothing of the danger of a premature discharge. If your rifle pulls off at 3 or 3½lbs. it is easy enough, and if you use the same pull all the time you can do better work both at game and at the target.

In conclusion, what I do not know about rifles would fill a very large volume, but if what I have written will help the young beginner, and teach him at once what I have had to learn in the school of experience, and what has taken many years of my life to find out, then my object in writing will have been attained and I will be content. IRON RAMROD.

SOMERVILLE, Mass., May 24.

GAME IN CENTRAL NEBRASKA.

NO section of the United States is without some group or groups of animal life that make it of especial interest to the sportsman. The Red Desert of Wyoming is the winter haunt of elk, deer and antelope (*Cervus canadensis, C. macrotis, Antilocapra americana*). The great desert of Utah and Nevada belongs for four months every year to *C. richardsonii* or *C. columbianus*. (Is there any distinction between the two last named species?) After leaving the realm of *Cervidæ* and *Ursidæ*, of rifle and hunting knife, it seemed as though sport with rod and gun in any portion of the plain region must be very tame. But as I have lain concealed in thickets of *Salix lucida* during the chilling hours before sunrise and have listened to the anserine chorus borne on the south wind from the waters of the Platte, I have found it necessary to change my mind. The wood duck is an occasional visitant of southern Idaho. It, as well as the green-winged teal, is found at intervals in the Sweetwater region of Wyoming. But all the genera and every species of water fowl make the Platte valley in central Nebraska a resting point in the annual migration from Indian Territory and Texas to the cooler climate of the Upper Missouri and of the northern lakes.

The swift yet shallow Platte affords little opportunity for the duckboat, but its willow-covered islands and banks form natural blinds of which the most verdant sportsman will not fail to take advange.

As soon as the ice breaks, geese are here, and they remain until the warm weather of May drives them to their breeding grounds. This year the first flock was observed about the 20th of February. The line of migration is constantly moving westward and the thickly settled portion of the State east of Grand Island receives scarcely half as many geese, brant and ducks as it did ten years ago.

From the river to the northern bluffs and upland cornfields is about three miles as the crow flies. The birds leave the river at dawn, flying across the level bottomlands to their feeding grounds back on the rolling prairies, and return about nine o'clock. They make a similar trip late in the afternoon. When there is a strong north wind they fly almost within stone's throw, but on clear, still mornings they are out of rifle range except close to the river. Many hunt them only with rifles and some excellent wing shots are to be found in this section. It is good practice to rest on the river bank and pick off brants on the sand bars from 300 to 500yds. distant. Such practice is of great use to would-be "crack shots" and does but little injury to the living targets.

The white-winged brant makes a shorter stay here than does the goose. It is very abundant during the migrating season. The common gray goose is found in almost as great numbers as the brant. The Canada goose is rare, though three or four individuals are to be seen with each flock of "grays."

Ducks are with us all summer, haunting the creeks, sloughs and ponds that empty into the Platte. In former years the mallard was abundant but of late it has almost completely disappeared. Redheads are now plentiful, woodducks and butterballs are not strangers, but of teal, especially of blue winged teal, I have seen very little.

In the matter of songsters the Nebraska of to-day bears no relation to that of five or ten years ago. Each timber claim and small fruit orchard has aided in attracting thrushes, warblers and finches until it needs the pen of a Thoreau, a Burroughs or a Muir to do justice to the chorus that it is now our privilege to hear. Even here where singing birds have been, until within the last five years, almost unknown, there is a call for an Audubon club. Something must be done to protect our visitors or they will be exterminated by ruthless hunters who spare neither lark nor thrush, who know no game law, who will shoot a chicken on her nest. The boys and young men of central Nebraska are certainly in need of some severe lesson that shall teach them to realize the wanton cruelty of which they are constantly guilty.

KEARNEY, Neb., April 24. SHOSHONE.

[These are synonyms. The species is now known as *Cariacus columbianus*, the Columbian blacktail deer.]

FORT MCLEOD, North West Territory, June 1.—Large game on the prairies in this vicinity is getting scarce; a few antelope are occasionally seen, but the large bands have moved northward. Prairie chickens are plentiful along the river bottoms, as are also wild ducks, Canada geese and several kinds of waders in the sloughs and coulees. The rivers down in the prairies are almost destitute of fish, excepting the common sucker, though thirty miles west among the mountains good trout fishing is to be had. A ride of twenty miles northwest takes us to the Porcupine Hills, where large game, such as blacktail deer, elk, bear, etc., are quite numerous.—STANSTEAD.

RE-BORING MUZZLELOADERS.—A correspondent writes to know who re-bores the old-time muzzleloading hunting rifles. He thinks that there must be many men who, like himself, have these rifles and want to have them bored out. If he is right, the gunsmith who can supply their needs will do himself a benefit by speaking up.

THE WILD PIGEONS.

Editor Forest and Stream:

In your last number a correspondent asks as to the whereabouts of those beautiful birds, the wild pigeons, which used to be so abundant a few years ago. It is thought here that the wholesale destruction of young and old at their nesting places has resulted in nearly exterminating them. A few years since there was a roost near Kilbourn City in this State; and men, women and children, besides a large number of Indians, spent a week or more in shooting the old birds and clubbing down the young. The weather was intensely hot and nearly all that were intended for shipment spoiled; several tons of young birds which had been brought to the express office and were found to be unfit to send off, were thrown into the Wisconsin River. As this process is substantially repeated in every State or Territory where a roost is discovered it cannot but soon result in wiping out the entire race of passenger pigeons, unless soon discontinued. The excellent game law of this State now inflicts a heavy penalty on harming or disturbing a pigeon within three miles of a roost, and it would be well if one like it should be generally adopted. C.

WHITEWATER, Wis.

Editor Forest and Stream:

I notice in last week's issue Mr. L. H. Smith, of Strathroy, Ont., asks what has become of the wild pigeon. I think the answer is that they have been annihilated by the netters and trappers, who not many years ago found a ready market for them with certain so-called "game protective clubs," the extent of whose game protection was the needless slaughter of these birds at the trap. Not many years ago, in every spring and summer, Michigan was thronged with pigeons, but for the past four or five years none have been seen. Occasionally a stray one will be found in the northern part of the State, but they are gone never to return. When in Missouri last fall I heard the matter discussed by some sportsmen of that State. They said the birds used to come there in clouds every spring, but a few years ago their migration suddenly ceased, and they were asking the same question that Mr. Smith propounds. Where I go salmon fishing in eastern Quebec the same state of affairs exists; and I think without doubt the pigeon has met the same fate as the once plentiful buffalo. W. B. MERSHON.

EAST SAGINAW, Mich.

AN ELK HEAD FOR THE ELKS.—East Saginaw, Mich., June 7.—It is to be regretted that there are not more first class taxidermists in the country. Many a time a sportsman secures a fine specimen in his pilgrimages about the country that he desires very much to preserve for his future pleasure, but the average taxidermist will put it up in a way to outdo nature and make it almost unrecognizable. East Saginaw is particularly fortunate in having a veteran workman, Wm. Richters, who has been a resident of East Saginaw for a number of years, and this being the center and base of supplies for the deer shooting territory of Michigan, each year several hundred deer heads are sent to him for mounting. Of course the number is rapidly decreasing, but last year he put up seventy-five to eighty that were killed in Michigan. Having had so much experience in this class of work and being a man of progressive ideas, he has got it down to such a fine point that I think there is no one in the country that can beat him. His latest piece of work is the mounting of a fine elk head sent to the Brotherhood of Elks at East Saginaw to be placed in their lodge room. It came from Montana and is a magnificent specimen. The spread between the horns in the widest part is 4ft. 1½in. and the length or height of each is 4ft. 6½in. Mr. Richters has just finished mounting it and it was on exhibition to-day preparatory to being placed in permanent position. It is put up in such a solid manner that I think it could bear the weight of a loaded wagon, and looks as natural as life. Any of my brother sportsmen that have a longing for a well-mounted specimen at any time can rest assured that it will be properly taken care of if sent to Mr. Richters.—W B. MERSHON.

MAINE.—Newfield, June 11.—Ruffed grouse wintered fairly. I saw several on the 4th while fishing, and have heard of a number of broods of young ones.—LO.

Camp-Fire Flickerings.

"That reminds me."

235.

A FEW years ago Attorney-General T. M. M., of my State, was with his family rusticating for a short while in the country, at the house of a hospitable Southern planter, a relative of my own, where I was also a guest.

We had fine sport shooting partridges (*Ortyx virginianus*, I believe the savants call them) over my good setter Noggs, of happy memory, who, poor fellow, died of a well-defined case of consumption at the age of seven, after a most useful and honorable life. We also had very good squirrel shooting in all the small creek bottoms, where they greatly abounded that season.

One evening near sunset the General picked up his gun and strolled down to "the spring," about three hundred yards from the house. He was accompanied by his young hopeful, D., aged about five, and by the dog Noggs. Several squirrels were discovered in the trees near the spring, and the General emptied five or six shells without bringing one to the ground, much to the disappointment of the boy and dog.

As they strolled up the hill they accidently kicked up a rabbit (so called), which ran into the jaws of Noggs and was captured. After the momentary excitement was over and the rabbit secured, little D., who has a comical trick of stammering in his speech, thus delivered himself, "Father, d-d-don't you wish o-o-old Noggs c-c-could c-climb a tree and c-c-c-catch a squirrel!" COAHOMA.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Sea and River Fishing.

THE AUTOMATIC REEL.

Editor Forest and Stream:

I have been much interested of late in reading the criticisms, favorable and unfavorable, which have been written for the FOREST AND STREAM on the merits of the automatic reel by various sportsmen.

The automatic reel has now been in use for five or six years, and now for the first time, apparently, begins to arouse discussion. This has been surprising to me, knowing how ardent all true sportsmen are in seeking the latest improvements in tackle, and I can only account for it on the ground that it was not first called to the attention of anglers by the leading tackle dealers in the great cities, nor commended by the sporting papers.

There are two styles of the automatic reel in existence. The first, patented by Loomis & Plumb, of Syracuse, N. Y., was a system of clock-work wheels actuating a spool by means of a spring. As first made, this reel was defective in mechanism and power, and those who judged of the automatic by this first pattern pronounced against it. Since then the Loomis & Plumb reel has passed into other hands, and has been greatly modified and improved.

Soon after the Loomis & Plumb reel was patented, F. R. Smith of Syracuse patented an automatic reel, worked by a spring but which dispended with the clock gearing wheels, and was much stronger and simpler in construction than the Loomis reel. Several hundred of these reels were manufactured five or six years ago and sold to sportsmen scattered over the country, when the further manufacture or sale was stopped by suit for infringement.

This reel is used almost exclusively by the leading fly-fishermen of Syracuse, and by many others. When once familiar with its working, the fly-caster would as soon replace his Leonard or Conroy split-bamboo rod by hickory or ash sapling of his boyhood, as to substitute a crank reel for an automatic.

"The world do move" and the world of the fly-fisherman has moved a great deal since this invention. Now, what are the merits of the automatic over the crank reel? I speak from an extensive experience for five or six years in fly-fishing for bass, from boats, on lakes and streams and for trout in the Adirondacks.

It should be understood once for all, that the automatic is only adapted to fly-fishing or trolling the fly, but for either of those purposes it is comparatively superior to the best crank multiplying reel ever made. Why?

Because, first—Being heavier than the crank reels, it balances the rod better, placing the center of equilibrium and of action of the rod at the grip, and not from 12 to 18in. forward of the grip.

You old fogies who think the Fowler gutta percha reel the best for fly-casting because it is light: try the automatic fairly and learn how much fatigue it saves to the muscles of the wrist and arm.

Second—It is vastly superior because it brings in the line rapidly, without effort, whenever desired, to replace a fly, or for any other purpose. Will your old crank do it? It saves time and patience and adds comfort to the sport.

Have you ever drifted down stream, while casting toward the brush-covered bank from a boat and seen, too late, that your cast was sending the flies into the brush, to tangle, and perhaps to stay? Or have you ever, while wading a trout stream, seen a trout rise under the roots of a tree, and in your eagerness to reach his lurking place get out a little too much line, get caught, and spoil all the sport in that pool in extricating your flies? Annoying, isn't it? That need never occur with the automatic. After the forward cast is made, if you see danger ahead, lift the finger from the line an instant, flash! two, four, six feet reeled in and you are safe. Comforting, isn't it?

Third—Will your old crank do that?

You can play a fish better with the automatic than with the crank. I have heard it said it was not sportsmanlike to kill a fish by a machine, and that you lost the play of the fish on the automatic. That is all nonsense and moonshine. You play the fish exactly as you do with any other reel, with a strain on the rod, but with this difference, and it is a vast difference: If the fish makes a run toward you, you lower the tip, relieve the strain and instantly the reel takes in slack faster than the fish can come. No stripping of the line, no fever of crank action, but quick, sure, effortless, the line flows in.

Will your old crank do that?

Perhaps you love fishing well enough to sometimes go out for bass alone and "paddle your own canoe." Did you ever strike a big one under such circumstances while using a crank? Didn't you find it rather hard work to play that fish with one hand and keep the boat in position with the other? If he came for you, which did you abandon, the fish or the oar? The fish, wasn't it? You would not have lost him and had to regret the loss if you had overcome your prejudices and bought an automatic, for that was as good as both hands, and a little better.

Buy an automatic and try it fairly, get used to it, keep it well oiled, and my word for it, you will prize it above all your other fishing possessions. It may bother you a little at first, before you get used to it, but do not abandon it on that account. The sewing machine has bothered many an old woman, but is that the fault of the machine, or does it furnish a good reason for not using it?

I have known old fishermen whose prejudices against the automatic were so strong that they would not try it, but sitting a few days in the same boat with another who used it, and watching the quickness and ease of its work, has convinced them of its superiority.

A good automatic reel, a good bamboo rod, a good waterproof line, a good looped leader, a good assortment of flies, good fishing and a good conscience will make any fisherman happy. ROB ROY.

ST. ALBANS BAY, Vt., June 4.—From June 1 to date the catches of bass have been good; quite a number of anglers are here. I append an item taken from the St. Albans *Messenger* of June 2, record of three local anglers for the opening day. "The fish law went off June 1, and the season was opened in great shape on that day by A. H. Switzer, T. S. Miller and Worth Watson, with Joe Armstrong, of Samson's Lake View, as boatman. 'Joe' knows where the bass can be found, and when this party struck the St. Albans shore on Friday night they had captured twenty-five bass, one pickerel and four dozen perch. Four of the bass weighed a plump 16lbs., and there was not a small bass in the lot of 25."—H. L. S.

SEALS DESTROY SALMON.

THE enormous capacity of seals for destroying fish is not fully known except to those who have kept them in confinement, and when so kept the expense of feeding prompts the owner to reduce the diet to the minimum quantity. We have fed both seals and sea lions in captivity, for months, and found that they were expensive boarders, even when fed upon the cheapest fish in New York markets, usually herrings. About fifty herring per day kept the hair seals in good order, but they always wanted more. "Old Dick," the sea lion which a dozen years ago made the walls of the New York Aquarium echo with his hoarse bellows for fish, and who was the largest of his kind ever exhibited, at that time, weighing over six hundred pounds, could be kept on one hundred and fifty herrings a day, but no doubt twice that number could have been eaten. When he traveled with the circus, and his appetite was increased by the involuntary exercise on the road, the attendant told us that he never saw him so satisfied that he could not hold another fish.

On this subject the Portland *Oregonian*, of late date, says: "The baby seal recently added to the free menagerie on Morrison street has seemed content to bask in the sun, eat the salmon given it, and whine for more. Saturday, however, it seemed to wake up to the exigencies of life, and concluded it had to hustle, so it rolled into the tank and started to catch one of the fish, and the way the pair went round the tank was a caution to all observers. The seal weighs only 10lbs., but it eats 4lbs. of salmon per day and looks around for more. From this a slight idea may be formed of the amount of salmon consumed by the thousands of seals and hundreds of sea lions which haunt the mouth of the Columbia, and it would seem that while the Legislature and the United States Government are endeavoring to keep up the supply of salmon in the Columbia by means of a hatchery, they might help the matter by taking some steps to exterminate the seals and sea lions."

It will strike most people that salmon is an expensive diet for a seal, or would be on the Atlantic coast, even if it only consumed 4lbs. per day, a fair allowance for a "baby." No doubt the seals, which are protected in San Francisco harbor, are most expensive luxuries, kept for people to look at. The salmon which they destroy are not seen.

MAINE TROUT.—A correspondent of a Maine paper says: "The fishing at the Upper and Middle Dams has been exceptionally good. Freeland Howe of Norway broke his former record and landed an eight pound trout within twenty minutes after arriving at the Upper Dam last Thursday. This was the first big fish caught. P. W. Judkins has caught several good ones. His biggest one weighed over 5lbs., two more weighed 3 and 4lbs. The best fishing seems to be at the Narrows and at the head of the lake. C. G. Hasbrook, Cleveland, caught one weighing 8¼ and another 7¼lbs; W. P. Clark, Peabody, Mass., 8¼lbs. The Kings caught three that weighed 15lbs. C. H. Lane of West Paris took one that weighed 4¼lbs. David Hague of Meridan, Ct., has caught an eight pounder; Chas. D. Chase of Northumberland, N. H., caught a 5¼lbs. trout and one or two other good ones; E. W. Curtis of Meridan, Ct., took six trout in a pool back of the Middle Dam, the heaviest was 6½ and the lightest 5½lbs. This undoubtedly is the best catch for the length of time consumed of any. "Viator" writes to us: "The following trout were taken at the Middle Dam on May 25 and 26, besides numerous smaller ones: One of 6lbs., one of 5½lbs., two of 4¾lbs. each, one of 4½lbs., one of 6½lbs. The Middle Dam has always been one of the best fishing locations in the entire Androscoggin Lakes Region, and we think this is a good record for the opening of the season."

A NEW TROLLING BAIT.—A novel trolling bait has been invented by Mr. Wm. F. Brewster, of East Orange, N. J. It is very compact and is designed especially to do away with the annoyance so common in trolling, the catching of grass and weeds on the hooks. This trouble is avoided in the new bait by having the hooks lie within the body of the fictitious minnow until they are released by the bait being seized by a fish. When this takes place the hooks spring into place and become available. The last model made by Mr. Brewster is 3¾in. long and about ¾in. thick. A practical trial of this model was made by Mr. Brewster a short time ago at Lake Hopatcong, New Jersey. The greater part of the time was devoted to using the bait among weeds and lily pads, and in no case did it catch or make any trouble. On the way home the bait was thrown over for fishing, and the line intrusted to Mr. Brewster's 10-year-old son. In a few movents a very lively pickerel was hooked, and before long safely landed. The new bait appears to be perfectly weed-proof and entirely effective.

FISH POLES.—We are sometimes asked where a good fish pole can be bought, and if it occurs in the course of a private conversation and we are familiar enough with the questioner to warrant it, we refer him to any of the shad fishermen who drive down entire trees to string their gill nets on, in the Hudson River. Then, as the talk goes on we suddenly learn that it is a rod that is needed. There are poles and rods, but, an angler who owns a fine piece of workmanship, made by his favorite maker, every inch of which has its true taper and bears its own proportion of the strain and contributes to the elasticity of the whole, feels his heart sink when an acquaintance picks it up and says: "That's a good pole!" A pole, forsooth! as if it might be used for supporting a clothes line when not in other service. If you speak of his fine breechloader as a "musket" he will not be more hurt, so please spare him when you have occasion to mention the excellence of his rod.

TOM-ALLEY.—A correspondent wants to know where the name "tom-alley," as applied to the green fat of the lobster, comes from, and says that he has heard the same term applied to the "coral," or immature eggs. Webster gives the word as spelled above and says that it is sometimes called "tomaline," and that it is the liver of the lobster, which turns green when boiled, but says nothing of the derivation of the word. Who can tell what tom-alley, or, as we have seen it spelled, tomally, is derived from? We never heard it applied to the coral.

STRIPED BASS.—Ocean Beach, N. J., June 8.—The day before yesterday while fishing in the surf with rod and reel I landed a striped bass weighing 21lbs. He measured 3ft. in length and 9in. in diameter and was as fat as a British alderman. In endeavoring to find a good reason for the increased numbers of striped bass along the coast this year I sometimes think that as the bluefish kept off shore more than usual last year this fact might be looked upon as one of the causes.—BIG REEL.

A TEST NET CASE.

Editor Forest and Stream:

The Fish and Game Association of Southern Jefferson County applied in 1887 to the State Fish Commission, under Chap. 317, Laws of 1883, for the services of a game protector to protect the waters of Black River Bay from depredations of illegal netters; the bay having been included in Chap. 141, Laws of 1886, as waters in which all netting was prohibited. In response to the request, Wm. N. Steele, of Clayton, one of the regularly appointed State game protectors, was dispatched to the locality and made certain seizures (destroying the nets seized), for which subsequently suit was brought against him for the value of nets destroyed. The County Association, having a deep interest in the matter, and acting as sponsors for Mr. Steele, have defended this suit, and have further decided to assist in taking an appeal from Judge Williams's decision, which holds the law, or all laws, directing the summary seizure of nets unconstitutional. The Association feel, however, that the question is one in which all game protective associations and all sportsmen have an equal interest, and that it is of vital importance, not to one alone, but to all.

Gen. R. U. Sherman has written on the subject to the president of the Jefferson County Association: "The Board of Commissioners have no funds in their control applicable to pay the expense of such a proceeding, but the various anglers' associations of our large rivers and interior lakes who have such a great stake in the premises should promptly take the case in hand and raise a contribution from their resources sufficient to pay for the most competent counsel to study the authorities and argue the case before the higher courts."

While this local association is unwilling to go far to solicit the favor of others, they believe that voluntary action in this direction would be only a just assumption of a common burden, and that failure so to act would be an abandonment of the common interest by other associations.

It may be well to add that, the law being held unconstitutional, it is no protection to the officer who executes it. Mr. Steele has been sued and a judgment recovered against him, not as a public officer, but as a private individual and a trespasser and wrong-doer. All the provisions of law, therefore, in relation to payment of expenses and for the protection of the officer, fail in the case, and throw the burden upon him personally or upon those that step in as interested parties in reversing the decision and upholding our protective laws.

If Fish Commissioner Sherman's recommendation meets the approval of other associations or individuals, and they desire to assist in vindicating the fish laws, they can communicate to that end to the president of the Association at Watertown, N. Y.

E. L. SARGENT, President.
ELON R. BROWN, Attorney.
J. Q. ADAMS, Secretary.

THE FISH NET OPINION.

GEORGE W. LAWTON AND ANOTHER, vs. WILLIAM N. STEELE AND OTHERS. } Opinion (9-66).

Jefferson Circuit. Tried April 16, 1888. Decided May 22, 1888.

Action to recover damages for the conversion of fishing nets.

Tried before a jury, verdicts ordered subject to the opinion of the Court, for plaintiff against defendant Steele for $216, and in favor of defendants Sargent and Sherman. The case is now to be disposed of pursuant to Sec. 1,185, Code Civil Procedure.

The facts are undisputed. The nets were the property of plaintiffs and were taken away by defendant Steele and destroyed. They were worth $216. At the time of the taking most of the nets were in the waters of Black River Bay, being used for fishing purposes, and the balance were on the shore of that bay, having recently been used for same purposes. The plaintiffs were fishermen. The defendant, Steele, was a State game and fish protector. The taking and destruction of the nets is claimed to have been justifiable under the statutes of the State relating to the protection of game and fish. The plaintiffs claim there was no justification under the statutes, and that the statutes, if in form they constitute such justification, were unconstitutional. The defendant Sherman, was a State fish commissioner, and the defendant, Sargent, was president of the Jefferson County Fish and Game Association, and plaintiffs claim these defendants are liable on the ground they instigated, incited or directed the taking and destruction of the nets.

E. C. Emerson for plaintiff, E. R. Brown for defendant.

WILLIAMS, J.

I held upon the trial there was no evidence upon which the jury would be justified in rendering any verdict against the defendants, Sargent and Sherman, on the ground they neither instigated nor directed the taking of the nets. There certainly was no evidence to charge Sherman; and as to Sargent, I still adhere to my opinion expressed at the trial. He only requested that defendant Steele, as game and fish protector, to enforce any law that existed to protect the fish in Black River Bay. He did not assume to direct as to what the law was, and if he is to be believed he told defendant Steele he did not think he had the right to take or destroy the nets. He did not, in my view of the evidence, by writing the letter or having the interview he had with defendant Steele, render himself liable for the taking and destruction of the nets, if such taking and destruction was unauthorized and unjustifiable. If I was wrong at the trial in taking the question of fact from the jury I cannot well correct that error now, because Sec. 1185 only relates to a case where there are no questions of fact. I could not certainly order judgment against the defendant Sargent now. If I was wrong as to this defendant I should have submitted the question of fact to the jury. My refusal to do so can only only be reviewed on appeal from the judgment as to these two defendants, therefore the verdict ordered will not be disturbed, but judgment thereon will be ordered.

The questions to be here considered and determined relate to the verdict ordered for plaintiffs against the defendant Steele. Defendant Steele moves to set aside that verdict and that judgment be directed for him against the plaintiffs; and this motion is opposed by plaintiffs. In order to correctly determine this motion it will be necessary to decide whether the taking and destruction of the nets was authorized and justifiable under the Statutes of the State. The defendant Steele claims to have acted in taking and destroying these nets, and to have been justified in so doing, under Chap. 591, Laws 1880, and Chap. 317, Laws 1883, and Chap. 141, Laws 1886.

It is provided substantially by Sec. 1 of the act of 1880, that it is the duty of a State game and fish protector to enforce the statutes for the preservation of fish or any other game law; and by Sec. 2 of same acts, that any net or other means devised for taking or capturing fish, or whereby they may be taken or captured, set, put, floated, had, found or maintained in or upon any of the waters of this State, or upon the shores of, or islands in any such waters, in violation of any existing or hereafter enacted statutes or laws for the protection of fish, is hereby declared to be and is a public nuisance, and may be abated or summarily destroyed by any person; and it shall be the duty of any game and fish protector to seize and remove and forthwith destroy the same, etc., etc., and no action for damages shall lie or be maintained against any person for or on account of any such seizure or destruction.

It is provided by Sec. 1 of the act of 1886 substantially, that no person shall at any time kill or take from the waters of Henderson Bay or Lake Ontario, within one mile from the shore, between the most westerly point of Pillar Point and the boundary line between the counties of Jefferson and Oswego, or within a mile from the shore of any island in Lake Ontario, which is a part of Jefferson county, any fish of any kind by any device or means whatever, otherwise than by hook and line or rod held in the hand; and by Sec. 2, same act, that any person violating any of the provisions of this act shall be guilty of a misdemeanor, and liable to a penalty of $50 for each offense. In order to determine whether defendant Steele was authorized by the acts of 1880 and 1883 to take and destroy these nets, it is necessary to inquire whether the nets were set, put, floated, had, found or maintained in or upon any water of this State, or upon the shore of any such waters, in violation of the act of 1886. The nets were concededly in the waters and upon the shore of Black River Bay, and were there in the water within a mile from the shore. Others on the shore had been used within a mile from the shore in the bay. In fact the bay is nowhere to exceed one mile wide, and therefore all fishing in the bay must be [within] one mile from the shore. If the act of 1886 prohibits fishing with nets in that bay, then the authority of the defendant Steele to take and destroy the nets, so far as the statutes could authorize it, would seem to be established. Black River Bay is a bay of Lake Ontario; it extends from the mouth of Black River to the lake. It is bounded upon the one side by Pillar Point, so called in the town of Brownville, and on the other side by the town of Hounsfield and Sacket's Harbor, which is in the latter town. The harbor of the lake known as Sacket's Harbor is upon the shore of this bay. Directly adjoining Black River Bay on the south, and with no lake between them, is Henderson Bay, upon the shore of which lies a portion of the town of Henderson and the town of Hounsfield, and in which latter bay is the harbor of the lake, known as Henderson Harbor. Henderson Bay is much wider than Black River Bay and other smaller bays between Pillar Point and the line between Jefferson and Oswego counties, and some points in Henderson Bay can evidently be selected which would be more than a mile from the shore of the bay or of Lake Ontario. The plaintiffs claim the act of 1886 does not cover or include Black River Bay and the other bays along the lake between Pillar Point and the Oswego county line, except Henderson Bay, because the latter bay alone is named in the act, the language being: "the waters of Henderson Bay or Lake Ontario within one mile from the shore," between the points named. The argument is that while "Lake Ontario," if those words alone were used, might naturally include all bays that are navigable waters, when one bay is named by words in the act, that shows the legislative intent to exclude all other bays from the act. There would nowhere be any good reason for such an intent on the part of the Legislature, and therefore we naturally look to see if the language of the act is susceptible of any other reasonable construction. The naming of Henderson Bay in the act must be presumed to have been done for some purpose. And if there was no other reason we might be compelled to adopt the construction contended for by the plaintiffs; upon the theory that the Legislature intended in the term "Lake Ontario" to include all bays that are navigable waters. Are the words Henderson Bay useless and unnecessary? It seems to me not. If Henderson Bay was not named in the act but it read merely, "The waters of Lake Ontario within one mile from the shore" there would still remain some parts of Henderson Bay that would be more than a mile from the shore, and in which fishing with nets would still be allowed. This would not be true of any other bay between the points designated in the act. I am led to believe therefore, the reason this bay was specifically named in the act, was that the Legislature intended and desired to cover the whole of Henderson Bay by the act, which could not be done by the other language used in the act, without expressly naming the bay. Unless this be true, why was Pillar Point fixed as one of the points between which the shores of the lake were bounded? Why not say, "the waters of Henderson Bay and of Lake Ontario between —— the line between the counties of Jefferson and Oswego?" There was no lake shore north of Henderson Bay toward Pillar Point except Black River Bay. It is possible the Legislature in passing the act in question may have had no particular intent at all. That form of the act may have been the result of carelessness in drafting, or of amendments made while the bill was before the Legislature, the outgrowth of severe opposition and feeling well understood to have existed between the sportsmen and the fishermen so called. We are compelled, however, to consider what was the legislative intent as indicated by the language used; and it seems to me such intent must have been as I have indicated. In this construction I read the words "within one mile of the shore" as applying alone to the words Lake Ontario; so as to prohibit the fishing in the whole of Henderson Bay and of Lake Ontario within a mile from the shore only.

It is suggested by plaintiffs' counsel that the act of 1886 does not prohibit the using of nets in the water or on the shore for the purpose of taking fish in the designated waters, but merely prohibits the taking of the fish; and therefore the nets were not then in violation of the law. If it was a violation of law to take the fish in those waters with nets, was a misdemeanor, then attempting to take the fish with nets and having the nets there for such purpose is a crime (Penal Code, Sec. 34 and 686), and therefore the nets would be there in violation of law, or of the statute. My conclusion, therefore, is that under the proofs of the case, and the statutes in question, the defendant Steele was authorized and justified in taking and destroying the nets, provided the statutes were constitutional.

While the trial court should not in my judgment readily hold an act of the State unconstitutional, question the power of the Legislature to pass the act, but leave that duty to be performed by the appellate courts; yet the plaintiff's counsel is so persistent in his argument against the validity of these statutes, and the case is likely to be determined sooner or later upon the sole ground of the validity of the statutes under the State and federal constitutions, that I ought very likely to give some attention to this question, and endeavor to make such a disposition of the case as will well be approved and sustained by the appellate courts, to which the case is likely to be carried.

First, as to the act of 1886, prohibiting the taking of fish with nets in certain waters, and making such taking a misdemeanor, it is said the Legislature had no power to pass this act, because fishing with nets was a lawful, industrial pursuit which the citizen had a right to follow, and which he could not rightfully be prohibited from following; and the act, therefore, was an unconstitutional interference with the liberty and privileges of the citizen. The cases principally relied upon by plaintiff to sustain this proposition are:

Matter application Jacobs, 98 N. Y. 98.
The People vs. Marx, 99 N. Y. 377.
The People vs. Arensburg, 105 N. Y. 123.
The People vs. West, 106 N. Y. 293.
The People vs. Kibler, 106 N. Y. 321.

And the cases therein referred to and considered. It is well to understand just what these cases are and what they decide.

The Jacobs case involved the constitutionality of "an act (Chap. 272, Laws 1884) to improve the public health, by prohibiting the manufacture of cigars and preparation in any form in tenement houses, in certain cases, and regulating the use of tenement houses in certain cases," and it was held that while generally it is for the Legislature to determine what laws are required to protect and secure the public health, comfort and safety, yet under the guise of public regulation it may not arbitrarily infringe upon personal or property rights, and its determination as to what is a proper exercise of authority is not final or conclusive, but is subject to the scrutiny of the Courts; and when it passes an act ostensibly for the public health, but which does not relate to, and is inappropriate for the purpose, and which destroys the property and interferes with the rights of the citizen, it is within the province of the Court to determine this fact, and to declare the act violative of the constitutional guarantees of those rights; and the act in question was held unconstitutional because it did not relate to, or protect or secure the public health, was inappropriate for that purpose, and it did interfere with the rights of the citizen, by prohibiting the carrying on of a legitimate business, which in no manner interfered with the health, comfort, safety or welfare of society. The prohibition applied only to the cities of New York and Brooklyn, and yet if the business affected the public health it would have done so in other cities of the State as well. The act not only interfered with the business to be carried on relating to cigars and tobacco, but also to the leasing of tenement houses and the profitable use thereof to the lessor as well as the lessee. The act was really designed to protect some manufacturers of cigars against the cheaper manufacture thereof, which is not within the province of the Legislature.

The Marx case involved the constitutionality of "Sec. 6 of an act (Chap. 202, Laws 1884) to prevent deception in the sale of dairy products." And it was held the section which prohibited the manufacture or sale as an article of food of any article designed to take the place of butter or cheese, produced from pure, unadulterated milk or cream, from any oleaginous substance or compound of the same, other than that produced from such unadulterated milk or cream, was unconstitutional, because it prohibited its manufacture and sale of a substitute for butter or

cheese, however wholesome, valuable or cheap, and however openly and fairly the character of such substitute might be owned or published. In other words, that without any element in the section of a design to deceive, it prohibited the manufacture openly of a cheap substitute for butter and cheese. The Court saw the design of the section was clearly not to prevent fraud and deception, but to protect the dairy industry of the State against the substitution of a cheaper article from cheaper materials than real butter and cheese, which was not within the power of the Legislature. The same principle thus underlies this case as the Jacobs case. The acts both were designed, not to protect the public against any attempted injury, fraud or deceit, but to protect one peculiar business or industry or branch thereof at the expense and to the detriment of another. This interfered with the liberty and rights of the citizen and was unconstitutional.

The Arensburg case involved the constitutionality of Sec. 7 of Chap. 183, Laws 1885, "An act to prevent deception in the sale of dairy products," and it was held the section which prohibited the manufacture or sale of any product not made from unadulterated milk or cream, but made in imitation or semblance of dairy butter was constitutional because it was designed to prevent fraud and deception being practiced on the public. This distinction (which I have suggested) was expressly made by the Court between the Jacobs and Marx cases and this case.

The West case involved the constitutionality of Sec. 3 of the same act considered in the Arensburg case; and it was held the section which prohibited the selling or bringing of any milk diluted with water or adulterated, or skimmed milk, etc., to any butter or cheese manufactories to be manufactured into butter or cheese, was constitutional, because it, like Sec. 7 in the Arensburg case, was designed to prevent fraud and deception being practiced on the public or the patrons of such factory.

The Kibler case involved the constitutionality of Sec. 1 of the same act considered in the Arensburg and West cases, and it was held the section which prohibited the sale, exchange, or exposing for sale or exchange of any unclean, impure, unhealthy, adulterated or unwholesome milk, was constitutional. It was designed to protect the public against deception and to preserve the public health also.

It is not difficult to understand the principle underlying these cases, and the only question is whether they throw any light upon the validity of the statute we are here considering. If the sole object of this act is to prohibit the carrying on of an otherwise legitimate business, fishing with nets in the interest and for the benefit of another class of persons, the fishing with nets being injurious to no public common right, then its validity cannot be maintained. The theory of the defendant Steele and of the public he officially represents, however, is that the right of fishing in the navigable waters of Lake Ontario and its bays and harbors is public and common to all the citizens of the State; that fishing with nets is injurious to such public and common right, in that it tends to destroy the supply of fish, and that the State has the power to regulate the extent and manner of fishing so as to protect equally the public and common right of all the citizens of the State to take fish from these waters. The only authority in this State to which my attention is called relating to this question directly is the case of Smith vs. Levinus, 8 N. Y. 472. This case involved the constitutionality of "An act (Chap. 194, Laws 1849) to vest in the Board of Supervisors certain legislative powers," etc. By Sec. 4, Subd. 13, it was provided the said Boards of Supervisors should have power and were authorized to make such laws and regulations as they should deem necessary, and provide for the enforcing of the same. To provide for the protection of all kinds of shell and other fish within the waters of their respective counties. The Board of Supervisors of Queens county, under this act, passed an ordinance that no person should take oysters from any of the public waters of the county by means of the process known as dredging, under the penalty of $100 for each offense. This action was brought to recover such a penalty. The Court held the act was constitutional, saying: "The people in their sovereign, corporate capacity, own the beds of all navigable waters within the State. They are held for the common benefit and to promote the convenience and enjoyment of all the citizens. One of the purposes for which the people own the beds of such waters is to provide and regulate the rights of fishing in them. The Legislature may make such laws for this purpose as it deems most beneficial to the common enjoyment of the right, in the same manner that it may for the public convenience authorize wharves to be erected upon navigable waters. So it doubtless may for commercial purposes authorize the filling up of a part of a bed of a stream or cove which prevented a desirable fishing place. All these powers are within the scope of legislation."

In State against Roberts, 59 N. Y. 256, (Sec.) 47, American R. 199, which was an indictment for taking fish from navigable waters out of the season prescribed by statute, it was said by the Court, "At common law the right of fishing in navigable waters was common to all. The taking and selling of certain kinds of fish and game at certain seasons of the year tend to the destruction of the privileges or right by the destruction consequent upon the unrestrained exercise of the right. This is regarded as injurious to the community, and therefore it is within the authority of the Legislature to impose restriction and limitation upon the time and manner of taking fish and game considered valuable as articles of food or merchandise. For this purpose fish and game laws are enacted. The power to enact such laws has long been exercised and so beneficially for the public that it ought not now to be called in question."

In Smith vs. State Maryland, 18 How. U. S. 71 the validity of an act of the Legislature of the State of Maryland was involved. It was "An act to prevent the destruction of oysters in the waters of the State," and provided it should be unlawful to take or catch oysters in any of the waters of the State, with a scoop or drag or any other instrument than with such tongs and rakes as were then in use and authorized by law; and forbidding all persons to use such instruments on pain of forfeiting to the State the boat or vessel employed for the purpose, etc. The Supreme Court of the United States held there was the public and common right of taking fish in Chesapeake Bay, as well shell fish as floating fish, and the State had a right to protect this fishing by making it unlawful to take or catch oysters with a scoop or drag, and to inflict the penalty of forfeiture upon the vessel employed in the pursuit and that the law was constitutional. It may be said perhaps of this case, that the ground urged why the law under consideration is invalid, was not among those urged in that case, that it interfered with the liberty of the citizen the right to carry on an otherwise legitimate business. It was said by the Court in that case that the State might forbid all such acts as would render the public right of fishing less valuable or destroy it altogether; and that the power resulted from the ownership of the soil under the water, from the legislative jurisdiction of the State over it, and from its duty to preserve unimpaired those public uses for which the soil was held that the power had been exercised in many of the States; that the act in question had for its avowed and real object to prevent the destruction of oysters within the State, by the use of particular instruments in taking them; that it did not touch the subject of the common liberty of taking oysters, except for the purpose of guarding it from injury, to whomsoever it might belong, and by whomsoever it might be enjoyed; that the law might be correctly said to be not in conflict with, but in furtherance of any and all public rights of taking oysters whatever they might be. I entertain no doubt, after an examination and consideration of these authorities, but that the act of 1886 in question, was within the power of the Legislature to enact and violate no constitutional provision. Its object was not to prohibit fishing, but to prescribe the manner in which it might be done and to prohibit its being done by nets. The avowed object in the passage of the act was to preserve the fish, and prevent the injury or the destruction of the fishing in the waters covered by the act. Whether the act was more severe than necessary to accomplish the object sought, it was the province of the Legislature itself to determine; and the court has, I think, no power to declare the act invalid because it thinks a less rigid law would have answered the purpose sought to be accomplished.

As to the acts of 1883, providing nets illegally used were a public nuisance, and might be abated and summarily destroyed, and it should be the duty of any game and fish protector to seize, remove, and forthwith destroy the same, and that no action for damages should lie or be maintained therefor; it is said the Legislature had no power to pass these acts, because they authorize one person to deprive another of his property without due process of law. The statute would seem to be objectionable upon the ground stated, unless it can be upheld under the police power, for it does not provide for the summary destruction of the nets, and therefore the taking of the property from the owner of the nets without due process of law. The statute expressly provides and declares the nets to be public nuisances, and therefore authorizes and directs their destruction; and the only question is whether there was power in the Legislature to declare them public nuisances. Unless this power existed the Legislature could not direct their destruction summarily and without any legal proceedings, in which the owners of the nets should have a chance to be heard and should have their day in court.

In Coe vs. Shults, 47 Barb. 64, the principles of the law applicable to the subject of public nuisances, and the abatement thereof, was considered by Judge Sutherland at Special Term. He said: "At common law a very concise definition of a public or common nuisance was, that it was a public annoyance; but a more extended definition was, an offense against the public, either by doing a thing which tends to the annoying of the public and common against all, or by neglecting to do a thing which the common good requires. It was a principle of the common law that any one might abate or remove a public nuisance without staying to have the thing abated or removed, found to be a nuisance by a jury, or in or by any preliminary legal proceedings. Of course any one who undertook even in good faith thus summarily to abate a public nuisance of his own motion, by his own act showed that he regarded and declared the thing stated to be a nuisance. But he, nevertheless, took upon himself by his act the risk of being able to show in a proper action by the party whose interests were injuriously affected, that the thing abated was a public nuisance. No one has probably ever suggested that Magna Charta interfered with the process of summarily abating a public nuisance. If the abatement involved the deprivation of property, the owner was deprived of his property 'by due process of law,' if the thing abated was a public nuisance, for there the summary process of abatement was authorized by the common law, and any process authorized by law must be due process. I am not willing to concede that the Legislature can create a public nuisance, or a new definition of a public nuisance unknown to the common law decisions, or declare an act or anything a common nuisance which palpably, according to our present experience, or information, is not and cannot be under any circumstances a common nuisance, by the common law definition or common law decision. By such an unlimited power it is easy to see that any citizen might be deprived of his property without compensation and without any tolerable pretext the public good required such deprivation."

This language, or some of it, was cited with approval by Judge Earl in the Jacobs case, as hereinbefore referred to. In that case the police power was sought to be upheld for the promotion of the public health, welfare and safety, and it was said "The police power is not without limitation, and that in its exercise must respect the fundamental rights guaranteed by the Constitution. If this were otherwise the power of the Legislature would be practically without limitation. In the assumed exercise of the police power in the interest of the health, the welfare or the safety of the public, every right of the citizen might be invaded and every constitutional barrier be swept away. Generally it is for the Legislature to determine what laws and regulations are needed to protect the public health and secure the public comfort and safety; and while its measures are calculated, intended, convenient and appropriate to accomplish these ends, the exercise of its discretion is not subject to review by the courts, but they must have some relation to these ends. Under the guise of police regulation personal rights and private property cannot be arbitrarily invaded, and the determination of the Legislature is not final or conclusive. If it passes an act ostensibly for the public health and thereby destroys or takes away the property of a citizen or interferes with his personal liberty, then it is for the courts to scrutinize the act and see whether it really relates to and is convenient and appropriate to promote the public health."

In matter of petition of Cheesebrough, 78 N. Y. 232, the subject of the police power was discussed in considering the drainage act, and it was said: "The police power possessed by the State and conferred upon municipal corporations is very broad and far-reaching, and it is impossible to place upon it any precise limitations. By its exercise in many cases rights of property and of person may be interfered with and largely impaired, without any compensation. Nuisances may be abated by private persons without any liability to damages, and by the public without making any compensation, because no one has the legal right to maintain a public nuisance. In cases of actual necessity, as that of preventing the spread of fire, the ravages of pestilence, the advance of a hostile army, or any other great calamity, the private property of any individual may be lawfully taken, used, or destroyed for the general good without subjecting the actors to personal responsibility. In such cases the rights of private property must be made subservient to the public welfare; and it is the imminent danger and the actual necessity which furnishes the justification. It is under the police power that municipal corporations make ordinances to preserve health, prevent fires, regulate the use and storing of dangerous articles, establish and control markets, regulate the burial of the dead, and the like; and this police power may generally be exercised without making compensation for property and rights interfered with."

I am unable to see, under the principles I have quoted, how the act in question can be upheld under the so-called "police power" of the State.

It will not do to say the Legislature has the power arbitrarily to declare property a "public nuisance" and authorize its summary seizure and destruction. Such a doctrine would permit the Legislature to violate every private right of property, and the enjoyment thereof guaranteed by the constitution. Nor do I think the mere fact the property is used in the commission of crime entitles the Legislature to declare it a "public nuisance," and authorize its summary destruction. The Legislature cannot declare that property to be a public nuisance which is clearly not such, and for the immediate destruction of which there is no necessity whatever. Fishing nets are not and cannot be considered in and of themselves "public nuisances." It is only the illegal use made of them that disturbs the public or interferes with its rights. There can be no immediate necessity of requiring these nets, even if they are being illegally used, to be summarily destroyed. The Legislature might just as safely to the public have provided further seizure and detention until it should be judicially determined they were being used in violation of the law, and should be ordered destroyed before its destruction should take place, as to make this provision for summary destruction. This would not be true of property which the public health required to be destroyed, or the public safety from fire or pestilence or some other things, clearly within the "police power" of the State. I am clearly of the opinion the Legislature exceeded its powers under the constitution in these provisions of the acts in question, and in these respects the acts are invalid. This conclusion leads to the determination of the present application adversely to the defendant Steele. These acts being invalid afforded him no protection for the taking and destruction of the nets. The taking and destruction were therefore illegal; and the defendant Steele is liable in this action to plaintiff for the value thereof. The verdict ordered against him at the trial will not therefore be disturbed, but judgment will be ordered thereon.

Counsel will agree upon the form of order in accordance with the views expressed in this opinion, and same will be presented to me for signature. Ten dollars costs of motion allowed to prevailing parties; that is to such as are entitled to have costs against the others.

Fishculture.

MENHADEN IN RARITAN BAY.

THE Governor of New York has signed the bill entitled "An act for the better protection of fish in the waters of Richmond county," and we learn from excellent authority that the Governor of New Jersey has signed two bills of a similar nature. We have already published the New York bill, which forbids the use of any purse net, pound, weir, or other device, except fykes and hook and line, for the capture of any fish in the waters of Raritan Bay, within the jurisdiction of the State, under certain penalties.

The question was argued at length before the legislative committee by both sides. It was shown that the waters are only from 5 to 17½ feet, three channels excepted, all over the bay, and that many of the menhaden nets are sixty feet deep and rake the bottom, unavoidably taking up oysters. Witnesses before the committee testified to seeing lobsters, clams, conch shells, and bits of iron in the nets, and that the damage to the fisheries of the bay by these nets was exceedingly great. All the inhabitants of the south shore of Staten Island asked for the passage of this bill. Capt. Polworth has a "dead bed" of 7,000 baskets of oysters which cost to seed it $3,500, and he told the committee how he knew that the oysters were destroyed by the nets, and not by the drumfish.

The menhaden men are reported to have acknowledged to thirty car loads of weakfish at factory dump, on Long Island. The regular menhaden boats are followed by tramp boats, out for a cargo, the owners of which conceal the names of their boats by strips of canvas, or a board, with some alias chalked or painted on it, which is changed as occasion requires, thus showing a desire to escape responsibility for any damage done.

The large nets have unavoidably removed the oyster stakes which mark the lines of ownership, for when the net is full the stakes have to give way when it is pulled through the water. As Raritan Bay is but a small spot, compared with the menhaden grounds of the Atlantic coast, and, as it is a favorite place of resort for many valuable food fishes, and the anglers of New York city and vicinity, it would have been wise in the menhaden fishers to have conceded this spot to the hook and line men, but they preferred to fight it. Capt. Hawkins, State Senator from Long Island, and an owner in menhaden steamers and factories, denounced the bill as "infamous," because it saved one little bit of water from the all-scooping purse nets. As Capt. Church has recently described square miles of menhaden off other parts of the coast, it would seem that the menhaden interests cannot suffer much from the protection of Raritan Bay.

LOBSTERS FOR THE PACIFIC COAST.—The lobster hatching at Wood's Holl has been successful this season and a car load will be sent to the Pacific about the middle of the month. Young lobsters have never been transported such a distance and it is not certain that they will endure the trip although the experiments made with them seem to prove that they will go through.

THE FISHERIES EXHIBIT AT CINCINNATI.—The U. S. Fish Commission will make a display at the Cincinnati Exposition, beginning July 4. A pump of a capacity of 200 gallons per minute will force water up over rock work and make a picturesque water fall. Aquaria, and apparatus of the fisheries and fishculture will be displayed. Capt. J. W. Collins will be in charge.

THE AMERICAN FISHERIES SOCIETY.—At a meeting of the publication committee, held at Mr. Blackford's, June 1, it was decided to have the papers printed and ready for mailing by August 1.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 10.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6291.**

FIRST IMPRESSIONS.

EVERY dog breeder knows how embarrassing it is when showing one of his pets to a non-fancier friend to find how little the good points of the animal are appreciated. His friend sees in the distinguished canine simply a dog and probably to him not a very prepossessing one at that. Then it is exceedingly annoying to have it made plain by the friend's ill-suppressed yawns that the eulogy on the canine's superior points is anything but interesting; and not at all flattering to notice by the quizzing looks that he considers you slightly cracked on the dog question.

Still if the most of us will look back we will find that at one time we also cared as little for dogs as our unappreciative friends do now.

As for myself I always had a liking for dogs in general but it has not been so very long ago that I thought bull-terriers had short faces, wore brindle patches over the eye and were kept only by disreputable parties in red shirts. Then I was actually verdant enough to suppose that collies were used to drive cattle and sheep; that beagles were intended to chase rabbits, and pointers and setters hunted quail and other feathered game. Of course I know better now, and that winning a prize at bench shows is the prime reason for breeding, except the other prime reason of selling them for a big price.

The first wire-haired fox-terrier I ever saw was to me an exact fac-simile of a dog that accompanied a colored individual who twice a week emptied the contents of a slop barrel kept in the rear of my back yard. So forcibly was I impressed with this fact that the next time the man made his appearance I questioned him concerning the dog.

"Uncle Silas," said I, "that's quite a nice dog you have; where did you come across him?"

"Yas, sar, he's a right smart 'un; I brung 'im up from a little pup."

"You did!" I exclaimed in astonishment, "why he looks like a remarkably fine one; how is he bred?"

"Oh, he's breeded all right," answered the darky with a grin, "his mudder was a black-in-tan terrier, an' a mighty good un she war."

"And his father?" I queried.

"Wall, to tell de truff, sar, I 'spects he war about all de dogs in de nayborhood."

I had no more questions to ask, so I went into the house to ponder over this problem: Was the origin of the modern wire-haired fox-terrier a black and tan bitch mated with a multiplicity of sires? When I saw an Irish terrier for the first time he struck me as bearing a suspicious resemblance to the proverbial "yaller dorg," somewhat darker in color it is true, and much shorter in tail, but very forcibly reminding me of that legendary animal.

Before I saw one I always imagined the St. Bernard to be as large as a lion and strong as a bull. The picture in my youthful geography had made these impressions. When a dog that I supposed to be an overgrown setter was pointed out as one of the celebrated Alpine breed, my cherished imaginative structures went clattering to the ground. Many a time had I in my early boyhood on a winter's night when

it was snowing hard outside, sat before a cheerful fire and thought that was the kind of weather when the sagacious St. Bernard patroled the mountain passes on the look out for storm-bound travelers. When some poor wretch half perishing in the snow was found, his freezing blood would be thawed by the dog's warm body and the brandy flask so conveniently attached to the collar. After regaining strength I supposed the traveler would mount the dog's back and the animal trot off with him to the monastery. But it was plain that this St. Bernard (he was a crack too), had he been large enough to carry a man, could not trot; he was entirely too straight in the stifles. It is doubtful if he could have even walked fast enough to keep himself from freezing to death on a real cold night.

When a friend took me to his home to see a newly imported Great Dane, I was again greatly disappointed. To my inexperienced eyes the dog looked exactly like that breed of many names kept by butchers, brewers and traveling Uncle Tom's Cabin companies, which latter used them for tracking poor Eliza over a sea of canvas ice. I had a mortal hatred of these dogs from the fact that the first time I saw Uncle Tom's Cabin one of the pack that rushed across the stage after the fleeing slave took it into his head that the bass viol player was more suitable game, and made a rush at him. The orchestra and the greater part of the audience, I among them, took to their heels. So you see my prejudice was well founded.

To return to my friend's Great Dane, he appeared to me but little different from the butcher's dog. He was marked exactly the same. It is true he was not so large, and his knees seemed to have a strange magnetic attraction for one another, a point that the other dog lacked. Then my friend's Great Dane had won several prizes across the water, while the butcher's dog had won nothing except the ill-will of everybody in the neighborhood.

These instances are the only ones I can recall where I was greatly disappointed when a breed came under my notice for the first time, but even these few are sufficient to cause me to bear meekly with the outside public, and endeavor to persuade other fanciers to do so too. S. REICNAF.

THE LATE ENGLISH FIELD TRIALS.

FORMING an opinion from results, there is no doubt that during the past two or three years evidence of the growing popularity of trials for the purpose of ascertaining the merits of pointers and setters as field dogs has been forthcoming. That they will ever become as popular as some other branches of sport, including dog shows, is not at all likely; still there is a satisfaction in finding that, at a period of our history when game shooting, in the ordinary acceptation of the term, has sadly degenerated, there is still a means whereby our most valuable field dogs can sustain their reputation as such. The story of improved farming, artificial manures, modern guns, and short stubbles has often been told. Of course, one way and another, these are by no means conducive to the increase of our ordinary game birds. Against such things, however, there is the fact that some varieties can be, and are, reared artificially, and in many districts, if such is not actually the case, extraordinary precautions are taken for their preservation in a wild state. Thus, so far as pheasants and partridges and red grouse are concerned, we have as many in the British Isles as ever, advancing cultivation leaving its mark more in the increased scarcity of snipe, woodcock, ordinary waterfowl, and perhaps black game has likewise suffered from a similar cause; at any rate, that handsome bird is far less numerous in some districts than was the case twenty years ago. As we have said, field trials for shooting dogs are certainly not on the wane, and already this season three meetings have been held in this country, most likely a fourth will be held during the autumn, and on the Continent several have likewise taken place, and in America such gatherings have of late years become very popular. But only with our own meetings shall we deal at present, and strangely these three are held under different rules. In the one promoted by the Kennel Club the dogs are drawn in pairs, and after the first round meet each other as is the custom in greyhound coursing. Thus, though likely enough the best dog in the stake may win, it is extremely unlikely that the second and third best reach the positions their merits would entitle them to, for the second best may be drawn in the first round against the absolute best, and thus be defeated the first time of asking; and in the next round the actual third best may lose its chance of a prize for a similar reason. The disadvantages of this method are so marked, that it is extremely likely another year the Kennel Club will modify their field trial rules, and make them more nearly approach the "spotting system" adopted by the National Club at its Shropshire meeting. This arrangement of so-called "spotting" the winner is with competent judges the best possible, for, after drawing the dogs in the usual fashion, the award of the prizes is altogether left to the discretion of the judges. Two dogs down together may run well in the first round; then they are given another trial, while other two dogs that performed badly are at once thrown out of the stake. Then, if judgment does not err, in the end only the very best animals are brought out for the prizes. The Pointer Club, who for the first time held a meeting of its own, adopted a mode of judging by points; but, as it is merely a matter of opinion how many points are to be awarded for a certain display of work, we fail to see any advantage therein. One judge will think a dog's pace, or quartering, or backing, or nose perfect, and give the maximum number of points, while another judge, whose ideal of perfection is higher, might decrease that maximum considerably. Again, the judges have considerable trouble in dealing with the figures when allotting them, nor do they always come quite satisfactorily in the end, an instance of which may, perhaps, be cited in the case of the winning pointer puppy Rocket R., who immediately after the conclusion of the stake was credited with a grand total of 85 points in a possible hundred. Later on this total was advanced 5, the actual official return giving that good young dog 90 points of merit. Judging by points either in the show ring or in the field sounds well enough in theory, but in practice no greater exactitude as to judging the respective merits of the competitors is reached than can be obtained in the usual way. Still it is satisfactory that, following so soon after each other, we had these meeting judged on different lines, and so opportunity was afforded of comparing the various rules. We shall not be isolated in our opinion, when it is expressed strongly in favor of the method adopted by the Shropshire meeting.

The varying quality of the competitors forward during the spring of 1888 will no doubt have already been noted, and the puppies all round can be set down as unusually promising. The older dogs were not nearly so satisfactory—a fact arising from a dislike they no doubt have to continually running without having the pleasure of game being killed to them. After a season or two of field trial work they become cunning, and about the only animal in the all-aged stake who went with the dash of puppyhood was Mr. Heywood Lonsdale's two-years pointer Deuce, who won at the Wrexham meeting. His equally successful setter Bruce did not run half so well as he did as a puppy in 1886; but the greatest failure was Mr. Barclay Field's pointer Dartford, whose performance at the two meetings where he ran was far and away below that which placed him at the top of the Acton Reynald Stakes in 1887. The Irish setters Mac's Little Nell and Drogheda both went well for old ones, and were perhaps quite as good as anything else of their age out this year; and certainly Mr. Ellis's dog was, at any rate, unlucky in his trial with Blue Maud of Cranfield at Welbeck. Mr. Lloyd Price's pointer Luck of the Goat showed to a great degree cunning running, and no doubt, had he been allowed to work the ground as he liked, would, at least, have done so to his own satisfaction, and found birds too. His worker had repeatedly to call or whistle to this dog—a proceeding certainly against the work of his opponent. Roderick of Altenberg—that peculiarly spaniel-like setter—at times ran well, but we fancy his pace is not so great as it was last year; still, he is a wonderful little dog, and no one need desire a better to shoot over. Mr. Hatfield Harter's Blue Maud of Cranfield ran to the end of the all-aged stake through her excellence as a game finder, and by making fewer errors than her opponents; still, she was lucky in winning the trial against the red dog Drogheda.

Of the puppies, at least those that ran into the money, only praise must be written Mr. Pilkington's Woolton Game was unfortunate in her preliminary trial at Welbeck, where Nicholson says she handsomely beat her opponent, Pride of Wilts, by finding birds well, which unfortunately the judges did not see. Anyhow, the following week she ran through the Juvenile Stake at Whitchurch, her roading up to birds right being particularly good, and she beat out her ground in a creditable manner. Mr. Richardson ran at Welbeck an extraordinarily good pointer puppy in Rocket R., who followed up some fairly run trials by making a brilliant performance against Bendigo of Kippen (and beating him), a dog who had just come with a great reputation from the Continent, whither he has now returned. Born late in May, Rocket is by Sussex Don II., from Milton Ringlet, who is by the show dog Graphic, from Bloom, by Bang II. out of Bell, who had for her sire Wagg II., by Squire. Here there is a good admixture of blood for bench and field trials. Graphic's stock have certainly not proved great successes in the field, but here is a young dog possessing some of his blood that has proved an exception to the rule, and possibly when a happy cross is hit, as has been the case by Mr. Richardson, other winners may be produced. The Belgian-bred dog was so old-looking a puppy until his mouth was examined that Mr. Lowe wished the breeder, Mr. Morren, to publish the date of birth, which was done in these columns last week. Bendigo, peculiarly enough, has Graphic blood in his veins, his dam, Hetty, being by Grandee, a son of Mr. Norrish's old champion. Prince Bang, Bendigo's sire, was by Master Bob, a son of Priam's. Miss Bang, dam of Prince Bang, was by Young Bang, from Polly, litter sister to Sir T. B. Lennard's Teal, dam of Priam. This pedigree, too, is interesting. In our report at the time, we said Rocket R.'s performance against Bendigo was the best run trial of the season; still, it is possible that in the long run the bitch, Woolton Game, might have beaten him had they met at Wrexham, where, unfortunately, Mr. Pilkington's bitch could not go. At any rate, a meeting of the two cracks would have been watched with great interest. After the Kennel Club meeting, Rocket R. was purchased by Mr. F. Lowe, and for him ran almost unchallenged through the Puppy Stakes at Wrexham. Woolton Game, a heavily marked, liver and white pointer bitch, of medium size, and by no means a bad-looking one, is of exceptional breeding, being by Gough, from that good bitch Larkspur, who was by Lake—Dingle, while her sire was by Garnet from Doxie. Here we have again a combination of both bench and field qualities; and through Lake, the sire of Larkspur, the pedigree can be traced back to Lord Sefton's Marquis. Messrs. James Bishop and Dickin's setter Bonny Daisy was actually the heroine of the year, a plain-looking, small blue and white bitch, who ran through the Derby at Mansfield and the Puppy Stakes at Whitchurch in great form. Born late in May, 1887, she affords proof of the value of field trial blood, for through her dam Flora she inherits the strain of Beau of the Ball, who won the Field Trial Derby in 1880, the latter being sire of Venus, who was dam of Flora. Daisy is own sister to Brave Tom, sire of Brave Prince, who will be remembered as the best setter in the Derby in 1886, and who the same year ran second in puppies at Shrewsbury. Beau had for his granddam Darling, own sister to Mr. Llewellyn's Dick and Dan.

One of the best setters of the year is E. Nicholson's Master Sam, whose performances and excellences have already been described. Particularly in his pedigree on the sire's side to be noticed, he being a son of Monk of Furness, the handsomest setter of the day, and himself a fair performer at field trials, where he has twice competed, though without success. Moreover, Monk of Furness is sire of Nun of Kippen, the fastest puppy out this year, possibly the best, had her breaking been more finished; she is a winner on the Continent; her brother, Monk of Kippen, also ran fairly well; and still another with the same sire, Bess of Braunfels, whose performance was by no means a bad one. Monk of Furness is from Mr. Cockerton's kennels, Cartmel Fell, N. Lancashire, and the blood on one side is easily tracable back to a bitch he got from Mr. Laverack almost a quarter of a century ago. Then the old Rock strain is apparent, he being sire of Belle of Furness, and then Sir Allister is there, who carries the strain back to Tam o' Shanter and Daisy, the latter by Blue Prince from Old Kate, by Dash II. Master Sam's dam, Bonny Belle, is by Mr. Barclay Field's Brag (brother to Beau of the Ball, mentioned above). With such a pedigree there is no wonder a good performance from their young blood is at last recorded. As a rule, field trial setters have not been the handsomest in the world, being so unlike the pointers in this particular, but there is no reason why a good looking setter should not excel in work, and in this new field trial blood we appear to have obtained the two, for Master Sam won on the bench at the last kennel club show, and both Monk of Kippen and his sister Nun are good to look at, and either have won or are pretty certain to win prizes in the ring.—*London Field.*

RICHMOND DOG SHOW.

RICHMOND, June 8.—*Editor Forest and Stream:* Please announce among your fixtures that the Virginia Field Sports Association will have a dog show under the auspices of the American Kennel Club at the great Va. A. M. & T. Exposition in October. The show will begin October 9 and close October 12. Mr. George H. Hill, of Madoria, O., has been engaged as superintendent. Entries close October 1. The prizes offered will be the same as those offered by the Westminster Kennel Club. We have secured Mr. J. M. Tracy as judge of setters and pointers, and will secure the best judges to be obtained in the country for the other classes. Our premium list is now being printed and will be distributed within the next thirty days. The prizes, leaving out specials, aggregate $2,000 in cash, and nothing will be spared to make this a first-class exhibition in all respects.

We appeal to our friends through the country to rally to this exhibition and make exhibits, so as to sustain us in this effort to make our show a successful exhibition.

For further particulars address The Bench Show Management, Room 26, Shafer Building, Richmond, Virginia.

JOHN S. WISE, President Virginia Field Sports Ass'n.

MARYLAND KENNEL CLUB.—The Maryland Kennel Club has been incorporated and the list of officers is as follows: Sherlock Swann, President; H. Malcolm, Vice-President; Geo. N. Appold, Treasurer; W. Stewart Diffenderffer, Secretary. Governors—Gilmore Hoffman, Alexander Brown, J. Olney Norris, Dr. B. Holly Smith, C. Malcolm, J. Edward Duker, Frank W. Thomas. Dr. Robert V. Ward, Veterinary Surgeon.

INDIANA FIELD TRIALS.—The entries for the second annual Derby of the Indiana Kennel Club number 68, of which 38 are setters and 30 pointers. The list was received too late for publication and will appear next week.

TYPE AND ITS INTERPRETATION.

From the American Kennel Register.

"S. REICNAF" lately had an excellent article in FOREST AND STREAM on "Exaggeration of Type," and while I would not be disrespectful to FOREST AND STREAM by transferring a matter original in their columns to yours, still such a journal as yours is the fitter one for the philosophy of subjects connected with dogs and breeding. The illustrations of more than exaggeration of type, amounting even to distortion, as quoted by "S. Reicnaf," illustrated by mastiffs, spaniels, etc., must have impressed themselves on any thoughtful show-goer; and I recently noted in *The Bazaar* a most remarkable statement as to the collie Caractacus. Mr. Dalziel gave his measurements as skull 5in. and muzzle 9in., a total of 14in.

Now, this seems incredible, although the lengthening and narrowing of the collie's head in the last few years has frequently been noticed and commented on, but such a length of head as 14in. is beyond even greyhound measurement. Still, I do not see how the statement can be wrong, for in the same article there was a typographical error, giving the height at shoulder as 37in., and the breeder of the dog was also wrongly given. Mr. M. H. Lowe, an intimate friend of Mr. Dalziel's, corrected these errors in a subsequent communication to *The Bazaar*, but took no exception to the length of head, nor did Mr. Dalziel, in explaining how the errors occurred, have anything to say as to this point. Mr. Dalziel gave the measurement as furnished by Mr. Megson, owner of the dog, and Mr. Megson has made no correction; so it seems fair to infer the statement was correct. A consideration of the English Collie Club standard shows that no such proportions could fairly be deduced from it. Then why this strange distortion of the standard? The explanation is not as difficult as might be supposed, nor is the action of breeders in breeding such animals, and judges in awarding them prizes, particularly absurd. The root of the whole matter is, that "type" is not definable in exact terms, nor is it a matter susceptible of exact mathematical demonstration. It is simply the concurrence of the majority of breeders, judges and fanciers, guided by prevailing fashion, or if that is too belittling a word, say general consent. It is very true that this consent is often under protest, as in the case of the "long and low" spaniel, but when protestors get courage to make themselves heard, fancy immediately shapes itself to suit the prevailing breeze, as has been demonstrated in the case of spaniels in this country.

The case of mastiffs is a still more striking instance of the impossibility of exactly applying the terms of a standard, for there an exact definition was given to "square" as applied to the muzzle, that positively debarred undershot muzzles, yet it is well known that a fair majority of winners contradict in this point the very standard they are judged under; and it cannot be said that the fashionable head in collies complies with the definition "skull of moderate width." All this seems most preposterous to the beginner, and so it is, in the light he considers it in, but it soon vanishes when we remember that it is impossible to secure exact conformity in even the definition of such a compilation as a standard, and doubly so to secure exact application of it.

The notions, fancies, preferences, etc., of men must and will vary, and show judges are no exception to the ordinary rules applying to human nature. The true mode of dealing with the matter is to remember that a standard is meant to guide a judge, not to make him its mere mouthpiece. Of course the judge, to be honest, must always keep in his eye the dog meant by a standard, his private fancies have nothing to do with the decision, but he has a right to interpret the standard in the light of a prevailing fashion, although I can hardly say that he has a right to directly contradict what the standard demands, no matter what fashion may say. BULGER.

IN RELATION TO REGISTRATION.

Editor Forest and Stream:

I am weary of the pressure indirectly brought to bear upon me to help pay the expenses of the official book clique and consequently I send this letter for publication in FOREST AND STREAM; it will answer several correspondents who have been urged to write me in a similar strain.—VICTOR M. HALDEMAN.

MILFORD, Del., June 6. J. C. McClure, Esq., West Fairfield, Pa. *Dear Sir:* Your favor of the 4th inst. at hand and I must first thank you for your expression of confidence.

On the postal card written by Mr. A. D. Lewis, he, as you say, is "in doubt as to Sandycroft Brag being a mastiff." This is only an illustration of his non-competency for the position he holds, which I believe is that of editor of the A. K. C. stud book.

Sandycroft Brag is registered in the *American Kennel Register*, No. 4984. I have used this trustworthy register before the A. K. C. stud book was known, and will continue to use it after the "official" has been forgotten.

The A. K. C. stud book is for "revenue only," they are after the half dollars and appear to be accepting anything in the shape of a pedigree offered, this being particularly the case in English mastiffs. For example, the reliable *A. K. R.* long since refused entries of a well known pedigree "faker," whose advertisements are no longer allowed in any reputable kennel paper. Notwithstanding the publicity given this man, his dogs are still admitted in the A. K. C. stud book. Mr. W. Wade has just called attention to the last two bogus pedigrees numbers 8811 and 8852.

The American Kennel Club has never missed blundering when it was possible to do so, and its management of the stud book has proved no exception, on the contrary, the apparent greed for the money to accrue from this speculation will eventually be its ruin.

What is an "official" registration worth? The very fact of its being in the club's stud book, and not in the *A. K. R.* only shows that it may be "manufactured." You now understand why I do not wish to see any dogs of my breeding put in with such questionable companions. Yours very truly, VICTOR M. HALDEMAN.

[We are told by the secretary of the stud book committee that it is proposed to have committees from specialty clubs inspect pedigrees.]

REGARDING SO SO.—2025 Bainbridge street, Philadelphia, June 9.—*Editor Forest and Stream:* In your issue of May 31 Mr. Wade has made a statement in his letter on "The Sir Colin Substition" to the effect that Dr. H. M. Perry substituted one bitch for another. The bitch So So I suppose is the one he refers to; if so I know she was in the show as entered. Referring to my catalogue of the show (October, 1885), I find a note that she was very sick; the doctor called my attention to her, as veterinarian to the show; I examined her on her bench and prescribed for her.—ALEXANDER GLASS, V. S. [It is late in the day to go over this ground. The Philadelphia Kennel Club, upon protest by Mr. Lindsay, reversed the decision of the judge respecting the collie award, on the ground of fraud committed by the owner of So So, that bitch not having been present in the show at the time of judging. The case may be found reported in our issue of Oct. 22, 1885.]

FOX-TERRIER LOST.—On the night of May 30 a small 7mos old fox-terrier puppy was stolen in Montclair, N. J. He is all white with the exception of a small spot on the middle of one ear. Any information as to his whereabouts will be thankfully received by his owner, Mr. L. Daniels, 301 Produce Exchange Building, New York.

DOG TALK.

THE well known champion pointer bitch Water Lily died June 4 from paralysis. She was eleven years old and was brought to this country in 1881 by Mr. Chas. H. Mason, who showed her at New York that year when she won first. In addition to other winnings she won the champion prize at New York three years in succession from 1883. She was owned by Mr. W. H. Moller of New York.

Mr. Chas, M. Nelles, Brantford, Ont., wishes the address of the owner of the cocker spaniel bitch that was bred to his Brant at the recent New York dog show. He also wishes the address of H. W. Lacy.

There will probably be a dog show at Pittsfield, Mass., the coming fall.

At the Police Court, Ottawa, Canada, a man was recently sentenced to imprisonment for three months for kicking a puppy and assaulting its owner.

The editor of *Sporting Life* advises us that the kennel department of that paper will not be discontinued as was stated in this column last week.

Mr. Otto W. Volger, Buffalo, N. Y., recently received from England a St. Bernard bitch by champion Valentine and out of Bessie II. (the dam of Plinlimmon) in whelp to Duke of Wellington. On June 2 the bitch whelped 6 puppies, one of which has since died.

Messrs. Geo. Gillivan, West Jefferson, and A. E. Pitts, Columbus, O., have just received from the kennel of R. T. Linton, Edinburgh, Scotland, the champion pug bitch Belle of the Ball. She is in whelp to champion Victor II.

Mr. Paul Hacke of Pittsburgh, Pa., is the owner of a pair of Russian wolfhounds, the only specimens known to be in the country. They are built like deerhounds, but have soft silky coats.

The National Dog Club's committee of management is the strongest combination ever banded together for the benefit of dog owners. The delay was time well spent when the result is noted.

Intending competitors should not forget that entries for the Derby of the American Field Trial Club close July 1. The secretary's address is C. W. Paris, Cincinnati, O.

The entries for the Southern Field Trial Club's Derby also close at the same time. The address of the secretary is T. M. Brumby, Chattanooga, Tenn.

NATIONAL DOG CLUB.

FOLLOWING is a list of the temporary officers of the National Dog Club: President, Dr. J. Frank Perry, Boston, Mass.; Vice-Presidents, Miss Anna H. Whitney, Lancaster, Mass.; W. S. Jackson, Toronto, Ont.; E. S. Porter, New Haven, Conn., and Dr. C. E. Nichols, Troy, N. Y. Secretary and treasurer, H. W. Huntington, Brooklyn, N. Y. Executive Committee, Dr. M. H. Cryer, Philadelphia, Pa.; John Davidson, Monroe, Mich.; Jean Grosvenor, Lynn, Mass.; Mitchell Harrison, Philadelphia, Pa; H. W. Huntington, Brooklyn, N. Y.; S. R. Hemingway, New Haven, Conn.; K. E. Hopf, Arlington, N. J.; J. F. Kirk, Toronto, Ont.; A. C. Krueger, Pittsburgh, Pa.; E. Lever, Philadelphia, Pa, E. H. Moore, Melrose, Mass.; J. H. Naylor, Chicago, Ill.; Dr. J. Frank Perry, Boston, Mass.; Frank Windholz, New York. There are 137 names already on the list of members, and the club will soon be in working condition. The list includes the names of well-known gentleman from 18 States with 12 from Canada.

LONDON DOG SHOW.—*Editor Forest and Stream:* The promoters of the London bench show have decided to form a kennel club for the purpose of holding bench shows. The said club to be known as the London Kennel Club. They have applied for letters of incorporation according to the laws of Canada and have placed the capital stock of the company at $2,500, 250 shares at $10 each. They purpose erecting a fine building with everything complete on the grounds of the Western Fair, having secured from that association a five years' lease of the land. The first show will be held on Sept. 24, 25, 26 and 27.—C. A. STONE, Secretary.

ALBANY DOG SHOW.—Albany, N. Y., June 12.—*Editor Forest and Stream:* The first annual dog show of the Albany Kennel Club opened to-day. There are 290 entries, and among them are many noted dogs. The attendance to-day was first-rate, the building this afternoon was packed with visitors. Judging will begin to-morrow. The weather is delightful, and there is every prospect of a most successful show.—TROJAN.

COLLIE SHOW.—*Editor Forest and Stream:* The Central Ontario Exhibition Association will offer the following prizes for collies at their exhibition to be held in Ottawa this autumn: Dogs—First, $10, second, $5; bitches the same. Puppies: Dogs—First, $5; bitches the same. They intended holding collie trials, but the grounds at their disposal were inadequate, and they could not afford prizes of sufficient value to draw a good entry.

WASHINGTON DOG SHOW.—*Editor Forest and Stream:* Your report of the Washington dog show states that first was withheld in the open class for small pointer dogs. The prize was won by my dog Virginius. In addition to champion prize, Fritz also won special for the best pointer. Please make the corrections and oblige C. W. LITTLEJOHN (Leesburg, Va., June 8.).

UTICA DOG SHOW.—Utica, N. Y., June 6.—*Editor Forest and Stream:* The Fort Schuyler Kennel Club claim March 5, 6, 7 and 8, 1889, for their second annual dog show. —JAS. W. DUNLOP, Pres. [By consulting our columns last week it will be seen that the Albany Kennel Club have already claimed that date.]

BUFFALO DOG SHOW.—Buffalo, N. Y., June 4.—*Editor Forest and Stream:* We wish to claim dates Sept. 11 to 14 for our first international bench show of dogs. Will give you further particulars later.—C. W. ROBINSON, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Faust. By Hornell-Harmony Kennels, Covert, N. Y., for white and tan ticked beagle dog, whelped May 30, 1888, by Royal Krueger (champion Bannerman—Cora) out of Pussie (A.K.R. 5983).

Uncle Dick, Little Roy and Trissa. By Hornell-Harmony Kennels, Covert, N. Y., for black, white and tan beagles, two dogs and one bitch, whelped May 30, 1888, by Royal Krueger (champion Bannerman—Cora) out of Pussie (A.K.R. 5983).

Hooster Tom and Hoosier Hornet. By W. S. Applegate, New Albany, Ind., for white, black and tan head and black tail, fox-terrier dog and bitch, whelped May 3, 1888, by Mixture (A.K.R. 2697) out of Wasp II. (A.K.R. 5035).

Hoosier Bee. By W. S. Applegate, New Albany, Ind., for white, black and tan fox-terrier bitch, whelped May 3, 1888, by Mixture (A.K.R. 2697) out of Wasp II. (A.K.R. 5035).

Jacko. By W. S. Applegate, New Albany, Ind., for black, white and tan fox-terrier dog, whelped Sept. 6, 1884, by Batcheldor's imported Jack out of imported Tina.

Reno. By W. F. Rutter, Jr., Lawrence, Mass., for white, black and tan beagle bitch, whelped March 20, 1888, by Cameron's Racket (Rally—Louise) out of Vickery (Racer—Vic).

Elora Blue Bell. By Hiram Card, Elora, Ont., for black, white and tan beagle bitch, whelped April 21, 1888, by Blue Cap (Blue Cap—Blue Bell) out of Di (O'Shea's Rattler—Minnehaha).

Forest Prince, Forest Pride and Forest Echo. By Rosecroft Kennels, Birmingham, Conn., for black and white English setter dog and black and white and blue belton bitches, whelped March 23, 1888, by Prince Foreman (A.K.R. 5800) out of Forest Dora (A.K.R. 500).

Dash Bondhu. By F. R. Wing, Jamaica Plain, Mass., for white, black and tan English setter dog, whelped July 17, 1887, by Phil Warwick (Dash III.—Opal) out of Model Bondhu (Gus Bondhu—Model Druid).

Highland Piper, Highland Forest and Highland Guard. By H. W. Huntington, Brooklyn, N. Y., for white, black spots, black and white, and fawn, white feet, greyhound dogs, whelped May 18, 1888, by Balkis (A.K.R. 5881) out of Cassandra (A.K.R. 5883).

Highland Fancy and Highland Thistle. By H. W. Huntington, Brooklyn, N. Y., for fawn, white toes, greyhound dog and bitch, whelped May 18, 1888, by Balkis (A.K.R. 5881) out of Cassandra (A.K.R. 5883).

Highland. By H. W. Huntington, Brooklyn, N. Y., as prefix for his greyhound puppies.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Betty—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Betty (A.K.R. 2910) to their Royal Krueger (champion Bannerman—Cora), June 6.

Dorah—Trailer. Dr. C. E. Nichol's (Troy, N. Y.) beagle bitch Dorah (Ringwood—Birdie) to H. F. Schellhass's champion Trailer (Racket—Fly), June 5.

Elora Nellie—Sportsman. Hiram Card's (Elora, Ont.) foxhound bitch Elora Nellie (Jumbo—Fanny) to his Sportsman, May 31.

Fly—Whoopy. The Cook Kennels' (Detroit, Mich.) foxhound bitch Fly (Drum—Flora) to H. E. Cook's Whoopy (Dick—Spotty), May 11.

Fanny—Brave. The Cook Kennels' (Detroit, Mich.) foxhound bitch Fanny (Dick—Spotty) to their Brave, May 7.

Queen—Blucher. H. Card's (Elora, Ont.) Newfoundland bitch Queen (Sancho—Juno II.) to Speedside Kennels' Blucher, May 15.

Telie Doe—Bang Bang. D. W. Oyster's (Washington, D. C.) pointer bitch Telie Doe (A.K.R. 4660) to Westminster Kennel Club's Bang Bang (A.K.R. 394), June 10.

Wanda—Naso of Kippen. G. H. Bailey's pointer bitch Wanda to Westminster Kennel Club's Naso of Kippen, June 9.

Belle of Jersey—Naso of Kippen. F. T. L. Lane's pointer bitch Belle of Jersey to Westminster Kennel Club's Naso of Kippen, June 7.

Lota—Bang Bang. Dr. E. Field's pointer bitch Lota to Westminster Kennel Club's Bang Bang (A.K.R. 394), June 6.

Modesty—Naso of Kippen. Thos. H. Terry's (New York) pointer bitch Modesty to Westminster Kennel Club's Naso of Kippen, June 1.

Countess—Bang Bang. G. E. Bailey's pointer bitch Countess (Sensation—Lass) to Westminster Kennel Club's Bang Bang (A.K.R. 394), June 1.

Penelope—Naso of Kippen. F. R. Hitchcock's (New York) pointer bitch Penelope (Bang Bang—Pocahontas) to Westminster Kennel Club's Naso of Kippen, May 24.

Bonanza—Naso of Kippen. F. F. Harris's (Portland, Me.) pointer bitch Bonanza (Beaufort—Zuba) to Westminster Kennel Club's Naso of Kippen, May 8.

Lill S.—Bang Bang. F. E. Rogers's pointer bitch Lill S. (Sank—Miss Merrimac) to Westminster Kennel Club's Bang Bang (A.K.R. 394), April 26.

Fanny Turner—Fritz. Alex. Wynkoop's (Leesburg, Va.) pointer bitch Fanny Turner (Sensation—Queen II.) to C. W. Littlejohn's champion Fritz (A.K.R. 1351), June 8.

Juno S.—Graphic. Clifton Kennels' (Jersey City, N. J.) pointer bitch champion Juno S. to Chas. Heath's champion Graphic (A.K.R. 2411), June 9.

Jessica—Argus II. Geo. E. Browne's (Dedham, Mass.) Gordon setter bitch Jessica (Tom—Cremorne) to his Argus II. (Argus—Beauty), May 22.

Black Princess—Newton Abbot Darkie. Henry H. Truman's (Orange, N. J.) field spaniel bitch Black Princess (A.K.R. 4809) to E. M. Oldham's Newton Abbot Darkie (Newton Abbot Nigger—Newton Abbot Squaw), May 27.

Fairy—Reignauld. H. Card's (Elora, Ont.) spaniel bitch Fairy to T. & E. Black's Reignauld, June 1.

White Puss—The Baron. E. A. Woodward's (Chicago, Ill.) bull-terrier bitch White Puss (The Baron—Nelly) to Associated Fanciers' The Baron (Dutch—White Rose), May 25.

Modesty—Jacko. C. W. McCord's (New Albany, Ind.) fox-terrier bitch Modesty to W. S. Applegate's Jacko (imported Jack—imported Tina), April 15.

Lillias—Jacko. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Lillias to his Jacko (imported Jack—imported Tina), April 25.

Lillie Belmont—Jacko. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Lillie Belmont (Earl Leycester—Coquette) to his Jacko (imported Jack—imported Tina), April 20.

Verdict—Dusky Trap. Blemton Kennels' (Hempstead, N.Y.) fox-terrier bitch Verdict (Result—Diadem) to their Dusky Trap (Dusky Splinter—Spider), May 28.

Meersbrook Model II.—Bacchanal. W. R. Mack's (Rochester, N. Y.) fox-terrier bitch Meersbrook Model II. (Meersbrook Ross—Meersbrook Model) to Blemton Kennels' Bacchanal (The Belgravian—Bedlamite), May 21.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fan. Geo. H. Remick's (Lawrence, Mass.) beagle bitch Fan, April 15, seven (three dogs), by W. F. Rutter, Jr.'s, Rowdy (champion Rattler III.—champion Myrtle).

Rose. The Cook Kennels' (Detroit, Mich.) foxhound bitch Rose, April 28, nine (five dogs), by H. E. Cook's Whoopy (Dick—Spotty).

Lanctry. The Cook Kennels' (Detroit, Mich.) foxhound bitch Lanctry, April 30, eight (three dogs), by H. E. Cook's Brave.

Harmony. Hornell-Harmony Kennels' (Covert, N. Y.) greyhound bitch Harmony (A.K.R. 5887), June 9, eleven (four dogs), by their Custer (imported Duke—imported My Lady).

Cassandra. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch Cassandra (A.K.R. 5889), May 18, six (four dogs), by his Balkis (A.K.R. 5881); one since dead.

Kate VIII. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Kate VIII., May 17, ten (eight dogs), by their Naso of Kippen.

Zanetta. W. F. Todd's (Portland, Me.) pointer bitch Zanetta (A.K.R. 1261), May 22, seven (six dogs), by Westminster Kennel Club's Bang Bang (A.K.R. 394).

St. Pierre. Coughcura Medicine Co.'s (Eau Claire, Wis.) St. Bernard bitch St. Pierre (Tell—Clio), June 7, eleven (six dogs), by Otto II. (A.K.R. 2480); one bitch since dead.

Countess Peg. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Countess Peg (Fairy King—Countess Floy), May 28, six (three dogs), by their Prince Foreman (A.K.R. 5800).

Effie of Bayside. H. M. Dickinson's (New York) English setter bitch Effie of Bayside, April 23, three (one dog), by O. E. Dudley's Rover (Hamlet—Flora).

Wasp II. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Wasp II. (A.K.R. 5035), May 3, three (one dog), by John E. Thayer's Mixture (A.K.R. 2097).

Media. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Media (Arius—Nancy Lee), May 29, seven (four dogs), by their Lucifer (Splinter—Kohinoor); one dog since dead.

SALES.

Rowdy—Fan whelp. Black, white and tan beagle dog, whelped April 15, 1888, by W. F. Rutter, Jr., Lawrence, Mass., to W. H. Thorn, Windham, N. H.

Cameron's Racket—Vickey whelp. White and black beagle bitch, whelped March 20, 1888, by W. F. Rutter, Jr., Lawrence, Mass., to A. C. Krueger, Pittsburgh, Pa.

Chip. Black, white and tan beagle dog, whelped March 21, 1887, by Alba out of Bunnie, by W. F. Rutter, Jr., Lawrence, Mass., to A. C. Krueger, Pittsburgh, Pa.

Cameron's Racket—Vicky whelp. Black and white beagle bitch, whelped May 20, 1888, by W. F. Rutter, Jr., Lawrence, Mass., to Fred A. Marchant, Gloucester, Mass.

Queeney. Black, white and tan beagle bitch, whelped March 3, 1886, by Lee out of Dianah, by W. S. Clark, Linden, Mass., to W. F. Rutter, Jr., Lawrence, Mass.

Bob—Fanny whelps. Black and tan beagle dog and bitch, whelped March 5, 1888, by N. Elmore, Granby, Conn., to Corsicana Hunting Club, Corsicana, Tex.

Bob—Fanny whelp. White, black and tan ticked beagle bitch, whelped March 5, 1888, by N. Elmore, Granby, Conn., to T. C. White, Corsicana, Tex.

Whoopy—Rose whelps. Tan and white foxhound dog and bitch, whelped April 28, 1888, by the Cook Kennels, Detroit, Mich., to A. Fred Nash, same place.

Sampson. Black, white and tan foxhound dog, whelped March 12, 1888, by Sportsman out of Elora Fan, by H. Card, Elora, Ont., to Mack Switzer, Kingston, Ont.

Trailer. White and tan foxhound dog, whelped March 12, 1888, by Sportsman out of Elora Fan, by H. Card, Elora, Ont., to J. Maitland, Ponsonby, Ont.

Beech Grove Pompy. Light fawn mastiff dog, whelped Sept. 21, 1887, by Beech Grove Toby out of Beech Grove Princess, by Geo. Jackson, Beech Grove, Ind., to Geo. Gifford, Indianapolis, Ind.

Beech Grove Annette Light fawn mastiff bitch, whelped Jan. 2 1888, by Beech Grove Toby out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to F. L. Calkins, McHenry, Ill.

Beech Grove Toby—Beech Grove Gabrielle whelps. Light fawn mastiff dogs, whelped Jan. 2, 1888, by Geo. Jackson, Beech Grove, Ind., a dog each to T. J. Halpin, Rock Island, Ill., and W. A. Cristy, West McHenry, Ill.

Beech Grove Rob. Light fawn mastiff dog, whelped Aug. 30, 1887, by Ashmont Victor out of Beech Grove Duchess, by Geo. Jackson, Beech Grove, Ind., to J. Van A. Carter, Fort Bridges, Wyo. Ter.

Beech Grove Gyp. Light fawn mastiff bitch, whelped March 7, 1887, by Tor out of Beech Grove Duchess, by Geo. Jackson, Beech Grove, Ind., to J. A. Nelson, Bynum, Ind.

Beech Grove Dick II. Light fawn mastiff dog, whelped July 6, 1887, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Jos. P. Sharp, Springfield, O.

Beech Grove Cæsar. Light fawn mastiff dog, whelped Sept. 21, 1887, by Beech Grove Toby (A.K.R. 4867) out of Beech Grove Princess (A.K.R. 4541), by Geo. Jackson, Beech Grove, Ind., to J. A. J. Shultz, St Louis, Mo.

Beech Grove Betty. Light fawn mastiff bitch, whelped July 6, 1887, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to F. L. Calkins, McHenry, Ill

Ned. Liver and white pointer dog, whelped May, 1885, pedigree not given, by Geo. W. Lovell, Middleboro, Mass., to Elmer E. Fisher, Fostoria, O.

Glen Graphic—Jeannette whelp. Liver and white pointer bitch, whelped Feb. 25, 1888, by Geo. W. Lovell, Middleboro, Mass., to E. R. Bellman, Madison, N. J.

Elora Jumbo. Tawny and white St. Bernard dog, whelped March 1, 1888, by Duke of Albany out of Topsey, by H. Card, Elora, Ont. to Frank Wasley, Gravenhurst, Ont.

Prince. Black and white English setter dog, whelped October, 1887, by Zip out of Fan, by Geo. W. Lovell, Middleboro, Mass., to A. K. Potter, same place.

Draco. Black and white English setter, whelped Jan. 25, 1885, by Dash III. out of Nellie Dale, by Geo. W. Lovell, Middleboro, Mass., to Capt. C. A. Gorham, Wellfleet, Mass.

Prince. Liver cocker spaniel dog, whelped August, 1887, pedigree not given, by Geo. W. Lovell, Middleboro, Mass., to B. B. Abbe, Sagamore, Mass.

White Puss. White bull-terrier bitch, whelped Oct. 1, 1886, by The Baron out of Nelly (A.K.R. 4483), by Associated Fanciers, Philadelphia, Pa., to E. A. Woodward, Chicago, Ill.

Grip. Red Irish terrier dog, whelped June 10, 1887, by Garryowen out of Judy, by Geo. W. Lovell, Middleboro, Mass., to Geo. T. Putnam, same place.

DEATHS.

Virginia. Lemon and white pointer bitch, whelped Oct. 20, 1883 (A.K.R. 1357), owned by C. W. Littlejohn, Leesburg, Va., March —; cause unknown.

Fairfax and Forest. Lemon and white pointer dogs, whelped May 18, 1887 (Fritz—Spot), owned by C. W. Littlejohn, Leesburg, Va., from distemper contracted at the New York show.

Di. Black, white and tan beagle bitch, whelped March 1, 1886 (Rattler—Minnehaha), owned by Hiram Card, Elorr, Ont., May 1, from poison.

Glen II. Gordon setter dog, whelped Feb. 22, 1879 (A.K.R. 604), owned by Geo. E. Browne, Dedham, Mass.

THE PAINE-BENNETT MATCH.

IN the last issue the results of the opening days of the Paine-Bennett pistol shooting match were given. The intention was to have the match go on for six days, each man shooting 100 rounds on each day and the grand aggregate to determine the winner. Instead of reaching a sportsmanlike finish the match fizzled away into a disgraceful finish, and what promised to be a fine display of the capabilities of the modern revolver was an exhibition of the wrangling ability of two men, each anxious to overreach the other and not particular as to means. What was done well and what was done otherwise, the day-to-day narrative of the match given below will tell. It seems incredible that such a snarl as this would happen when the men had had so much preliminary experience of the petty obstacles which each was capable of throwing in the way of the other. Each knew that the other was specially anxious to win the match in order that the record of winning might be blazoned on his posters as a variety show performer, and each in turn knew that his opponent would rather bring on a tie or any sort of a mismatch rather than pluckily face and own up to a defeat. This last alternative came from a pair of marksman one of whom was afraid of and the other dare not meet a defeat.

The facts under which the protest of Mr. Paine was made come in for weight in considering the motives of it. So long as he was an assured winner the match went on, but as his young and skilful antagonist each day cut down the margin of difference the necessity for some sort of loop hole to escape from the impending defeat was imminent. It came in a protest over the revolver sight, which, it was suddenly alleged, was out of the regular military fashion. They were good enough for four days of defeat but not good enough to take the winning place in the match. Any competent judge acting for the protestor would have examined the weapon used by the opposing party and then and there promptly and at once, before a single shot had been fired, entered a protest, or had it really been desired to have a contest and to have acted in a true manly fashion, to have made the protest as a matter of record and then gone on under that protest to have shot the match. It is not claimed that the use of this or that sort of revolver by Bennett affected Paine in the manipulation of his arm. The questions embraced in the protest could not be affected by the position of the men at the finish, whereas now the question is left in anything but a satisfactory one for adjustment. It is a question whether the silence of Paine for four days of the match did not give his binding as well as quasi consent to the use of the revolver with these sights.

Above the judge who did not judge until it became necessary to break up the match stands a referee who is no referee at all, since his decision was in no wise binding, and a further reference is

had to another referee, who is to sit in calm judgment on a question where it is doubtful whether the principals will agree to any one basis of fact.

The Creedmoor rule is the very convenient and elastic one that pistols or revolvers must have practical sights, which may mean very various things under various conditions.

Entirely apart from this unfortunate finish or non-finish of the match, it can be said in full praise that either of the marksmen is a worthy example of a first-class reliable man with these small arms. The shooting during the four days when there was a real contest was capitally well sustained, and the targets are worthy of going upon record as models of fine work under the somewhat adverse conditions which the men created about the shooting stand.

Further, in a general way and of interest to every one of the rapidly increasing army of revolver experts, is the exhibit made of the degree of exactitude which has been attained in the manufacture of this class of arm. They were revolvers of an ordinary type big enough for effective work, strong enough for general usage and not mere machines for turning out high scores. The shoot took place in the open air, and a range long enough to serve as a fair test of all just demands to which a revolver may be subjected. The loading, too, was done from boxes of factory-filled ammunition, and the seemingly complete accord of weapon to charge was evidenced in the steadily sustained high scores these men were able to show.

There was a time, and not half a decade ago either, when such a showing could not have been made. There were revolvers but they were crude affairs, and the ammunition put up for use in them was evidently elaborated on the old notion that the bigger the charge the better the work. The manufacturers were shrewd enough to watch the work done in such galleries as Conlin's, where the art of marksmanship is studied out intelligently, and the result is seen in such packages of ammunition as were supplied to Messrs. Paine and Bennett during this great test.

Below will be found in detail the scores and the story of each day's doings:

SPRINGFIELD, Mass., June 4.—The first day's shooting at Hampden Park between Chevalier Ira A. Paine, of Providence, R. I., and Fred E. Bennett, of Boston, for the revolver championship of the world and $2,000, resulted in Paine's securing an advantage of 30 points over his opponent, to be counted in the final result. Paine scored 867 points and Bennett 837 out of a possible 1,000. According to agreement the shooting was done with Smith & Wes on's .44-caliber Russ an model revolvers, on an American standard 200-yd. rifle target, at 50 measured yards. The weather was bad for good shooting, as there was a strong and gusty wind blowing, and the scudding clouds and a peculiarly bright blue sky made sudden and frequent changes of light and shade which baffled all attempts at sight regulation. There was an attendance of from 200 to 500 interested spectators. Myron W. Bull, of Springfield, acted as referee, and Newton N. Dexter, of Providence, was judge for the chevalier, while J. N. Fellows held the same position for Mr. Bennett.

The rule was that each marksman fire 10 shots at a fresh target provided for him, and then make way for his opponent. Chevalier Paine was the first to face the bullseye. A coin had been tossed, and he, having won the call, chose to have the opening shots. No sighting shots were allowed, so when he first raised his .44-caliber 6½in. barrel Smith & Wesson revolver above his head and lowered it into position, he was ready to let go. His attitude was very graceful. With his right hand holding the revolver in position, his shoulders well back, feet spread about a yard apart, and his left hand straight down by his side, the 3½lb. trigger pull was given. Then there was a flash, a bang, some smoke, and a hole in the bullseye of the target. Then his score of 10 shots was summed up and found to make 81.

Without delay a new target was put in position, and Mr. Bennett assumed his firing attitude. He lifted his arm as did Paine, held it almost out at full length, took aim, and dropped his arm again. Then he lifted it once more; and with his feet about 30in. apart, his left arm hanging by his side, his body held erect and his head thrown slightly forward, he pulled the trigger of his pet pistol. The lead was outside the bullseye. He showed slight signs of nervousness, but was steady in a moment. Then he slowly took his nine other shots, and a summary of his first string showed that he had scored 82, and was, therefore, one point ahead of the man from Rhode Island.

During the shoot, which lasted 3 hours and 35 minutes, the many brilliant shots made by both men were frequently applauded. At the commencement of the sh ot both contestants showed signs of nervousness, Bennett being the worse off. Paine's nerves soon quieted, while Bennett seemed to grow worse and worse on every 10 shots after the third. The low scores made surprised every one present, except the marksmen themselves. Paine averaged less than five minutes on every 10 shots he fired, while Bennett, who seemed to sight the target twice each time before firing, took longer. The score of the first day stood:

Paine	8	9	8	7	8	6	7	9	6	10—81
	7	7	10	8	8	8	7	8	10	10—84
	8	8	10	8	10	9	10	8	9	7—86
	9	8	9	10	10	8	7	8	9	10—88
	10	10	6	10	9	8	9	10	10	7—89
	10	8	8	10	9	9	10	10	10	9—93
	7	10	10	9	9	7	10	8	10	8—88
	10	8	8	10	10	10	10	7	7	9—89
	8	8	7	9	9	9	9	9	8	7—84
	8	7	10	10	8	9	9	8	7	9—85—867
Bennett	6	8	8	8	9	10	8	9	7	9—82
	8	7	9	9	6	7	8	6	9	10—79
	10	10	7	10	8	10	9	10	10	8—92
	9	9	9	9	8	9	7	9	9	10—88
	9	8	9	9	10	9	9	8	9	6—86
	9	9	10	7	8	8	10	7	9	8—85
	8	9	8	6	8	8	6	10	9	8—80
	8	9	8	9	8	9	6	8	8	8—81
	7	8	8	6	10	7	9	7	7	10—79
	9	7	9	6	9	8	10	8	9	10—85—837

SPRINGFIELD, Mass., June 5.—The second day of the great revolver match between Chevalier Ira A. Paine, of Providence and Frederick E. Bennett, of Boston, resulted in a day victory for Bennett by a score of 887 points to his opponent's 879. This reduces the lead of 30 points which Paine secured Monday to 22, the score for both days now standing at 1746 for Paine and 1724 for Bennett. The day seemed to be perfect for shooting. Not a cloud affected the light all the afternoon, but the hot sun shone steadily down on the face of the target and brought every line out clearly and distinctly. There was a slight breeze, but hardly enough to affect the result of the shots. Bennett was in prime spirits and seemed to have more confidence in himself than on Monday. Paine was in the same cool condition that the smell of powder always finds him. He came out into the field to look at one of his targets, which was a rather poor one for him, and after looking at it for a moment he exclaimed, "Well, I am shooting like a 'chump' today." The attendance was no better than on Monday, but the match was fully as interesting, as it looked first favorable to one of the great marksmen and then for the other. Bennett was on the ground in the forenoon for a little practice and succeeded in making one target of 98, which is as high as the best ever scored on a 200yds. American association rifle target at 50yds. with a Smith & Wesson Russian model revolver. Although the younger man was in excellent form, he exhibited the same hesitation in shooting, which is rather exasperating to the spectators. He will stand and take deliberate aim and when one has concluded that he is long about firing, he will lower his arm, go back, take a towel and wipe his hand. Then he will walk up to the line and perhaps go through this operation two or three times before scoring. It was rather noticeable, too, that when this maneuvering was carried to the greatest extent, he made a poor shot. The old Chevalier, on the other hand, bad always the same delivery. A firm position, deliberate, steady, confident aim and a score. It was like clock work. A poor shot did not make him take longer aim the next time. It took Paine about 5½ minutes to shoot a string, while Bennett used up from 11½ to 13 or 14 minutes. Bennett led off with the first string and had as the result of Monday's score, 30 points to contend against. The 87 points made to Paine's 85 gave him a lead which he kept all through the afternoon. At the end of the second innings he stood 8 points ahead on the day's result. The next made 3 points more for the Boston man. Paine's score of 96 points in the ninth innings made it look as if he were not going to lose by the day, but he weakened on the final string and came out 8 points behind.

Paine	9	10	8	10	7	10	7	8	10	6—85
	9	10	10	8	7	10	9	8	6	10—87

	6	10	7	10	10	10	9	10	9	8—90—887

SPRINGFIELD, Mass., June 6.—The third day's shooting on Hampden Park this afternoon in the Paine-Bennett revolver match for the championship of America resulted in 866 points for Frederick E. Bennett, of Boston, and 860 for Chevalier Ira A. Paine, of Providence, R. I., which added to the previous scores, makes 2,606 points for Paine and 2,590 for Bennett. Paine led Bennets by 30 points at the end of the shooting Monday. The Boston man succeeded in reducing this lead by 8 points Tuesday and 6 to-day. The match to-day was shot under protest. The shooting did not begin until 3:15 o'clock and was not finished until nearly 7 o'clock. Bennett challenged the pull of Paine's revolver before the match began. The articles of agreement specify: "Revolvers to be Smith & Wesson, 44cal., Russian model, with a 3lbs. pull and not over 6½in. barrel." The chevalier's piece was tried and failed to stand the test. He then produced another revolver which withstood the 3lbs. weight, but it did not have the usual sight of this make of revolvers, but Referee Bull decided that nothing had been said about sights and allowed it, when Bennett's friends entered a protest. The sight on the second revolver was the simplest sort of an adjustable one. If Paine should win the match now the protest would be carried to the secretary of the National Rifle Association, who would decide the matter. There was a strong west wind blowing all the afternoon, and although the light was good, this was enough with the feelings over the decisions and protest, to make a decidedly dull afternoon. Nothing contributed more to the tediousness of watching the shooting than the exasperatingly slow way in which Bennett shoots. He was over 20 minutes in shooting each of the first two strings. If the two men should tie on a score, many who saw the match could not help deciding that the chevalier is the best marksman, for promptness is part of the art of shooting. Paine lost 3 points on the first string, brought back 2 of them on the second, made 2 more on the next and then 1 more, standing 3 ahead at the fourth. The fifth string gave Bennett 3 points again, and then Paine ran 3 back and 3 more in the sixth, only to lose the lead in the seventh, and in this way it went all afternoon. Bennett stood 10 ahead at the end of the ninth string. The men took the train for Providence in the evening, where the last three days' shooting will be done. The score:

Paine	10	7	8	7	10	7	8	8	7	10—82
	10	9	10	10	9	9	8	9	7	9—90

PROVIDENCE, R. I., June 7.—The fourth day of the revolver match for $1,000 a side and the championship of the world between Chevalier Ira Paine, of this city, and F. E. Bennett, of Boston, at Narragansett Park, to-day showed a gain of seven points for Bennett, which left him only nine points behind. The first three days of the match at Springfield showed fine work, but to-day's was fully up to it.

The day was all that could be desired, the light steady and strong and no air to speak of stirring. The train for the track left the city at 2:10 and carried a fair-sized party, but there was by no means a crowd in attendance. The shooting was done directly in front of the grand stand, the men standing in the paddock there, while the target was placed in the inclosure across the track, 50yds. from the firing point. One thing to which those present objected was that the men could not be seen when at work, as the firing was all done from a shed or shooting-box covered over, so that their positions could not be seen, and those who expected to learn something from witnessing the match were sorely disappointed. There was no reason why the men should not step out boldly and fire, for there was no wind to bother them, and even if they were desirous of having the side walls of the box they might at least leave the roof off and let their aiming and positions be seen. Mr. Paine was perfectly willing to do this, and on the opening day of the match it was done, but since then Mr. Bennett has refused to shoot in the open, and the box has been used. The audience were kept in the grand stand and when the reporters asked permission to sit on the band stand beside the firing point, Mr. Paine and his judge, Mr. Newton Dexter, cheerfully granted it. Mr. Bennett refused to allow them to stay there and they were forced to go to the grand stand and get their information as best they could. The National Rifle Association rules governed the shoot, but they were not observed on the time limit, one minute for each shot, by Bennett, nor were the rules in regard to cleaning after each string, for Bennett cleaned his pistol when he pleased, usually after each five shots. The hour for beginning the shooting was 3 o'clock, and the crowd waited patiently until 3:20 and then began to express dissatisfaction in various ways. A few minutes later Mr Dexter announced that the referee had forgotten his trigger test and that the shooting would have to be delayed until one was secured. The test is a lump of lead suspended from a hooked wire, the whole weighing a little less than 3lbs., and when that can hang on the trigger the pull is all right. Bennett was very anxious about Paine's trigger pull, and called for a test of it about every time he made a bullseye, which delayed the shooting considerably.

At a few minutes of 4 o'clock the test arrived, the referee, Mr. M. W. Bull, tested the trigger pulls, and at 4:01 Bennett took his place and began the match. He was nervous at first, and made a 9, an 8 and a 7 in order. Just as his marker was covering the last shot Paine's revolver went off; he was sighting at the target and did not know it was loaded. The bullet went unpleasantly near the marker's head, and counted an 8, which Bennett claimed as his shot, and it was allowed, so he gained one point in the string. Cleaning his revolver after the fifth shot he braced up, and made 5 straight bulls, the most that were made in succession during the day's race. He was twelve minutes making the 10 shots, two minutes over the time limit, and scored 91 points. Paine then fired his 10 shots, and in five minutes equalled the score of 91, and honors were easy. The second string proved to be Bennett's poorest one, and in eleven minutes he only succeeded in scoring 81 points. This Mr. Paine easily beat by 4 points, 3 of which Bennett gained back on his next string and on the next one gained 4 more, which put him 3 ahead. On the fifth string Bennett gained another point, making his lead 4, which Paine cut down in the sixth string to 2. The seventh was a tie, each scoring 87, but in the eighth Bennett did some wonderful work, making six 10s, a 9 and three 8s, a total of 93. Against this Paine made his poorest score, 84, which put Bennett 11 ahead. The ninth string was a tie on 87 and it was 6:15 when Bennett began his last 10. He opened well with a 9 and three 10s, but then fell off and two 6s and a 7 brought his score down to 87. Paine then started his last string as coolly as if shooting for fun. Bennett's manager and friends had been sitting just behind the firing box making remarks about the shooting and Bennett's chances of winning, but they did not succeed in making the Chevalier nervous, and he made 9s and 10s with ease until he finished with a score of 91, leaving Bennett's lead 7 points on the day's work.

On this point ot annoyance the Providence *Telegram* says:

"There was one unpleasant thing about the match, and that was the ungentlemanly and unsportsmanlike behavior of some of Bennett's friends, who sat immediately behind the marksmen, and tried in every way by aggravating and insulting language, to make Paine lose his head, and thereby lose the match."

Not until Paine came out in the ninth inning, and with cocked and leaded revolver faced them did they desist.

The times made by the men in shooting each string were:

Bennett—12 minutes, 11, 8, 9, 11, 7, 10, 7, 7 and 5.
Paine—5, 5, 7, 6, 6, 6, 6, 6, 7 and 5.

At the target Mr. C. C. Gray marked the shots and called them off. The style of the two men in firing differs materially, Chevalier Paine is easy and graceful; he raises his revolver well in the air, lowers it steadily until in line with the bullseye and then pulls. No time is wasted, and no sooner is the shot announced and the bullet hole covered than he is ready to shoot again. Mr. Bennett on the other hand, raises his revolver, sights, then drops it, and repeats this two or three times, wipes his revolver barrel, and finally after holding a long time on the target pulls the trigger. One of his party excused his poorer shots to-day by saying they were due to poor ammunition or lack of powder, but their location did not bear out this theory as his 7s and 6s were generally to the right or left.

Following is the score:

Paine	9	10	10	7	10	8	9	10	10	8—91
	8	8	10	8	10	10	7	9	7	8—85
	9	10	10	8	9	6	7	10	7	10—86

	9	10	10	10	6	10	6	7	9	10—87—879

PROVIDENCE, R. I., June 8.—The Paine-Bennett match came to a sudden end, so far as a contest was concerned, at Providence yesterday by Paine entering a protest and withdrawing from the match, while Mr. Bennett shot out his 10 strings of 100 shots and scored 878 points. Mr. Paine said that he had objected on former days to the sights used on the revolver, and at last was compelled to make a formal protest and call for military sights, such as the articles of agreement demanded. He also protested against Mr. Bennett's exceeding the time limit in firing. In accordance with these views, his judge, Newton Dexter, gave the following protest to Referee Bull:

PROVIDENCE, R. I., June 8, 1888.

Myron Bull, Esq., referee in the Paine-Bennett revolver match now in progress:

DEAR SIR—As judge for Chevalier Ira A. Paine, I hereby state that my principal is prepared and ready to go on and finish this match with strict military sights, such as the articles of agreement call for. If Mr. Bennett refuses to do this, Chevalier hereby withdraws from the match, and claims the stakes on account of such refusal, and on his protest against the persistent infringement by Mr. Bennett of Rules 5 and 15 of Section 10 of regulations of the National Rifle Association. NEWTON DEXTER,
Judge for Chevalier Ira A. Paine.

The referee held a consultation, in which Mr. Bennett's judge stated that his principal was using the sight made by the Smith & Wesson people, and the one that came on his revolver, and had no other ready. Referee Bull, at 3 o'clock, read the protest, and gave his decision that, as he had allowed the sights on four days of the match, he could not order them changed on the fifth day, and he then ordered the men to proceed with the shooting. He said that under the articles of agreement the protest would go to the secretary of the National Rifle Association. Mr. Paine declined to go on, and Mr. Bennett, at 3:10, began to shoot his 100 shots, finishing at 4:35.

Referee Myron W. Bull, of Springfield, claims that Paine has neither used a "strict military sight" during the contest nor produced one upon the ground. Both men had used pin head sights, Bennett's being smaller and the supporter lighter. Bennett protested against Paine's "exaggerated sight" on Wednesday, but Mr. Bull would not allow it to stand. Mr. Bull claims that under the agreement governing the shooting the men may take as much time as they like at their strings.

The day's score stood:

Bennett	8	10	9	10	10	9	7	7	7	10—87
	8	10	9	8	10	9	8	9	8	9—88
	9	10	7	8	8	9	9	10	10	7—87
	6	8	10	10	7	9	10	8	10	10—88
	7	9	8	7	9	10	8	9	10	10—87
	8	10	8	7	10	9	10	10	10	7—89
	9	10	10	8	7	10	10	8	8	9—89
	8	6	10	10	8	10	6	6	9	8—81
	9	7	10	10	10	9	10	8	8	10—90
	9	8	10	10	10	7	10	9	9	10—92—878

PROVIDENCE, R. I., June 9, 1888.—F. E. Bennett went out to Narragansett Park to-day and shot off his last 100 rounds in the Paine-Bennett match. The score:

Bennett	6	9	9	9	9	10	7	9	8	8—84
	6	10	8	6	10	8	7	6	7	6—74
	7	10	8	7	8	9	9	6	7	10—79
	6	6	7	10	6	8	7	9	10	6—75
	8	7	10	10	7	10	4	7	7	6—76
	8	7	8	5	9	7	8	8	7	9—76
	9	10	8	10	8	8	9	8	9	7—86
	8	9	6	10	6	4	8	10	5	4—70
	6	8	5	5	4	6	9	5	5	10—68
	4	8	7	9	4	5	8	4	0	9—58—746

Bennett says that he will shoot Paine on the same conditions, allowing him 20 points in the 1,000, for from $1,000 to $5,000. Man and money ready at any time.

The Boston *Herald*, stakeholder in the match, says: "It has been reported that Chevalier Paine protested Mr. Bennett's sights on Monday last at Springfield when the shoot commenced, but if such was the case a *Herald* man, who at no time during the firing was more than 50ft. from the target, heard nothing about it. After the shoot was over he talked at least 15 minutes with Chevalier Paine, but that gentleman said nothing to him about sights. The *Herald* man was on the grounds for the special purpose of examining the sights if called upon to do so. When the match was made Mr. Bennett showed Chevalier Paine the sights on his revolvers and asked if they were all right. Chevalier Paine said he had no objection to them. After Mr. Paine left the office Mr. Bennett showed the sights on his revolver to the writer, saying at the same time that they were the sights Chevalier Paine did not object to, and he (Bennett) wished the writer to remember the sights in case a question arose as to their use. When the writer took a casual glance at Mr. Bennett's revolver at Springfield on Monday the sights he saw he considered the same as those shown in the *Herald* office, but will not be positive till he takes the revolver used by Mr. Bennett in his hand and examines it. But the *Herald* has no decision in the matter other than that it will hold the stake money until released by one or the other side, or that both sides agree to draw it. Mr. Paine has protested its paying over, as was stated in the *Herald* Friday.

Saturday afternoon a telegram was received at the *Herald* office from Referee Bull. It read as follows:

PROVIDENCE, R. I., June 9, 1888.

To the Editor of the Herald: In the match for 600 shots with revolver between Mr. F. E. Bennett and Chevalier Ira Paine I declare Mr. Bennett the winner.—MILAN W. BULL, Referee.

Though Referee Bull decides Bennett a winner, that does not settle the matter, as can be seen by the following extract from the original articles held in the *Herald* office:

"If the referee's decision is disputed, the secretary of the National Rifle Association shall make a decision which shall be final."

Chevalier Paine disputes Referee Bull's decision. He also says that the National Rifle Association must decide the question at issue. The *Herald* will pay over the money according to the decision that Chevalier Paine asks, which is right, according to the articles of agreement. It is taken for granted that Chevalier Paine's protest is only issued pending the decision of the national secretary, and that should that official decide against him, he is willing to have the stake money paid over to Bennett. Should the national secretary decide against Bennett it is taken for granted that he is willing to have the stake money paid over to Paine.

NEWARK, N. J.—The directors of the International Sharpshooters' Union at their last session let the contract for the new shooting stands and houses to Henry Hardy. John Coppersmith was appointed chairman of a committee on short-range or gallary shooting, and was authorized to organize a committee from among members of those clubs which intend to parti ipate in this class of shooting during the festival. The scale upon which this shooting will be conducted will depend entirely upon the interest displayed by the members of clubs. The main responsibility will be assumed by the Shooting Society, while the number and value of prizes, team and individual, as well as the distance to be shot, the number of ranges to be erected and style of targets to be used will be left entirely with the clubs.

BOSTON, June 6.—High winds prevailed to-day at the Massachusetts rifle range, and few shooters were present. To-day's score follow:

Rest Match—200yds.

H Severance	9	8	9	11	7	12	8	12	11	12	9—99
A Maynard	8	8	7	9	9	9	8	7	12	11	8—88
F D Hart	9	9	9	6	11	8	9	6	9	7	8—83

Off-hand Match—200yds.

N F Tufts	7	7	10	9	6	8	8	9	8	5—76
A Maynard	4	7	6	7	6	10	5	6	9	10—70

P Munroe	5	8	6	4	4	10	6	4	7	5—59

NEW YORK ASSOCIATION.—Auburn, N. Y., June 11.—The following averages were made by the 90 per cent. class of shooters at the thirtieth annual tournament held here recently. It will be noticed that C. W. Tuttle, of Auburn, N. Y., leads the shooters, his averages being 92 per cent. Mr. Tuttle used a 10lb. Ithaca hammer gun: Munroe Smith, Syracuse, 75 per cent. (Smith hammerless); H. McMurchy, Syracuse, 87 per cent. (Smith hammerless); H. B. Whitney, Oaks Corners, 82 per cent. (Smith hammerless); F. W. Kelsey, East Aurora, 90 per cent. (Smith hammerless); Chas. Wagner, Pultney, 87 per cent. (Smith hammer); Otto Besser, Jr., Buffalo, 81 per cent. (gun not given); Geo. Luther, Syracuse, 87 per cent. (Lefever hammerless); C. W. Tuttle, Auburn, 92 per cent. (Ithaca hammer). The above averages are computed from the six regular contests including ties.—CHAS. E. KERR, Sec'y.

SYRACUSE, June 6.—At the shoot af the Onondaga Rifle Club to-day these scores were made: Off hand, possible 100. W. A. Koehler 77, 81, 84, E. Seeley 73, Lighton 71. Rest, Koehler 97, Seeley 73, Lighton 76, Short 97.

LYNN, Mass., June 9.—The following scores were made at Indian Hill to-day: Military Match, 500yds.:

Lieut Merritt	5545445555—47	M Williams	4555444555—46
Lieut Hussey	5555553545—47	Sergt Chase	4434444554—41

There was considerable practice by military men at the 200yds. range.

BOSTON, June 9.—Only a few riflemen visited the Massachusetts rifle range to-day, and the fish-tail wind prevented any good scores being made. Following are the best scores made to-day:

Rest Match—200yds.

S Wilder	11	12	12	11	9	12	9	10	11	11	—108
B G Barker	12	11	10	10	11	10	8	12	12	10	—106
S T Summer	9	12	10	11	12	10	12	10	12	8	—105
T Oliver	8	11	9	12	11	9	9	12	9	10	—100
A T Warren	11	10	9	9	9	8	10	10	10	10	—96
S Ham	10	12	10	11	8	10	12	8	7	9	—97
A B Ballard	11	9	8	12	9	8	11	10	7	11	—96
A R Avay	5	6	7	7	9	10	11	10	9	8	—92
H Harrison	9	10	10	9	8	8	10	9	10	8	—91
B G Cutts	7	8	12	8	6	10	8	6	9	9	—83

Pistol Match, 50yds.

Mrs J L Fowle	8	9	7	8	8	6	6	8	10	10—83
J L Fowle	8	7	6	8	7	9	10	5	6	8—74
W S Hill	8	9	7	6	6	4	5	8	10	7—70

ST. LOUIS, June 9.—At the weekly shoot of the St. Louis Pistol Club, Fodde made the top score of the ten contestants. Out of a possible 120 the following scores were made:

F A Fodde	115	W H Hettel	108
W Bauer	111	E C Mohrstadt	103
A E Bengel	110	W C Mackwitz	98
M Summerfield	109	O Wallace	94
M C Billmeyer	108	J Sieminkle	92

CREEDMOOR.—New York, June 12.—The first qualification and marksman's badge match of the series for 1888 was shot at Creedmoor on Saturday, June 9. The day was bright and cool, and with a good light and favorable wind the conditions for good shooting were very satisfactory. The attendance was large, nearly all the regiments in the first and second brigades were represented. Following are the scores of 42 (sharpshooters) and over, the first seven being the winner of the match:

	200yds.	500yds.	Total
G Stuart Scott, Co A, 23d regt	22	25	47
Geo F Hamlin, Co I, 23d regt	21	25	46
W A Dixon, Co G, 7th regt	22	23	45
W H Palmer, Staff, 7th regt	22	23	45
Alex Stein, Co C, 7th regt	20	24	44
G W Dixon, Co G, 7th regt	21	23	44
C E DeLa Vergne, Super Staff	22	22	44
H W Janssen, Co A, 7th regt	19	24	43
J B Holland, Co H, 7th regt	20	23	43
O E Dudley, Co F, 7th regt	20	23	43
W J Underwood, Co H, 7th regt	21	22	43
J D Foot, Co F, 7th regt	20	22	42
G A Williams, Co H, 23d regt	22	20	42

The next matches will be on June 23 and July 4.—J. MANZ, JR., Ass't Sec'y N. R. A.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WELLINGTON, June 6.—The initial shoot of the summer tournament of the Boston Gun Club was held here to-day. Eight valuable prizes are to be contested for, the capital prize being a Cyrus B. Holden breechloading, 44-caliber, long-range rifle, valued at $125. The tourney will be on the handicap plan, and alternate matches are to be shot on neutral ground. The entrance is free. The weather here to-day was supurb for trap-shooting, the only drawback was a blustering wind. The programme contained 19 events, and the winners are as follows: 1. 3 pair Peorias Gay, Richard and Wilson. 2. 5 Macomber targets, Connell and Richards. 3. 5 Peorias, Wilson. 4. 5 clay birds from 5 traps, Connell. 5. 5 straightaway Peorias, Bowker, Whitcomb and Flanders. 6. 10 clay-pigeons, Connell. 7. 5 Peoria blackbirds, Chapman and G. H. Savage. 8. 5 clays from 5 traps, Bowker first, Sewell, Richards and Kirkwood second, Chapman and Clark third, Wilson, Whitcomb, F. Norton, Jamieson and Blackwell fourth. 9. 10 Peorias, Gay and Connell. 10. 10 clay-pigeons, Bond first, Gay and G. H. Savage second, Richards and Flanders third, Bowker and Kirkwood fourth. 11. 5 pairs of Peorias, Whitcomb and G. H. Savage. 12. 7 straightaway Peorias, C. E. Savage. 13. 5 straightaway Peorias, Gay, Richard and Bond. 14. 5 Macomber targets, Gay. 15. 7 straightaway Peorias, Bond and Gay. 16. 7 Peorias, Gay. 17. 7 Peorias, Bond and Richards. 18. 5 Macomber targets, Whitman and Kirkwood. 19. 7 clay-pigeons, Bond. The scores made in the ninth, tenth and eighteenth events count for the tournament prizes, and the winners stand as follows: Connell first, Bond and Gay second, Whitcomb third, Kirkwood fourth, Flanders and G. H. Savage fifth, Bowker, C. E. Savage, Richards and F. Norton, sixth, Wilson seventh, W. Chapman eighth, Clark and Jamieson ninth, Beckman tenth. The next shoot will be held on the East Boston Gun Club grounds, at Orient Lake, East Boston, June 13.

WELLINGTON, Mass., June 9.—A goodly number of gunners were at the grounds of the Wellington Club to-day, and some good scores were made in the merchandise match. In this match points were scored as follows: Scott first with 19, Swift and Hall second with 18, Bond, Stanton, Brown and Moore third with 16, Henry and Grimes fourth with 15, Phelps, Baxter, Perry, Nichols and Trebble fifth with 14, Pason and Chase sixth with 13, Shumway, Stone, Sanborn and Schaefer seventh with 12, Bradstreet eighth with 11. Following were the winners in the sweepstake matches: 1. 6 blue rocks, Scott and Swift. 2. 6 clay-pigeons, Scott, Swift and Chase. 3. 6 blue rocks, Scott and Hall. 4. 6 clay-pigeons, Snow, Swift and Stanton. 5. 6 blue rocks, Scott and Phelps. 6. 6 blue rocks, Hall, Shumway and Snow. 7. 10 clay-pigeons, merchandise match, Swift, Scott and Hall first, Bond, Chase, Baxter and Grimes second, Stanton and Moore third, Shumway, Phelps and Sanborn fourth. 8. 10 blue rocks, merchandise match, Scott and Brown first, Hall and Henry second, Schaefer, Bond and Phelps third, Bradstreet, Grimes and Trebble fourth. 9. 6 blue rocks, Nichols and Swift first. 10. Miss and out, won by Scott. 11. 6 blue rocks, Scott. 12. 6 blue rocks, Hall and Stanton. Payson won the Grimes prize.

OTTAWA, June 7.—The second shoot for the club cup between the Ottawa and St. Hubert gun clubs came off to-day. The Ottawas greatly improved on their former effort, as their six representatives made a tie at 56 points with that of their team of nine guns at the first competition. Club cup, 15 birds each, 18yds. rise, 5 traps:

Ottawa.		St. Hubert.	
J Stewart	14	Geo White	12
A Stewart	11	Dr A Martin	12
W H Baldwin	10	H Trudeau	11
J Manuel	8	A Throop	11
W H Tracey	7	G Thompson	11
H Street	6—56	J Deslauries	7—64

Sweepstakes at 10 birds each, 18yds, rise, 5 traps: P. Trudeau 10, Dr. Martin 9, J. Deslauriers 9, P. Thompson 8, Geo. White 8, A. Throop 8, Dr. Horsey 7, Ed. White 7, C. Labelle 6, A. Stewart 5, Dr. McPhee 4. In the nines Delauriers broke three straight and won, and in the ties at 8 Thompson won by breaking 8 straight. The Ottawas shot their club match in conjunction with the team match, J. Stewart carrying off the medal.

WORCESTER, Mass., June 8.—The classification matches at Coal Mine Brook Brook range under the auspices of the Worcester Sportsman's Club were continued this week. The sport included a number of special events. In the classification match there were four strings of clay-pigeons with a possible 20 and two strings of blue rocks with a possible 10. Ties divided:

Classification—Class A.	C.P.	B.R.	C.P.	C.P.	B.R.	C.P.	
C H Howe	5	4	3	5	5	4—26	9

SPRINGFIELD, N. J., June 4.—The Union Gun Club held its sixth monthly badge shoot on its grounds here this afternoon, and seventeen of the boys turned out to try their hands at Lockport bats, with results as follows: Miller 25, Roll 21, Johnson 24, Dunican 22, Brientnall 19, A. Sickley 21, Terry 12, G. Pudney 18, Lightipe 17, Sopher 16, Conover 23, Sayre 18, Morrison 19, E. Sickley 17, Wade 11, Newton 20, Snow 17. Miller first, diamond badge, Johnson second, gold badge, Conover third, silver badge, Dunican fourth, gun case. Roll fifth on shoot-off corduroy coat, Newton sixth corduroy pants, Brientnall seventh on shoot-off canvas hunting coat, Sayre eighth on shoot-off cane gun. The covers each made shot at 25 bats, 18yds. for 10-bores and 16yds. for 12s. Sweepstake shooting was started and kept up as long as it was possible to see.—12-BORE.

TORONTO, June 9.—Messrs. W. McDowall & Co. have decided to offer three gold medals valued at $50 for free-class competition to all the shooters in Toronto and suburbs. Messrs. Sandys, Blea, Humphries and Barrett will be a classification committee to determine what marksmen shall belong to the first, second and third class. The conditions are as follows: The medals must be competed for three times, viz.: June 16 and 30 and July 14, at 16 Peoria blackbirds per man, thrown from two screened traps in 6 directions at 18yds. rise, the highest aggregate in the three shoots to win, national rules to govern. Entries must be made before the competition begins. Fifty cents will be charged for birds, which purse will go for prizes for shooters who make 40, 30, 20 and 10 per cent.

CLEVELAND, June 7.—Seven members of the East End Gun Club took part in the semi-monthly badge shoot held on the club range this afternoon, and Nicklous came out of the contest winners of the first and second badges respectively. The conditions were 15 single Peorias and five pairs at 18yds rise. The score follows:

D June	111111111111111	11 11 11 11 11—25
J H Maggo	111001101111111	01 11 10 00 00—16
C M McCracken	101001111101111	10 11 11 11 11—20
Levi Wherry	010110111111100	11 11 00 00 11—16
J J Six	111111101111101	11 10 11 11 01—21
Nicklous	110111111101111	01 11 11 11 11—22
K Henry	010101111011000	01 11 01 11 11—16

CLEVELAND, June 9.—The Kirtland club held its badge shoot on the club range this afternoon, and Richardson will wear the trophy until the next shoot. Two team shoots and one double bird sweepstake were held. Following is the score of the badge shoot, the conditions being twenty blue rocks sprung from five traps at eighteen yards:

Prechtel	11111101101111110111—17	Sharp	00110011000010011111—10
Roach	11110111011101111111—16	Newell	10111111011110111111—17
Wood	10110111110111101111—15	Sall	11111101111110111011—17
Phillips	11011000110111010101—12	Morris	10110010101111111000—11
Forester	11010011110101110011—13	Honecker	00111001101010110001—10
Richardson	11111111111010111101—18	Towns	00111101101101111100—13
Bell	10110100100111111000—11	Martin	11111110111010110010—15

The first team shoot, 10 single blue rocks, resulted as follows:

Prechtel's Team.		Closse's Team.	
Prechtel	9	Closse	8
Richardson	9	Roach	5
Sall	5	Wood	2
Phillips	5	Newell	7
Forester	9	Honecker	4
Towns	2	Bell	5
Morris	8	Sharp	3
Martin	8	Allen	2
Lawn	2—57	Chubb	8—41

The second team shoot, 6 singles and 2 pairs of blue rocks at 18yds. rise being the conditions, resulted as follows:

Newell's Team.		Sall's Team.	
Newell	8	Sall	6
Prechtel	8	Richardson	8
Forester	9	Martin	6
Closse	5	Wood	5
Morris	7	Towns	6
Roach	7	Phillips	7
Chubb	6	Bell	4
Sharp	2—52	Allen	5—47

At the close of the team shoot a double-bird sweepstake shoot was arranged. The condition were 10 blue rocks, 18yds. rise. Richardson broke 10, Roach 6, Bell 7, Prechtel 9, Forester 6, Newell 8, Closse 6, Wood 5, McGuyre 5, Sall 5, Towns 7, Phillips 1, Sharp 5. Richardson won the purse.

BELLEVUE, O., June 6.—The opening shoot of the Bellevue Gun Club tournament was held to-day. The weather was fine and the grounds crowded. A very large number of ladies were among the spectators.

Shoot No. 1, 9 single Peoria blackbirds, 20 entries at $2—Schachtele 7, Valentine 5, Heat 9, Welker 6, Benscotten 8, Pierson 8, Smith 7, Deyo 6, Bodette 5, Welch 2, Hart 8, Warden 3, McCormick 7, Chandler 7, Paul 8, Eckford 8, North 6, Croy 7, Heikes 8, Chubb 6. First, D. Heat; second, Pierson and Benscotten; third, Smith and Croy.

Shoot No. 2, 8 blue rocks, 20 entries at $2—Deyo 8, Schachtele 7, Benscotten 7, Braden 4, Heat 8, Warden 5, Heikes 8, Chubb 4, Valentine 9, Chandler 7, Hart 7, McCormick 6, Eckford 7, North 8, Croy 7, Pierson 5, Paul 9, Bodette 7, Welker 4, Harness 6. First, Valentine and Paul; second, Deyo, Heat, Heikes, North; third, Benscotten and Hart.

Shoot No. 3, 5 live birds, 25yds. rise, use of one barrel, 20 entries, at $3.50—Heikes 5, Schachtele 5, Chubb 4, Harkness 2, Benscotten 4, Deyo 3, Manden 3, Pierson 2, Braden 4, Smith 3, Richards 3, Heal 2. Eckford 3, Sprose 5, Bedette 3, North 4, Lanterman 3; Warden 4, Hart 3, Coonrad 3, Croy 5, Chandler 5, Valentine 3, 3, Paul 3. First, Heikes, Schachtele, Sproos, Croy and Chandler; second, Chubb, Benscotten, Braden, North and Warden; third, Mauden.

Shoot No. 4, 9 Peorias, 23 entries, entrance $2—Braden missed 3 and withdrew, Lanterman 7, Eckford 8, Deyo 5, Valentine 7, Pierson 7, Heal 7, Schachtele 8, Welker 6, North 8, Chubb 6, Heikes 9, Cray 6, Sprose 6, Smith 4, Bellamy 5, Bodette 9, Hart 8, McCormick 8, Chandler 6, Paul 8, Fitzgerald 7, Benscotten 9. First Heikes, Bodette and Benscotten; second Eckford, Hart, North and McCormick; third Lanterman, Valentine, Piersou, Heal, Fitzgerald.

Shoot No. 5, 12 blue rocks, 22 entries, at $2.50—Heal 10, Valentine 8, Warden 6, Schachtele 7, Heikes 10, North 11, Chubb 7, Curtis 5, Croy 9, Bellamy 4, Bodette 9, Pierson 5, Deyo 10, Sprose 9, Benscotten 12, Eckford 8, Chandler 7, Hart 10, Braden 4, Lanterman 8, McCormick 9, Paul 10. First Benscotten; second North; third Heal, Heikes, Deyo, Hart, Paul.

Shoot No. 6, 9 live pigeons, 25yds.. 20 entries at $5—Heikes 7, Schachtele 5, Chubb 5, Eckford 7, Benscotten 6, Harkness 3, Smith 5, Coonrad 4, Manden 4, Bodette 5, Warden 5, Braden 5, Valentine 1, Richards 7, Croy 6, Bellamy 6, Pierson 6, North 6, Deyo 5, Heal 6. First Heikes, Eckford and Richards; second Benscotten, Croy, Bellamy, Pierson, North and Heal; third Schachtele, Chubb, Smith, Bodette, Warden, Braden and Deyo.

Shoot No. 7, 12 blue rocks, 18 entries, at $2.50—Heikes 12, Croy 10, Hart 11, Benscotten 11, Schachtele 11, Paul 8, Warden 6, Valentine 9, Heal 5, Eckford 11, North 6, Smith 10, Pierson 9, Deyo 10, Welsh 8, Bodette 10, Chandler 10, Cupp 6. First Heikes; second Benscotten, Hart, Schachtele and Eckford; third Chandler.

June 7.—The second day's tournament was a grand success and the crowd was immense. The ladies' stand was crowded:

Shoot No. 8, 9 Peorias, entrance $2, 18 entries—Heal 6, Avery 8, Chubb 7, Heiks 8, Crozier 8, Schachtele 8, Benscotten 9, Deyo 6, Bellamy 6, Richards 4, Braden 7, Bodette 7, North 6, Valentine 7, Croy 7, Smith 8, Harkness 8, Eckford 5. Benscotten first, Avery, Crosier, Schachtele second, Braden and Bodette third.

Shoot No. 9, 9 blue rocks, 22 entries, entrance $2—Hicks 9, Chubb 7, Heal 4, Schachtele 7, Valentine 7, Benscotten 9, Crosier 7, Deyo 7, North 5, Bodette 7, Bellamy 4, B. Deyo 4, Richards 7, Eckford 6, Croy 6, Brayden 5, Hart 8, Smith 7, Warden 6, Harkness 5, Pierson 7, Avery 5. Heikes, Benscotten first, Hart second, Smith, Deyo, Pierson third.

Shoot No. 10, 7 live pigeons, 25yds., 22 entries, entries $5—Heiks 7, Chubb 4, Schachtele 5, Croy 6, Crosier 5, Heal 5, Eckford 6, Harkness 2, Bodette 4, Conrad 6, Braden 5, Valentine 5, Richards 2, Benscotten 5, North 4. Hart 7, Smith 4, Warden 7, Miller 4, Deyo 6, Bellamy 5, Pierson 7. Heiks, Hart, Warden, Pierson first, Conrod, Croy, Eckford, Deyo, second, Crosier and Braden third.

Shoot No. 11, 12 single blue rocks, 24 entries, entrance $2—Crosier 8, Croy 8, Heiks 11, Chubb 8, Avery 10, Conrad 10, Bellamy 7, Schachtele 11, Eckford 8, Pierson 4, Heal 9, Hart 10, Richards 6, Braden 7, Lanterman 8, Sutton 6, Bodette 9, Bing 5, Valentine 9, Smith 9, Benscotten 11. North 10, Deyo 6, Dennis 7. Schachtehle, Heiks, Benscotten first, Conrad, Hart, Avery, North, second, Bodette, Smith, Valentine, Heal third.

Shoot No. 12, 12 blue rocks, 23 entries, $2—Deyo 10, Crosier 9, Bing 9, Conrad 8, Warden 7, Smith 8, Stewart 6, Lanterman 4, Schachtele 10, Bodette 7, Hart 10, Avery 10, Heiks 12, Braden 8, Eckford 10, North 7, Chubb 7, Pierson 10, Valentine 9, Croy 10, Miller 5, Heal 9, Benscotten 10. Heiks first, Eckford, Pierson, Benscotten, second, Crosier, Bing, Valentine, Heal, third.

NEWARK, N. J.—The forth shoot in the series of monthly contests inaugurated by the South Side Gun Club, will be held on Thursday, June 21, beginning at 9:30 o'clock in the morning. It will be a class shoot under club rules with prizes divided into 40, 30, 20 and 10 per cent.... A fifty-bird match was shot at Erb's on June 8 by Oswald Von Lengerke and Charles Heath for $200 a side, under Hurlingham rules, at 30yds. rise. Von Lengerke shot Heath out on the 35th bird, having killed 33 while Heath killed but 17. The birds were excellent. Von Lengerke missed only his forth and sixteenth.... The West Newark Gun Club will hold its next shoot on July 4 ... The South Side Gun Club will go to Springfield on Saturday next to shoot a team match with the Union Gun Club, each side putting in 12 men.

JERSEYVILLE, Ill., June 5.—The following scores were made at the weekly shoot here this afternoon, during a very high wind and good scores were out of the question. Medal shoot, 20 standards: Chappell 16, Beatty 7, Warren 14, Hutchison 13, Perrings 13, Skelly 11, Tuck 15, Snecked 15; medal won by Chappell the third time. Sweep, 6 targets, one money: Perrings 3, Warren 5, Hutchison 5; Warren and Hutchison divided. Sweep, 6 targets, one money: Perrings 6, Warren 3, Hutchison 4, Chappell 4, Skelly 5, Tack 4 Beatty 1. At 10 targets for the gold badge: Skelly 6, Tack 6, Hutchison 5, Perrings 7, Beatty 8, Chappell 8, Stoeckell 5, Warren 7; Chappell first, Warren and Perrings second, Skelly third. Six targets, two moneys: Warren 3, Chappell 4, Beatty 0, Perrings 3, Skelly 6, Snell 3, B. Kirkpatrick 3, J. Kirkpatrick 3, Stoeckell 5.

SOUTH SIDE GUN CLUB, Newark, N. J.—The fourth of the series of monthly shoots will take place on June 21, at 9:30 o'clock. The grounds are situated on New Jersey Railroad avenue, near Lehigh Valley Coal Depot, and may be reached via the Pennsylvania Railroad, Emmett street station, Newark & New York Railroad, Broad street station, and Delaware, Lackawanna & Western Railroad.

AURORA, N. Y.—The Union Gun Club, of Western New York, will hold a two days' tournament at Aurora to-day and to-morrow.

Canoeing.

A. C. A. PRIZE FLAGS.

A FEW weeks ago the regatta committee sent out a circular to a number of clubs asking contributions of flags for the meet prizes. Each club was asked to subscribe a flag or send $5 to the chairman. The committee take pleasure in publishing the names of the clubs who have most generously responded to the call. Only a few clubs have not as yet been heard from: Quaker City C. C., Philadelphia C. C., Brookville C. C., Brooklyn C. C., Amsterdam C. C., Vesper B. and C. C., Deseronto C. C., Ottawa C. C., Mohican C. C., Shattemuc C. C., Oakland (Cal.) C. C., Pequot C. A., Knickerbocker C. C., Toronto C. C., Shuh-shuh-gah C.C. (Winchester, Mass.), New York C.C., Springfield C.C., Rondout C.C., 18 in all. About 30 prizes will be needed, and it is hoped that a few other clubs will come forward with their aid. The following clubs declined for good and sufficient reasons to subscribe: Potomac C. C., Trenton C. C., Paterson C. C. The committee append the following letters to illustrate two kinds of canoeists that belong to the A. C. A., and with whom they have had to deal:

BOSTON, Mass., May 25, 1888.—Paul Butler, Esq., Lowell, Mass.—Dear Sir: The Shuh-shuh-gah C. C., of Winchester, Mass., desires to furnish one of the A. C. A. prize flags as per circular of the regatta committee (of which we did not receive a copy, being a new and unknown club), and I therefore inclose check for $5 to your order to be applied to that purpose. Our club has twenty-six members, is the successor of the Misticke C. C., and is officered as follows: Captain, G. B. Tiley; Lieutenant, C. S. Sergeant; Purser, F. C. Childs; Secretary, T. A. Apollonio. Kindly acknowledge receipt and oblige yours truly, C. S. SERGEANT.

——, May 19, 1888.—Mr. C. Bowyer Vaux, Chairman of Regatta Committee, Dear Sir: I am instructed by the members of the "—— Canoe Club" to say:—that as only four of the fourteen members of our club are members of the A. C. A., and as but *one* of these has ever attended a meeting of that organization, we think that the Regatta Committee for 1888 displays an unlimited amount of "brass" in asking us to donate prizes for which the members of that committee and a few other canoeists may compete; if you want prizes for which to race, provide them yourselves, as we are obliged to do under similiar circumstances, and as we hope we may always be able to do. Respectfully yours, ——, Sec'y.——.

CAPTAIN KENDALL'S CRUISE.

NEW SMYRNA, Fla., May 23.—*Editor Forest and Stream:* This should be called Old Smyrna, for it is of a decidedly ancient pattern, old houses and ruins do most abound. Made a big run yesterday through a perfect wilderness of mud flats, over oyster bars, narrow and intricate channels, etc., and the whole dominated by the ever-present mosquito.

The greatest novelty I can think of is we have have not seen a bird hunter for two whole days. People who have not been through this section can form no estimate of the extent to which plumage birds have been slaughtered. We have met the hunters everywhere, often two or three families living together, their whole business being to get plumes for market. One man told me the other day that "it paid better than farming." Said he, "I was out just nine days last month and cleared $94. Got into a big rookery where the birds were nesting and shot all I could handle." And so we find them on the whole of our cruise, all bent on wiping out the plumage birds, and I guess they will do it.

I believe my last letter was written from Fort Lauderdale. We left there on May 11, got as far as Hillsboro Inlet, headed off by northeaster, ran in and worked up through to Lake Boca Ratone, where we made a portage of 30yds., and on May 14 we paddled up to Lake Worth. Hillsboro Inlet is the place where Hamilton, the mail carrier, was lost. Mr. Coman tells me that he (Coman) found the carrier's clothing and mail bag on the bank and his boat was adrift on the other side of the river. He may have been eaten by sharks, he may have been drowned; no one knows any more than this.

Mosquitoes are far too many and I fear they may drive us out yet. We shall complete the circuit of Florida at all events, whatever we do afterward. But "I am tired now and sleepy too," so I'll tell you about Boca Ratone in my next. TARPON.

THE ATLANTIC DIVISION MEET.

A MEETING of members of the Atlantic Division was held in New York on June 11, Vice-Com. Stanton presiding. The committee on camp site made a report, after which a motion was made by Mr. Stephens to the effect that whereas it was uncertain as to how many members could be depended on to attend the meet, and any permanent camp must involve a large expense for floats, steamboats, etc., owing to the difficulty of securing a suitable place within easy reach; that a cruising meet be held in the waters about New York, Staten Island and Sandy Hook. This motion was carried unanimously and vote was taken as to the date, the decision finally being that the members should rendezvous at the Passaic River camp on Newark Bay near Bayonne on July 4, and that the cruise should start next day. The route proposed is through Staten Island Sound to Raritan Bay, thence to the Shrewsbury River. Canoeists from the Delaware can come by rail to Perth or South Amboy, or to Bayonne. A committee including Messrs. Stephens, N. Y. C. C., Cox, Essex C. C. and Brokaw, Brooklyn C. C., was appointed to arrange the programme for the cruise, which will be published as soon as possible. The idea of a cruising meet was favorably received by all present, and there is every indication that it will be a success.

THE A. C. A. MEET.

THE below named members are appointed a committee on cruising arrangements and on competitions for cruising canoes for the meet of 1888. They will prepare and publish a programme and will award prizes. Special prizes offered by members for cruising canoes in competitions not under the regatta committee's rules will be received by them. Mr. L. W. Seavey, chairman, New York; Mr. W. L. Palmer, Albany; Dr. G. L. Parmele, Hartford. With power to add to their number.

JUNE 9, 1888. R. W. GIBSON, Commodore.

To the Committee on Cruising Canoes:

GENTLEMEN—I beg to offer a first prize flag to be competed for in an obstacle race by cruising canoes with camping kit aboard, under such conditions as you may approve. R. W. GIBSON.

PITTSBURGH CANOE CLUB-PROGAMME SEASON OF 1888.—Club Days.—Each Saturday afternoon from May 12 to Nov 1, shall be recognized as club day, and all members are requested to be present at the boat house on as many of these days as possible. Spring Regatta.—May 30 shall be regatta day, when a steamboat will be provided, to be paid for by subscription of the members participating, to convey members, guests, and canoes to the course on Monongahela River at Homestead. An unlimited race will be sailed, in which all competitors will be timed. A handicap race, based upon time made in the unlimited, will be sailed in P.M. Prizes in these races will be flags, presented by the Captain, Jas. K. Bakewell. Record Cup Races.—June 23, July 21, August 18, September 15, and October 13, shall be the race days, when sailing races will be held upon the Allegheny River between Sixth street and Union Bridges. A record shall be kept in which the winner of each race receives as many points as there are starters in that race, the second man one point less than the winner, and so on; the last man receiving one point if he finishes the course. At the end of the season, the member having the highest number of points shall be awarded the club record cup, to be held by him for the ensuing year.

NEW YORK C. C. REGATTA.—The spring regatta of the New York C. C. will be held on June 16 off the club house, between Tompkinsville and Stapleton, Staten Island. The races are as follows: I. Sailing, unclassified small boats. II. Sailing, senior class canoes and novice class canoes. III. Paddling, Class A. (This class includes all canoes of not less than 28in. beam). IV. Paddling, Class B. (This class includes all canoes of not less than 30in. beam). V. Paddling, tandem in decked sailing canoes, classes A or B. The races are open to members of other canoe clubs.

A. C. A. MEMBERSHIP.—Eastern Division: Lathrop Hedge and Frank A. Heyer, Boston, Mass.

Yachting.

FIXTURES.

LARCHMONT SPRING REGATTA, JUNE 9.

THE first of the larger races was sailed successfully on Saturday over the new courses of the Larchmont Y. C.; the day, in spite of the bad beginning, being all that could be desired. In the early morning there was a dense fog and no wind, but about 11 A. M. the breeze came in from the south, and for the rest of the day it blew from about S.W, with force enough to make a good race, while the fog soon cleared before it and left a warm and delightful June day. Unfortunately there were not entries enough in any one class to make a close race, while in several but one yacht was entered, so that she was compelled to start in the class above, assuming a handicap thereby. The regatta was open to neighboring clubs, but in addition to the regular prizes a pennant was given to each yacht of the Larchmont Y. C. which won in her class or sailed over in the event of no competitor; this pennant to be held subject to challenge during the season from other yachts of the club. The starting line for all the courses was plainly marked out in the harbor by two boats, each with a large club flag, while a sloop carrying the same colors was stationed at each of the other points. The first of these, at Hempstead Harbor, was turned by all classes; from there the large sloops went to a mark off Stamford Light, thence back to Hempstead and home, 27 miles; the others turned a mark off Captain's Island, from which point the classes below No. 7 came directly home, making 16 miles, while the schooners and the other classes of sloops turned Hempstead mark again, making 20 miles. The entries were:

Class D—Schooner Clio, E. C. Moffat, 72ft. sailing length.

Class F—Schooners Agnes, J. L. Winslow, 57ft. 3in.; Leona, J. H. Sterling, 49ft.

Class 3—Sloops Shamrock, J. R. Maxwell, 71ft. 8in.; Fanny, Fiske Bros., 63ft. 6in.; Huron, Bloodgood & Kelly, 66ft. 10in., and Anaconda, J. G. Prague, 64ft. 3in.

Class 6—Sloops Daphne, Com. Lowery, 48ft.; Adelaide, R. T. Inman, 46ft. 2in., and Nymph, F. W. Flint, 45ft.

Class 8—Sloops Eurybia, Com. Pryer, 36ft. 1in.; Ariel, Dean Bros., 31ft. 6in.

Class 9—Sloops Kangaroo, Franklin Beames, 27ft. 11in.; Amazon, Dr. Lewis, 26ft. 4in.

Class 15—Catboats Lorna, E. J. O'Gorman, 24ft. 5in.; Shrew, R. H. Chittenden, 25ft. 6in.

Class 15—Catboats Fairy, F. Towle, 21ft. 9in.; Olive, N. F. Noxon, 22ft. 8in.

Class 16—Catboats Kid, Barnard Thayer, 18ft. 7in.; Narrioch, Lieut. Pitcher, 18ft. 6in.

The above measurements are by the club rule, the length taken parallel to the waterline and at a height of 2 per cent. of its length above it. Anaconda and Nymph were each obliged to enter a higher class at an increased measurement. It was expected that Pappoose would start, but she was on the ways at City Island and did not get off in time. The new courses are very much better than the old, but still it is impossible for one steamer to time all the yachts at each turn, and in this race no attempt was made to get the official times except at the start and finish. In the future it will probably be arranged that a time keeper will be stationed in each stakeboat. After some waiting in the fog the tug B. T. Haviland came in with the cutter Huron in tow, and soon started out to the line with the regatta committee. Gradually the fog lifted, until when the preparatory gun was fired at 11:47 it promised to trouble the yachts no longer, and in a short time the opposite shore of the Sound was visible.

The start was given at 11:52, the fleet going over in a string, all on starboard tack, most of them setting small jibtopsails. Shamrock and her little sister, Daphne, led the line, with Nymph in company with them.

Spinaker booms were lowered to port as the fleet neared the markboat in Hempstead Harbor, and soon all were winged out before a freshening breeze, and with a good ebb under them. Shamrock, of course, led the procession, but Daphne hung closely to her. Once round the mark Shamrock headed down the Sound and drew away from Huron, her nearest rival, who thus far had led Fanny some little way, but with sheets off the latter soon passed her and held the second place. Shamrock managed to carry her spinaker to port until well up to the second mark, but the others all ran by the lee, and had to take in spinakers and finally to jibe some time before the mark was reached, jibing a second time at the mark. The third leg from Stamford Light, and also from Captain's Island, was to windward, the fleet now being well scattered. As they neared the Hempstead mark Daphne was well in advance of the entire fleet, while Nymph came up at a rapid pace close in under the Long Island shore. The boats came across to the finish with a beam wind, the little fellows, from Captain's Island direct, finishing just ahead of the others. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS D—SCHOONERS OVER 59 AND UNDER 68FT.				
Clio	11 59 32	3 35 15	3 35 43	3 35 43

CLASS 15—CATBOATS 20 TO 23FT.				
Fairy	12 00 35	3 35 37	3 35 22	3 34 13
Olive N	12 00 30	Did not finish.		
CLASS 16—CATBOATS 20FT. OR UNDER.				
Kid	12 04 45	3 52 03	3 51 18	3 51 17
Narrioch	12 00 52	4 25 50	4 24 58	4 24 58

Though Shamrock was never hurried she sailed very fast, and from all appearances has been improved by the alterations of the winter, beating Fanny very easily. She divides the honors of the day with Mr. Maxwell's other venture Daphne, now the flagship of the Larchmont Y. C. The latter of 46ft. l.w.l. beat the Adelaide, of the same length, by over 8m. Nymph, the new Burgess boat, had no suitable competitor, but sailed very well with Adelaide, being within 2m. of her time, thought nearly 7ft. shorter. As the arrangements were all in the hands of the regular regatta committee, Messrs. Willard, Greacen and Scott, it is needless to say that everything passed off well, without any hitch or misunderstanding.

The Larchmont Y. C. will offer prizes for a race of the 40ft. class in the fall regatta for the purpose of bringing together all the boats in this class, and the presence of all the new Boston boats of Mr. Burgess's design has been promised. There will be about ten entries, Crocodile, Rival, Banshee, Nymph, Chiquita, Baboon, Xara, and some of the older boats. It is hoped also that Mr. Tweed's new 40 footer, by Fife, will prove a racer and will enter with the rest, making as fine a representative fleet as has ever been brought together on an American course.

The following amendments were adopted by the L. Y. C. at a meeting on June 2:

"By-laws, Chapter X., regattas.—To be amended by substituting the word 'spring' for the word 'pennant.' Chapter XI., prizes.—Section 1 to be amended to read as follows: At all regattas a prize shall be offered in each class, and in each class in which four or more yachts start a second prize shall be offered. And the chapter to be further amended by adding to it the following two sections: Section 3—The regatta committee shall have power at any regatta to offer in any class a special prize for yachts originally built before a certain date, which date shall be determined by the regatta committee. Section 4—The regatta committee shall have power to offer individual prizes for amateur members of a winning crew in any special race.

"Sailing rules, entries.—The last paragraph to be amended to read as follows: At all regattas the flag officers and regatta committee may invite entries from such other yacht clubs as they shall deem proper."

SOUTHERN Y. C. REGATTA, JUNE 5.

THE spring regatta of the Southern Y. C. was sailed on June 5 in a strong breeze, the starters being as follows:

Schooners—Frolic 37ft. 4in., Viola 37ft. 8in.

Cabin sloops—Zoe 31ft., Susie B. 32ft., Stella 35ft. 4in.

Open sloops—Lady Sarah 21ft. 9in.

Catboats—Evelyn 27ft., St. John 26ft. 3in., Dora D. 28ft., Fatna 25ft., Pansy 22ft., Minnie S. 19ft. 6in., Anna S. 25ft. 9in.

Anna S. did not cross the line properly and was not timed. The corrected times are:

Viola	2 45 57	Lady Sarah	3 09 13
Susie B	2 32 04	Evelyn	2 55 48
Zoe	2 37 00	Fatna	2 35 15
Stella	2 50 21	Minnie S	3 14 53

The St. John carried away her mast, Dora D. and Frolic collided and both gave up, and Pansy tore her sail badly.

The prizes were: For schooners, a pair of marine glasses, specially imported; cruising sloops over 30ft., cruising rig, club pennant and the historic S. Y. C. solid silver prize of 1853, presented by Mr. John Astredo; first-class sloops, clock, compass, barometer and thermometer in stand; second-class sloops, silver wine cooler; third-class sloops, clock and barometer; cat-rigged boats, first prize $20, second $5.

The officers of the day were: Judges, Alex. Brewster, Wm. Lynd, O. F. Vallette; Timers, H. Bonnabel, A. M. Aucoin, Jos. McNeil; Regatta Committee, C. L. De Fuentes, chairman, P. Labouisse, A. Brewster, J. M. Bourge, C. P. Richardson.

A hop was given in the evening.

The club fleet will soon receive a most important addition in the shape of a new Burgess boat 50ft. over all, built in Boston for Mr. Chas. Richardson, owner of the Susie B. She is built from southern oak and cypress, shipped to Boston for her.

ROCHESTER Y. C. OPENING CRUISE.

THE opening cruise of this club which occurred on May 29 was a most successful event, and one which will long be remembered by those who were fortunate enough to participate. The only thing to be regretted was the absence of a good wind in both going and coming from Sodus Bay. The fleet started at 11 A. M., under command of Commodore Newell, all headed due north. This course took them well out into the lake, and gave the fleet an excellent opportunity to execute several naval manœuvers, which proved highly satisfactory. It was 4 P. M. before the signal "sail at will" was given, when each yacht was put on her course for Sodus Light, which was just visible. The wind was so light that the yachts made very poor time, and the first to reach port, the Florence, did not arrive until 1 A. M. The rest came in at intervals of a few minutes, and all had arrived at 3 A. M. The Oswego fleet also arrived at this time, accompanied by the cutter Madge on her way to Rochester. The day was spent in the exchange of greetings between the Rochester and Oswego yachtsmen, and during the afternoon Commodore McFarlane, of the Oswego Y. C., assisted by Commodore Newell, of the Rochester Y. C., reviewed the fleet. The yachts of the Rochester fleet made a very creditable appearance, and Commodore Newell is to be congratulated, as it is largely due to his untiring efforts that the club has attained its success. The yachts returned in groups of three or four and came into port in about the same order as they left Sodus Bay. The new yacht Majel did not show as much speed as was expected. She is no doubt a heavy-weather craft. Madge was sailed with her smallest canvas, and in spite of Capt. Goulding trying to hold her back she outsailed both the Ella and Crickett in the run from Oswego to Sodus.

The Madge has been given her trial trip under her new owners, and proves herself worthy of all that has been said regarding her. Her owners are more than pleased with her, and are only waiting for a chance to try her with some of the favorites. The Merle arrived from Oswego Saturday night, and Vice-Com. Ames was an interested guest on board the Madge Sunday. The first practice sail and drill will occur on Thursday, the 14th, and a goodly number of the yachts are expected to participate. Ladies' day is set down for the 21st inst., and a most enjoyable time is anticipated. The Majel has not distinguished herself so far as a "flyer." She will no doubt do good work in heavy weather, and is certainly a handsome craft.—X. (June 11).

GREAT HEAD Y. C., JUNE 9.—The first race of the season was sailed in a light S.E. wind, the times being:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Good Luck, J. B. Farrell	22.00	1 32 10	1 05 26
Black Cloud, Aaron Brown	23.10	1 31 11	1 06 09

Modoc, D. W. Belcher	15.07	1 01 21	0 38 19
Lucy, W. H. Ranson	13.10	1 05 08	0 40 09
Topsy, Henry Vinal	14.04	1 07 50	0 42 07
Sprite, H. M. Wells		Withdrew.	

Prizes—First class—First, $20, Good Luck; second, $12, Black Cloud; third, $8, White Fawn. Second class—First, $15, Em-Ell-Eye; second, $12, Trouble; third, $8, Nereid. Third class—First, $15, Flora Lee; second, $12, Diadem; third, $8, Zoe; fourth, $5, Nora; fifth, $5, Wild Fire. Fourth class—First, $18, Medoc; second, $15, Lucy; third, $13, Topsy. The judges were Harry Hutchinson, C. H. Worcester, A. A. Martin, E. H. Bradshaw, S. A. Freeman, G. B. Cartwright, Wm. Daly, Jr., and F. H. Mudge.

DEATH OF COM. HENRY CLAY FUNK.—*Editor Forest and Stream:* H. Clay Funk, commodore of the Corinthian Y. C., died on May 25. His quick decision, firmness and self-reliance made him eminently qualified to lead, and though then very young, he fought in the rebellion to perpetuate the Union, with a spirit and steadfastness akin to the patriots of '76. He was the pupil and friend of that venerable yachtsman, Benjamin Wilkin. By strict practical attention, and study of cause and effect applied to matter in hand, he rapidly advanced in the mysteries and deep-hidden secrets of the noble sport until he took his proper place among the best. He was not a professional, never having sailed a race for pay. He accepted the position of commodore in the Corinthian Club that the enthusiastic but untutored might profit by his experience. He was a prominent and highly respected member of the Quaker City Y. C. A proof of his prowess as a yachtsman was given in the annual regatta of that club last year, when with a purely Corinthian crew selected from the club of which he was the head, he distanced every yacht in his class (second) and closely contested first place in the race. Socially he was a genial, whole-souled gentleman, as a friend, firm and unflinching; but it was in the home circle the real value of the man was most felt. His death is not only a great loss to his family and friends, but to the yachting community.—CORINTHIAN.

COOPER'S POINT COR. Y. C.—The 5th race of the Corinthian Y. C. was sailed on June 5, the regular race being postponed on account of the burial of H. Clay Funk, Commodore of the club. The start was made from Cooper's Point at 2:26:30 P.M. The course was to Horseshoe buoy and return. The following boats were in line; first class—The Humes, Fitch and Adonis; second class —Item, Wilkins and Almond; third class—Cook and Anderson. The Humes and Wilkins turned the lower buoy together, closely followed by the Item. The Humes passed the home stake boat at 4:42:55; Wilkins, 4:53:05; Fitch, 4:58:15. Adonis, 4:58:18; Item, 4:59:55; Cook, 5:03:03; distance 12 miles. The time of the Almond and Anderson was not taken. The race was less spirited than usual on account of the death of the club's most prominent member. The wind was fresh from southwest and as much as the boats could stand up under with full sail. The next race will be over the regular club course, when all the club boats will be entered and all outside boats of the different classes are cordially invited to participate in the race, which will take place on June 26. The Item and Wilkins are matched to sail over the Quakey City Y. C. course for the champion flag and supper at Thomson's Hotel, Gloucester.

AN OLD-TIME SANDBAG RACE.—On June 7 a race was sailed off the Mill Rock Cottage, foot of Ninety-second street, East River, the prize being $20 in gold for the first and a silk pennant for second. The course was a triangle of about one mile, ten rounds, and the wind was strong from the north. The entries were: Julia, 17ft. 11in., sailed by Alfred Wright; Jessie A., 15ft. 9in., sailed by James Auld, and Triad, 16ft. 6in., sailed by William Rogers. Before the start Triad capsized and Jessie A. carried away her throat halliard block, and when both were finally ready the skipper of the Julia had withdrawn his boat. At last the Clipper, 13ft. 6in., was entered by W. Henry, and at 4:06 P. M. the race was started. Clipper capsized during the race, while Jessie A. twice was in trouble with her halliard block and once luffed into a canal boat and parted her forestay. Triad won first prize easily, but the others repaired all damages and sailed the race to a finish, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Triad	4 06 22	6 31 00	2 24 38	2 24 38
Jessie A	4 06 56	6 56 55	2 49 59	2 49 14
Clipper	4 08 08	Not timed.		

SOUTHWARK Y. C.—This club will hold its fourteenth annual regatta on June 18. There is a great interest taken in the regatta this year on account of the increase of sail from 62ft. around bolt rope to 72ft. of the fourth class boats, and also an increase in sail in the second class "duckers" from 42ft. to 52ft., and also a great interest taken in the third class "tuckups." These tuckups in this class are undergoing a change of rig which is unlimited. This class contains the champion boats of the Delaware River.

A FATAL COLLISION.—On June 7, as the steam yacht Gleam was coming up the Patapsco River at 10:30 P. M., she was struck and nearly cut in two by the steamer Joppa, bound down. All on board were saved except the owner, Mr. T. Harrison Garrett, who was thrown into the water by the steamer as she backed off from the yacht, the latter sinking instantly. Mr. Garrett's body was found yesterday.

THE COMING YACHTING SEASON.

III.—THE RACING FLEET.

THE long list of fixtures promises an unusually large number of races, the majority naturally being of local rather than of general interest, the races in which the united fleet will take place being as far as is yet decided as follows: June 12, Atlantic Y. C.; June 21, New York, followed on June 23 by the Seawanhaka. The Eastern regatta is set for June 28 off Marblehead, while the Larchmont annual comes on July 4. After this nothing is fixed until the Goelet Cups, about Aug. 10, followed by the race at Vineyard Haven for the cups offered last year. The fleet will probably disband after this, not going around the Cape. In the fall the New York, Seawanhaka and Larchmont clubs will hold each one regatta, and it is possible that the Eastern may do the same. The Atlantic has offered prizes for the runs on its cruise, and some prizes may be offered on the other cruises, but this list includes all the important racing. The severe weather of March with the cold and rainy spring that followed has seriously delayed the fitting out of the fleet, and many yachts are even now unprepared for the spring regattas, and if entered will do so in poor form, especially the new ones. It is unfortunate that the Atlantic Y. C. has set its regatta for the week preceding the New York and Seawanhaka, making it necessary to haul out twice in order to enter the three races. The custom has been for a long time that the Atlantic Y. C. takes Tuesday, the New York Thursday, and the Seawanhaka Saturday, so that the yachts when once prepared sail in all three events, but this year some will not enter the first, as they desire to dock only in time for the other two. Last season for the first time a fourth regatta for large craft was held, the Corinthian Y. C. taking the Monday following the Seawanhaka, but thus far no date has been announced by the club. It seems likely just now that owing to the general delay few Eastern yachts will be in the New York races, and few New York boats will venture around the Cape, especially as the Larchmont regatta on July 4 is becoming more attractive to the larger yachts every year. In any case the great event of the season is certain to be the Goelet Cup race at Newport, in August, as by that time the fleet will be in good racing form. In the meanwhile, however, it is likely that some private matches will be sailed, as there are a number of new boats to be tried with each other and also against the old ones. A match of this kind has already been sailed between the Vivid and the Wizard, it is likely that another will soon be settled between Ramona and Dauntless. Sea Fox and Elma will neither be in trim for the regular events, and a match later on could not fail to be interesting, while Katrina and Shamrock will have a score to settle after the new boat is in racing trim, which will not be for some weeks. In connection with the regular regattas it is necessary to return to the much discussed question of classification, which, in spite of all that has been said and done about it during the past year, is still in a very unsatisfactory condition. The large clubs have all moved in the matter, but without any hearty co-operation, and the result, though a slight improvement on the past, is still far from unity or system, as the following table of classes will show:

SCHOONERS.

	New York.	Seawanhaka.	Atlantic.	Larchmont.	Eastern.

In the schooner classes there is hardly a semblance of uniformity, each club retaining the sizes that it happens to find convenient, without regard for the yachts of its fleet, which at the same time may be enrolled in other clubs. In the single-stick classes the case is better, though there are two large clubs whose classes differ greatly from the other three. As regards the new limits of the classes, 70ft., 61ft., 53ft., 46ft. and 40ft., they are as good as any that could be devised, but it is unfortunate that the result was reached in such a manner, and that even now there are two clubs not in accord with the rest. In the numbering of classes, both schooner and sloop, there is no attempt at order or system, Class 1 in one club is Class 2 in another, Class 3 in a third and Class B in a fourth. What we said a year ago on this subject is just as true now as it was then, and though the practical difficulties have been in a measure lessened in the sloop class, the need of a thorough and uniform system is just as imperative. It is not easy to make up a full and accurate list of the racing fleet, but the following includes most of the yachts that will enter the season's races, the new yachts being marked thus *:

SCHOONERS.

	Length.		Length.
Dauntless, C. H. Colt..	112.00	Iroquis, T. J. Coolidge, Jr.	81.00

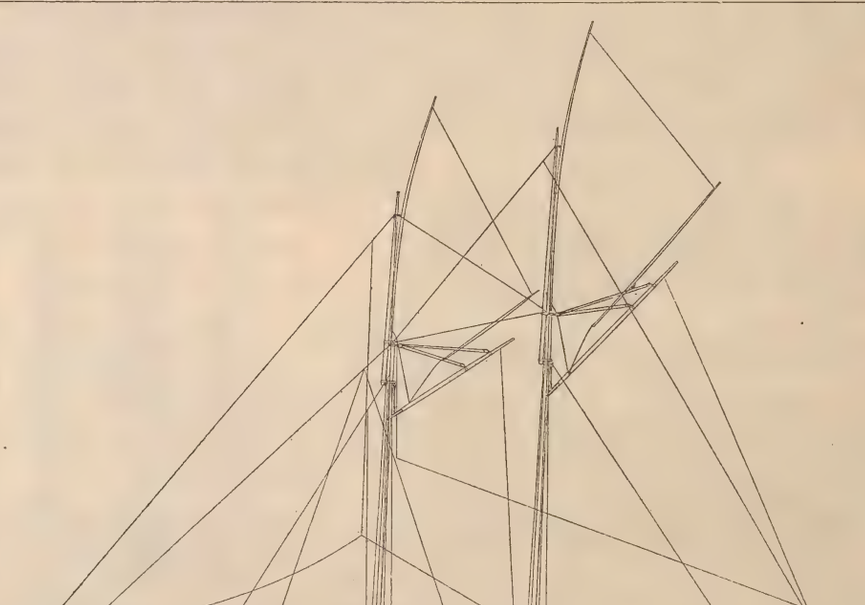
		Pappoose.....	36.00
		*Eurybia, Chas. Pryer.....	35.00

This list of about 40 schooners and the same number of single-stickers, includes all that are likely to race about New York and Boston in the sizes over 35ft., that is, all that usually race outside of their home port. The chief interest in the racing promises to center in the schooners, and of them in the class whose maximum limit is about 90ft. In the sizes above this there are two new boats, Yampa and Ramona, the former a steel yacht designed for cruising, but still good enough for the long races which are best suited to yachts of such size. At present she will go abroad under a cruising rig, and will not be in the racing this year, but she is likely to fly a racing flag some day in the event of a long ocean race like that of last year.



Ramona, though an old yacht, is practically a new boat, as she has been entirely rebuilt within the last two years, and now comes out with but little of the old Resolute about her. Both ends have been lengthened, the stern in particular being improved by a long counter; the planking is almost entirely new, the bulwarks and rail, with nearly all the deck work, are new, the keel has been deepened 2ft. 6in, with 17 tons of lead added, the straight sternpost has been replaced by a new one with a rake of 60 degrees, including new rudder and steering gear; the rig is entirely new, including a single jib and a pole bowsprit, and below the furniture and fittings are mostly new this year. As to the wisdom of such extensive repairs to an old boat there is room for argument, but as she stands to-day the owner has a very large and comfortable craft for the cruising that will be her principal use; while at the same time she promises to be speedy enough to take a good place in the races of her class, with Dauntless, Palmer, Mohican, Gitana and America. Dauntless has been refitted this season, with new garboards, topsides and general repairs, including a couple of very long topmasts for racing, so she may be expected to have a look in at the regular races. Palmer has been altered to a keel since she sailed last season, and the result of the alterations previously made will be more fully tested this year. Both Mohican and Gitana have been well overhauled this winter, coming out with pole bowsprits and other improvements in spars and rig, the latter being also painted white, but neither has been altered below water, save that Mohican has had 8 tons of lead run in her keel. America has been unchanged of late, while Montauk will await the result of the alterations in her sister, the Grayling, before going to Boston for similar changes.

The chief racing class is of course that from 80 to 90ft., the head of which for three years has been Sachem, but she will have harder work this year than ever before to hold her laurels. The longest boat in the class, Mr. Bryant's new Alert, is built for cruising only, and is not likely to be seen in the racing fleet this year. The next in size, however, the new Sea Fox, is built for speed as well as for general use, and while nothing has been sacrificed in the arrangement and fitting up, and she has all the accommodations of the best cruisers, she will spread racing kites in plenty, as the accompanying sail plan will show.

Should any Rip Van Winkle of the old schooner fleet awaken after a sleep of twenty years and open his eyes on the cracks of the class to-day, he would wonder what sort of craft he had fallen among, and probably call down deep imprecations on the new-fangled ideas. The rig of the Sea Fox shows the latest advance in the sparring and canvassing of a racing schooner, and in contrast with it we give the sail plan of the Columbia, a yacht of about the same length, a very good example of the old American schooner rig, with the masts of one length and well aft, and the cumbrous and complicated headgear. In these days of pole bowsprits and short foremasts the third sail plan has no little interest historically. It was made in 1873 by Mr. A. Cary Smith, for the schooner Prospero, 80ft. l.w.l., a keel yacht built for Mr. C. H. Contoit, and though fifteen years old, it would pass as new to-day.

SCHOONER "COLUMBIA"—1875.

SCHOONER "PROSPERO"—1873.

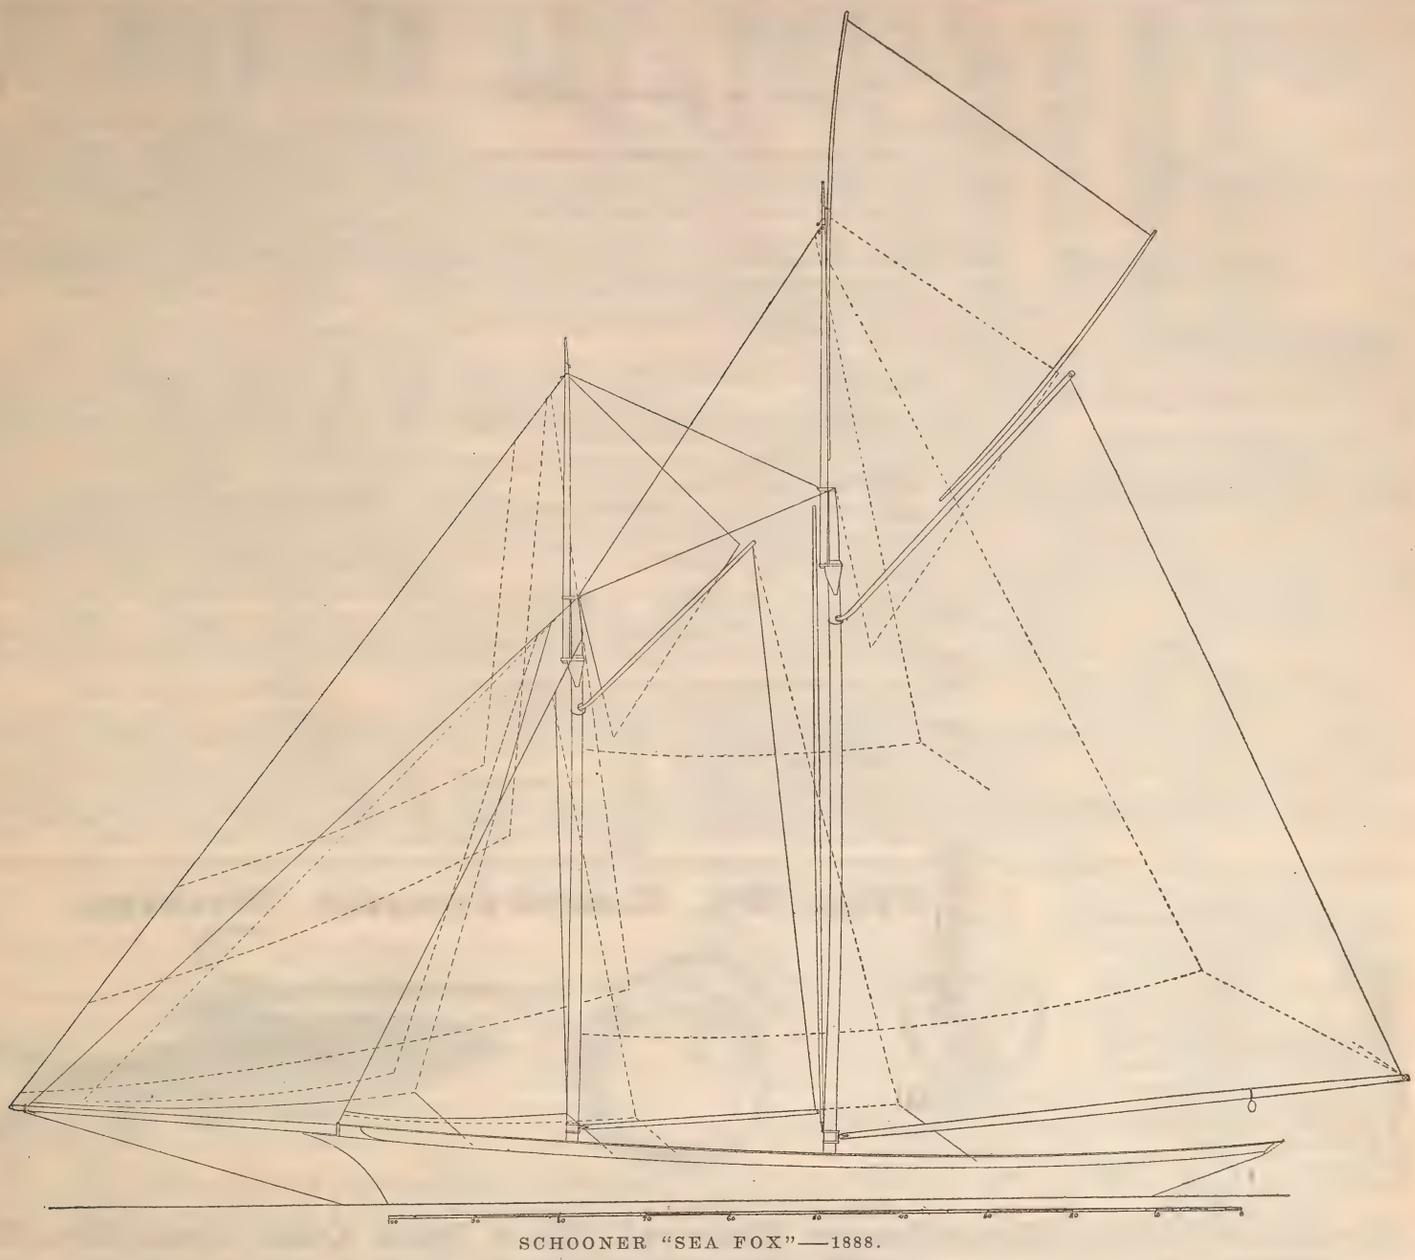
When put on the Prospero it was condemned by yachtsmen and longshore talent alike, and after a season or two it was replaced by the regular old-fashioned schooner rig, utterly devoid of all style or character, and to-day the yacht is in no way noticeable from dozens of others of her class, all equally commonplace. Again in 1883, ten years later, Mr. Smith introduced the pole bowsprit in the first sail plan of Fortuna, then building, but the owner objected to it, and the old rig was used. Only two years since, when a little schooner was rebuilt at Bay Ridge and the rig changed to the modern form, she was the butt for the ridicule of all the longshore critics. To-day the rig is general in all the schooner fleet, Ramona, Palmer, Mohican, Gitana, America and Troubadour of the old fleet all have conformed as closely as possible to it, while the new craft Sachem, Sea Fox, Iroquois, Elma and Marguerite have it as a matter of course. The most prominent example of the present rig has been for some years the Miranda, built by Mr. Harvey in 1876, and for the last two years familiar to American yachtsmen through her presence in the home fleet. In her the extreme of large mainsail, forward position of masts and difference of height in main and foremast was first reached.

[TO BE CONCLUDED.]

MONTGOMERY SAILING CLUB.—Fourth weekly cruise, June 3. Course, Norristown to Indian Creek and return, distance five miles. Weather clear; wind light to fresh, northerly.

	Length.	Elapsed.	Corrected.
Gracie, E. A. Leopold.....	12.00	1 48 20	1 39 00
Elsie, E. McAllister.....	15.00	2 03 40	1 53 40
Flying Eagle, J. Berndt.....	15.00	2 08 55	2 08 55
J. S. Frith, J. S. Frith.....	15.00	2 12 20	2 12 20
Warren, J. Wolf.....	14.00	2 40 10	2 30 10
Playford, J. Grisdale.....	15.00	2 47 00	2 47 00

Priscilla, Bowers, Volunteer, Scott, Igidious and Querner withdrew. Judge, William Alcorn.



BRIDGEPORT RIVAL-PROFESSIONAL MATCH, June 7.—Course, eight miles to leeward and return. Start from Bridgeport light 10:52:30 A. M. Weather clear; wind northwest, strong; tide, high water just turned ebb.

	Length.	Start.	Finish.	Elapsed.
Rival, F. I Hitchcock.....	21.00	10 52 30	2 21 51	3 29 21
Professional, Com. F. Burritt.	21.07	10 52 30	Carried away bowsprit and was towed in.	

The Rival is a new boat built last winter by Thatcher, of New Haven, and is smart. is ready to sail anything 21ft. long. This was a friendly race for $200 a side, to be made in four hours. Judges, C. M. Foster and L. K. Young. Referee, P. G. Sandford.

THE NEW FIFE CUTTER.—This boat, incorrectly given as a 40-tonner in a late issue, is 40ft., being 12ft. beam and 9ft. draft. Capt. Chas. Barr will sail for Scotland very soon to come out in her and she will be here some time in August. She will be in the class with the new Baboon, Xara and Chiquita, being some 2ft. narrower.

ALISTA.—Mr. Wiener's yawl arrived from Wilmington last week and is now at Hoboken. The racing this week makes it necessary to defer a description until next week, also any further notice of Capt. Norton's water ballast system.

SCHOONER "SEA FOX"—1888.

ATLANTIC Y. C., JUNE 12.

THE annual regatta of the Atlantic Y. C., on Tuesday, was favored with a long list of starters, 36 in all, and the finest of June weather, but the wind played a sorry trick all day and robbed the race of all excitement or interest. The day was beautifully clear, the sky and water perfect, and in the morning a light N.W. wind was blowing, but before noon it had fallen; while it was not until near sunset that the long-looked-for southerly breeze came in with any strength.

The courses were: Schooners and sloops in Classes 1, 2 and 3, from Bay Ridge, down through the Narrows, to and around Southwest Spit, Buoys Nos. 7 0 and 8½, passing to the west of same; thence around Scotland Lightship, keeping the same on port hand; thence around Sandy Hook Lightship, keeping it on port hand; thence returning to Buoys Nos. 8½ and 10, going around same keeping them on starboard; thence to home stakeboat; 37 miles.

Sloops in Classes 4 and 5, from Bay Ridge, around stake boat near buoy No. 8, off northern point of Sandy Hook passing to west of same; thence around Scotland lightship, keeping it on port hand; thence around Sandy Hook lightship, keeping it on port hand; thence home, 32 miles.

Classes 6 and 7, from Bay Ridge, around stake boat near buoy No. 8, keeping same on port hand; thence around Scotland lightship, keeping it on port hand; thence home, 24 miles.

Classes 8, 9, 10 and 11, from Bay Ridge, around stake boat near buoy No. 8, keeping the same on port hand; thence home, 20 miles.

The finish for all classes was at buoy No. 15.

The prizes were: A first to the winning yacht in each class, in which at least two yachts started, a second in each class, in which at least five yachts started. Also the Livingston Memorial prize for the first sloop of Class 5 in at home stakeboat, without time allowance, to be held on the conditions of its presentation. All yachts were restricted to topsails not extending above the truck or over 1ft. beyond the gaff. The starters were:

Schooners: Class 1—Palmer, Miranda, Grayling; Palmer allowing Miranda 6m. 23s. and Grayling 9m. 40s.

Class 2—Haze, Azalea, Gevalia; Haze allowing Azalea 1m. and Gevalia 5m. 11s.

Sloops and cutters: Class 2—Shamrock, Fanny, Huron; Shamrock allowing Fanny 3m. 48s. and Huron 5m. 8s.

Class 3—Hildegarde and Thistle; Hildegarde allowing Thistle 44s.

Class 4—Anaconda and Roamer; Anaconda allowing Roamer 5m. 9s.

Class 5—Enterprise, Stella, Nirvana, Amaranth; Enterprise allowing Stella 1m. 25s., Nirvana 3m. 58s. and Amaranth 4m. 35s.

Class 6—Ariadne, Phantom, Rival, Banshee, Pappoose; Ariadne allowing Phantom 2m. 41s., Rival 4m. 6s., Banhsee 1m. 41s. and Pappoose 7m. 26s.

Class 7—Mistral, Daisy, Ilderan, Eurybia; Mistral allowing Daisy 3m. 47s., Ilderan 6m. 27s. and Eurybia 1m. 3s.

Class 8—Hypatia, Kangaroo, Nyssa, Gem, Lena; Hypatia allowing Kangaroo 37s., Nyssa 1m. 37s., Gem 4m. 12s. and Lena 4m. 37s.

Class 9—Gleam and Frolic; Gleam allowing Frolic 1m. 3s.

Class 11—Catboats, Bijou, Marjorie, Cid; Bijou allowing Marjorie 2m. 18s. and Cid 15m. 30s.

Banshee and Pappoose were not officially measured, but a remeasurement will not change the result of the race. The numbering of the fleet was done in a most shiftless and slipshod fashion, some of the figures being too small to be read, while others were of the regulation size. Some yachts had one large figure and one very small one, making a ridiculous appearance, while some numbers were but half sewn on and could not be read at all, making the work of the time keepers very difficult.

The start was signalled by guns from the bluff, the preparatory signal being given at 10:32:50, the start for all above class 4 being at 10:38:02; for classes 4 to 7, 10:42:58, and for the rest, 10:47:53. The wind was then light N. by W., most of the fleet sending up balloon jibtopsails in stops, the schooners also having maintopmast staysails in readiness. The entire fleet was scattered at the time of the prepatory gun, and the start was slow and straggling, many being handicapped. With his usual promptness Capt. Terry had Grayling away for the line at the gun, and she came from inshore for the east end near the timer's boat. Just at this time the schooner yacht Clio, not in the race, put herself on the end of the line and squarely in the way of Grayling, forcing the latter to give way a little; a piece of work for which there is no excuse. Palmer and Hildegarde, the latter with her new cutter rig, came for the line promptly, but Miranda, Shamrock and many more were slow in getting over, though there was an ebb tide and wind enough to work ship readily. The start was timed:

Grayling	10 39 38	Amaranth	10 48 30
Palmer	10 41 31	Huron	10 49 00
Hildegarde	10 41 57	Roamer	10 50 53
Azalea	10 42 38	Phantom	10 51 28
Thistle	10 48 08	Kangaroo	10 52 07
Miranda	10 43 22	Eurybia	10 52 19
Nirvana	11 44 38	Ilderan	10 53 06
Gevalia	10 44 48	Daisy	10 53 33
Rival	10 44 48	Nyssa	10 54 08
Shamrock	10 45 53	Gleam	10 54 28
Ariadne	10 45 53	Hypatia	10 54 35
Banshee	10 46 20	Marjorie	10 54 50
Mistral	10 46 24	Gem	10 55 20
Haze	10 47 36	Bijou	10 55 30
Pappoose	10 47 53	Lena	10 56 18
Stella	10 48 01	Cid	10 56 47
Enterprise	10 48 21		

All were soon settled down to work, with spinakers to starboard, balloon jiptopsails, and on the schooners balloon maintopmast staysails, set; but the fickle wind had now left them to drift out of the Narrows as they could. Grayling of course had improved on her good start and was over half a mile in advance, with Hildegarde, Fanny and Shamrock hunting her. The little Rival had also gone off well and pushed ahead with the big ones, hanging very close to Shamrock. At noon Grayling was still above the Upper Island, while Shamrock was about half a mile astern, with Rival a few yards back, directly in her wake. On Shamrock's port beam were Fanny and Hildegarde, with Miranda and Anaconda next.

The rest of the fleet was scattered over a large space. For over an hour the fleet drifted slowly down, until at 1 P. M. the wind began to come in very lightly from the south. Sea Fox had come down with the fleet looking very stylish with main clubtopsail aloft, but she tired of the drift and set her spinaker to run home before the new breeze. The small boats worked down the Swash and turned their mark, Marjorie leading Bijou by several hundred yards, with Cid well astern; and at 1:45 they were on the way home. Inside the Hook the wind was very light, and the leaders merely drifted around Buoy 10, the times being:

Hildegarde	1 22 20	Thistle	1 36 10
Grayling	1 23 25	Haze	1 37 40
Fanny	1 30 30	Palmer	1 44 30
Shamrock	1 33 35	Huron	1 48 00

Miranda seemed to lose her way entirely and lay motionless near the buoy for a very long time. Once clear of the point of the Hook the leaders found a stronger wind and the beat to the Scotland began. The smaller craft, including Banshee and Pappoose, caught the others here, having gone a shorter course, and all worked out together, making a very pretty sight. The water was absolutely smooth, hardly a ripple all day, just what Fanny and Hildegarde liked, and both sailed very well. The first out to Scotland were Banshee and Pappoose, the former ahead but with a smaller lead than she had at the start, Pappoose being well within her time. The pair jibed around the mark and set jibtopsails for home.

Anaconda came next, with jibtopsail dragging overboard, far ahead of the only rival in her class, Roamer. After her came Eurybia, the large ones following; the times being:

Banshee	2 29 00	Grayling	2 46 00
Pappoose	2 30 40	Mistral	2 46 30
Anaconda	2 35 00	Hildegarde	2 46 40
Eurybia	2 44 55	Shamrock	2 47 25

Shamrock had been further to leeward than Grayling and Hildegarde, but she squeezed up and weathered the mark by a short leg, having gained considerably. Fanny was now astern and was not timed. On the reach across to Sandy Hook Lightship, Shamrock gained on Hildegarde, while Grayling ran away from both, gaining on Anaconda very fast. Miranda had by this time worked out of the Hook and was coming up on the fleet. The times at Sandy Hook Lightship were:

Anaconda	3 00 00	Thistle	3 31 10
Grayling	3 08 15	Nirvana	3 38 15
Hildegarde	3 11 10	Palmer	3 39 05
Shamrock	3 11 30	Huron	3 41 25
Fanny	3 18 00	Haze	3 42 40
Roamer	3 25 50	Amaranth	3 47 15
Enterprise	3 30 20	Gevalia	2 47 40
Stella	3 31 05	Miranda	3 50 30

Hildegarde made a very short turn of the mark, and Shamrock, following close, tried to force her way to windward but failed, her bowsprit going aboard the other to the great danger of her mainsail. As there was no sea and but little wind the two were separated without further damage than a few caps lost overboard. The drift home was long and tedious, the leaders having little wind and a foul tide. Later in the day the breeze freshened and brought up the tail of the fleet, aided by the young flood tide; so that they gained very much on the leaders.

Banshee led Pappoose all the way home, the distance between them being about 200ft. only over most of the way. As Banshee is a centerboard boat 4ft. longer but drawing nearly 2ft. less than Pappoose, the latter a keel boat, the fact that the latter outran her in a ten-mile run in very light weather, against the tide, is something that may interest English yachtsmen.

Inside the Hook in the light wind Grayling, Hildegarde and Shamrock were making slow progress, while Fanny, Palmer and Miranda were coming up outside. The run up the bay was slow and tedious, with little of interest, the winners in each class being settled long before the finish was reached. The official times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS 1—SCHOONERS.				
Grayling	10 39 38	6 39 55	8 00 17	7 50 37

In class 1 Grayling beats Palmer 15m. 41s.; in class 3 Gevalia beats Haze 8m. 21s.; in class 2 Fanny beats Shamrock 3m. 21s.; in class 3 Hildegarde beats Thistle 14m. 10s.; in class 4 Anaconda beats Roamer 12m. 37s.; in class 5 Enterprise beats Nirvana 2m. 36s.; in class 6 Pappoose beats Banshee 6m. 57s.; in class 7 Eurybia beats Ilderan 4m. 46s.; in class 8 Hypatia beats Kangaroo 4m. 54s.; in class 9 Gleam beats Frolic 9m. 32s.; in class 11 Bijou beats Marjorie 22m. 47s.

The keel cutter Enterprise wins the Livingston Memorial Prize in Class 5, for best elapsed time. On the first half of the course Grayling beat Miranda by 36m., but over the second half Miranda beat Grayling by 25m., the figures in either case being of little value, owing to the fluky weather. Hildegarde sailed very well, being with Grayling and Shamrock all day and getting much the same wind and tide as they. The keel cutter Pappoose was not in the same class with the new centerborder Eurybia, but she is only one foot longer. A comparison of the times show that she beat Eurybia by over 13m., while the old centerboards, larger and smaller, that sailed the same course with her, were all badly beaten. In the two classes between 30 to 46ft. the leading boats, Pappoose, Banshee and Eurybia, are all of large displacement and with outside lead, while the last in the race were the old boats of light displacement and inside ballast, and this in the lightest of fluky weather.

The race was managed by Messrs. G. W. McNulty, J. T. Van Wyck and J. H. Gielow, in whose hands everything passed off well. Next Thursday the New York Y. C. regatta will be sailed, and on Saturday, June 23, the Seawanhaka Corinthian.

HARLEM Y. C.—The opening regatta of this club on June 12 was spoiled by lack of wind. The result was not known up to the time of going to press, but there was probably no race made. Twenty-seven yachts started in the morning.

THE NEW YORK STATE CANALS.—Capt. Howard Patterson is now on a cruise on the Erie and Oswego canals in the steam yacht Skylark collecting information concerning these waterways.

THE AMERICAN Y. C.'s new club house will be formally opened at Rye, Milton Point, N. Y., next Saturday.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

JR., New York.—We know of no one who trains spaniels.

C. H. M.—For map write to Colton Bros., William street, New York.

W. J. M., New York.—We will publish the desired list in our game columns next week.

A. E. D., Worcester, Mass.—Flirt Warren is by Dash III. and out of Matchless, she was whelped Feb. 12, 1884.

B. S. T., Dorchester, Mass.—It is impossible to give a scale of weights for puppies as health and food have much to do with their growth.

G. G., New York.—You will find in the Catskills ruffed grouse in season and bears. There is excellent fishing for trout in many of the streams.

G. A. S., Beaver, Pa.—The hunting hatchet used and recommended by "Nessmuk" and described in "Woodcraft" is a small double-blade weighing 18oz., handle included.

W. E. H., Stamford, Conn.—For trout fry address one of your Fish Commissioners, who are Dr. W. M. Hudson, Hartford; Hon. R. G. Pike, Middletown, and James A. Bill, Lyme.

Lo, Newfield, Me.—What kind of a bottom is required for a trout pond, and also for white perch? Ans.—Trout need gravel to spawn in, and also to rub themselves on, but will live over anything, if the water is good. White perch will thrive over mud but require weeds to spawn in, as their eggs are attached to weeds near the surface.

W. S., New York.—Where can I find good trout fishing within six hours' ride from New York city? Ans. None that can be called very good. There are some fair streams in Ulster and Sullivan counties, or try the streams about Lackawaxen, on the Erie Railway, or about Maunch Chunk, Pa. There is sometimes fair trouting at Smithtown, Long Island, early in the season.

U. U. C., Damariscotta, Me.—Where can I get mirror carp? Ans. Write to E. G. Blackford, Fulton Market, New York, who distributes carp for the U. S. Fish Commission in October. Be sure to designate the kind you want, for the varieties come all together and the applications are generally for "carp." It is doubtful if these varieties will always breed true to kind, as they are all from the same parent stock.

J. M. C., Staunton, Va.—Will you put me in communication with some one who can give me information as to the culture of frogs or is there any publication on the subject? Ans. All accounts of "frog farms" are mythical. No man has bred frogs for market and in the present state of our knowledge it is impossible. He can breed and raise tadpoles in great quantities, but the young frog feeds upon insects, which it catches on the wing. The enemies of the frog are numerous, among them are large frogs, ducks, fish and wading birds, both diurnal and nocturnal, and these, without considering snakes and minor enemies, are enough to prevent success unless they could be reared under cover and the different sizes kept separate.

W. G. F., Unity, Me.—What has become of the salmon in the following instance? Nine years ago Winnecock Lake, in Unity, was stocked by Commissioner Stilwell with black bass and landlocked salmon, ten thousand fry of each. For the past three years bass have been taken in abundance, but no salmon have been seen. The lake is admirably adapted to salmon, having numerous springs, and is fed by two large streams with rocky bottoms. The former fish were pickerel and white perch, with occasionally a large trout. Since the bass came to maturity the perch and pickerel have decreased very rapidly. The lake covers an area of about twenty square miles, bottom rocky and beaches sandy. Do you think it possible the salmon still exist without being seen? Ans. At this distance it is impossible to speak positively on this subject. If the salmon are still there they should show up in the spawning season. Look for them near the outlet of the lake in the fall.
